ETHICS, PHILOSOPHY, SCIENCE, AND ART

Edited by KATHERINE TINGLEY

COMMUNICATIONS
Communications for the Editor should be addressed to "KATHERINE TINGLEY, Editor CENTURY PATH, Point Loma, California."

To the BUSINESS MANAGEMENT, including subscriptions, address the "New Century Corporation, Point Loma, California."

MANUSCRIPTS

The Editor cannot undertake to return manuscripts; none will be considered unless accompanied by the author's name and marked with the number of words.

The Editor is responsible only for views expressed in unsigned articles.

CENTURY PATH

WEEKLY ILLUSTRATED

Edited by KATHERINE TINGLEY

NEW CENTURY CORPORATION

Point Loma, California, U. S. A.

Entered January 11th, 1907, at Point Loma, California, as second class matter under Act of Congress of March 3rd, 1879.
Copyright, 1908, by Katherine Tingley.

SUBSCRIPTION

By the year, postpaid, in the United States, Canada, Cuba, Mexico, Porto Rico, Hawaii, & the Philippines, FOUR DOLLARS other countries in the Postal Union, FIVE DOLLARS AND FIFTY CENTS, payable in advance; single copy, TEN CENTS.

REMITTANCES

All remittances to the New Century Corporation must be made payable to "CLARK THURSTON, Manager," and all remittances by Post-Office Money Order must be made payable at the SAN DIEGO Post-Office though addressed, as all other communications, to Point Loma, California.

Scientists and Spooks

AN attempt will shortly be made, say press reports, to enter into communication with the "spirit" of a late Professor, who, as a member of the "Ghost Club," had entered into a solemn compact to appear after death, if possible, to the surviving members of the club. Portions of the deceased's diary, which are unknown to anyone but his family, will be used as tests of the genuineness of the communications; the medium will be asked to reproduce some of these secret passages. If this is accomplished, the investigators will proceed to ask the spirit for further particulars about its death; for the professor was found drowned.

The eminent scientists and others who are so ponderously engaging in these quests seem to be proceeding in entire disregard of accumulated past experience and knowledge on the subject. Such an attitude is characteristic of the absurd isolation of modern culture, which regards itself as the culmination of human wisdom and looks upon all preceding ages as merely preparatory to its own. The fact of the existence of the "shell," or "double," or "spook," has been known to mankind in all ages.

In India, and many other lands, it is justly dreaded, and rites are observed with the object of "laying" it; *bhûts*, these shells are called, and they are regarded as unclean, and as hostile to living humanity.

When the physical body dies, the individual finds himself on the astral plane, embodied in the astral form. But since, in all ordinary men, the astral form is not capable of acting as a permanent embodiment of the various higher principles, disintegration sets in. The *Higher Triad* — man's immortal part — goes to its sphere of spiritual rest and bliss (*Devachan*), where it abides during the interval between successive incarnations. The lower principles, consisting of (1) the *Kâma* or desire-principle, (2) the *Linga Sarîra* or astral double, and (3) a portion of the *Prâna* or vital principle, are thus left alone and cohere for a time as the *Kâma Rûpa* ("desire-body"), or psychic *shell* of the late living man. It is this entity that is so shunned by the wise. It is the decaying remnant of the animal man. It is devoid of the higher principles, and is therefore without conscience and with but very little *intelligence* of any kind; it is usually quite automatic.

In the case of a person dying in the course of nature, the spiritual part separates itself

largely before death; and this process of gradual passing, with its accompanying peaceful resignation, is often marked in the old. When the body dies, the liberated shell then naturally disintegrates in *Kâma Loka*, surviving the body for but a brief while. But in the case of one who has met a violent, sudden, and unnatural death, the *shell* is doomed to a more prolonged life, for the orderly processes of nature have been interfered with. Again, in the case of depraved and sensual people, the shell becomes earth-bound, and by its strong desires is drawn back towards the circles of the living, seeking those atmospheres where it finds that from which it may magnetically draw the elements of continued life. Thus it

becomes literally a vampire, and obsesses living people whose systems are depraved through loose living. Our civilization suffers very much

from the ignorance of these laws; for we take no precautions whatever to ensure the proper disposal of the shell. Hence our other sanitary measures are more than neutralized by the dangers we incur from the obsession of the *shells* of executed criminals, self-destroyed debauchees, and suicides. Thus are accounted for the impulses to criminal action which affect the neurotic and unbalanced, causing them to do things for no apparent reason. In ancient civilizations, and some modern ones, funerary rites include precautions specially directed to the laying of the shell.

There have also been people given to cultivating intercourse with the shades for the purposes of sorcery or divination, such as witch doctors, necromancers, etc. Their practices have always been abhorred as part of the "Black Art." In our modern wisdom we have seen fit to deny the existence of such practices, and then straightway to plunge into them ourselves!

On the other hand, very many today ignorantly encourage this communication with the shells of the deceased, thus opening the gate to influences which it may be impossible to get rid of, and which are detrimental.

And now we have eminent scientists and men of learning playing the same foolish game. What matters if they get the entire private diary of the deceased, what will that prove? The shell preserves stamped on its atoms, the memories of acts performed on earth. Mesmerize a man and you can pick anything out of his brain while the Ego is far away. The old thoughts of a man are no more proof of his actual presence than would be his old clothes; his mental diary is no more proof of his presence than is his paper and

Dummy or Vampire Lives

A Grievous Menace to Civilization

ink diary; or than is even his astral phantom.

The most that such experiments can achieve is to attract the shell of the deceased, thus helping to keep it alive when it ought in mercy to be left to pass quietly away. As to finding

Nothing of Value out anything of value about the real constitution of man by such methods, the task to be so Learned would be endless in its complexity; for the byways and chances of error are innumerable. So much more can be done by recognizing the worth of past experience on the subject and utilizing it, that the wise will not waste time. We can learn nothing about the existence of the Soul after death by such methods; what have Spiritists ever found out? The so-called "spirits" which are evoked, when not mere dummies created from the astral fluid of the medium and sitters, are but the fading shadows of what was coarsest in the nature of the departed; and their communications reflect their utter lack of *mind*—synthetic intelligence.

In Theosophical teachings the inquirer will find plenty of information about the constitution of man and the states after death, and he is referred to the Manuals on those subjects. STUDENT

Some Carriers of Disease

SIR JAMES CRIGHTON-BROWNE, perhaps the foremost British authority on mental and nervous diseases, has recently spoken to some purpose at the Liverpool Sanitary Conference on the danger from books and newspapers as carriers of disease. Having dealt with the material and microbe-distributing aspect of the case, he went on to speak as follows:

There is unhappily in circulation in these days literature that altogether apart from prudery or any puritanical prejudice must be pronounced pernicious to health. Mingling with the main and limpid stream are turbid currents here and there, effluents of debased or sordid minds, and loaded with putrescible material and uncanny spores.

The difficulty is that we have no adequate means of separating this foul stuff and getting it into the septic tank. There are novels in demand—hot novels I am told they are called—that pander to vicious tastes and excite unholy passions. There are scurrilous journalistic rags about—one sees them sometimes on the tables of the affluent of sporting proclivities—that should only be fingered by decent people with the tongs while being consigned to flame.

These are public nuisances which cannot be ignored when we are taking stock of the carriers of disease, for not more surely does sewer gas produce febrile disturbance and anaemia, and predispose to erysipelas and gangrene than do these emanations of cesspool literature discompose and debilitate the mind and prepare the way for hysteria, moral paralysis, and nerve degeneration.

This kind of literature is dangerous to the public health and should be dealt with like adulterated food.

Evidently the doctors are beginning to learn—and more.

One thing remains to be said: that in arranging our ideas on this subject we ought to be uncompromising. Heaps and heaps of "literature" (God save the mark!) does not come in the category so well condemned in the above, yet prepares the minds of its readers for the kind that does. Where are the full, vigorous, healthy, and original minds today? As for the newspapers, if it were made illegal to publish police and divorce court proceedings except in an official gazette accessible under restrictions, much good would come. V.

The Church and Science

A CERTAIN Professor has been defending his Church from the charge of hampering the progress of science. The method of his volume is skilful but very easy. From among the two hundred and more popes who have occupied the Chair a few can of course be selected who were either scientifically inclined, or who were able to understand the value of science. And in every age there have been certain sciences and parts of sciences in whose prosecution the most jealous eye could see no danger to dogma. By this kind of manipulation and selection a very fair-looking case can be made out. But in order to do so, the work of the inquisitors and of the censorship must not be, and is not, mentioned. So skilfully are these large sheets of thin ice skimmed and skirted that the inadvertent reader is likely enough to notice nothing.

But those who keep their minds positive while they read must sometimes look *through* the pages. What must be the effect upon a man's nature of spending many months upon the careful manipulation of evidence so as to support a certain thesis, passing by a hundred facts that point one way to select the hundred-and-first that points the other, making these selected ones look as if they ran continuous, drawing deductions that of course do not follow from the facts, and dressing the half-truth to look like the whole?

The school-book teaching that the Church was the suppressor of science and the terrorizer of scientists is but a small part of the case. Throughout the Middle Ages there were hundreds of brilliant minds which should have been, but were never, turned towards science. These men knew what to expect; they were not persecuted and their work was not anathematized simply because they went some safer way. Work that the Church was known to discourage in her formidable fashion simply went untouched. The mere *Caveat!* mostly sufficed to settle the matter in advance. C.

Tuberculosis

THE doctors are still in controversy as to whether the tuberculosis bacillus in man is the same as that in cattle, whether the disease is transmitted from cattle to man, and whether the bacillus from cows can be used as a prophylactic against tuberculosis in man. Experiments in this last seem to be both uncertain and dangerous, and much more practical value is attachable to the hygienic and sanitary precautions enforced in some cities.

The various forms of phthisic ("wasting") disease are due to a preponderating activity of the destructive "lives" in the body. Destruction and construction are always going on, but normally balance each other. Both processes are, so far as the eye of modern science can see, the work of cells and germs. But these are merely the *bodies* of the actual creatures. The source of their activity is on a plane above the physical. They are ensouled by corresponding psychic elements in our minds, which elements are likewise both constructive and destructive.

The fount of these diseases, therefore, as Theosophists would say, is in the *Astral Light*—that is, in the invisible atmosphere that surrounds us. Given appropriate soil such an

elemental may take unto itself a body and receive birth as a disease-germ, multiplying rapidly; or it may be overpowered by one of the other kind.

Diseases are primarily set going by wrong life and thoughts, but they may acquire a momentum that will enable them to attack those who are negative; our interests are all mutually bound up.

The increasing virulence of such diseases, coupled with the failure of all ordinary methods to cope with them, will eventually compel people to pay attention to the real source and to seek new principles of living which shall render Man master of the subjects in his own kingdom. "As a man *thinks*, so is he."

STUDENT

The Day of Rest

IN Paris the law enforcing a weekly day of rest has been applied to the Central Markets, causing some little friction at first, as all changes do, but with beneficial results to the population.

The weekly day of rest is an institution that hovers midway between religion and politics. We can trace it back to times when religion and political economy were one and the same. The Mosaic Law, for instance, cannot correctly be described by either term alone. Sabbaths (the name is said to be Sumerian—pre-Chaldaean) were periods of rest, not merely days among days, but years among years; the Hebrews, as we know, had also a Sabbatical year. The odd days at the end of the lunar year, or of the 360-day year, or of some other calendar year, have also often been regarded as sabbatical.

With regard to the sacred character of Sabbaths, one must bear in mind that in periods of true enlightenment, everything is sacred, and that the distinction between civil and religious belongs to less enlightened ages. Hence if the rationale of the periodic rest depends on religious sanctions, it is only in the same way as all other human institutions did. One familiar scheme of weekly division arrogates the several days to the several "Planets," the originators of this scheme having the knowledge that certain seasons are appropriate to certain kinds of action, like sowing and reaping, and adjusting the economy of man's doings to the economy of Natural Law. Under this scheme, one day in seven was set apart specially for rest and for contemplation of our Divine Nature, for cessation from distractions in order to remember our divine origin and destiny.

Even if we do not recognize this truth, we are forced to accommodate ourselves to the Laws of Nature or suffer; for even our humblest interests are bound up with them. The word "holiday" shows by its derivation the connexion between periodic rests and devotion. T.

The North Polar Expedition

THE Peary Arctic Club has heard from Commander Peary that his vessel the *Roosevelt* is proceeding and that the prospects are good, despite the bad season. A previous communication stated that Cape York was reached on July 31, and that the *Roosevelt* was overhauled and trimmed for the ice at Etah, and that dogs were secured. The season is stormy, with much snow, and no ice as yet.—From *Scientific American*

Some Views on XXth Century Problems

The Sum of Wills

OUR systems of psychology, in their chapters on the will, do not give much help to the student struggling with his own nature. They tell him nothing practical. Nor are current speech and thought any better. We hear of a weak-willed man, of a strong-willed man; but the real difference goes without inquiry. The weak-willed man is thought to have a positive deficiency of the will, as a quantity; the strong-willed, a large supply.

Does this view correspond with the facts? Is it not rather true that the former has the supply scattered over his field, the latter concentrated, the supply itself being the same in both cases?

The weak-willed man has his aspirations, sometimes mainly shown as regrets at his own powerlessness. Even into the very moments of his aspiration surges the desire, the impulse, which he knows as his undoing, and sweeps him away from his base. But if we added together into a sum the little strength which he employs to sustain his position, and the great strength of the wave which sweeps him from it, there would result a strength which if concentrated wholly on his side would enable him to do anything. Often indeed, he whom we call the strong man has almost no will at his command and is further from true manhood than he whom we call weak. He is wholly in the hands of a mastering desire, one that has absorbed every other—say to get money.

Every realized assertion of spiritual manhood, made on the basis of thought, meditation, aspiration, and imagination, is a calling in of will from the possession of enemies in the nature, desires. For that moment the man stands in possession of his own power. He cannot now hold that position at once and for ever; his possession is once more seized from him, but not all of it. Again and again as he repeats his work, the true alchemy, he holds back more and more from the hands of the intruders. Day by day he gains point after point, they correspondingly losing. And at last comes a moment in which he finds that he actually is master; he can hold his own in perpetuity. He stands supreme amid the "wild beasts" which now he can tame into servants.

But ere he reaches that point he will find that they have a subtler intelligence than he has credited them with. They feel their own danger, and will, when pressed, employ ever subtler and subtler devices; making him feel that his task is impossible; that it is undesirable; that they are necessary to him; darkening his mind with fear, despair; filling him with vanity at what he has done; opening up a thousand side-paths of pleasure.

Many of the old myths and fairy stories deal with this. The will is then sometimes a maiden imprisoned by beasts and giants, or in places of ill-fame. Sometimes it is a lost sword in the hands of enemies; it was one of the significations of the Golden Fleece; it was Simon's "Helena"; it is the key to the Gates of Gold. Its symbols are endless.

To imagine is to summon. He who imagines himself in his divine manhood, with the divine light in and about him, his heart awakened by compassion, has summoned his will and for that time taken it from the hands of the enemies. He has but to take it from them daily at last to keep it. STUDENT

"Righteous Anger"

WE are, it seems, still permitted to be "righteously angry." Wrath is proper and justifiable when directed against the criminal. Of two men, one barely on this side of crime, and only so because opportunity has not happened to force itself upon him; and another who has been swept across under some tremendous pressure, being really, perhaps, worth three of the former—the first gets the usual gracious daily salutation; the second the battery of our "righteous wrath." Today, says a Baptist paper,

a revival of indignation against sin and sinners is needed. The preservation of society demands it. The honor of God's laws and commands requires it. Mercy should be balanced by justice.

Between the man of full virtue and the absolute criminal there is no gulf but a long series of steps: rather, a slope. At an arbitrary place on that slope we have drawn a line on one side of which we have written *prisonable* and on the other *unprisonable*. Standing against the line and looking downward, for the preservation of society we burn with fierce anger; looking up we smile the morning salutation.

But the criminal, the man who has crossed the line, how will he be affected by the anger suddenly focussed upon him? Will he be melted, reformed? or will there be a corresponding anger and hate inductively aroused in him? Have we made a permanent enemy?

Comparing society to an individual, it is generally agreed that fierce anger against one's own failings is not the way to conquer them. "What an ass I was to give way to that!" is no magical formula capable of exorcising any of the demons in human nature. Half the drunkards curse themselves as regularly as the next morning comes round. These gusts of remorse rest on an intense focussing of attention upon what is to be overcome, and by that it *grows*. The wise struggle to overcome a failing is the struggle to develop a counter-acting virtue, a power. All we can do *directly* with the failing is to "imprison" it, namely, not to go into circumstances where it can show itself; remove its occasions, and the like—these as palliatives while we are developing into an ideal of our own best imagining.

So with society. If it hates the criminal it worsens him. Whatever its immediate treatment of him, the final treatment is to better itself. If every individual, hearing of a theft, would turn a microscope on his *own* honesty to detect its small flaws and then recast it according to an ideal of absolute rectitude, the general atmosphere would soon make the criminal impossible. Each such attempt on the part of anybody radiates a subtle force, which

unseen, entering some life at a tempted moment, may head off a failure.

Anger is the demon which actuates most murders. We need not flatter ourselves that he is any the less a demon because when we admit him into our consciousness we clothe him in the adjective *righteous*. STUDENT

"Conditional Immortality"

A GREAT Chinese statesman, of whom more may hereafter be heard, was recently interviewed for his ideas on some religious questions. He gave what might perhaps be called the Eastern rendering of the theory known among Christians as that of conditional immortality.

The belief usual among Christians is of course that the soul came into being at birth, but will be immortal after death. It is thus eternal forwards, not backwards. A less common belief is that this forward eternity has to be won. This is known to us as belief in conditional immortality.

In the East they are more logical. What can never end can never have had a beginning. Immortality runs backward and forward.

And in the East they apply the idea of evolution everywhere. That which has been immortal in the past and will be immortal in the future, has been evolving since it came forth from latency and will continue to evolve until to latency it returns charged with the aroma of its experiences, with a consciousness rich and intense beyond any present imagining. "Going into latency" is a passage through, and to the other side of, that mode of consciousness which has any relation to any sort of objective.

At death the body slips as it were away from the soul, carrying with it all that part of consciousness which related to it alone. If then, while in the body and in contact at every instant with bodily consciousness, the man has not recognized himself as what he really is, as soul, as something not identical with bodily consciousness: if during life he has contented himself with accepting this illusionary identity—what measure of self-consciousness can there be for him after death? If in life he has made his *self* the body, what self can remain after body has departed? More exactly, what *consciousness* of self?

And without reincarnation there would be no hope. But here is its purpose. As a law acting with the law of evolution, it provides us with opportunity repeated and repeated for becoming conscious of and in, and developing, that part which is not of the body and is not affected by the body. The death of the body will then leave the man unchanged in consciousness, still in the light of full self-recognition, prepared to take the utmost advantage of the larger world open to him, the world which is to the soul as the physical world is to the body. While therefore man is immortal, "conditional immortality" implies that he must, and in the course of evolution will, feel and know his immortality while clothed with the mortal. Otherwise the mere loss of that clothing will not unveil his spiritual eyes. C.

Archaeology Palaeontology Ethnology

Pre-Grecian Civilization Remarkably Modern

IT is evident that there is much archaeological evidence near at hand, but as yet unrevealed, even in Europe, let alone the other much less explored continents. And this evidence is of a kind that must unsettle cherished theories as to classical and ancient times; wherefore we must keep our minds open and be prepared for anything.

The proof is that we actually have made discoveries which have thus changed our notions; and that various obvious reasons why these discoveries were not made before are now being removed. It is only quite lately that we have really begun to look for things; and political conditions are continually growing more favorable to research.

This latter is the case in Crete, and we may expect more light from there now that the island is more settled. Professor Wheeler, in a lecture at Columbia University, abstracted in the *Scientific American Supplement*, says:

The excavations at Knossos have revealed a very long chronological sequence, which appears to begin as early as the earlier Egyptian dynasties, toward the beginning, that is, of the fourth millennium B.C. . . .

Schliemann found settlements at Hissarlik beneath the one which proved to be the Troy of Mykenaeen times, and evidence of this primitive culture has for years past been turning up in the islands of the Aegean. Just now similar phenomena are appearing on the Greek mainland, notably under the ruins of Mykenaeen Tiryns, so that a primitive archaeology of the Aegean region is slowly developing.

That word "primitive" is surely a concession to the Genesis-inspired view of the human race as having recently attained knowledge and civilization by working up along a single arc of ascent from a recent barbarism. What has been discovered about the art and other attainments of these so-called primitive times does not bear out that view. Even if the word "primitive" only means "early," still it can be only a relative term. Going further:

The view which archaeologists are at present inclined to take with reference to the Mykenaeen civilization is that one of its greatest centers, probably its greatest center, was in Crete, and that a period in the course of its great influence and power it to be associated with the King Minos who becomes an important figure in later Greek legend. . . . It was important in Sicily, and its influence reached to far-off Spain, which in its bull-fights appears still to hark back to a favorite Mykenaeen sport. Some students of the prehistoric archaeology of northern Europe believe indeed that this Mykenaeen influence may be traced northward into the continent. . . .

The art was in some respects of a very fully developed type. In architecture we find exceedingly elaborate structures. . . . It is clear enough that these residences were often splendidly adorned and were arranged for a life of considerable comfort.

Wall paintings of high decorative merit have been found, excellent relief work in plaster and fine carving in stone. . . . Some of the work in gold, silver, and bronze, has perhaps never been surpassed, and great skill too is shown in the relief work on some of the stone vases, and in the carving of ivory and gems. In pottery too there is very high development and great variety.

Scarcely a *primitive* civilization! A linear script, taking the place of an earlier hieroglyphic writing, has been found but not yet deciphered. On the whole, continues our writer, Mykenaeen art shows some Oriental and especially Egyptian influence, but in the main *its character is singularly independent, and it is often startlingly modern, much more so than the Greek art of the classic period.* When the human face is represented, it is neither Egyptian nor Semitic in type.

Lomaland Photo. and Engraving Dept.

RUIN OF FOUNTAINS ABBEY, YORKSHIRE, ENGLAND

The view that the Homeric poems reflect in the main the civilization of the Mykenaeen period is the prevailing one.

The chief respect in which the writer notes a difference from Oriental ideas, and an analogy with modern, is in the stress laid on the individuality of man, both in Mykenaeen culture and in Homer. The whole trend of the discoveries is to show us still another and novel center of radiation of human enlightenment. How many such centers were there? It is not a single line of descent that we find; the threads do not converge as we trace them back, but diverge. As urged by Theosophy, archaeologists must go much farther back to find the common origin of all these civilizations; for the whole scheme is on a much larger scale.

And we see that the later Greek ideas were farther from modern ideas than the earlier Mykenaeen ideas were. Does not this illustrate the fact that civilization goes in waves and cycles? We travel back till we get far away from modernity, and then still farther

back we come upon modernity again. And this civilization extended to northern Europe. All of these facts, so irrefutable and unanimous in their testimony, are proving the truth of H. P. Blavatsky's claim that great civilizations endowed with knowledge and power existed in Europe, Asia, and northern Africa in prehistoric times. Thus science is vindicating Theosophy, as it was prophesied it would in this century; and our views as to the possibilities of life should be enlarged accordingly.

STUDENT

Chaldaean Irrigation

IRRIGATION is in the air. Fifty years ago some of the waste places of the earth were regarded as hopeless desert, useless for any purpose of human activity. The vast irrigation schemes of antiquity were regarded as wonders of the otherwise childish ancients and not at all as feats of highly developed engineering skill, just as some of their so-called "happy speculations" as to astronomy are regarded even today as anything but purely scientific attainments.

But now it is recognized that some of the greatest civilizations of the ancient world were concurrent with, if not dependent upon, irrigation. The vast granary of Egypt, the valley of the Euphrates, and not improbably the huge civilization of the South-western deserts of America, were dependent upon irrigation in one form or another, and certainly all these were civilizations which in some ways surpassed our own.

With the return of irrigation on a large scale there seems to be no reason why these countries, like California, should not become the garden belt of the world, and the most wealthy of producers. The Nile dam is an accomplished fact. Irrigation in America is the burning question of the hour. And now irrigation works are to be undertaken on a large scale in Mesopotamia, by Sir William Willcocks for the Turkish Empire. It is a strange turn of the wheel that makes the deserts of one generation into the most fertile tracts on earth for the next. Yet it is fully in accordance with the cyclic laws which are so little studied, even after the wealth of information and suggestion introduced by H. P. Blavatsky in *The Secret Doctrine* and other works.

P. A.

Fountains Abbey

FOUNTAINS ABBEY, founded in A.D. 1132, is one of the largest and best preserved of the medieval Cistercian houses in England. Besides the church there are several monastic buildings. The tower stands in the unusual position of the north end of the north transept, where the ground may be harder. T.

The Trend of Twentieth Century Science

The Archaeus

PROFESSOR HALDANE'S address to the Physiological Section of the British Association has received much less scientific attention than the addresses of most of his colleagues. The critics have hardly been able to draw a deep breath yet. It was bad enough to be told by Professor Darwin that the germ plasm remembered the experiences of its successive efflorescences into plants. But that they should be asked to come back to the Archaeus, to Vitality as a special force!

For Dr. Haldane maintained that in dealing with the phenomena of life we are dealing with a force which is not only different from chemical and physical forces in the degree of its complexity, but in kind. It is something else altogether. The separation of special phenomena and their imitation in the laboratory is not the study of physiology. We have only done in one way what the plant does in another. What is that doer in the plant which corresponds to ourselves as doers in the laboratory?

There is nothing in the fields of chemistry and physics which has any resemblance to the essential life of a plant. The seed availing itself of every force in the solar system, gradually becomes a mature organism nearly *but not quite* resembling its parent. As a mature organism it may endure for a thousand years, every year separating from itself small particles capable of running the same great cycle, differing, some of them, from it as it from its parents. The sum of these differences constitutes the history of the species, occupying a still greater cycle, a chapter in the great book of evolution, of progress *manward*, of progress in consciousness. All the time the forces, like the different kinds of matter in the soil and the air, are used, selected, their possibilities brought into play—to an end which is never attained; for the goals are but mile-stones eternally.

We look, perhaps pityingly, upon the savage of the past and say: "He was animistic; he thought the clouds and rivers and trees were or had souls."

The man of the future may look, perhaps pityingly, upon ourselves of the present and say: "They looked upon the souls (of the trees) and thought they were test tubes." Will he classify materialism as a variety of savagery? STUDENT

"Hell Before Death"

"IT seems to be hell this side of death," said one of our Judges recently after hearing the story of a cocain victim. The States are waking up to the increasing numbers who are in and drifting towards this unnecessary hell and the other one provided by morphine. General attention is gathering around the whole subject, and a physiologist has been attempting to classify in some sort of order the stimulants and narcotics which are used relatively harmlessly or absolutely perniciously in modern life. Among the relatively harmless he counts tea, kola, coffee, and tobacco; among the absolutely pernicious, mor-

phine, coca and cocain, and haschish; on the boundary line, alcohol. Arsenic he does not mention.

These drugs cannot be exactly graded one above another. To some extent they appear to occupy entirely different fields. But it is beginning to be suspected that they have this principle in common—that whether they are called stimulants or narcotics they all produce all their effects by *paralysing* something and thus letting loose something else which had previously been tied up. Even if that something else should *not* have been tied up, the point often at issue is the advisability of this particular method of freeing it. In the case of coca and cocain, morphine, hemp, and alcohol, the method should at any rate be entirely in the hands of doctors.

None of them create or add to vitality; but some of them place more of his stores at the disposal of the user—by paralysing the check apparatus. Cocain appears to unlock for him all that he has, and for twenty minutes or half an hour he is—in the earlier stages of his career—happy in the feeling of intense health and vigor. At the end of that time he is bankrupt and every nerve of both nervous systems begins to cry out for its due and normal life-pulse, now no longer forthcoming. With successive doses the victim tries to get the very dregs from his reservoir and to tap it of every drop as fast as any comes in. The ultimate fate of these unhappy people is about as well known to the jailer and policeman as to the doctor. Unless help comes, the vital exhaustion with all its attendant miseries usually ends the case in about a year.

The way of morphine is very different. It lulls pain, if there is any, because (pain or not) it lulls—*i.e.* poisons—the entire sentient apparatus. Under certain conditions, and in the early stages of the habit, the *thinking* and imagining man may then be temporarily and in some degree freed because unhampered by the incessant and disturbing pricks of sensation from all over the body. None of us having absolutely healthy bodies, we are all continuously subject to these, even when we think we do not notice them. But they are none the less effective in worrying the currents of thought and imagination. The dose of morphine therefore permits for its few hours a freedom of mind that results normally only from a perfectly healthy body. But of course there is a penalty, a more than equivalent reaction. For when the sentient nerves fully wake up again they feel, each of them, as a man feels after a blow on the head. There is general ache, weariness, lowness and chilliness, sometimes coming on the day but one after the dose and persisting several days, sometimes getting worse for the first two or three. The stunned nerves are unable to get rid of their waste products. As the case goes on, the dose must be raised to escape the misery and at last agony of bruised and irreparably damaged life channels; and it no longer frees the mind at all. Finally the nerves cannot be lulled by any dose; external aid must now come or suicide is nearly certain.

Alcohol paralyses in a different way. The activities of protoplasm corresponding to the grades of its structural evolution and to the grades of the evolution of the activities of consciousness, are suppressed in the reversed order of their acquirement. The higher intellectual powers disappear while the lower seem reinforced because freed from the check of judgment. These in their turn fade out while *pari passu* the sensual animal gets a free hand. The voluntary animal powers, for example that of locomotion, then go and what might be called the physiological vegetative alone remain to stave off death. Every apparently stimulative effect of alcohol is really due to a paralysis of something that previously held in balance or in abeyance the "stimulated" function. Its rôle is to paralyse only, beginning with the physiological brakes.

The rôle of tea and coffee appears to have a remote resemblance to that of cocain. They place a little vitality at the disposal of their user. It is of course hardly fair to name them in the same breath with cocain; for as they cannot tap the whole vital reservoir they can rarely wreck the nervous system and never generate an unappeasable demon to absorb the whole of consciousness. They make the normal vital stream for a while stronger. Doubtless it must have to run a little slacker subsequently to restore the balance. In their ordinary and moderate use this alternation may be harmless. But there are now debauchees of coffee, people who take it hour by hour, who sometimes chew it steadily throughout the day. Ultimately they run the cocain debauchee pretty close.

It is obvious that however closely these drugs imitate the feeling of vital health, it is an imitation only and often at the expense of what real health there is—always in the case of some of them. For their work is really no addition, no gift, but a paralysis which must be paid for.

Perfect health in a completeness beyond the imitation of any drug is a near possibility for humanity. But such can only come from a life which is exercised, regulated, and developed, on all its planes, physical, mental, and spiritual; the health and exercise of each being necessary and contributory to that of the others. M. D.

The Colors of Flowers

IT appears from recent research that the colors of flowers are all due to one chemical body, chromogen, which in its primary condition is red. Flowers that are content to be red leave the chromogen alone, once they have made it. Slight chemical changes of it, however, run it up the scale through the yellows and blues to the violets; and in the purples a little of the original red remains with the blue. We do not yet know all the processes necessary to alter the chromogen; only, so far, that slight additions of acids and alkalis will effect some of the changes. The essential metallic nucleus of chromogen, like that of haemoglobin, the red coloring matter of blood, seems to be iron. STUDENT

A California Cloudburst

IN the upper reaches of San Emigdio Cañon, Kern County, says a Geological Survey *Bulletin*, cloudbursts have in many places stripped the mountain slopes bare of their forest cover and have swept great trees and masses of rock many miles from their source. A resident has sent the Survey a description of one. T.

The cloudburst . . . issued from Cloudburst Cañon into San Emigdio Cañon about 8 miles above this ranch house. I had been expecting the occurrence, as the premonitory signs had been very pronounced for two or three days previously, viz, immense masses of white snowy clouds in the forenoons, changing in color to inky blackness in the afternoons, with the accompaniment of thunder. The weather was sultry, with occasional gusts of cool wind rushing down the cañon, an unusual occurrence during the day in summer time.

Some time before it made its appearance, probably fifteen minutes, its dull and heavy roar could be heard from up the cañon, quite distinct from and rising above all the other noises of the storm, and reminding me of breakers against a rocky shore. As it issued from the narrow mouth of Cloudburst Cañon into the comparatively broad one of San Emigdio, it was accompanied by a cloud of dust occasioned by the breaking up of huge masses of dry soil torn from projecting points in its rush down the cañon.

Through the dust glimpses would be had of great piles of drift with an occasional tree turning end over end . . . by the moving mass behind.

After reaching the main cañon it spread to a width of probably 200 yards, and after descending about one-half mile came to a full stop, only to be succeeded in a few moments by another wave larger and swifter than the first. There was no dust about this or any of the succeeding waves, but immense masses of rock, many of which must have weighed several tons, were apparently dancing along, light as corks, on the surface, being supported by the rocky mass beneath.

This wave extended about one-half mile farther down the cañon than the first, when it also came to a stop, having spread to the full width of the cañon (about one-fourth mile here).

In a few moments another wave of mud swept by, followed by others at intervals of a few minutes, each succeeding wave getting thinner and traveling with greater velocity than the preceding ones, until finally in about half an hour it was mud no longer, but a steady rush of a yellow foaming torrent, at first probably 100 yards wide in the main cañon, gradually reducing its width and increasing its depth and swiftness as it washed out a channel in the soft mud.

In answer to your question as to the distance and size of rocks moved by cloudbursts, I will give you a description of one which lies on the bank of the creek close to this house. It is a sandstone boulder which has come from 7 miles above and as near as it can be measured, owing to its irregular shape, gives the following dimensions: Height 8 feet, length 16 feet, width 12 feet. On the plains (the San Joaquin Valley) about 5 miles east of

here, in sec. 22, T. 11 N., R. 21 W., several masses much larger than this can be seen. These were brought down the Pleito Cañon by cloudbursts.

To Save the Birds

THAT the true interests of the people are bound up with deeds of mercy is shown in many ways; among others, in the efforts now being made to check the destruction of birds. The National Association of Audubon Societies has mapped out all the United States and organized a force of speakers to bring home their ideas to the people; and seven able ornithologists have been engaged to tour the country constantly and wage a peaceful warfare on behalf of the birds. "Save the birds, who save our lives and crops," is their watchword. Were birds exterminated, successful agriculture would become impossible and the destruction of the greater part of vegetation would follow. Perhaps indeed this is one of the ways in which the Great Law brings about the sterilization of lands and the decay of civilizations in stern recompense for want of thought and want of heart. At all events it shows one of the things that might happen here, were we to persist in heedlessness.

Destructive insect life is alarmingly on the increase; and the birds, its natural enemy, are on the road to extermination. The loss due to this condition last year is estimated at \$800,000,000. As to water fowl, their function as nature's scavengers in preventing plague will be emphasized and impressed on all medical men, in order that they may use their influence against the slaughter. STUDENT

Sentience of Nature

AMONG the instances cited by Professor Francis Darwin in his British Association presidential address to illustrate mind in lowly organisms, were the following.

Stentor, one of the fixed *Infusoria*, when a jet of water is directed upon it, contracts into its tube. If however the experiment be repeated, it will not contract a second time. This shows that something more by way of explanation is needed than that it reacts mechanically to a stimulus. There is something akin to memory and calculation; the creature corrected its mistake.

The leaves of the Scarlet Runner are horizontal by day, but droop at night. Yet, if the plant be kept in a dark room, the leaves will continue to follow their usual habit, although there is no alternation of light and darkness.

These and countless other instances show that even plants have what must be called a "mind," which, however, is *not* the product of environment, as Professor Darwin seems to desire to make it. Science has often in the past tried to explain mind as a function of matter; but now we are already on the path leading to a definition of matter as a function of mind; and this is really more like explaining the unknown by the known, since we know more about mind than we do about that baffling thing "matter." The attempt to eliminate from our conceptions of the universe such elements of consciousness as purpose and design is truly a nightmare of the "civilized" brain engendered by over much purely mechanical thinking in set grooves. Students'

Path

From THE PRELUDE

Wordsworth

A MIND whose rest
Is where it ought to be, in self-restraint,
In circumspection and simplicity,
Falls rarely in entire discomfiture
Below its aim, or meets with, from without,
A treachery that foils it or defeats.

Some Observations on Habit

HABIT is defined as the fixed disposition to do a thing, a facility in doing it; the result of numerous repetitions of the action. It may be mental, psychical, or physical.

Mental: methods and tendencies of thinking.

Psychical: feelings and emotions; cheerful, despondent, charitable, uncharitable, suspicious, trustful.

Physical: overeating, etc.—too well-known to need defining.

All these may be put under control of the Ego. One of the greatest hindrances—a habit—is laziness or indolence in regard to any one or more of them, for there is other laziness than physical. A Râja Yoga training takes in all and does not permit indolence in any part of the nature, and for a complete knowledge of the complex nature of man with all his possibilities we must turn to Theosophy.

The law of Habit, which is a phase of the law of cycles, is a tremendously important principle and is not a capricious thing, but conditions our every action—whether physical, mental, or psychical. The Ego, acting under the impulse of half-knowledge, creates habits which become apparent afterwards as perhaps not commendable; and then they are to be overcome, broken. How very important therefore to get all the Theosophical knowledge possible. Cultivate the habit of acquiring knowledge, and remember that the Mind and Soul never grow old.

If we would have all our powers at their highest efficiency, we must remember that there are certain habits of life which destroy nerve substance. Facility of action (mental, psychical, or physical) depends to a great extent on the health of brain and nerve substance. A substance that is perfectly plastic is one which yields to an influence without destruction of its integrity.

We shall do well then if we rake ourselves over the coals again and again for knowledge of undesirable habits, that they may be broken, and to learn what desirable habits we lack, that they may be acquired. For "happiness comes from habitude and pain is ended."

Our youthful ideas of the Devil throwing us back into the fire, is not without truth. When we allow ourselves to become indifferent to life and to others, and try to slip out of the hot coals of strenuous endeavor to a part more

desired by our indolence, how often we find circumstances force us back into the fight again! This is the working of the Higher Law, and well for us that it is so. Let us be or see the Higher Law for ourselves, and act with it.

Do not let us forget that our bodies, outer and inner, are the result of the most wonderful work of Nature, ready for us to play upon, and which when played upon with skilled hands, produce a harmony in the Universe which gives happiness and help to all. Professor Ladd remarks that

The well seasoned Cremona, which has been played upon by skilled hands, will reproduce the tones with superior sweetness and purity, on account of the secret molecular changes of which it has been made the subject of previous agitations from the bow of the violinist

and just as a great musician permits with reluctance another to play on his instrument, so we should guard ourselves from other influence than that of our own Ego. Let us be the molders of our own character.

In all this we see too why evil or bad habits should be avoided, because of their irresistible power over us.

An evil habit is an entity of our own creation, and constantly demands of us and through us gratification.

A good habit is a tendency in us to act in accordance with our Higher Nature, and in accordance with the higher purposes of Nature.

To the extent to which a habit is contrary to these, to that extent is it evil, and means constant struggle and unhappiness.

Good habits, being in accord with Universal Law, become good habitude; pain is ended, and happiness ensues.

The unmaking of a bad habit is painful and difficult. The demands of the evil entity must be silenced, and the entity itself must be killed out.

With good habits we are free, because we have not entities of our own creation to prey upon us, but rather are we working in harmony with Nature.

Evil habits are swervings from natural law of forces first used for our own gratification, and then the drawing of those upon us for their life and continuance. It is harder and more difficult to unlearn than to learn.

In the unlearning of a bad habit we have a threefold task: (1) the overcoming of our indolence, or the controlling of our desires; (2) the resisting the demands of the entity we have created, or the stopping of the tendency of the nervous force to act along a certain channel, and turning it into and guiding it along a correct and proper way; and (3) the killing by starvation or non-use of the entity itself.

The only obstacle standing in the way of good or correct habits, is our own selfish and indolent desires. The best and surest care therefore for the unlearning of evil habits and the acquiring of good and permanent habits, is unselfish work for others. Then one's whole economy works for universal expression and liberty, and creates no personal, hampering evils to plague one's life; and more: unselfish and brotherly work brings a reaction which means enlargement of all one's faculties and makes for freedom and peace. W. H. S.

Earth-Life: a Soul's Experience

Not enjoyment, and not sorrow
Is our destined end or way;
But to act that each tomorrow
Find us farther than today.

WOULD it not do away with much of the sorrow of life if we regarded all that happened to us as an experience, something not for our detriment, but for our benefit—albeit that the surface appearances are often drastic, unpleasant, and of a corrective character. We would grow wiser much faster than we do if we followed out our lives with the fixed determination to attain perfection, which is the goal for all men, though hastened or retarded by our momentary thoughts actions, and feelings. One may perhaps unavoidably think that though

Some flowerets of Eden ye still may inherit,
The trail of the serpent is over them all

when we reflect upon the misunderstood and misinterpreted fragments of truth that have passed current for *Truth* itself, and especially of the debasing and effort-paralysing dogma of vicarious atonement.

What a relief to turn to the breezy energizing teachings of Karma and Reincarnation, which make of each human being a responsible self-respecting entity with a noble destiny, and with the means at hand to achieve it—not through the self-sacrifice of another, but of himself. Theosophy teaches us that we must be honest and pay our own debts, and that we must return here to the prison of mortal flesh until we have liquidated them to the last cent.

Naturally the experiences of the Soul are varied in the process of gaining perfection and training the human animal as a useful vehicle for the Soul's experience. Day and night alternate, the periods of rest and activity, of birth and death, and birth again, until our failings give way to perfections, hatred to love, fear to courage, pride to humility—in a word, "darkness to Light."

So our aim is neither for peace, for happiness, for wealth, fame, or any entanglement of the senses, but for freedom, for progress, for perfection. Why? Because only so can we become truly workers in the larger sense, truly servers of "the spirit dwelling in our hearts"; truly the creators of our glorious destiny; and realize the object of Earth-life, its pains and penalties, joys and privileges; complete our task and enter into the noble service of helpfulness to humanity. E. I. W.

EACH human being has a definite character different from every other human being, and masses of beings aggregated into nations show as wholes that the national force and distinguishing peculiarities go to make up a definite and separate national character. These differences, both individual and national, are due to essential character and not to education. Even the doctrine of the survival of the fittest should show this, for the fitness cannot come from nothing, but must at last show itself from the coming to the surface of the actual inner character. And as both individuals and nations among those who are ahead in the struggle with nature exhibit an immense force in their character, we must find a place and time where the force was evolved. These, Theosophy says, are this earth and the period during which the human race has been on the planet.—W. Q. Judge

THEOSOPHICAL FORUM

Conducted by J. H. FUSSELL

Question What do you mean by Occultism? Should one seek to study it, and if so, what are the first steps to take?

Answer If you wish for the real answer to this question you must go to the writings of H. P. Blavatsky: one of her articles is called "Occultism versus the Occult Arts," and that will answer you. Most people confound these two things and desire to fly off into something experimental and exciting; such as raising devils by extraordinary means (as if they did not kick enough devils up in the ordinary course of their blindfold stumbling through life), or foreseeing the future. Theosophy, the veritable Occultism, despises sensationalism and knows of no room for it in the universe. Theosophy is of the sun and the open air, and finds itself intolerant of all such gas-lit morbid inanities.

But what shall we say this Occultism is? *Occultus*, the hidden; that is the meaning of the word. And is not all hidden from our daily vision, except the very rind and garbage of things? We have to study the hidden part, if we would come on anything worth our considering. These worlds and all their wealth of being are hidden from us now; emphatically they are. Our minds hide them; our desires hide them; so do our dislikes. It is as if we never saw the sky at all; our eyes being so lured and compelled by the ground. We have no time to live, being always a-bustle over something else; a-bustle, that is, in our own minds.

Now the universe is like an egg; and we are like a breakfaster who dares not crack and eat it, being lost in consideration of the shell. That we are never so hungry is no matter; from point to point our eyes are led over the oval surface, one place leading them on to another. We have a thousand different sciences of egg-shellology, and here and there only a man who suspects the golden yolk. In this manner too we regard ourselves and all others. *What is a man—such and such a man?* I ask you. You answer, "*Oh, he gets up at such an hour; shaves twice a day; likes this kind of food; dresses so; follows this sport or hobby; earns his living at that business.*" Indeed you have told me nothing about him: or you have painted his environment and said nothing of the man himself. You have given a personality, bedecked with all the personal details: have you given anything which they could recognize who might have known him before his birth; or are to know him when death has stripped him of these encasements? True, the likelihood is that he could not have given me anything much better himself.

Strip off, in your own mind, the whole temporary paraphernalia of A or B, or for that matter of yourself. The sense-pleasures and desires that you have in no way individualize or signal you out; the same sorts of instincts are in the millions of mankind, and in the brutes themselves. And those things draw you no nearer to others, nor make you any the larger-hearted. No other can share such experiences with you; they cramp and confine you within your own bodily self. And we cannot say too often, that neither are you that

thing which you are pleased to call your mind. For, all the streams of feeble notions that flow through it—did you take any pains to originate them? Are they in any sense work of yours? Rather, is not your mind a kind of placid water in this sense, that it mirrors every shadow that falls across it? In your negative moments we mean, and when no business presses? But you can, if you will, scatter the whole nebulous treachery, and have the lake reflective of nothing but the stars. Or again, is it not a kind of highway, over which beggars and thieves and idlers and ragamuffins jostle? You have the power to clear the ground, and see that none but honest men pass. You can have an army of world-subduing heroes march that way if you will; and reserve the road for their traffic and discipline. Who then are you? A most potent king, will you but take your scepter in hand, and govern your whole dominion. Not that one parade ground only is your realm, but regions also which are unseen and unknown to you; the whole beautiful domain and continent of genius. *Occultus*, is it not—hidden away from you in all conscience? This then is Occultism, to find those splendid spheres, and open them out for human usage. "Blessed are the pure in heart, for they shall see God."

Now you can see, surely, why it is that science tells you nothing of realities; can by no possibility give you any direct knowledge of anything under the moon. It is because no manner of learning will, of its own force, carry you back to that shining and divine Self which is within you. The path to Occultism is a certain inner light and a method of life, which leads to the understanding of what we call the soul. There are two selves, as we know well, in all of us. The one that desires; that shouts "I"; whose sphere is rounded off by the limitation of the body and lower mind: follow that, and you shall never pitch your camp beyond those sordid and melancholy limitations; indeed your realm will go on dwarfing and shriveling itself up till it is nothing but the seat of an unsatisfied ache or itching, with no complacency in all its boundaries. And there is that inward and beautiful Self, which speaks out rejoicingly when any heroic or self-sacrificing action is done; which only manifests itself fully now and again, and then to the world's great wonderment of delight or dismay. To find this is the true Occultism; and when you ask "*ought we to seek or study it?*" the answer is, Indeed and indeed we ought; for the world will get no help nor encouragement except from those who do so study to some purpose. For, as H. P. Blavatsky says: "To live to benefit mankind is the first step," and there you have the key to the whole problem; nay, not only the key, but the door of the real life unlocked, and the whole royal road stretching out before your feet as far as the "snow-capped summits of purity eternal."

K. M.

Answer II. The words Occultism and Occult are much talked of at the present time, and much advertised in papers and magazines, and withal are very much misused and misunderstood. The question therefore is timely. Etymologically, Occultism may be defined as the science of that which is hidden. In the world today, astral clairvoyance, telepathy, hypnotism, breathing

exercises, and psychic powers generally are often spoken of as being occult and as together constituting Occultism. It is true they are occult *arts*, occult, *i. e.*, hidden, powers for the majority; but they are no more true Occultism than a pyrotechnic display is the science of Light, and, too, there is the same danger that as in the latter, so in the former, metaphorically speaking, one is very apt to get burnt—with risk of grave physical or mental derangement. As to what Occultism is, let us turn to what H. P. Blavatsky has said:

Occultism is not Magic, though Magic is one of its tools.

Occultism is not the acquirement of powers, whether psychic or intellectual, though both are its servants. Neither is Occultism the pursuit of happiness, as men understand the word, for the first step is sacrifice, the second renunciation.

Occultism is the Science of Life, the Art of Living. There are many people who are looking for practical instruction in Occultism. It becomes necessary, therefore, to state once for all:

(a) The essential difference between theoretical and practical Occultism; or what is generally known as Theosophy on the one hand, and Occult science on the other, and:

(b) The nature of the difficulties involved in the study of the latter.

It is easy to become a Theosophist. Any person of average intellectual capacities, and a leaning toward the metaphysical; of pure, unselfish life, who finds more joy in helping his neighbor than in receiving help himself; one who is ever ready to sacrifice his own pleasures for the sake of other people; and who loves Truth, Goodness, and Wisdom for their own sake, not for the benefit they may confer—is a Theosophist.

But it is quite another matter to put oneself upon the path which leads to the knowledge of what is good to do, as to the right discrimination of good from evil; a path which also leads a man to that power through which he can do the good he desires, often without even apparently lifting a finger.

Occultism is not magic. It is comparatively easy to learn the trick of spells and the methods of using the subtler, but still material forces of physical nature; the powers of the animal soul in man are soon awakened; the forces which his love, his hate, his passion, can call into operation, are readily developed. But this is Black Magic—*Sorcery*. For it is the motive, and the motive alone, which makes any exercise of power become black, malignant, or white, beneficent magic. It is impossible to employ *spiritual* forces if there is the slightest tinge of selfishness remaining in the operator. For, unless the intention is entirely unalloyed, the spiritual will transform itself into the psychic, act on the astral plane, and dire results may be produced by it. The powers and forces of nature can equally be used by the selfish and revengeful, as by the unselfish and the all-forgiving; the powers and forces of spirit lend themselves only to the perfectly pure in heart—and this is DIVINE MAGIC. [The word "magic" in its derivation means Wisdom.]

To sum up in one word we might quote the well-known Delphic Oracle, "Man, know thyself!" This is the purpose and end of Occultism, and to use that knowledge for the benefit of the human race; for in man are focussed all the powers of nature.

In a little book, *The Voice of the Silence*, "for the daily use of disciples," and "dedicated to the few," by H. P. Blavatsky, it is said:

Help Nature and work on with her; and Nature will regard thee as one of her creators and make obeisance.

And she will open wide before thee the portals of her secret chambers, lay bare before thy gaze the treasures hidden in the very depths of her pure virgin bosom. Unsullied by the hand of Matter, she shows her treasures only to the eye of Spirit—the eye which never closes, the eye for which there is no veil in all her kingdoms.

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

Central Office Point Loma California

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

The Churches Day by Day Lambeth Congress on Healing

THE Secretary of the Guild of Health, a healing movement within the Church, writes thus to an English paper:

Dr. McComb . . . claims efficacy for spiritual healing up to a certain point, but stops short of organic diseases; for these he has no gospel. The Guild of Health within the Church of England, on the other hand, claims for divine healing a universal scope and efficiency, and the truth of this claim has been attested by the cures wrought by its warden. . . . The Lambeth Conference recognizes that the Church must be brought into line with the outside bodies which have made their mark through faith-healing, yet it is not prepared to endorse the revival of the practice of anointing with oil, which was a fruitful source of healing in the early ages of her history. This Sacrament—together with the appeal to the subconscious personality practised in the Emmanuel Society of Boston, and the use of Intercession and the Laying on of Hands which the Lambeth Conference recommends—compose the authoritative working basis on which the Guild of Health founds its propaganda of spiritual healing.

It is by demonstrating the effectual value of these practices that we hope to reawaken in the Church the recognition of her heritage as the source of all healing, which the doctrine of the Resurrection involves.

Here we find the Church, as so often, trying to do two incompatible things at one and the same time: taking its cue from the day, copying certain lay movements, and making an undisguised effort to keep up with the times; and yet claiming paramount authority as the source of all power. The writer quoted hopes to awaken the Church to a recognition of its own claimed power; and he hopes to do this by demonstrating experimentally that the clergy, like laymen, can perform these cures. In *Huckleberry Finn*, the reprobate father utterly neglects his son—until the son acquires money; then the father begins to demonstrate his parental authority as the source of the son's being and the rightful owner of all the son's possessions. There is also a story of a countryman whose boy came back from school and aired his knowledge at the expense of his sire, who promptly "learned him to think he knew more than his father"!

Whatever a Church may be in its proper function, the function which it has all too frequently assumed is that of a distributing agency of things that may be in popular currency.

People will naturally ask why the Church has waited so long to produce its "divine right of healing" based on the Resurrection. Let

MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

them learn from this and similar cases that the Churches are dependent on the people. Whatever the people believe, that the Churches must teach.

As to psychic healing, about which in point of fact there is nothing "divine" whatsoever, it has often been stated in these pages that the dangers arising from dabbling therein are far greater than any benefits to be derived; that the cures are only temporary, if made at all, and usually result in a driving of the evil *inwards*, or, as William Q. Judge says, "Transplanting diseases for future use." Many clergymen are said to feel that it is a disgrace that the Churches should be associating themselves with such practices. Little indeed has this to do with the true gift of *divine* healing, which ministers to the mind and soul, by teaching the glorious truth of man's divine nature, origin, and destiny. Instead of trying to escape the consequences of past wrong living, we should so purify our lives as to avoid sowing any such seeds for the future, and treat the diseases we have by sane medical methods.

More Bibles Needed

A commercial travelers' Christian association has a plan for placing a Bible in every room of every hotel in the country. They will be only too glad, they say, to have these Bibles stolen, because it will mean saving souls at eighteen cents a head. Apparently they think there are not enough Bibles in the country.

Too Much Bible

The church of today should not give currency to the belief that the pulpit is fettered by the traditions of the Bible.—*Rev. Charles Parkhurst* (as quoted in press)

Old-Time Gospel Needed

The remedy for present-day extravagant living is, according to a bishop:

Preaching of the old-time Gospel, I do not mean to preach hell-fire and brimstone, but I do mean that the preacher should have them in mind when he addresses his congregation.

Pagan Polytheism in the Church

Amid the flood of rhetoric that is poured forth in eulogy of the work of the Church and of its destruction of the polytheistic superstitions of paganism in favor of a "sublime monotheism," it is well to keep our eyes on the facts lest we be deluded. And it is not of some remote corner of Europe, nor of some Polynesian island that we would speak, but of England in the Twentieth century.

The press reports that the solid farmers of the Lincolnshire Fens, sacred to the memory of Hereward the Wake, of staunch Protestantism and of Cromwell, were astonished to witness a gorgeous procession of robed priests, with banners and acolytes, proceeding on their way to bless "Our Lady's Chapel" in the Church of the Immaculate Conception and of St. Norbert, "wherein is a newly made grotto of Our Lady of Lourdes." They sang:

On Lourdes' lonely mountain
Our Queen deigns to rest.
Fair hill! holy fountain!
Be blest, ever blest!

The preacher is reported to have said that

The presence of the old church there—the names of the streets—the names of the surrounding hamlets: St. Mary's this, St. Mary's that, bore eloquent testimony that at one time in English history St. Mary reigned a queen in Lincolnshire. God grant that the time would come again, and speedily, with St. Mary returning with banners flying. . . . "Our Lady of Spalding, swift to hear, pray for us!"

Well may the rustics have rubbed their eyes and wondered "what are we coming to?"

But we do not purpose to grind any sectarian axe, but merely to contrast the Church's practice with its claims, and its teachings upon some occasions with its teachings on other occasions. In particular one must ask what is the difference between the above celebration and an ancient Pagan celebration in honor of the local goddess? How will it be possible in face of such facts to make out that Christianity is not polytheistic?

It may be that this is the kind of religion that attracts the people: but it is not Christianity as defined. E.

He who will not ponder over and master the difference between the meaning of the two Greek words *χρηστός* and *χριστός* must remain forever blind to the true esoteric meaning of the Gospels.—*H. P. Blavatsky*

THE THEOSOPHICAL ADDRESS AT ISIS THEATER

AT Isis Theater last Sunday evening the entire program was in charge of the pupils of the Râja Yoga Academy.

The music program was as follows:

Overture	<i>Preciosa</i>	Weber
	Râja Yoga Orchestra	
Violin Solo	<i>La Playera</i>	Sarasate
Cornet Solo (Orch. Acc.)	<i>Swiss Song</i>	Hoch
Quartet	<i>Allegro 1st Movt. Op. 32,</i>	David
	Râja Yoga String Quartet	
Coronation March	fr. <i>The Prophet</i>	Meyerbeer
	Râja Yoga Orchestra	

After the opening number by the Râja Yoga Orchestra, quotations were read from the writings of H. P. Blavatsky, William Q. Judge and Katherine Tingley. Addresses were given by two of the young speakers on "Music," and "The Needs of the World."

Regarding the former of these, the young speaker referred to the refreshment that the mind experienced in turning away at times from the unpleasant things in life to look at the beautiful, and what more beautiful than music? He quoted also from Plato:

Musical training is a more potent influence than any other, because rhythm and harmony find their way into the secret of the soul, on which they mightily fasten, imparting grace and making graceful the soul who is rightly educated.

Herein, perhaps, we can see why music has failed to an extent to fulfil its mission, for it will be noticed that Plato speaks of the soul "who is rightly educated," and because men have not been rightly educated, music has not been able always to reach the inmost chambers of the heart and do its ennobling work of uplifting the whole being. Who, then, are the real musicians; are they not those who have been able to send light into the deep recesses of the human heart?

The other young speaker on "The Needs of the World" said that of all things needed, the greatest is a moral regeneration. We are practically dead. We live without purposes; we move on in the world with a very narrow view of life. We picture the world as pretty dark. Does the fact that we have a multitude of incandescent lights lead us to believe that they light it more? Does the electric light make this world in the deeper sense brighter and more cheerful? It would be almost in accord with our modern views of life to believe this. Why does not someone invent a machine or make a pill that will make us a better race? It seems as though we were awaiting something of this kind. Where is our moral backbone? Truly are we not in need of regeneration? But how is it to come about? Our answer is, through Theosophy. Theosophy is our only hope. Truly ought we not to be thankful to H. P. Blavatsky for bringing this wonderful knowledge back to man! It took such courage; and shall we forget William Q. Judge, that noble helper, who succeeded her? What an example of devotion to duty and of man's love for his fellows!

Yes, Theosophy is our hope. What it is doing today under the leadership of Katherine Tingley we know at least to some extent, for works speak louder than words. She has brought Theosophy right down to practical everyday life. Knowledge of Theosophy alone can change the meaningless life of the

majority of mankind. It gives man an insight into the meaning and purpose of his life; it gives him hope and courage when he is sinking, and unlimited power and confidence when he aspires. We should all consider it our duty to spread this knowledge among our fellows. We hope the time is drawing near when all men shall recognize it. Not until then shall we see better times in the real sense of the word.

OBSERVER

The Dean and the British Association

THE British Association for the Advancement of Science met in Dublin this year, and on a Sunday the Dean of St. Patrick's Cathedral delivered a sermon to a large number of the members. The report of this sermon reads in some respects like an article in the CENTURY PATH might read, so extremely broad, tolerant, and reasonable is it. One knows, of course, that the speaker has got to round it off somehow at the end and crown the whole edifice with the triumphant image of the church sitting on the top; but one wonders how on earth he is going to do it. One sees that he has left himself no possibility but an *anticlimax*. While on a certain class of minds the effect of such a sermon may be to make them think that all has been thought out for them and that there is no cause for alarm and that they need not inquire further, other minds cannot fail to be set thinking along lines which will lead them far outside the widest limits by which the church can possibly define its territories. They will finish for the eloquent preacher the arguments he has left so suggestively incomplete; for *apophysis* was certainly his main figure of speech in this sermon, and the aether resounds with the reverberations of the words he left unsaid.

Is it not a gratifying sign that the progress of thought, inspired by the fructifying seeds of Theosophy, should have so forced the hands of the theologians that they choose this attitude, perilous as it is for them, in preference to any alternative?

"Guard yourselves from Idols" was the text; and the preacher spoke of the idols of the mind. These, he said, were both theological and scientific. In fact he drew a close parallel between theology and science all through his remarks.

The "idols," the "idola," which cheat the mind with the semblance of reality—these are the enemies of science, as they are the enemies of religion. . . . That Bacon's ingenious and subtle descriptions of these false guides have an application in the sphere of theology, no less than in the sphere of natural science, no serious student of theology will question. . . . The predisposition to hasty generalizations, the impatience with which we view any system that is not logically complete, the desire of uniformity in this various world; these are universal instincts. Hardly can we escape from them.

"The impatience with which we view any system that is not logically complete." Can this be a loop-hole for theology in case of necessity? Is its system logically incomplete? Again, is it a fault to be impatient with a system that is not logically complete? It is a fault to be impatient with a system that *seems to us* (but is not really) logically incomplete, for then the fault is in our own mind, not in the system. Why, then, did not the preacher say this? Again, why may we not desire uniformity? Is this another thing which we must be prepared to find wanting? And are we to

be prepared beforehand by being assured that the fault is in our own minds? Yes, let us give up the real idols, but not the just prerogatives of independent thought.

Nor, again, is theology free from perversions of truth due to the baneful habit of taking words for things, of putting one's trust in shibboleths which stand for no verified experience. And when Bacon predicted that the idola which would most widely prevail in the future would be the false images of truth due to the inveterate traditions of obsolete philosophies, his words were to receive a fulfilment other than he foresaw. For if scientific research has been often misdirected by *a priori* theories of nature, it has been the prevailing weakness of Christian theologians that they have, again and again, been misled by *a priori* assumptions as to what is worthy of God, or what is necessary for the highest interests of man. Thus it is that in every age such idola have deceived the seeker after truth, whether he has occupied himself with the phenomena that nature presents everywhere to his view, or whether—greatly daring—he has endeavored to co-ordinate them with the facts of man's deepest life, and to present the kingdom of nature as the Kingdom of God.

No Theosophist would find fault with the above.

We shall not think it surprising that the causes of error in the realm of theology should be identical with the causes of error in the realm of the natural sciences, if we remember that both theologian and scientific explorer have the same aim and interest—the attainment and realization of truth. That both may be misled by the same false ideals, the same prejudices, the same weaknesses, is a consequence of the unity of the truth which both alike seek. Truth is one, and it is perhaps still needful to repeat this platitude of science, this presupposition of theology. Every scientific inquirer recognizes the duty of reconciling the results of his own special investigations with the results of his fellow-worker in another field. That cannot be true for the physicist which is not true for the biologist; that cannot be true for the student of ethnology which is not true for the anatomist; that cannot be orthodox in geology which is heretical for a chemist. And, in like manner, it is of the gravest importance that we should realize on the one side and on the other that what is true for science must be true for theology; that what is false in the laboratory or lecture-room cannot be true in the pulpit; and again, that what is true of religious experience cannot be of indifference to science. The Christian Church—sorrowfully must we admit it—has not always been mindful, as she ought, of this great principle of the unity of truth. She is, indeed, pledged by the most sacred obligations to assert it, for the unity of nature is only the scientific expression of the Christian doctrine of the unity of God.

The unity of God is not an exclusively Christian doctrine; all the polytheistic systems recognized the primal Unity, and their gods were in hierarchies. The same idea is found in the Christian angels, and demons, and principalities, and powers, nor does the recognition of minor gods violate the conception of the One any more than the idea of angels and demons does.

Continuing, the preacher said that science was often persecuted by religion; we should remember the condemnation of Galileo, which would remind us that "a student of theology, however sincere or learned or devout, is not necessarily the best judge of the problems of geological or biological science."

The day is past for the repudiation of science by theology. . . . But we may say, too, that the day is past for the repudiation of theology by science. For if during these long and painful controversies theology has learned something, science has learned something also, of that humility which is the secret of progress. It is not too much to say that the idola of a materialist philosophy have lost

their attractiveness for the best minds among us. It is beginning to be recognized that the mysteries of nature are not to be completely explained by the researches of the laboratory, and that the problems of human life and thought are not solved when we have exhibited, or think we have exhibited, the history of man's origin and of his development from humbler species. The deepest problem with which science has to deal is the problem of the human spirit, the significance of man's invincible sense of dignity, of duty, his faith, his hope, his love. To this all other studies are but preliminary and incidental; towards the solution of this—the explanation of *man*—we do not advance very far if we have no eye for any image of the truth other than that which is conjured up by the study of man's physical structure. Truth is one; the avenues by which it is reached are manifold. We shut ourselves off from its full prospect if we do not include within the sphere of science the study of man's spiritual aspirations no less than the study of his bodily needs. And this is being recognized, we may thank God for it, by the science of today, which has rightly regarded the "Varieties of Religious Experience" as a fitting subject for psychological inquiry. It may be that the science of the future will have much to tell us about these high matters of moment to the human race, and to its moral and spiritual progress. We cannot tell; the future is in the womb of time. But whatever revelations science may have in store as to the destiny of man, and as to the world behind the veil, . . . it is little likely, if we are to judge by the indications of the present, that the science of the future will condone any neglect of the nurture and the discipline of man's spiritual part. For the highest and most imperative duty that we owe to those who are to come after us is to ensure the enrichment and education of the faculties by which they inevitably reach out towards the unseen things, which are eternal.

Truth is one. There can be no opposition between truth and truth. We who believe that religious truth is the most certain of all because the most intimate, the most deep-rooted; we who are entrusted with its proclamation, dare not, do not, make little of the truth which the prophets of science preach. That cannot be false for us which is true for you. That cannot be true for us which is false for you. We make the same kind of mistakes. We are misled by the same spectres of the mind, against which Apostle and philosopher warn us alike. But we check our mistakes by the same appeal. For our appeal is the same as yours in the last resort. We appeal to experience—the experience of plain men and women, who know of what they speak when they speak of the grace of God, the efficacy of prayer, the assurance of hope. Very humbly and hesitatingly will any one of us dare to suggest that his own personal experience can weigh much with another. Yet it is a fact, and all facts are worthy of the respect of science. More boldly shall we speak of our appeal to the experience of the past, of the multitudes of the world's best and bravest, who have found their peace in God. We appeal to the saints of the Bible and of the Church, the great company of Christian souls whose witness is borne to us down the ages that they found life in the knowledge of God and of his Son, Jesus Christ. Did they cheat themselves with a lying hope? Did they, too, follow an idolon, a false image of reality? If you ask it, we shall make the highest appeal of all. We appeal to the experience of Him who was at the least the greatest Master of the spiritual life, and who claimed not only to *teach*, but to *be* the Way and the Truth.

Anticlimax is a figure in rhetoric in which the ideas gradually rise as if to a culmination and then unexpectedly fall at the end. "It produces," says Webster, "a ridiculous effect." And what could more aptly describe this peroration? Truth is one, all the different branches of religion must be compared, we must learn by experience and beware of mental idols, the science of the Soul is the great science of the future. Does not this lead up to the ideals of Theosophy? What more could a Theosophist say? Yet down we come to the old Gospel of medieval tradition, appeal is made to the saints of the Bible and to the

church; and the final appeal of all is to the experience of a certain one who historically is a very doubtful quantity, and who (when dissociated from historical relation) loses his exclusively Christian character.

As has so often been said, it is impossible to make the churches bestride two such divergent steeds as that of Theosophy and that of dogmatic tradition, or to make the whole universe revolve around the idea of Jesus Christ. What is true and efficacious in this ideal is universal and not merely Christian, for "Truth is one," and what is *exclusively* Christian in it is neither universally true nor efficacious by the same rule. The preacher, it will be noticed, speaks of his calling as "we who are entrusted with the proclamation of religious truth." This is a very weighty claim to make after what he has just said about religious truth. Anyone who stands up and says: "Religious truth is all this and all this and much more besides, it is the highest and best thing in life; and *we* have been entrusted with its proclamation"—such a one takes upon himself a most grave responsibility and evinces no small self-confidence. In short, how will the church make good its tremendous claim? Let us look around at the churches today and see! Now is their opportunity; the world waits in expectation.

The preacher speaks in the name of the ministry, and it is with that in whose name he speaks that we are concerned when we ask: "Have they the right to say what is here said about religious truth? How do they dare to say it?" Such lofty words, unless followed by immediate and corresponding action, become—what *do* they become? Should not such words be resounding from every pulpit in the land? Should not the people in every town and village be told that Christianity recognizes all religions and bases itself on the eternal Truth in the human Soul? Should not the churches make a great and mighty effort to purify themselves of all their idols and reorganize their whole machinery on the broad and lofty pattern laid out by this eloquent clergyman? Or will they leave it to Theosophy? Well may people ask, "What is Christianity?" As far as one can make out, it is several different things according to occasion. But it will have to choose, for it cannot much longer hold together under the strain of trying to keep up with the times without abandoning its ancient claims. T.

The Calculating-Rule

IT is pointed out in the *Zeitschrift für Vermessungswesen* that shortly after publishing his trigonometric logarithm tables in 1620, Gunter placed logarithm scales on wooden rules and used a pair of dividers to add or subtract the logarithms. In 1627 these scales were placed by Wingate on two separate wooden rules sliding against each other, thus dispensing with the need of dividers; and in 1657 Partridge brought out the slide rule in the present form. It will no doubt be a surprise for archaeologists when they find that ancient races had also their calculating-sticks, and that among their Eastern descendants are said to be some who perform the most amazing calculations of astronomical revolutions, cycles, and eclipses, by the aid of a simple instrument of this kind. STUDENT

Responsibility and Opportunity

Ten thousand school children in Chicago are insufficiently nourished, some live constantly on the verge of starvation and many are not sufficiently clad to keep them in a healthy condition, according to a report made to the board of education Thursday. . . .

Many parents were found to sleep so late that their children went to school without breakfast.

In one house where the father was out of work and the mother sick, five children were found to have lived three days on dry bread and tea. In another house six children reported they had lived on one meal a day. Another mother employed as a seamstress said she supported her four children on \$2.50 a week. Numerous pupils reported inability to attend school because of the insobriety of their parents. "Every afternoon I have to hurry home from school to get the dinner," declared a pale-faced little girl of 12 years. It was discovered she was burdened with the household duties for a father and five other children.—(From the Press)

EXTREMES meet; liberty can run to tyranny. People would be glad of a swing of the pendulum towards restriction and discipline, in order that a truer liberty might be attained. All need help, the deprived parents, as well as the wronged children. Those in positions of authority need help, for they know not what to do. The charitable need help, for they do not see how to help.

All this horror is the outcome of selfishness, a snake that is cherished in many bosoms. Resolve to kill it out from your own. Thus you will create a little center of health and good, which will spread out; knowledge will come and opportunities will present themselves. The world needs unselfish people; train yourself in it. Begin where you find yourself and your sphere of action will soon expand. You cannot do everything, but you can do much—your share, your duty. E.

New Uses of Ozone

IN a German contemporary it is shown that comparatively small volumes of carbonic-acid gas, with a diminished amount of oxygen gas, lead to feelings of discomfort, and if these conditions are somewhat intensified, death results. There is no actual proof of the existence of alkaloids or toxic matters in the breath, but if the surrounding atmosphere is laden with watery vapor, and there is also a considerable rise in temperature, it leads to headaches and fainting-fits. For thorough comfort each human being needs 1130 cubic feet of fresh air hourly, with not more than one-tenth per cent carbonic-acid gas. In order to avoid drafts the air in rooms should be renewed three times hourly. The bad conditions often prevalent in barracks, schools, and between decks on board ship, where ventilation is apt to be neglected, are of such nature that it is not sufficient to employ means for disguising the bad smells found to prevail in such cases, but steps must be taken for the removal from the atmosphere of those substances which give rise to such odors. For this purpose the use of ozone is advocated, and Sir William Ramsay has found that with a new form of apparatus which has been devised, ozone can be produced at the low cost of about 85 cents per pound. The use of this apparatus, when tested on an emigrant ship where 182 women slept in a very stuffy cabin, gave very good results. At an ozone plant in Philadelphia, water having 562,000 germs including disease-germs, before treatment, had only 25 after, with no disease-germs. J.

Art Music Literature and the Drama

Millet, the French Painter and Philosopher

THROUGHOUT history we see masterful natures springing from the most primitive and unlikely origins to the leadership of men or nations. There is something in privation and the hard struggle against the elemental forces that actually develops the power in such natures, for, under circumstances which stupefy or brutalize weak characters, in them the fire of genius presses onward. The impetuous soul grasps the situation swiftly and dominates the apparently hopeless conditions, bending them to its service. France has produced many such heroes, for instance, Joan of Arc, the marvel of those ages.

In the history of art, a more brilliant genius, a deeper thinker, or a finer character, would be difficult to find than Jean François Millet, the French peasant-painter (1814-1875). His life is an inspiring example of the supremacy of the soul over circumstances. Innumerable difficulties were all marshalled against him, and when, at last, intelligent appreciation and relief from harassing care arrived, his health gave way and he died before he could enjoy the fruit of his struggles. But it was during the terrible lifelong fight for bare existence for himself and his loved ones that his marvelous insight into so many of nature's secrets was perfected, that his strength was drawn forth, and the series of glorious pictures created which are now celebrated the world over. The story of his career touches the feelings like a majestic epic, reminding us of the irresistible working of Nemesis in Greek drama. His pictures, which now fetch tremendous sums, would not sell when he painted them, but he had a message to deliver and he could not fail till he had done so; therefore the world is richer in thought and beauty. He has left some letters and notes showing his high aims and the clear perceptions of the fundamental realities of the life he wished to express through the medium of art.

Though supreme in technical acquirements, a fine colorist, and a master of composition, he was never misled by the narrower interpretation of the phrase "Art for Art's sake." An exemplar of the highest qualities in art, a lifelong student of the "old masters," particularly Michelangelo, and of the ancient Greeks, he always insisted that "Art is a language, and a language is made to express thoughts." He adds: "In art, there must be a governing thought expressed eloquently. We must have it in ourselves and stamp it on others, just as a medal is stamped. Art is not a pleasure-trip; it is a fight, a mill that grinds. Pain is, perhaps, that which makes the artist express himself most distinctly"; and also: "The artist must have a high and definite aim. Without it how can he make efforts to reach a point of which he does not even suspect the existence?"

Brought up among peasants, son of simple, devout peasant parents, experiencing the hardships and toil unavoidable in wrestling from Nature the necessities of life, never losing touch with the classes who live nearest to Nature, he breathed the atmosphere of the funda-

mental truths of existence. So he writes:

We should be saturated and impregnated with Nature, and think what she wishes to make us think. Truly she is rich enough to supply us all; and whence should we draw, if not from the fountain-head? Men of genius are gifted with a sort of divining-rod; some discover this in Nature, some that, according to their kind of scent. . . . They may say, "If you give yourself up to Nature, as we have done, she will let you take away of these treasures according to your powers. You only need intelligence and good will. . . . With those who do not love her and who do not trust her she does not let herself be understood and retires into her shell. . . ." We can start from any point and arrive at the sublime, and all is proper to be expressed provided our aim is high enough. Then what you love with the greatest passion and power becomes a beauty of your own, which imposes itself upon others.

Speaking of the unity in all nature he says:

"GOING TO WORK"
BY JEAN FRANÇOIS MILLET

MY Soul is like an oar that momentarily
Dies in a desperate stress beneath the wave,
Then glitters out again and sweeps the sea.
Each second I'm new-born from some new grave.
—Sidney Lanier

I try not to have things look as if chance had brought them together, but as if they had a necessary bond between them. . . . I profess the greatest horror of uselessness (however brilliant) and filling up.

Millet was well read, making the Bible and the classics, particularly Vergil, his constant companions, but he never overlooked "the gulf between what is reasoned and what is felt," and the sincere, unaffected pathos of the peasants' ceaseless round of laborious toil which appeals to us so strongly in his works, came straight from his compassionate heart. He realized the underlying spiritual basis and import in the everyday, the common, things, and he would never weaken his types by "prettyfying," as he calls it. Speaking of the *Woman Fetching Water*, he says:

I have avoided anything that can verge on the sentimental. I wanted her to do her work naturally and simply, as if it were part of her daily labor, the habit of her life, without thinking anything about it.

To read the biography of J. F. Millet is to receive a mental tonic, for it is the record of a strong, pure, and withal, human man, tried to the uttermost and subject to temptation, but in whom the soul conquered throughout the whole journey. IDRONE

Color Symbolism

IT is curious to see how writers on this subject seem to think that color symbolism is a device invented by those who use it, as an artificial aid to the expression of an idea. They seem to think that color is an *accident* in nature and used by the artist according to his mere fancy, unless, indeed, according to some set formula, in which case it is called symbolic. But surely it must be evident that color and form in nature are direct expressions of the inherent qualities of things; being the results of definite causes. And as similar causes tend to produce similar results, so each color and every form is a natural symbol of the qualities that gave it birth.

Symbolism is the visible expression of the invisible qualities of things, and nature is the great symbolist in all her work, producing her creations according to law, which is the fitness of things.

Man, in moments of high inspiration, is an intuitive symbolist; but when the inspiration is lacking he tries to supply its place by formulae or rules, which are obtained by an analytical study of nature and by a co-ordination of the results of this study. Thus it may often happen that a man of genius, trusting to the light of his intuition, produces works of true symbology, while he may possibly be entirely unconcerned with and even perhaps ignorant of the rules of symbolism invented by others. Such a man may declare that he is not a symbolist, and, using the term in the sense in which the materialist uses it, he is right, but only in that sense for he cannot avoid symbology if he attempts to express in visible or audible form any idea; he will certainly endeavor to use the colors, forms, or sounds, that are most appropriate to his purpose — and this is pure symbology.

It is unfortunately true that most people *try* to keep their intellect and their intuition in separate compartments and, more often than not, encourage the development of only one of these faculties, despising the other and allowing it to become weakened or lost altogether; but a well-balanced training would preserve both in full vigor, and then the intellect would appreciate the revelation of the intuition, and gathering the experiences so gained and correlating the results, would arrive at an intelligent perception of the Laws of Nature and not be bound by mere rules that are too often parodies of those laws. STUDENT

A DESPATCH from Athens states that Prince Nicholas of Greece has recently finished a symphony for flutes after *motifs* found in flute compositions of Frederick the Great. The Prince is an accomplished flutist, as was the great Frederick of Germany, and often plays in private recitals and musicales. STUDENT

ALTHOUGH brotherhood is, to begin with, a human thing, there are vaster interrelationships for us than those which are comprised within humanity; and when once we shall have set our own house in order, that is to say, wiped out our inter-human jars and differences, we shall begin to find what relations we have that are neither human nor less than human, but elementally divine and universal.

With the ancients these were spoken of as the Gods, and antique religion and science were woven into certain festivals and ceremonies, through which, as was thought, the life of the Gods might be approached, tasted, and to some extent assimilated. Now-a-days we are all for personalism; every "I" among us is a central body with planets, but no sun; the topmost and innermost of a world. To imagine a greater identity encompassing this one, would be a nightmare, a sense of starvation to most of us, instead of the huge and sunlit inspiration it should be. The truth is we hold our selfhood far too dear, and have not the education to understand the value of the currency offered in exchange for it. What is the beauty of the sea, the elemental royalty, the magnitude, the flowing blue and purple? Can we afford to lay it aside, and give it no place in our schemes and philosophies? Is there nothing in it to which we are akin, or in the mountains; or is it that some generous, some magnanimous power, such as Poseidon and the Mountain Gods, has faded out of our minds during the ages, and we are left crippled and incomplete for lack of them?

In the Golden Age it was all different, and they understood how, in glorifying the Gods, they were really drawing near to their own deeper greatness. *The corn, the vine, and the young flowers: Demeter, Iacchos, and Persephone—they were in me and I was in them, and in approaching them I was dissolving the gall of selfhood, I was untying the strained*

The Gods and the Golden Age

"**M**ANY are called but few are chosen," because they would not allow it. . . . Some of the unmarked and unchosen are those who walked a long distance to the threshold, but stopped too long to hunt for the failings and the sins they were sure some brother pilgrim had, and then they went back farther and farther, building walls behind them as they went. They were called and almost chosen, the first faint lines of their names were beginning to develop in the book of this century; but as they retreated, thinking indeed they were inside the door, the lines faded out and other lines flashed into view.

—William D. Judge

tangles and knots of my personality; or, you may say, making myself as large as all Greece, as all the realms where these three Bright Ones reigned. Religion in those times must have meant such thoughts as that, and the big, altruistic life that would flow from them. If the people had no individuality save that of their race, how fortunate they were in having so much greater individuality than we have, in whom it is merely of these personalities.

One can imagine how the labor of agriculture in those days would not have tended ever to level man with the oxen that drew his plough, but would have constantly clothed him in divinity. Who knows what may have come to the ploughman as he turned at the end of his row? He was walking with Juno, with Athena; he may have heard some communication from Demeter through the life-thrilled, broken clouds beneath his feet, or Apollo may have leaned down from his chariot and whispered some secret in his ear, which suddenly revealed to him—

Ah, what! What is the thing to be revealed, the final excellent thing for man, for which we ourselves are striving, and the whole of creation waits? We can but say *Our own Divinity*,

but how are we to realize that all happiness and power and sacrifice are compounded in the thing which lies behind those words. *Shall I fly to the far stars, or cast myself into the uttermost depths of the sea—behold Thou art there also.* In every moment and atom this familiar glory, this treasure, this infallible thing, this ultimate sword in conflict, and salve in all journeyings.

There never was a time, perhaps, when Saturn's Italy was the whole world; there were other people beyond for whom the Golden Age men were responsible; they were there in training, perhaps, either for other lands or for times foreseen; storing themselves up with spiritual sunlight, as broken glass on the hill-sides becomes empurpled in time with elements from the soil and the sun. So it is that wherever the Golden Age is loved, and the old purpose again insistent, namely, to send out the force that saves the world, to prepare to carry it out, to undergo discipline for that end—so it is that there the sea and the sky and the mountains and the dear, warm hillside itself, cease to be merely "natural features," externals; and become intimate and a part of one's own being, contributing each its own currents and tone to the consciousness. So that although all beauty is crowded upon one, and wide elemental thoughts of the long past and the long future and the eternal purposes sweep up like the tides, there is no being lost, as there might so easily be, in a futile dream life. All things are translated into the energy by means of which duty is done, and nothing of the brightness and inspiration is lost, because nothing is hoarded and there is no waste. The bright God-life is being brought back into the world—and this even now. One has but to feel the pulse of life in Lomaland, one has but to realize the inspiration that is born of selfless joy, to know that the Golden Age is even now heralded from the heights.

STUDENT

Woman in Archaeology

NO account of woman's work in archaeology, however lengthy—and it would have to be lengthy in the present age with so many women winning honors in this field of research—could be considered complete without mention of Mrs. Zelia Nuttall, who has been exploring the Pyramids of the Sun and of the Moon near Teotihuacan, some twenty-five miles from the City of Mexico.

The first work which served to bring Mrs. Nuttall's name before the public was the publication by her in 1886 of a brochure on "The Terra Cotta Heads of Teotihuacan." Not long after she was sent to Russia on a scientific mission by the University of Pennsylvania and for her scholarly careful work there received honorary membership in the Pennsylvania Archaeological Association.

Her latest book, however, is considered her most valuable contribution to science. It was published by the Peabody Museum of Harvard University (of which she was made Honorary Special Assistant in 1887), is entitled *The Fundamental Principles of Old and New World Civilizations*, (issued in 1901) and grew out of a little monograph on the *svastika* which she started some years before but in the doing of which she found herself entering an immense and unanticipated field of research. The book mentioned is the outcome of that monograph and of thirteen years of work in general research.

Mrs. Nuttall's remarkable persistence in following out any line of research once it has been begun has resulted in a number of valuable discoveries, not always of the nature anticipated. While rummaging one day through an obscure private collection in San Andres, she discovered what she knew must be the very feather work fan and shield (the finest existing, it is said) which had been sent to Charles V from Mexico by Cortés and later lost sight of. This was verified and led to many similar discoveries in Spain and other countries. Among these is what is known as the "Hispano-American Manuscript" (published by her under the auspices of the University of California) and later (in an English collection) the celebrated *Codex*, now known as the *Codex Nuttall*, which is believed to be the best preserved extant record of ancient Mexico.

Among other subjects investigated and reported on by Mrs. Nuttall are the "Ancient Mexican Calendar," "Sorcery, Medicine, and Surgery of ancient Mexico" (her monograph on this having been published in several languages), and "A Note on Mexican Folk Lore,"

in recognition of which the American Folk Lore Society bestowed upon the author honorary vice-presidency of the society.

Mrs. Nuttall's recent appointment by the University of California (in pursuance of the purposes of the Ried-Crocker fund for archaeological research) has recently taken her to Coyoacan, near Mexico City and she has made her headquarters in the old palace built by Alvarado, Cortés' adjutant. As one result of her discoveries there is to be built a local

the archaeological lore of Old Mexico known in most of the European countries in a way that would have been impractical, if not impossible, had she not known their languages. She is still a young woman, dainty and feminine and not averse to wearing pretty gowns, yet with this keen, well-attuned, deliberative *other* side to her nature which has made her work so valuable to the world. Yet the Theosophist, particularly one who is familiar with H. P. Blavatsky's writings on the civilization of the ancient Mexicans, the Incas of Old Peru, etc., finds in her writings great limitations through lack of that larger knowledge of prehistoric life and peoples that, today at least, only the study of Theosophy can give. The world does not yet realize the fulness of its debt to our archaeologists, nor do the latter as yet (with a few exceptions) realize the limitations of their own knowledge, limitations that a study of the writings of H. P. Blavatsky, William Q. Judge, and Katherine Tingley would reveal and largely do away with.

H. H.

Jottings and Doings

(From a Student's Note Book)

In the London *Graphic*, Sept. 5, 1908, Lady Violet Greville has this to say upon the modern woman's extravagance:

Whether great luxury is good for trade or a sign of a decadent nation is too big a question to be discussed in these columns; but there can be no doubt whatever that women of all classes spend more money on dress than they are justified in doing, especially when there is so much poverty and distress among the working classes. And these also are to blame in copying their wealthier sisters. They will put all their earnings on their backs and save nothing for a rainy day, while the middle-class woman ruins her husband in her attempt to rival the millionaire. . . .

Surely, now that women have announced themselves as rivals and equals of men, it is time they sounded a new note of earnestness, of simplicity, and of common sense. . . . What kind of health, nerves, and morality are the children of modern mothers likely to possess? The race after amusement, dress, fashion and pleasure is as exhausting and as exacting as the Marathon race, which nearly lost the life of the well-trained, eager athlete.

And with all this wild search after excitement no one can say that we are happier. We are pessimists. Our music, our art, our books are morbid and depressing; our very countenances have changed. In Chicago, recently, some albums of photographs of the pioneer citizens of forty years ago were opened during a temporary removal. All the faces in these photographs were those of cheerful, pleasant, humorous men, full of a simple courtliness. The life of "hustle" has changed our very features. Look round in the street. Rich and poor have a discontented, unhappy, careworn, worried look. Seldom does one see a smiling face, even among the young; kindness . . . has entirely faded from the features.

THE TRIUMPH OF FERDINAND III

PAINTING BY GIOVANNI BATTISTA TIEPOLO. METROPOLITAN MUSEUM OF ART, NEW YORK

museum for archaeological finds, at the foot of the ancient Pyramid of the Sun. Almost no end of remarkable finds have already rewarded her work in excavation.

Mrs. Nuttall is a native Californian, her mother an American, her father an English physician, for some eighteen years a Fellow of the Royal College of Ireland. When he retired from practice he took his son and daughter to Europe that they might learn the different languages, a wise departure and one which has immensely increased the usefulness of both to science. Mrs. Nuttall herself is proficient in seven languages, and has made

A Modern Conquest

ON the kitchen shelf stood a bowl heaped with large clear lumps of washing soda, and just under it hung the kitchen salt box. Salt and soda! There they were, close together, ready to be used. Far removed from poetry and romance they seemed, yet in reality a history in which imagination and heroism are shown warding off a great international danger, unites these two willing servants of the household. More than this, if their humble comrade, soap, is included in the story, then the interest stretches far back into prehistoric times.

The ancient Romans had no soap. The elder Pliny relates that when the Romans penetrated the northern forests, they found the barbarians using a healing salve or ointment made by cooking together wood-ashes and fat. The Romans adopted this medicament and used it for several centuries. Gradually it was found out that besides its healing properties it had other virtues. It could be used for cleansing. This must have appealed to the Romans, who loved cleanliness; so it grew in use.

Wood-ashes boiled with fat makes a kind of soft soap, a very poor kind, we should think. The use of soap for cleansing increased however, until as early as the year 1000 A. D. there was a flourishing soap industry in the south of France, whence it spread over Europe. Other industries were also growing apace. Many of these, like soap, needed wood-ashes for a starting point. These wood-ashes were not always used raw. It was found more effective to dissolve them in water, and then put this liquid in large pots and boil it down until only a thick residue was left in the bottom of the pot. This was commonly called *potash*. The demand for potash was enormous; the soap makers needed it in great quantities; so did the glass makers; the dyers needed it and so did the weavers. The demand increased with the passing centuries.

There was another kind of ashes that could be used for soap making besides wood-ashes. A sea-plant called *barilla*, found on the northern coast of Spain, furnished this. The ashes of *barilla* had a peculiar quality—when boiled with fat they made hard soap, whereas wood-ashes made only soft soap. To make this soap hard, salt had to be added. Naturally the ashes of *barilla* were greatly in demand. The supply, however, was so small that wood-ashes continued to be used in ever increasing quantities.

About the middle of the eighteenth century the great importance of forests to human life was found out. If the forests are destroyed, flood, famine and disease follow. The magnificent forests of Europe were not only being used to furnish building material and fuel, but were being sacrificed to furnish the enormous amount of potash needed in the industries. Something must be done. It was as if a terrible monster threatened to destroy the people of many countries of Europe.

GOLDENROD

Frederic Fairchild Sherman in *Appleton's Magazine*

UPON the hillsides, hand in hand,
The princesses of Fairyland,
Their wealth of golden hair undone,
Are dancing in the autumn sun.

Science, that had discovered the danger, was called upon to put an end to it. The French Academy faced the situation. A substitute for wood-ashes must be found. The scientists thought of the *barilla*. Here was a plant that extracted from the salt sea-water the valuable substance that could be used for making both soap and glass. The plant must change the salt that it drew in, into this valuable substance just as the trees extracted from the ground the substance that made their ashes valuable. Then the French Academy spread the wings of the imagination. Could they not discover the secret of *barilla* and make this valuable substitute for potash directly from salt, instead of getting it by way of the sea-plant? The substance in question was what we know as soda. So the French Academy offered a prize to the one who could turn salt, which was so abundant, into soda, which was so rare, and thereby save the precious forests.

The problem did not seem very difficult, because salt and soda are really first cousins. They have the same family name. Salt is a compound made of a metal called sodium and a gas called chlorine. Its real name is chloride of sodium. Soda is a compound of sodium, carbon and oxygen. Its real name is carbonate of sodium. The kinship is plain. The problem to be solved was this. To make the metal sodium in the salt release its hold upon the chlorine gas, and instead to catch the hands of the friendly carbon and its associate oxygen. Thus salt, or chloride of sodium, would become soda, or carbonate of sodium.

This simple secret of the sea-plant puzzled the minds of the learned men of England, France and Germany for over twenty-five years. It was finally worked out by a Frenchman, M. Le Blanc, during the awful time of the French Revolution. The times in which he lived increased his difficulties; when his patron, the Duc d'Orléans fell under the guillotine, his factory was taken away from him. His work was not resumed until there was a great national demand for soda, when his factory was given back.

M. Le Blanc won the secret of making soda from salt by fighting every inch of the way. It was as if nature had set a hundred-headed monster to guard it, in order to test the right of man to possess it. In putting M. Le Blanc's process for making soda into practice, there was another army of difficulties to be subdued by the men who came after him. But one by one they were conquered, and a strength, knowledge and skill gained thereby which armed them for far greater work in the future.

M. Le Blanc was an international benefactor.

Once for all he showed how science could be made to serve nature and man. By the manufacture of soda in great quantities, the destruction of forests was, in a measure, arrested. Glass became so cheap that now even the poor man's dwelling has windows, opening it to the light. The use of soap became a necessity instead of a luxury. Soft woolen garments replaced the coarse stiff ones, since washing with soda cleanses the wool and makes it soft. By means of soda, wood is converted into paper, and dyes, perfumery and medicines are made. The work of the household is lightened by it.

More than all this the manufacture of soda furnished a new battlefield, where men could use their strength of mind and heart in serving mankind instead of destroying it.

UNCLE OSWALD

Indian Names

THOUGH it is more than eight hundred years since the conquest of Saxon England, a rich inheritance of Saxon words has come down to us, while in the short time since the dispossession of the red men in America a valuable language-gift has been cast aside as though worthless.

Niagara was called *Nee-ah-gah-rah* by nearly all the American tribes and it meant "thunder-water" or "broken-water." *Itasca* is now believed not to be Indian but a combination of the last two syllables of *veritas* and the first of *caput*; and *Siwash*, which sounds so much like a true Indian word, is but the savage way of saying the French word *sauvage*. *Canoe* supposed popularly to be French *canot* turns out to be more probably a real Indian name, after all! Poughkeepsie is the longest and least accurate of forty-two spellings of the old word *Apo-keep-sink*, a safe and pleasant harbor.

Seneca is a deformed survival of the Dutch word *cinnabar*, vermilion—red Indian! *Erie* is wild cat; *Mohawk*, live-food eaters; *Iroquois*, Erie people.

Squaw, *papoose*, *wigwam*, *wampum*, *moccasin* are all Algonquin words which the white people have taught some of the Indian tribes to use in the place of other names they once knew. Indian file, Indian summer, Indian giver—do you know better ways to express these particular meanings? *Moose*, *caribou*, *tomahawk*, *succotash*, *hammock*, are Indian words, and so also is *Tammany*, the modern survival of *Tamenend*—a Delaware chieftain.

When the Indian had no tobacco, he smoked weeds and the bark of certain trees, and these substitutes were called *k'nick k'neck*. Now you know how we learned the word *knick-knack*.

These are all lowly names, but the Indians had a wonderful gift of attaching appropriately beautiful names to places and people. If a locality was adapted to corn-raising the name suggested the fact. *Muskego* was the place of cranberries; *Minnehaha*, laughing water; *Saratoga*, miraculous waters in a rock; *Jamaica*, abounding in springs.

STUDENT

THE CHILDREN'S HOUR

OH! WHERE DO FAIRIES HIDE THEIR HEADS?

Thomas Haynes Bayly

OH! where do fairies hide their heads,
When snow lies on the hills,
When frost has spoiled their mossy beds,
And crystalized their rills?
Beneath the moon they cannot trip
In circles o'er the plain;
And draughts of dew they cannot sip,
Till green leaves come again.

Perhaps, in small, blue diving bells
They plunge beneath the waves,
Inhabiting the wreathed shells
That lie in coral caves.
Perhaps, in red Vesuvius
Carousals they maintain;
And cheer their little spirits thus,
Till green leaves come again;

When they return there will be mirth
And music in the air,
And fairy wings upon the earth,
And mischief everywhere.
The maids, to keep the elves aloof,
Will bar the doors in vain;
No keyhole will be fairy proof
When green leaves come again.

A True Story

FATHER Stork stood on one leg at the end of the tiled roof and looked proudly out over the village. His head was held up straight—as you hold yours at drill time—for that morning the babies had broken through their eggshells, and he felt he had a new duty in life. They were his first little ones too.

"LOOKED PROUDLY OUT OVER THE VILLAGE"

Just then Mother Stork flew up with some food for the little ones, and he went over to the nest to watch.

"Do you think they will ever fly?" said he. Mother Stork raised her beak scornfully.

"What a question! Of course they will fly. Why shouldn't they?"

"Look at their wings. They are not made right. They are too short and lumpy. The

feathers are absurd. I guess they hatched out too soon." And Father Stork moved around the nest of sticks he had so earnestly built, examining his children anxiously.

"I don't see how they are ever going to fly with those wings," he repeated mournfully.

Mother Stork laughed. "Just like a male thing! You expect everything all at once. They must be taught, just as you and I had to be, so long ago that we cannot remember it. Give them time to grow."

But Father Stork was unconvinced. "We came here from Egypt this spring," said he, half to himself, "and we must go back before the winter comes."

Mother Stork answered briskly: "Of course we must, and take the children with us too. Now you go and get some food for them. Be useful, and don't worry. It's like humans."

When he had gone, Mother Stork laughed cheerfully to herself, for her heart told her what she must do, and how her helpless little ones would be ready for their long autumn flight before the time came. She had no doubts at all, partly because she was not a human and knew how to obey the voice of her heart without questioning, partly because she was a mother.

"SOON CAME BACK WITH SUPPLIES"

Father Stork soon came back with his supplies, looking more cheerful. As soon as his beak was empty and the four gaping mouths satisfied, he said:

"When I was on my way to the marsh I heard some human children talking about us and they said our babies would soon fly. They have seen it happen before in other families."

Many days later the mother coaxed her little ones out of the nest on to the roof.

"Now you must watch me," she said, "and do what I do." She flew gently away, circled round and came back to them.

"Oh, we can't do that. We shall fall."

"Try."

"We daren't."

"Try."

"We've never done it before."

"Try."

But they wouldn't try that day, and Father Stork said gloomily "I told you so!" and went over to the far end of the roof and thought many foolish thoughts. The wise mother was silent, knowing that time would tell, and next day she tried again. This time they were not so frightened and flapped their wings timidly and jumped up a little way from

the tiles, but they would not trust themselves in the air.

Lomaland Photo. and Engraving Dept.

"JUMPED A LITTLE WAY FROM THE TILES"

After many lessons from the patient mother they tried; and as soon as they tried they began to learn. Father Stork soon lost his doubts and began to join eagerly in the lessons and soon the whole family could fly to the swamps where the meals were to be found.

One day a human caught one of the children and he was lost for two hours. When he came back he had a bracelet on his left leg with curious marks on it. None of them could understand what it was for or read the marks. This bracelet did not hurt the little stork, nor prevent him flying, and he soon grew quite accustomed to it—and even proud of his ornament.

One day Father Stork said, "Winter is coming and we must go somewhere where it will be sunnier than here. If we stay here the frost and snow will kill us."

So they flew away, father and mother and four children, now grown big and all strong fliers. Generally the storks go to Egypt, but this family went another way.

The rest of the story is told by an English newspaper.

A man in Fort Jameson, Rhodesia, South Africa, has shot a stork on whose foot was a light metal ring bearing the date July 5th, 1907 and the name and address of a naturalist in North Germany. Though these birds have been long known to migrate in great numbers to Egypt, it is quite a new discovery to find that they fly so far. The distance is approximately 4000 miles.

And Father Stork thought his babies would not be able to fly. Has anybody else any doubts?

PERCY VERENCE

Lassie and Laddie

THEY were two collie dogs and lived with their master on a ranch near Seattle. One day Lassie disappeared. No one else found her, but Laddie did. She had fallen into an old well and of course could not climb out without help. Laddie could not get her out of the well but he carried food to her every day, thus saving her life.

For over two weeks he did this, every day making a journey into the woods where the old well was and dropping food down to the imprisoned Lassie. At last his master noticed his long absences and decided to follow him; so when Laddie started off with a bone in his mouth, his master went too, and found the missing dog in the well. A. G.

THE SECRET DOCTRINE

THE
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogogenesis
Vol. II treats of Anthropogenesis

IN PREPARATION

Postage prepaid - - - - \$10.00

Primitive Man in Europe:

New Discovery
Supporting
Theosophical
Position

ONCE again the scientific world is confronted with a problem only to be solved by Theosophy. A prehistoric skeleton of the European Stone age, with a cranium like that of the famous skull found at Neanderthal, near Düsseldorf, in 1857, has just been discovered in a grotto of the valley of the Vézère in Southern France. When the Neanderthal skull was found an unsuccessful attempt was made by some anthropologists to place it in a special class below the human. Criticising this, the eminent French anthropologist, De Quatrefages, writes in *The Human Species* (1890) as follows:

The epithets *brutal* and *simian*, too often applied to the Neanderthal cranium, and to those which resemble it, the conjectures made with regard to the individuals to whom they belonged, might lead us to think that a certain moral and intellectual inferiority was naturally connected with this form of cranium. It can easily be shown that this conclusion rests upon a most worthless foundation.

At the Paris Congress, M. Vogt quoted the example of one of his friends . . . whose cranium exactly recalls that of Neanderthal, and who is nevertheless a highly distinguished lunacy doctor. . . . The skull of Saint Mansuy, Bishop of Toul . . . even exaggerates some of the most striking features of the Neanderthal cranium. The forehead is still more receding, the vault more depressed . . . the skull of Bruce, the Scotch hero, is also a reproduction of the Canstadt type.

The Neanderthal skull is incomplete, lacking the face; but the newly found specimen is fairly perfect, even the teeth being preserved.

According to the prevailing scientific opinion of the past half century, man originated a few thousand years ago—perhaps twenty, perhaps more—from a primitive, semi-animal state, when he was

Thewed like the aurochs bull,
And tusked like the great cave bear

and, certainly, many of the oldest skeletal remains of early man display greater evidences of muscular development than of mental capacity. De Quatrefages was one of the few eminent biologists who considered the positive evidence available quite insufficient to establish the Darwinian hypothesis of the descent of man from a speechless arboreal ape-ancestor. His belief was that the only truthful answer a cautious scientist can give upon the problem of man's origin is, "I do not know."

Evolution, according to Theosophy, is, above all things, the unfolding of the innate powers

of the soul through long and varied experiences in physical and other forms. Reincarnation of an enduring principle, the soul, is a necessary part of a real Evolution—otherwise what is it that evolves, the *vis a tergo*? Theosophy proves that the origin of man is not a simple question, that it has not been an uninterrupted advance from a comparatively recent "ape-ancestry"—a short upward march from the brute to the philosopher. Humanity has passed through many cycles of barbarism and civilization; of the present one only a few thousand years have elapsed. The man of the Stone age in Europe was a degenerate relic of a greater past, and, contemporary with him, higher civilizations were still existing in other quarters of the globe. The information brought forward by the Teachers of Theosophy has so greatly enlarged our conception of the nature, origin, and destiny of man, that the speculations of the modern materialistic evolutionists are seen to be nearly as limited in their scope and as inadequate in their logic as the old-fashioned theological interpretations of *Genesis*.

The earliest races at present known to anthropology were no doubt primitive enough in their method of living, but they were at least as human as the Andaman Islanders or the Veddahs of Ceylon, today. In explanation of their long continuance at a low level of culture, H. P. Blavatsky says in *The Secret Doctrine* that their egos—for in the ego lies the evolutionary impulse—were suffering from the downward tendency of Karma, which a long course of evil-living in the later Atlantean period had brought upon them. It was long before the clouds lifted and an approach to civilized life became again possible for them. Though their brain capacity was large their bad Karma inhibited them from effectively using the organ of mind provided by heredity.

If Reincarnation, even considered as simply a hypothesis, is rejected, how can we explain the possession by savages of brains quite as capacious as those of civilized persons?

Low as the cranial arch of the Vézère skeleton may be, prognathous its jaws, or clumsy its thigh-bones; and however it may differ in some details from the highest type of man, a surprising thing is reported of it: *the canine teeth, instead of being tusk-like, are small, one abnormally so!* Now, therefore, that we have at last a fairly perfect skull of "primitive" man to examine, the supposed gorilla-tusks, which, according to theory, should have been well developed if the human race had

A Wider and
Nobler View
of Mankind

Reincarnation
the Key to
the Mystery

only just emerged from the brute, are a myth.

The Theosophical claim that mankind has been on earth for almost countless ages preceding the European Stone age, is distinctly strengthened by the discovery of these non-animal canines!

A Consistent and Purposeful Evolution

The published report gives a touch of human interest in these words:

The most interesting thing in connexion with this discovery is probably the fact that here, for the first time, a funeral in the early palaeolithic period can be traced. Under the head of the dead man flat pieces of flint had been placed with obvious care and tenderness to fit into the spaces between the body and the place on which it was laid.

Palaeolithic man executed the remarkable incised drawings upon reindeer antlers, which show greater artistic feeling and more careful observation than many civilized productions; some would not disgrace a skilful artist of today. Neolithic man, his successor, did not possess this aesthetic faculty. The earlier race, the Palaeolithic, had disappeared before the advent of the newer, and in connexion with this H. P. Blavatsky throws out a curious hint in *The Secret Doctrine*:

Neanderthal skulls may sometimes point to something else (than a low type of ancestral humanity); to a race of men quite distinct from our (Fifth Race) Humanity. (Vol. II, 724) STUDENT

Loss of the Soul

WHEN the human soul (the *lower man-as*) has broken away (perhaps temporarily, perhaps beyond recall) from its Divine counterpart, the mentality that it has acquired from that high association becomes devoted to the service of the demon of desire, and its faculties become sharpened in proportion as their scope is limited. But such a state is not permanent; it is but the rapid transition to lower levels. The *source* of light being now cut off, the energies that are expended must soon *run dry*. In the case of one who has not entirely lost the connexion with the Soul, a revulsion may take place, in the present life, or a new opportunity be afforded in the next incarnation; when bitter experience may discharge the debt of retributive justice and strengthen the nature by the merciful rod of correction.

In the comparatively rare case of the *lower man-as* (personal ego) breaking entirely away from its Divine counterpart, we get a soulless human whose nature is wholly selfish and whose career is a headlong descent towards annihilation. Deprived of the power of entering the Devachanic rest between incarnations, there is almost immediate rebirth, each time at a lower level than before; and thus we have one of those desperate human wrecks that from time to time appear. But the Law is merciful and the Self long-suffering; it takes consummate and persistent depravity to cause such a final separation; and usually the wayward career is brought to an end by its own bitter effects ere yet the nature is hardened beyond repentance. And here the truth of Reincarnation comes in with consoling balm; for by it we know that though the man may have misspent the whole of a life, there are yet other opportunities before him. And we see that the hard lot of many in this life must certainly be the apportionment of that merciful Law, which has decreed for them

that which was so urgently needed for their correction. Such a reflection should, however, only stimulate us, their comrades, to greater helpfulness, that we may become worthy agents of the merciful and secret laws of life.

The lesson should not be lost upon those who in a spirit of selfishness, or even of heedlessness, are tampering with the subtle forces of their psychic nature; since by such means they may awaken terrible foes. Deep planted in the psychic nature lie the *seeds* of desire, which, stirred to quicker life, may generate psycho-animal propensities strong enough to destroy our moral balance, thus starting us on a path that, however it ends, cannot but be crowned with affliction. STUDENT

Light and Its Physical Manifestation

THE large amount of energy expended in the production of a small quantity of light was commented on by Professor Dewar in a lecture. He gave the following figures for the efficiency of various illuminants:

Percentage of Light	Non-luminous Energy
Candle	2 98
Oil	2 98
Coal gas	2 98
Incandescent lamp.	3 97
Arc lamp	10 90
Magnesium lamp	15 85

This shows how much is still to be discovered.

Light in itself is not material in the usual sense of that word; but it is capable of manifesting itself through physical matter, and the effects thus produced can be estimated quantitatively in accordance with the rules for working out equations involving quantities of physical energy. Scientists are discovering that luminous effects can inhere in grades of matter finer than the ordinary. Not wishing to define light as a substance, they define it as a "form of energy" or a "mode of vibration"; thus, in the opinion of a Theosophist, identifying it with its effects. For the salient question is: What is the cause of that particular mode of energy? And this cause, whatever it may be, is the real Light.

In connexion with radium we are beginning to suspect that there are enormous supplies of latent energy resident in matter—the potential energy of the atom—and that these can continue to supply light and heat for a very long time without exhausting their fount. It may well be asked: Where did this energy come from? But surely there is no reason to suppose that *all* the processes now going on in the universe are running-down processes. May there not be some building-up processes that continually supplement the running-down processes?

The answer of Theosophy to this question would be that the processes of thought are powerful creative energies. Physical science does not touch this domain; it deals with the energy at the point where it emerges upon the physical plane and becomes scientifically measurable. It says that its equations are exact and that all the energy is "accounted for"; and so it is, with the reservation that there is an unresolved factor at each end—namely, the latent energy in matter, from which the kinetic forms spring, and the latent energy into which they finally disappear. So that much can be added to the equation without disturbing it. If $x=a$, we can show that

$x=m+n$, and $a=p+q$, without disturbing the equation. A physicist would say that the latent energy of matter becomes transformed into thermal and luminous energy and disappears again into latent energy. This leaves the whole part of the chain between the disappearance and the reappearance open for speculation.

Perpetual lamps, able to give light indefinitely, are spoken of in old legends. We do not know enough about the resources of Nature to be able to deny the possibility of such lamps, and we must not be dogmatists. This was an alchemical quest, and, like other such, it had also a symbolic meaning. That meaning, in this case, was the quest for a source of perpetual contentment within the mind, independent of all external aids. T.

A Sacred Railway

THERE are a good many sacred roads in the world but perhaps only one sacred railway. To us in the West it is almost as hard to conceive of a sacred railway as a sacred telephone.

This railway is sacred to the Mohammadan mind for several reasons. Starting at Damascus, it runs along the Arabian coast to the sacred city of Medinah and will finally run as far as the still more sacred city of Mekkeh. The line is also sacred because the proposition to build it came from the Sultan, the head of the Mohammadan faith; because he gave the first sum of money towards its expenses; and because all the rest of the necessary funds have come from the glad pockets of the faithful, partly in the form of a stamp tax and partly in that of voluntary donation. The *Scientific American* tells us that two elements which we are accustomed to associate with Turkish proceedings—dilatoriness and official peculation—have been entirely absent. Within four months of the Sultan's suggestion and appeal to his subjects, to their piety and their patriotism, the building was begun. That was August 31, 1900. Eight years have been spent on the 1008 completed miles; though so rough was the country traversed that the line has already needed more than 4000 bridges, tunnels, and viaducts. A German engineer did most of it; but when very sacred territory was reached, his place was taken by an equally skilled and energetic Mohammadan. Moreover, all the laborers were of the faith from that point onward.

To archeologists the line will be if not sacred at least much respected. For it passes through and near regions rich in remains, ancient cities, temples and shrines. And the Sultan does not appear to be much opposed to archeological research. STUDENT

Evaporation

THE U. S. Government is arranging for an extensive series of observations to be carried on around the Salton Sea in Southern California, with the object of acquiring a better knowledge of the evaporation, under varying conditions, from the surface of large sheets of water, and incidentally of studying the subject generally. The amount of water flowing into the Salton Sea is small and can be readily measured, and no water flows out of it, so that the conditions are unique, and the opportunity is not to be lost, for it is anticipated that in ten or fifteen years this sea will have disappeared. STUDENT

Some Views on XXth Century Problems

As It Might Have Been

A SERIES of papers unfolding a suggestion as to a new method of teaching history, was published a few years ago in England. We do not know that the suggestion was ever adopted, but it certainly had possibilities in capable hands.

The method was to imagine certain events, or sets of events, as not having happened and the consequences therefore as not being present. If Napoleon had won Waterloo; if Gustavus Adolphus had been early converted to Rome; if Charles Martel had been crushed; if Hannibal had finally conquered; if Mithraism had outrivaled Christianity. . . .

It was not expected that children should solve the problems; they were to be presented to older students.

The facts of history can be learned by memory, almost without thought at all. *What were the consequences of this or that?* is a question not difficult to acquire the answer to. But, *What would have been the consequences of this or that not having happened?* requires not only a knowledge of what the consequences actually were, but a great deal of thinking.

The situation was frequently saved by the end of its hair. The great crucial events or sets of events were those which just saved the life of our present civilization, so to speak, before that life yet was. All the crucial events are called crucial because something not yet in being—our civilization—hung in deadly peril. After all these hairbreadth escapes, here we are! We agree that it was very important that we should be here; and it was. Bad as is the shell, the little, little, kernel is golden. From it is to spring the tree of a new humanity. But there are very few who see or know anything about that kernel. That corresponds with the reasons why the situations were so critical. The masses that were concerned never saw the real issue, no more than they do now. They were as likely to be on the wrong side as the right. The work had to be done for them, over their heads. The same is the case with all but a very few of those who seem to have been the great figures.

The beneficent and divine force of evolution becomes very complex in its work in human history. The wills of men, used blindly and often wickedly, mostly run counter to it. The passions of men always, and their desires usually, run counter to it. Through this storm it must pursue its way, ever working towards a redeemed and perfect humanity.

Evolution, in the mouth of science, means an observed process; never the work of a divine conscious presence. Yet there have always been a few who know it as such, have tuned their hearts to conscious recognition of it and unity with it, and who work with it. Some do so out of sheer goodness, scarcely understanding why they work as they do; some feel it with greater clearness but have not made it part of their minds; some know it not only with heart but with mind and have its wisdom in what they do. When the balance is weighted with a hundredweight in

either scale-pan, the addition of an ounce will determine the fall. It is by these ounces that the work of evolution has had to be done. At last the best obtainable result has been reached in the storm and darkness of conflicting human wills and passions, and human ignorance. The difficulty was and is that while every man's will must be left free—an essential of his evolution—the upward trend had to be held *against* the momentum of will and passion. In the old story the battle was lost because the blacksmith put a nail loosely into the shoe of the general's horse. The loose nail is the ounce again; a great result from a minute cause. And it is there, in the unobserved nooks, that the law of evolution mostly works. But sometimes those who know of it and know it, more or less (by whatever name they call it) take an open and visible part in the great game. Whether they are workers with sword or with pen, whether like Gustavus Adolphus they alter the map, or like H. P. Blavatsky sow in half unwilling minds the seeds of the message of the law itself, they are supplementing the work of those of whom history says nothing. STUDENT

The Future Congress

SAYS the (London) *Spectator*, commenting on the recent Oxford Congress of Religions: "What it is that gives the history of religions the special attraction which it seems for the time to offer it is not easy to say."

Possibly not for those who think that the whole of divine truth was for the first and only time fully concentrated in one religion hardly a couple of thousand years old and that this is adequately presented twice a week from the average pulpit.

The "special attraction" is divine hunger. The people come away from the pulpits, or stay away from them, hungry. And in their souls they know that somewhere is truth that will feed them.

There are two or three plays now running, and two or three novels in the market in which the person of Jesus Christ is introduced under some slight disguise. They are very popular because they reply to a demand. Novels like Crawford's *Mr. Isaacs*, with a touch of the mystical in the background, are equally popular for the same reason.

These represent the *advance* current of a double movement, a current which has found that the average pulpit opens for it no gate into a larger channel, and which is therefore experimenting in some new directions.

The other current is a *recession from* pulpitism. Here we have men who have done with dogma but who try not to have done with Christianity. Their new Christianity shall be one of deed, of social and international brotherhood, of imitation of Christ in act and feeling. That, they hope, is sufficient for noble life.

The same heart-stir generates the learned Congresses of Religions, though the Congresses certainly generate no heart-stir. The learned are on, though mostly not of, the rising

wave of interest in old religions; and they show their position, unconsciously manifest the force that is pushing everywhere, in their learned way. They treat the religions as interesting old fossils.

Another kind of Congress will be held one day. Its speakers will be men who believe that all the great creeds hold the one living Light, and they will devote themselves to the development from them all of some splendidly comprehensive expression of it. Whether they use the word Theosophy or not, it is that which they will speak. They will develop no new religion, but they will retrieve one so luminous that it will seem like new.

This religion will then be found capable of doing several things. It will give everyone the consciousness of being himself a light derived from the great Light, a soul; and will therefore give life a continuous background of joy. Of that joy it will be found that brotherhood is a necessary manifestation. It will give health, for joy destroys disease in advance. It will give understanding of life and a vision of its future possibilities, of the future new heaven *on earth*, and of Reincarnation; for the inhabitants of that new heaven will be ourselves. And in the light of that joy and that vision two or three generations will suffice for the appearance of a new humanity, the old transformed. Into its midst will begin to come again the great teachers of the past, men who have had to wait for long until humanity would once more listen. H.

Anaesthesia and Death

THE *Lancet* (London) considers the question of the identity of sensation in anaesthetization and death—behind which, of course, is the question of a deeper identity. The journal points out that the sensations are as varied as human nature. Persons of fine temperament often seem to themselves—

to be carried out of the body, even to be swept swiftly under the stars; but the interpretation of this state of consciousness depends very largely upon their intellectual convictions. . . . The intellect or the spirit, or whatever it is to be called, is isolated—reduced to its purest essence—and operates with extraordinary rapidity and ease.

Persons of cruder texture have less *memory* of passing through any such state; the crudest have no memory at all.

Records of cases in which the gates of death seem to have actually been just passed, though not beyond return, drownings and other forms of accident, show that wherever any memory is brought back at all, it is a memory of *freedom* of consciousness, of a swiftness of mental view, of a clarification of feeling, to which ordinary life offers no corresponding moments. Time seems long because a few seconds permit of as many changes of consciousness as ordinarily require hours, days, even years. Most people attend only to those changes which go with nerve changes; but the soul, which lends a fraction of its thinking essence to the slow brain, is always co-present on its own plane of time. The records of anaesthesia and pseudo-death show the first stage of the return of this lent ray of essence. C.

ONE END OF THE "KUTTAM POKUNA" OR TWIN BATHING PONDS, ANURĀDHAPURA, CEYLON

The Twin Bathing Ponds, Anurādhapura

THESE two baths are placed end to end, the larger measuring 132 feet in length and 51 in breadth, while the smaller is about 90 feet in length. At the end shown in the photograph, the sides of the bath and the steps have been partially restored. Most of the stone-work is found quite complete, although dislodged from its proper position.

"The sides are built in projecting tiers of large granite blocks so planned as to form terraces all round the tank at various depths, the maximum depth being about twenty feet. Handsome flights of steps descend to the terraces, some of them having carved scrolls on the wings. The bold moldings of the parapet give an exceedingly fine effect to the sides. There are signs of rich carvings in many parts of the structure, but every portion is too much defaced to trace the designs.

"There is something very weird about these remnants of ancient luxury hidden in the lonely forest. . . .

"We cannot help reflecting, too, that the famous baths of the Roman emperors were constructed contemporaneously with these, and that while those of Caracalla and Diocletian, being built of brick, have crumbled now beyond repair, the picturesque and elegant baths of Duttha-

gāmini with their beautiful terraces and stairways of granite can with little trouble be restored to their pristine condition."—*The Ruined Cities of Ceylon* (H. W. Cave). T.

Garden of Eden to be Reclaimed

THIS does not refer to an approaching millennial restoration of our Paradisiacal state before the Fall, but to the plan for irrigating Chaldaea, which country is one of those that have been identified with the Biblical Eden.

It is reported that the new Turkish Government will now push on this scheme, entrusting it to an English engineer. This man has been for years perfecting a scheme of reinstating the ancient irrigation works of Chaldaea and making the Mesopotamian desert once more fertile and a supplier of wheat to the world. As long ago as 4000 B.C. a system of canals from the Euphrates existed, as the excavations show. The Persians, and after them the Arabs, kept it in working order; but the Turkish invaders of the Eleventh century caused its decline; consequently it is only just that by Turks it should be restored.

Scholars dispute as to whether Eden was symbolical or historical. If they are unable to believe that a story may be both symbolical and historical at the same time, they may be surprised to know that many of these ancient myths have seven mean-

ings. The system of the Olympian Gods, for instance, has seven different meanings, all of which were understood by the Initiates by whose predecessors that system was devised.

The story of Eden is universal; we find it among the ancient Americans; like the accompanying legends of the Creation, the Deluge, the Fall, the Tower of Babel, etc., it forms part of an ancient and universal system of symbolical teaching in which are preserved both the past history of the earth and its races and the story of the Soul's pilgrimage. Each nation adopting this system translated its details into terms of their own geography and history. Thus we have in the Hebrew story which we have adopted the names Euphrates and Tigris, Ararat, Babel, etc. It need not alarm people to find that the Jews, from whom we have borrowed, borrowed in turn from the Babylonians; for, as stated, the myth was universal and may be found in the New World.

In its significance as relating to the allegory of the Soul, Eden is of course the condition of primal innocence and bliss before the gift of *Mind* to Man, and his *abuse* of that gift. Satan, the woman, the coats of skin, and all the rest, have their allegorical significance well known to students and treated of in Theosophical writings. Geographically Eden refers to the habitat of an earlier race of humanity which had attained the summit of perfection in its cycle, as many traditions declare. STUDENT

The Trend of Twentieth Century Science

Electricity from the Earth

A PRIVY COUNCILLOR, writing to a German scientific magazine, asks why, since we get everything else from the earth, we should not get electricity. The proposition is not new, but his suggested method is. The earth is a magnet and its poles correspond more or less with the poles of the axis. May it not have subsidiary poles on other axes? At any rate the Councillor says he has observed that certain well-tubes sunk a thousand feet into the crust—that is, towards the center—become strongly magnetized. But he does not propose to use magnetism for his electricity. He depends upon the fact that two electrodes, connected at one end by a wire, and placed in solutions of different strengths or of different temperatures, generate a current. The earth's crust contains various liquids, watery and other, containing various things in solution; it is at different temperatures at different depths, and often at the same depth in different places. Moreover a deep boring, relieving pressure and permitting expansion, causes a rise of temperature.

The experiment upon which the suggestion rests, was this: an unlined boring of 46 feet in depth and containing 11 feet of water was selected for the reception of one electrode—a piece of lead six inches long. To this was attached 300 feet of wire leading to the other electrode, which was a brass rod driven into the damp surface ground. A current of 0.06 volts resulted, the amperage being 0.001. The substitution of brass screws for the lead, and an iron rod for the brass, raised the voltage to 0.24, leaving the amperage unaltered.

The writer suggests that this result is enough to make further experiments worth while. If the boring were say 3000 feet instead of 46, the difference of conditions at that depth and at the surface might generate a notable current.

But this is not strictly a use of the earth's electricity. It is a transformation of heat, or of the differential value of two solutions, into that force. There must be actual currents running here and there through the crust, the tapping of which would seem to be a problem better worth study. And the study may be yielding results just about the time when we are close facing the exhaustion of our coal supplies. These secrets have a way of getting found out quite opportunely. STUDENT

The Rim of Atlantis

THE western edge of Europe, like the eastern edge of America, seems from the evidences of marine river beds to have done a good deal of sinking. Which means, of course, that the Atlantic bed has sunk. The process was the after-echoes of the submergence of Atlantis; nor, probably, have they yet died away. As the bed of the Hudson river has been traced out along the sea floor for many miles, so now have the beds of one or two rivers on the other side. Professor Hull has been communicating to the Royal Geographical Society some of the results of his investigations on the rivers of the

European and African coasts. He has followed the bed of the river Adour, in the angle of the Spanish and French coasts, for 50 miles out to sea. Further south, the river Congo, whose bed had previously been traced out for 80 miles, has now been shown to be possessed of 20 miles more. The Adour bed is at a depth of 1500 fathoms; so the sinking has been very considerable.

How does Professor See account for a sinking edge all around the Atlantic? According to his theory of mountain ranges the rim should be rising, raised by lava forced sideways from beneath the ocean bed. If we had only the Pacific to consider, his theory would look very nice; but the Atlantic seems to be raising—or rather sinking—a protest.

STUDENT

The Backbone of the Universe

ASTRONOMERS are beginning to think that the visible universe of stars may be lozenge-shaped, the rim of the lozenge being the Milky Way. Stars seem to be aggregated along that line because we are looking through a far greater thickness of them, looking along the radii of a wheel; at right angles to this we have but the thickness of the wheel, are looking through the hub.

But the Milky Way may be more than this; it may be an actual structure, as it were a skeleton to which the position and movements of all stars are related.

There are two types of variable stars. In one case the variation is due to the periodic interposition of a dark companion between us and the visible star's light. In the other case the variation is real. It is supposed that our own sun belongs to this second group, having a variation period of eleven years. At that interval it passes through a cycle of greater and less brilliancy. In part these changes are due to the appearance near its poles of very brilliant faculae. These move toward the equator, dim in brightness because their light is absorbed by the solar equatorial atmosphere, and finally vanish at the equator.

Taking this as a guide to the history of the second class of variable stars, and assuming that the degree of variation enables us to know whether we are looking directly at their poles or at their equators, Professor Turner has concluded that the axes of rotation of these stars is nearly in the plane of the Milky Way; that is, that they have some definite relation to it.

It is at any rate an attempt at another step to the study of the universe as a coherent organism. STUDENT

Nothing Like Leather

WE have been learning from a well-known physician that whenever we are nervous, melancholy, suicidal, unstable in character, or are troubled with any of the morbid states so often accompanying genius, have dyspepsia, or are wrecked with mental and moral earthquakes and volcanoes, it is all our eyes. Correct astigmatism, myopia, or other ocular malformation, and all will be well. If only Calvin and Torquemada and

some others had had the right spectacles. . . !

But before that we had learned that the same maladies and some others were due to affections of the nose and throat.

And now we learn that the teeth are the real offenders. Unsuspected caries and chronic abscess, teeth that cannot break through but do not cry loud enough to be heard, forgotten roots and congenital malformations—all these play as much havoc as the nose and eye. Hence melancholia, insomnia, even paralysis, and indeed most mental and nervous derangements.

It is certainly true that a large number of people are entirely negative to their physical condition. And with them some slight defect, or rather some defect which makes slight appeal to overt sensation, continuing a great length of time, will at last produce a cumulative mental effect. No one with a healthy and positive mind would however thus go under.

According to Theosophy, many of these defects when congenital are the physical result, the Karma, of permitted mental negativity and unrestrained moodishness in the last life. Like all Karma it is beneficent, forcing the victim to begin the necessary struggles to hold his own, to use his will. He is being stung to effort; his attention is being markedly called to his own defect. STUDENT

Yellow Spectacles

PEOPLE who wish to protect their eyes against strong sunlight usually use blue glasses. These are undeniably comfortable. They cut off the yellow rays and a good proportion of the red. That is, they cut off the heat rays, and the eye feels cool.

Ultra-violet rays are destructive to living tissue. They will destroy the life of flies and bacteria in a little while. It is they which cause the blindness of careless workers with X-ray tubes and certain kinds of lamp. And this destructive effect is made available in certain affections of the skin and superficial morbid growths.

They exist in sunlight, and nature has arranged for the protection of the retina. It has been found that when ultra-violet light is thrown into the eye, the lens, which is in front of the retina, becomes fluorescent or opalescent. This means that the high rays, lying above the visible spectrum, have been translated downward a part of an octave by the lens tissue, slowed in their vibrations, and so brought within the limit of visibility. But this translation downward is the safety of the retina. The invisible ultra-violet vibration, when slowed down into the visible blues and greens and yellows of the fluorescence, becomes harmless. Ordinary sunlight is therefore cooked, as it were, for the use of the retina. But when light is very intense, as when reflected from snow or on high mountain peaks, the powers of the lens are overtaxed and the dangerous rays, reaching the retina, may injure or even destroy it.

The proper glasses are therefore yellow or greenish yellow, blocking the higher rays altogether whilst weakening the red. STUDENT

Nature

Studies

Forests, Moths, and the Saxony Authorities

THREE tons of moths caught by one trap in a single night! That must have been something like a trap—a trap capable of disincarnating moths on the same large scale as that on which Nature produces them. Yet it is no wonder, when the nature of the trap is considered.

In Saxony, says a report, the caterpillar plague has had a disastrous effect on the forests; so the authorities have invented a way of destroying the brown moths that lay the eggs from which the caterpillars come in such enormous quantities. This is the "electric light trap."

Two great searchlights are thrown on to the wooded mountain slopes half a mile distant. Adown these streams the moths come floating in their thousands and their tens of thousands, until they reach the place where the great exhaust fans take up the work and suck the insects down in swirling eddies into the trap.

This is certainly working on a magnificent scale. The pine forests were being threatened with destruction owing to the devouring of their foliage by the grubs. None the less, one cannot refrain from the thought that the destruction of moths by the hundreds and thousands of tons (as will happen when more traps have been erected) must surely set in motion a chain of causes and effects equally portentous in their dimensions. How can we create such a huge vacuum in Nature without disturbing the balance of things? It will be interesting to see whether there will ensue any consequences traceable to it.

One thing is sure—that whatever may be the cause of this destructive pest, that cause has not been removed by the destruction of its effects. The eggs may come from the moths, and the moths from the eggs, but how did the whole business originate? If there is some unknown cause that prompts the atoms of Mother Earth on certain occasions to build themselves into moths and into caterpillars, what will that cause do now? Go on creating insects for the Saxony authorities to turn into fertilizer? Hardly thus would it fulfil its purport, for it is a destructive force, breathing menace to every green thing. Will it find a vent through some other channel, choosing another country, another kind of

Lomaland Photo. and Engraving Dept.

THE MONUMENT, LONDON

victim, another instrument? Depend upon it, there is a whole science of "conservation of energy" yet untouched by scientific men; they balance up merely the income and expenditure in such matters as heat and mechanical energy; but it takes something more than these to account for the facts of animal and vegetable life.

STUDENT

Insect Pests as a "Sign of the Times"

IN a paper called *Signs of the Times*, which believes in the emergence of a non-ecclesiastical Christian union, and points to current events as indicating the fulfilment of alleged prophecies to that and similar effect, there is an article on "The Ravages of Destroying Insects; What Is Their Significance?" The significance may be gleaned from the quotation of an alleged prophecy from the Bible, which, however, will not strike the ordinary reader as being necessarily a prophecy. In the *Book of Joel* it is said:

The word of Jehovah that came to Joel the son of Pethuel. Hear this, ye old men, and give ear, all ye inhabitants of the land. . . . That which the palmer-worm hath left hath the locust eaten; and that which the locust hath left hath the canker-worm eaten; and that which the canker-worm hath left hath the caterpillar eaten.

Awake, ye drunkards and weep. . . . For a nation is come upon my land, strong and without number. . . . He hath laid my vine waste, and barked my fig tree; he hath made it clean bare, and cast it away; the branches thereof are made white.

Then the people listen to the exhortation and repent and Jehovah grants them new vines and fig-trees. This is taken as a prophecy relating to our day; and the article gives a large number of pictures of the various insect pests with descriptions of them.

But is it not more likely to be an account of a certain actual visitation and of the efforts of the people to cure it by religious and ceremonial observances? In any case such visitations are periodic all through history, and very much worse things have happened than are happening now, as for instance the plague and portents in Justinian's reign and the Black Death in medieval Europe.

Such plagues and portents are, however, a sign that the *Astral Light*, the plastic mother of physical Nature, is surcharged and tense with the conditions that man's acts and thoughts have imposed

on it. The well-springs of life are corrupted and there is an overplus of the destructive life-atoms. For plants, animals, man, and even the so-called lifeless rocks, all live in this common atmosphere—the invisible warp upon which the fabrics of Nature are woven; and man is the most potent of them all. His many sins against the harmony of Nature pile up to his own detriment, and he blames Providence not more wisely for this than he would blame it for polluting the air of a closed room.

The great number and variety of insect pests, destructive fungi, etc., and the liability of man to have his labors suddenly neutralized by them, brings home the fact that Science is one, as Nature is one; and that the co-operation of chemists, physicists, naturalists, and all other departments will be needed to cope with conditions. But even that will not be enough, for physical science is itself but a fragment of SCIENCE proper. STUDENT

EVENING VOLUNTARY

Wordsworth

CALM is the fragrant air, and loath to lose
Day's grateful warmth, though moist with fall-
ing dews.

Look for the stars, you'll say that there are none;
Look up a second time, and, one by one,
You mark them twinkling out with silvery light,
And wonder how they could elude the sight!
The birds of late so noisy in their bowers,
Warbled a while with faint and fainter powers,
But now are silent as the dim-seen flowers. . . .

A stream is heard, I see it not, but know
By its soft music whence the waters flow:
Wheels and the tread of hoofs are heard no more;
One boat there was, but it will touch the shore
With the next dipping of its slackened oar;
Faint sound, that, for the gayest of the gay,
Might give to serious thoughts a moment's sway,
As a last token of man's toilsome day!

The New Foothold

IN his introduction to the first volume of the
Path magazine, W. Q. Judge says :

The true path lies in the way pointed out by our
Aryan forefathers, philosophers and sages, whose
light is still shining brightly, albeit this is now Kali
Yuga or the age of darkness.

And in his review of the work at the end
of the first year, he says :

A new age is not far away. The huge unwieldy
flower of the 19th century civilization has almost
fully bloomed and preparation must be made for the
wonderful new flower which is to rise from the old.
We have not pinned our faith on Vedas nor Chris-
tian scriptures, nor desired any others to do so.
All our devotion to Aryan literature and philosophy
arises from a belief that the millions of minds who
have trodden weary steps before ours, left a path
which might be followed with profit and discrimina-
tion. For we implicitly believe that in this curve
of the cycle the final authority is *the man himself*.
In former times the disclosed Vedas, and later, the
teachings of the great Buddha, were the right au-
thority in whose authoritative teachings and enjoined
practices were found the necessary steps to raise
Man to an upright position. But the grand clock
of the Universe points to another hour, and now
Man must seize the key in his hands and himself—
as a whole open the gate. Hitherto he has depended
upon the great souls whose hands have stayed im-
pending doom. . . .

Our belief may be summed up in the motto of the
Theosophical Society, "There is no Religion Higher
than Truth," and our practice consists in a disregard
of any authority in matters of religion and philo-
sophy, except such propositions as from their innate
quality we feel to be true.

The student who enters upon this path of
study with a heartfelt desire to pursue it for
its own sake, and because he is convinced it
is the only thing worth doing, is constantly
confronted with experiences which demand a
firm faith and an unswerving purpose, if he
would not be diverted from his chosen course.
The continual reminding himself that this is
only natural, would seem to be an ever pre-
sent necessity. All progress can be nothing
else than a reaching forth into the unknown

and the unfamiliar. And this is especially the
case when the new experiences call for a re-
versal of the usual currents of thought, and
of the ideals which seem most natural to the
everyday existence of the world at large, and
which he has made a part of his being for
many ages. It may be true that no one is
likely to enter seriously upon this study just
at the present time, who has not laid a founda-
tion in the past by a previous tendency, yet
the urge of the cycle brings us face to face
with a *new demand*, so potent and resistless
that it calls up every latent energy of the past,
both for progress and delay.

As these experiences follow each other day
by day, there is sometimes dismay at the new
situation. One by one the possessions which
have been most valuable lose their attractive-
ness. From time to time we may fancy "This
at least is left to me," but in course of time
its value fades. And often when the sense of
the loss of all lies heaviest, comes the gleam
of knowledge that when all is gone, there
must be somewhere, on the other side of the
narrow gate of true poverty and humility, a
new foothold, which shall rest upon eternal
truth, firm as a rock and changeless as the
universe itself.

In time the conviction grows into a certainty.
Dimly seen at first it is continually obscured
by the clouds that are passing, and which can-
not be dispersed in a day, nor perhaps in a
lifetime. But once we are sure it is there, we
can have nothing worthier of high endeavor,
and we have the assurance of those who have
already trodden the same path, that no effort
can be lost in the perfection of universal law.

One of the first ideas which comes to us
may be: "Why—if this condition is so su-
preremely desirable—is it not described for us
by those who have attained to it?" The an-
swer is, that it has been described over and
over again, by the Teachers of mankind, but
their words have not availed to call up the
experience to those who have not yet known
it. Hence the necessity of carefully studying
and re-studying the lessons of the sages. For
as they have constantly warned us, there is
no short road on this journey, nor any help
which can be given, without the individual
effort of the man himself. Watched over and
guided he may be, unknown perhaps to him-
self; but the path must be trodden by every
man *alone*.

Paradoxically it may be said perhaps, that
the strength and power and life and joy of
the new foothold depends upon its non-exist-
ence. When personal desire, plan, or achieve-
ment no longer have any charm, but are seen
in their true light, the individual soul does
not feel its separateness from the whole. The
individuality does not depend upon the sense
of separateness, but upon the limitation which
must ever be in every portion of the Eternal
until all enter together into the Absolute
Perfection. The individuality needs neither
care nor thought nor consciousness of its ex-
istence. It is cared for by the Law.

Working in the cause of universal brother-
hood is therefore the greatest privilege of the
age. This great Cause—"in the sense of an
enterprise"—has been called by W. Q. Judge,
"the Cause of Sublime Perfection and Human
Brotherhood," and that such a Cause is openly
proclaimed amongst mankind is the tangible
fulfilment of his prophecy. STUDENT

FRIENDS IN COUNSEL

Our Companionships

WE live together, break bread together,
grind out together the price of food
and raiment, in a companionship that
seems accidental, temporary, purposeless. Per-
haps, after a while, there will be a readjust-
ment and we shall find other, pleasanter, com-
panions, *our sort*.

Companionship once meant the union of
warriors under one flag. Mere association is
its meaning now. You and I have been hired
to build this man's house. The companion-
ship is nothing to us; the work everything.
Yet, if we knew life's business as thoroughly
as we think we know nail-driving, we should
understand the significance of these "chance"
associations. We should then realize that out
of every companionship one must come vic-
torious or vanquished.

Without speech, without interchange of
thought, something in my untrained nature
will seek out cause for quarreling with some
untrained thing manifest in you and your
methods of work. Or, something fine in me
will answer back some beauty you reveal.

We come away from our companionships
readjusted, newly balanced (often newly un-
balanced). With every casual meeting new
chords are sounded, new chemical processes
take place, we are actually different.

We must make it our business to learn the
meaning of these companionships—to wait
until after all the grind of the long day's
work is over and learn what it meant. Was
it that in every association (though we called
it unpleasant and distasteful and inharmon-
ious) we were standing shoulder to shoulder
with a dear comrade, a brave warrior, one who
with us was fighting desperately to keep the
line unbroken—the shining of whose eyes
we could not see until the fight was won?

STUDENT

Hope

THERE appear to be at least two kinds
of hope, positive and negative; also there
appears to be a condition of harmony
between Soul and mind in which hope does not
exist, which is above and beyond the ken of
the sentiment of hope as we understand it.
It is as though the lesser sentiment becomes
dissolved in the greater; the dewdrop slips
into the shining sea. The sentiment of hope
is not an integral part of the higher law. It
represents our aspiration towards it—our
prayer. It is our relation to the Will to
achieve. Are there not moments when nature's
beneficent forces combining to render the mind
tranquil, the soul as limpid as a mountain lake,
we glimpse the universal, the all-embracing,
the certitudes of life?

The Dew is on the lotus, rise Great Sun
And lift my leaf and mix me with the wave.
Om mani padme hum, the Sunrise comes:
The Dewdrop slips into the Shining Sea!

The negative variety of hope dreams beau-
tiful dreams and drags its victim into the false
elysium of Fancy-land, intoxicated by its evan-
escent exhalations.

Positive hope reveals the energy of right
action. It is a vigorous inspiring quality of
work which is a benison to all who come
within its radiance. H. C. B.

THAT WHICH THOU ART

K. M.

THAT which thou art is sacred; it begun
Before the oldest sun had fiery birth,
Or the green earth first dreamed; and is so wise
That its two eyes see all things that shall be,
And all things past they see, and further far
Than any star that burns, within heaven's deep.
Knowing not sleep, nor birth, nor death, nor woe.
That which thou art is more than mind may know.

That which thou art is sacred; mortal ear
Is not allowed to hear its holy name,
Nor to know whence it came, nor in what hour
First stirred the Power that sent it forth through night
To carry light where darkness was of old;
And the wild desert worlds to hold for God;
Through ways untrod to travel till the sun
Shines on the battle won, which ages fought—
The worlds and stars are born of thine own thought.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

✽

Question What is meant by the Higher Self? Is it not blasphemy to say that we are equal to God? It seems so to me, for I know myself to be a very limited creature, and God is the Infinite Creator of all.

Answer The position taken in the question is one that every believer in Christian dogma is bound to take who has a wrong impression of Theosophy from the pulpit or elsewhere. But Christian dogma does not mean the teachings of Jesus, who by word and example taught the Ideal of Human Brotherhood and Spiritual Perfection, in fact, the same ideal as that set forth by the Teachers and Sages in all ages, for they all had drunk from the same eternal stream of Divine Truth—Theosophy; whose living waters have again been offered abundantly by the three Leaders of the Theosophical Movement of the present age—H. P. Blavatsky, W. Q. Judge, and Katherine Tingley.

But what are the real teachings of Jesus in regard to these questions? Like most of the great Teachers of the world, Jesus wrote nothing himself that has been handed down to us; and, like all other great Teachers, his real teachings were given privately to his immediate disciples, and were not to be written down. What, for example, was Jesus teaching when he said to his disciples: "Unto you it is given to know the mysteries of the kingdom of God; but unto them that are without all these things are done in parables"? (*Mark iv. 11*) If we ask what these mysteries were, who can answer us? The churches do not know. Yet one cannot doubt that they have been preserved and may be known by him who is worthy and well qualified to receive them.

What is man? According to the teachings of Jesus, as recorded in the New Testament, man is not such a limited creature as the questioner would have us suppose. Jesus is recorded as saying: "Be ye perfect, even as your Father in Heaven is perfect." (*Matt. v. 48*) In this there is left no room for dispute, for he gave the standard of perfection that could be attained.

Again, he said: "The kingdom of God is within you," (*Luke xvii, 21*) and on another occasion, when they marveled at the wonderful things which he did, he said: "Greater things than these shall ye do."

Evidently Jesus did not look upon man as a

"very limited creature," but as a being having Divine possibilities of Godlike power and perfection.

What is man? Looking backward over the records of the past, is he the creature of the stone axe and flint arrow, or the builder of the cyclopean structures, majestic and sublime, of Central America, Egypt, India, and Greece, which are monumental proofs of the marvelous knowledge, skill, art, and industry of the ancient Builders?

Again: What is man? Is he a Plato, a Socrates, or a Confucius; a Christ, a Buddha, or a Krishna?—beings of godlike Wisdom and Compassion, who have shaped the lives of myriads of millions for centuries.

Looking inward to that many-toned gamut of consciousness which we are constantly ascending and descending, where can we stop and say "*This is I*"? Are we that depth of darkness and misery, beneath the lowest that we have ever descended, or are we that sublime possibility which we have seen beyond but have never attained? Manifestly man is an embryo God, requiring many lives for his fruition.

According to Theosophy all things spring from a boundless, homogeneous Principle, which is neither matter nor spirit, time, nor space, but the Source and Root and Container of All, periodically differentiating into organisms from electrons to Brahmāndas; the latter meaning stellar systems, such as that to which all the stars visible to us belong. There is no corresponding word in any European language. We have not been in the habit of thinking so far and have not needed it. It is said that there are countless myriads of these in the bosom of the Infinite. The All is the great Tree of Life; Brahmāndas, suns, systems, men, and atoms, are the branches, twigs, and leaves; each constantly gathering experience and rising to higher and higher levels of consciousness and intelligence. And as this evolution and involution has been going on throughout the eternities of the past it follows that there must be Beings that far transcend our highest conceptions.

It would indeed be akin to blasphemy for the ordinary mortal to say he were the equal in evolution of these, and there is That which transcends them infinitely. Truly it would be arrant egotism. Yet the same divine spark that is in them is in him also and in so far as he realizes his divinity, is he one with them, and with Divinity Itself.

What is the Higher Self? It is a well known fact that every organism is built of smaller organisms. The atom is built of electrons or corpuscles; molecules are built of atoms; cells of molecules; the organs of cells; and the animal body consists of its various organs. Each unit, large or small, having a life and soul of its own, and capable, in degree, of so-called independent existence. Nothing, however, can have an independent existence *per se*. No particle, however small, can ever be cut off or separated from the Infinite Root of All; but smaller units may be, and are, constantly being thrown off from larger ones. It is the Soul of the complete being that is the abiding principle, and which combines the whole in harmonious co-operation and order.

Although the animal consciousness feels itself to be one with and inseparable from its body; yet, as is well known to science, none

of the bodies of the smaller organisms of which the animal body is built actually touch each other. It is said that if the molecules were magnified to the size of men they would be much farther apart than men in a city, and would appear to be equally as active and seemingly independent.

Now to get a clear understanding of the greater Self of which we are a part, one may imagine all the members of the human family to be the cells of the great Human Organism, and this greater Self as the Soul of the complete being. The analogy is perfect although the scale is higher. In a sense this may aid us to understand what is meant by the Higher Self, though this is not to be understood by a mere extension of consciousness.

If one can imagine the right attitude of the "soul" of a cell towards its neighbor cells and towards the "soul" of the complete being, then he can understand his relation to his fellow-men and to the greater Self of Humanity. The real man—the ego who incarnates from life to life—is a direct ray from the higher Universal Self, and is the mediator between the lower man and the Higher Self which is "the light which lighteth every man that cometh into the world," Divinity itself.

Man's duty is to open his heart to this Divine Ray, first, by living a life of true brotherhood, for it is selfishness that obscures the radiance of the Divine Ray, through which alone we can reach the light, because it has the same relation to the Universal Sun as the colors of the spectrum have to the solar rays. It is as if they had conscious power to go inward through the prism, there to find themselves blending in perfect harmony in the pure white light of the sun.

This raises another question. If the human family are as the cells of a higher Being, whence the universal ignorance of that relationship?

The answer is that we have so completely engrossed ourselves in the selfish passions and desires of the personal cell life, that we have lost sight of the larger Universal Soul life. "As a man thinketh, so he is." If we identify ourselves with the smaller, selfish life we are that. If we live in the larger Divine Life we are that. Ignorance is just what the word means. It is the result of ignoring the Light of the Divine Ray which alone can give spiritual illumination—which is wisdom itself.

There is nothing strange or unusual about this. Most have had sufficient experience to know that if we ignore an acquirement we ultimately become ignorant of it again. How then can we expect the Divine Light to illumine our hearts if we seek it not at all. Nay! even in infancy we have been taught to foster the smaller life; while there was none to tell us of the glories of the Higher Self.

But let us blame no one. If we had always followed the "still small voice" of the heart, we would have been led to the light; for there are Great Helpers who know every effort. But instead of listening to that divine voice we give ear to the clamoring of the many voices of passion

formed from desire which rageth like fire and is never to be appeased. Know this to be the enemy of man on earth. Therefore thou shouldst conquer this sin which is the destroyer of knowledge and of spiritual discernment. (*Bhagavad Gītā*) W. S.

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

Central Office Point Loma California

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

The International Congress on Moral Education

THE First International Moral Education Congress has lately been held in London, and has issued a thick volume of the papers in English, French, and German, communicated to it. No attempt is here made to review this volume, but it is assumed that intelligent people have a fair notion of the character of the ideas expressed on such occasions. Congresses on moral education have been held before, but this is the first international one. The patrons include the education ministers of Belgium, Bulgaria, China, England, France, Greece, Holland, India, Italy, Japan, Mexico, Roumania, Russia, Spain, Turkey, and the United States; also ministers and directors from Barbadoes, Ceylon, Cyprus, Honduras, Jamaica, New Brunswick, Nova Scotia, Queensland, Rhodesia, Saskatchewan, South Australia, St. Helena, Tasmania, the Transvaal, and Western Australia.

Of course the main question is the relation between religion and ethics; or, regarding ethics as theory, between religion and morality. Morality is the practical outcome; religion has hitherto been regarded as supplying the theoretical basis; can this be replaced by ethics?

Morality must be grounded on ideals of some sort. We cannot be guided by instincts alone, for the reason that we have minds, which, if not occupied by truth, will be occupied by error. We cannot have instincts pulling one way and reason another; hence reason must concur with our moral instincts. If we have no adequate theory of life to appeal to, then we must appeal to such motives as self-interest, comfort, etc. We exhort the young person to become a good citizen *because*—

Theosophists have a definite purpose in life and a sincere belief in its higher possibilities. Instead of stumbling in the dark, they are all bent on a purpose kept ever well in view; this gives them the power to appeal to the right chords in others. Hence the success of Raja Yoga teaching; hence its incommunicability to teachers who are not Theosophists.

The cause of the failures in moral teaching is simply that the teachers themselves are not up in their subject; and surely that is cause enough. Therefore it is they who need to learn first. They have not grasped the essentials of religion, though they are groping after them. They do not realize that the inspira-

MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

tion to right conduct springs from a knowledge of the higher nature of man, and that such knowledge is actually attainable by those whose aspirations impel them to make the sacrifices necessary for attaining it.

The practical exigencies of the times are impelling nations to an extensive process of self-examination, which will result in showing up the shortcomings of modern faiths and in emphasizing the necessity for finding something more enlivening and permanent.

Delusions About Buddhism

IN an article on Buddhism in a London paper, anent the arrival of a certain "Buddhist" mission in England, we find some curious delusions. To begin with, the article is headed, "A Religion without a God." Buddhism does not recognize the anthropomorphic God of Christian churches; and well it may not, if it is the philosophical religion it claims to be. But to describe it as without recognition of Deity is very misleading. Its prime doctrine of the unity of all life; and its goal of attainment, the renunciation of separateness and the absorption of the Ego in this great unity: these presuppose God in the only true sense—the Universal Being, or Spirit. In this sense, Buddhism has more of a God than Christianity.

Again, it is unfair to contrast decadent forms of Buddhism with theoretical Christianity, especially when Buddhists might just as well contrast their religion at its best with Christianity at its worst. Even at the present moment we can find every sort of fanaticism passing under the name of Christianity, from the extreme asceticism of the Trappists to the feeble imitations of Paganism or of Lamaistic ritual indulged in by some representatives of Roman Catholicism. Is it not, then, most disingenuous to make these contrasts?

The article also tries to make out that Buddhism is to be contrasted with Christianity in that it teaches the avoidance of life, while Christianity teaches the avoidance of death.

Are not both of these tendencies the modern result of ignorance and misunderstanding of the true teachings? Real Buddhism, like real Christianity, and like every other great religion in its origin, teaches that the cultivation of the personal self is not the ideal of life, but a mistaken path which man treads during his stage of partial knowledge; a

path which has no goal and has to be abandoned sooner or later in favor of the true path. But abandonment of the personal ego implies the finding of the true Ego and the realization of man's true purpose in life. Abandonment of life with its duties, its trials, its privileges, is a perversion of the true doctrine, of which all religions have been more or less guilty.

The right thing to do is to leave off picking holes in other peoples religions and try to find the essential ethic common to all, which is the doctrine of Right Living, by which man forsakes the gospel of selfishness and follows the gospel of mercy. Surely Gautama the Buddha and Jesus the Christ are one in this respect!

H.

Aerial Flight

THE early days of George Stephenson's fight with public opinion are recalled by an article in the *Nineteenth Century*, where we read:

May we not say . . . that the efforts at aerial navigation now being made are simply most ingenious attempts to substitute, as a support, of moving bodies, the thin air for the solid ground? And is it not evident, on careful consideration, that the ground affords a much better base than air ever can? Resting upon it we feel safe and know where we are. In the air we are carried about by every wind that blows. Any use we can make of the air for the purpose of transportation, even when our machinery attains ideal perfection, will be uncertain, dangerous, expensive and inefficient, as compared with transportation on the earth and ocean. The glamor which surrounds the idea of flying through the air is the result of ancestral notions, implanted in the minds of our race before steam transportation had attained its present development. Exceptional cases there may be in which the air-ship will serve a purpose, but they are few and unimportant.

"The result of ancestral notions" is rather good: an unconscious truth, especially if the notions were effectively applied by pre-historic ancestors. Planets, too, absurdly fly through ether, without immediate commercial purpose. We are thankful to have real men like the pioneers of aeronautics.

THE THEOSOPHICAL ADDRESS AT ISIS THEATER

LAST Sunday evening at Isis Theater before a large and most attentive audience, Mr. C. J. Ryan lectured upon the subject "Theosophy and Utopia."

He spoke first of all of the many theories that have from time to time been put forward of the possibility of a new Golden Age. Some of these placed the attainment of right conditions only in another state of being, such as in the Aanu of the Egyptians, where the Perfect reap the allegorical grain of seven cubits' height, and lead a high spiritual life pictured under the form of an ideal citizenship; or in the Elysium of the Greeks; or in the Golden Land of perfect comradeship and beauty on St. Brandon's Isle, which the poetical fancy of the Irish Druids saw far out in the western wave.

The speaker quoted from the vision of Isaiah: "Behold I create a new Heavens and a new Earth"; and from *The Republic* of Plato, who, he said, was the first great thinker of whom we have record to outline definitely a certain scheme of ideal state government. Passing, then, to Sir Thomas More, he gave a brief description of his Utopia, and then went on to describe two ideal communities which actually do exist so far as we have been able to observe, namely, among the ants and the bees.

Many observers, the speaker remarked, have noticed that ants and bees in their collective consciousness seem to have arrived at a sort of satisfied equilibrium of conduct, though of course they cannot be standing still, but must be moving towards the mysterious goal of evolution with all nature. But with men it would seem that progress must be made through *individual* development—a far higher system. Although we may wonder if the apparently ideal condition of the most perfect ant communities could be improved, so far as *they* are concerned, our business is to make our own lives and surroundings conform more fully to *our* best thoughts of what man should be.

Asking what was the great obstacle to a Utopia, the speaker said it was to be found in the fact that the units constituting society at large, have not, save in the rarest exceptions, gained self-control and self-knowledge, knowledge that they were in their essence, divine and immortal beings. The study of man as he really is must be taken up seriously from the standpoint of Theosophy before the goal can be distinguished.

While other systems are temporarily incomplete and one-sided, owing to their ignorance of the complex nature of man, Theosophy is offering the true theory of life and the method of living based on the actual knowledge which alone can lead to fulfilment of the vision of poet, sage, and prophet. OBSERVER

Crippled Poets

THE *Dublin Review* gives us a poet's essay on a poet—a study of Shelley by Francis Thompson, glittering with jeweled imagery. The run of poets, curiously enough, are no more likely to furnish good prose than good caligraphy. But Thompson's prose was poetry. Calling Shelley "essentially a child," he says:

The universe is his box of toys. He dabbles his fingers in the day-fall. He is gold-dusty with tumb-

Fair sister Nymphs, . . .

Henceforth we will not part. There is a cave,
All overgrown with trailing odorous plants, . . .
A simple dwelling, which shall be our own;
Where we will sit and talk of time and change, . . .
And if ye sigh, then I will smile; and thou,
Ione, shalt chant fragments of sea-music,
Until I weep,—when ye shall smile away
The tears she brought, . . .

It was such rose chains that bound Shelley down. At the last, instead of pushing open the gates of the new world and climbing the stairs to the sun, he was forever retiring to the flowery cave with various Iones and Asias. But the cave was a dream, no reality; and the odors and flowers and nymphs were dreams of the senses. At the end of his rapture of inspiration, Shelley sank into that sleep with such a dream. He was a poet and with the wings of a poet, but he could not use them to fly up into the higher sunlight. For it he mistook other lights altogether. This Prometheus was just as effectually chained to a flowery nymph-haunted cave as the other to the naked rock. And the vulture at the roots of his spiritual virility seemed to him a bird of Paradise. How many other poets and musicians, might-have-beens, have made and are making the same mistake?

And so Shelley's poetry is not immortal; for the instinct of the world, in these matters, works truer than it knows. It acts where it has not formulated the principle and condemns to death for good reasons it cannot give.

STUDENT

Our Friends the Birds

WHEN birds are permitted to labor undisturbed they thoroughly police both air and earth. The thrushes, sparrows, larks and wrens search the surface of the earth for insects and their larvae or hunt among the leaves and peer under logs and refuse for them. The warblers, vireos, creepers and nuthatches with their microscopic eyes scan every part of the tree or shrub—trunk, branches, and leaves—and few hidden creatures escape them.

The woodpeckers, not content with carefully scrutinizing the bark and limbs of trees, dig into decayed and worm-eaten wood and drag forth the burrowing larvae, which in their hidden retreats are safe from other enemies. The flycatchers, aided by the warblers, are ever on the alert to snap up insects when flying among trees and branches; while the swallows and nighthawks skim over the pastures and patrol the air high above the tree-tops for such of the enemy as have escaped pursuit below. It is well that this is so, for so vast is the number of insects and so great is the quantity of vegetation required for their subsistence that the existence of every green thing would be threatened were it not for birds and other agents designed to keep them in check. Most birds most of the time are beneficial.—*Yearbook of Dept. of Agriculture*

Lomaland Photo. and Engraving Dept.

ONE OF THE "BARQUES" ON LAKE LEMAN

ling amidst the stars. He makes bright mischief with the moon. The meteors nuzzle their noses in his hand. He teases into growling the kenneled thunder, and laughs at the shaking of his fiery chain. He dances in and out of the gates of heaven; its floor is littered with his broken fancies. He runs wild over the fields of ether. He chases the rolling world. He gets between the feet of the horses of the sun.

Francis Thompson thinks *Prometheus Unbound* the greatest of Shelley's poems. It does show his power, but not less his deadly weakness. Prometheus, the immortal human spirit, is freed at last. The vulture of passion gnaws his vital center no longer. He stands glorious and ready. But what now? What does he do with his unchained strength? *Retires to a cave with a band of nymphs!*

Asia, thou light of life,
Shadow of Beauty unbeheld; and ye,

Longevity

THE question of longevity is one that our authorities seem unable to touch. We do not refer to the faddists who tell us to chloroform ourselves when we are sixty, nor to the paragraph writers who dogmatize for the benefit of others who will have forgotten their weighty prescriptions long before they could be tested, but to the thinkers of the age. And yet longevity is a very important subject indeed.

We have one old man attributing his great age to smoking six pipes a day, and his brother of an equal age attributing his age to never having smoked at all. Another is sure that moderate use of alcohol is all that is needed; a fourth case proves that teetotalism is all that is necessary to live beyond a hundred years. Such deductions are not very serious. Probably the acquisition of a natural dignity and calm has more to do with long life than anything we know, for the opposite qualities of worry and waste of energy are known to shorten life.

Doubtless heredity counts for something, but the negro is proverbially happy-minded and free from worry. The ages of individuals of this race are not always easy to fix exactly, but within a year or two are often accurate beyond possibility of error, especially in the West Indies, and the ages they attain to are remarkable.

One old woman was born when such-and-such a ship was wrecked; another was a little slave girl helping to carry the sugar when the Soufrière first became an active volcano. Another was "so high" when the big hurricane swept Barbados. Another is called after the name of some ancient flagship visiting her home at the time of her birth; and so the record goes.

There were two sisters in Cuba not long ago who were credited with an undoubted age of 125 and 128 respectively, within a year or two. One is dead but the other is still living, so report says.

On September 30th last the Rev. Alexander Mans died in the Aged People's home at London (Ontario) at the age of 118. He was for many years a minister at the colored church, and had lived in London 60 years. Born of slave parents in the Southern States, he grew up in slavery, but at the age of 50 escaped to Canada. His escape occurred more than 60 years before his death!

As to white men it may be noted that about the same time a local race in a Canadian town was won by a jockey aged 103, who chose this method of celebrating his birthday. He is a French Canadian.

The case of Old Parr is almost too well known to say much about; he lived in the reigns of ten sovereigns; married a second time when 120 years old, and there was a child by the marriage. He died in 1635, aged 152 years, having lived in England all his life.

Hippocrates died at 104.

These do not seem to be cases of senile decay. Is the latter necessary, and if not, why is it so frequent? A. M.

THE narratives of the Doctrine are its cloak. The simple look only at the garment—that is, upon the narrative of the Doctrine; more they know not. The instructed, however, see not merely the cloak, but what the cloak covers.—From the *Zohar*

Give Us More Life

Alexander Blair Thaw

Give us more life! Our blood grows thin,
Until we fear, like shapes of sin,
Our very shadows, as they lie
Upon the path; in vain we sigh
For the brave days that once have been.

We shut the door, and there, within,
We wait for wonders to begin,
And light our little lamps, and cry,
"Give us more life!"

But push the door; aye, make it spin,
And face the sunlight entering in!
Behind us now the shadows fly,
No fear that life will pass us by,
As we go forth, fresh fields to win!
Give us more life!—Selected

IF man's powers were not commensurate with his aspirations, life would indeed be a mockery and the universe an eternal lie. In face of the thought of such a lie comes the resolve to challenge eternal law and by our acts to unmask the lie. The mere aspiration for "more life" is proof of its attainability. We cannot snatch it in one moment, but we can—nay, *must*—keep on aspiring, and efforts accumulate power.

But we cannot keep our new wine tied up in the old skins, nor imprison the sunbeam. Like the sun, our emblem of life, we must radiate light and warmth to all. We must give up being moles and ants and become birds. Let the winged Soul throw off its fetters and soar free. H. T. E.

The Stir of the East

A CERTAIN city recently opened its first public reading room. There was a little ceremony in connexion with the event, and an inaugural address was given by a judge.

In the afternoon of the same day the first issue of that city's first paper appeared.

In the evening a night school was started.

What was the city? As no one will guess, we will answer at once—Jerusalem!

The judge was the Governor, a Mohamman. The audience was Mohamman, Jewish, and Christian, all on the most fraternal terms. The room has the Turkish and Arabic journals and will soon add the chief European ones. The newspaper whose first issue appeared in the afternoon is Arabic, the *El-Kuds* (The Sanctuary). At the night school a number of things are to be taught, including international law.

It is evidently not only Japan and China that the energy of the new light has touched.

STUDENT

In Defiance of Thoreau

THE rural depopulation of Germany is going on as fast as that of other countries, and the statesmen there as elsewhere are inquiring into the cause and remedy. The *Journal of the Royal Society of Arts* tells us that in 1871 the rural population was to the urban as 64 to 36. Now it is, for the whole Empire, as 48 to 52; in some places even as low as 23 to 77. Since the same date the city population of Saxony has multiplied itself by two-and-a-half; the rural population has remained nearly stationary.

Part of the cause may be that it is more difficult to make a living in the country than in the city, though the difference cannot be great. A more important cause is probably that the *mind* of the young man has not

enough to do in the country; at least it is not stimulated, as it is in cities.

Perhaps, therefore, we shall have to wait for a change till swifter and cheaper locomotion—through the air?—and electric transmission of news, music, plays, transmission for eye and ear, have done away with space and time.

What a pity that the body of the city man does not crave for nature-work as urgently as the mind of the country man craves for stimulation. The country life *could*, even now, be made to yield all that is really of value in the other—perhaps not a very large proportion of it, that! But the reverse can never be true. STUDENT

Clipped From the Press

The Dangers of "Holy Water"

THE sanitary dangers lurking in "holy water" have recently been scientifically studied by a monk, Fr. Augustin Gemelli, who is himself a highly qualified medical man. He published his results in the *Scuola Cattolica*. Each cubic centimetre of holy water in the basins in the Church of Santa Croce, Turin, taken from the surface, contained 150,000 microbes, while a cubic centimetre taken from the bottom contained no less than 6,000,000 microbes. He injected this water into animals and found that it always killed them, the causes of death being tuberculosis, colitis, or diphtheria. He recommends a new form of holy water receptacle, so constructed that persons, instead of dipping their fingers into it, can obtain three drops of water by pressing a button.—*Westminster Gazette*, October 9, 1908.

There appears to be something wrong here somewhere. M.

Greatness of Latin America

LAND AREA THREE TIMES THAT OF THE UNITED STATES—ALMOST AS MANY PEOPLE

ALL America, including the United States and excluding Canada, which is not a republic, covers an area approximately of 12 million square miles, of which Latin America occupies nearly 9 million, or three-fourths. The total population of the same Pan-America is 160 million, of which 70 million, or almost half, live in Latin America. The total average foreign commerce, exports and imports, of Pan-America is 5000 million dollars, of which the share of our little appreciated sister nations is over 2000 million dollars, or considerably more than one-third. Last year the foreign commerce of the Argentine Republic reached nearly 600 million dollars. Buenos Aires, the capital of the Argentine Republic, has a population of 1,200,000 and is growing faster than any city in the United States after New York and Chicago. Rio Janeiro, the metropolis of Brazil, has nearly reached the one million mark, while the total area of Brazil exceeds the connected area of the United States by sufficient square miles to have room almost for Germany in addition. Out of the Amazon river every day flows four times as much water as out of our mighty Mississippi.—*John Barrett*, Director International Bureau of American Republics

Use of Art Museums

A NOBLE delight in great works of art and a desire that such a delight should be shared by all can come only to those who feel all the emotions which great works of art were designed to express and communicate; and these emotions are possible only to those who understand the conditions in which great works of art were produced and the purposes for which they were designed. To revive such an understanding, therefore, is, or should be, the main purpose of our public museums. . . . The art preserved under glass cases warns us that it was not produced to be so preserved . . . but that it was meant to be used, and enjoyed by the users of it. If we take this warning to heart, we shall see that its beauty expresses or symbolizes the enjoyment of its use, and becomes a dead beauty when that use is at an end.—From the *London Times*

Art Music Literature and the Drama

The Missing Keystone in the Arch of the Temple of Life

AS one watches the field of human life, one sees here and there dissimilar figures standing out clearly against the background. They are the leaders, teachers, poets, musicians, thinkers; in fact, those whom we call geniuses.

It is the mark of the genius that he is unlike any others, before, or since, his time. He has his special message or work, and the higher his rank as genius, the more dissimilar is he to all others.

Take, if only as hypothesis, the theory of Reincarnation; look again at the field of life in the light of it and see how many difficulties are dissipated.

Let us look back an aeon. We see some one among the rest turning towards music. Perhaps his era was like that of the Middle Ages in Europe when only the few had mind or leisure for art in any form. So we see this soul standing a little apart and entering the small band of those like-inclinationed with himself. But mayhap the inner pressure is stronger with him than with them.

Time passes; we look again and see the same soul in another birth, still more markedly drawn to music, but, with some few others, no longer content to listen — they would fain compose. Yet the compositions of all bear one stamp.

Again we let time pass and the man is in another of his lives. But the compositions of that life now have a specific note of their own. They are no longer like those of this man's contemporaries in music, though among these may be artists, geniuses.

Our man is, let us say, Richard Wagner, and one of his contemporaries is Beethoven. Hand in hand, as it were, we can suppose the two coming up the ages, differentiating themselves at first from the mass of men, then from their fellow-musicians, then from each other: until each learned to speak to mankind his special and essential and peculiar message, one which no mortal save himself could give. But neither of them has finished yet; for more of the message we must wait; we can only see that it must be ever grander and more unique as the ages unfold.

Let us turn back again to look at the field of life, shedding upon it as before the light of this "theory" of Reincarnation.

For one genius, we see ten thousand men of

consummate ability in various lines. They are men of genius in the making; they have not fully differentiated from each other; they have not yet arrived at the power to unfold and deliver to mankind the special message or gift folded up within them. For one man of consummate ability, we see a thousand of fair talent. They are on their way up also, two steps from genius. And behind these men of talent are the vast multitudes with no

near this ancient conception, and will presently come full upon it. Modern thought merely lacks the idea of rebirth, the idea that each man and woman of us is an undying essence sentient in a body, and that this living essence is the inexhaustible seed from whence will unfold throughout all time further and further powers and splendors in the conscious life of those whose center-spark it is. The deeper thought of today perceives the eternity of life, perceives its continuous and ever more glorious process of bloom and fruition; but conceives of man as entering upon this, holding it for a few years, and then losing it forever in individual extinction. Thus a writer speaks of

the familiar re-discovery which the nineteenth century has achieved, that he (man) is, after all, only the transitory custodian of an undying gift of life, an inheritor under conditions, the momentary voice and interpreter of a being that springs from the dawn of time.

But why not push the idea farther? Man is not the embodiment or body of life divine; *he is that life*, and the body, used rightly instead of desecrated, would neither be a shell nor a tomb, but a harp on whose strings he would smite the harmonies of divine feeling now latent. And for this the first step is universal brotherhood. For all men I have a message; they for me. But neither can attain or communicate aught beyond poor fragments until we know our eternal relation as Brothers; *and we must act to know.*

We must "live the life" ere we can hope to "know the doctrine." STUDENT

The Harp — Note by a Student

RECOGNIZED authority on the history of the harp, Mr. John Thomas, an English writer, has just published an interesting brochure on the subject. Discussing the question of the introduction of the instrument into Britain, he deems it probable that either the Greeks or the Phoenicians, who from early times traded with the country, were the means of bringing it thither. He points out that for ages the harp was "the inseparable companion of prophet, king, bard, and minstrel," and the high place it held in the affections of the ancient Egyptians and Greeks is indicated.

Naturally the author has a good deal to say of the harp in relation to Wales and its history. In the seventh century the instrument was held in such honor that in Wales a slave was not allowed to practise upon it, and to be able to play it was an indispensable qualification for a gentleman. It was one of those things, too, that could not be seized for debt. One wonders whether the modern improved harp, so remarkable in its possibilities, will ever come to hold in the hearts of men the high place it occupied in ancient days. STUDENT

RICHARD WAGNER

special mark, *three* steps from genius. Only they have not yet started forward.

But in all men sleeps a divine message for all others. Goethe writes greater poetry because he hears the music of Beethoven. Beethoven rises to greater heights because of the poetry of old Greece. Men need and must have the messages of others ere they can *perfect* their own. Only there can be no limit of finality to the process. It is only our weak imagination, not the reality, that is beggared. Splendor ever holds enfolded within itself a vaster splendor.

The best modern thought is drawing very

O man greatly beloved, fear not: be strong, yea, be strong.
And when he had spoken unto me, I was strengthened, and
said, Let my Lord speak: for thou hast strengthened me.—*Daniel x: 19*

WHY not take a trial balance each night before sleeping? A mental ledger and day-book account might be opened, beginning with a clear statement of the ideals on our horizon, the obstacles in our way, and, coming down to detail, the next step proposed to be made and the probable perils to be guarded against through the coming day. The better to make the ledger show profit and not loss a series of questions might be prepared calculated to meet every attempt at prevarication and excuse which we know so well the lower nature will inevitably begin when it finds itself cornered.

There are many questions which might serve us to start out with, and as the evening's answers are mentally tabulated we shall not find it difficult to open our individual account. For example:—

On Duty. Have I endeavored to find out my duty, or that work which I am fitted to contribute towards the general welfare of my people?

Have I faithfully performed it today?

Have I kept myself from interfering with any other's duty?

Have I cheerfully complied with every call to work and to help others?

Have I never tried to avoid meeting people or opportunities of service that seemed tiresome?

Have I wasted time?

Have I kept my apartment neat and clean?

How have I eaten my food?

What have I taken to drink?

Have I controlled the body? Have I stood erect?—walked with a purpose?

Have I endeavored to maintain the highest standard of purity, mental and physical?

Have I kept my heart in sympathetic touch with those working around me, appreciating their efforts and the difficulties they have to meet?

Have I harbored any ill-feelings?

Have I appreciated all work that was well

The Day's Ledger

done and expressed commendation where it was deserved?

Have I taken pains to show love, goodwill and gratitude?

Have I lifted my thoughts above the ex-

PIONEERS

ETHEL TALBOT

FORGET not yet, forget not yet,
That once we were your peers;
Remember, though the world forget
We were the pioneers.

We braved the fever-swamps by night,
The desert's heat at noon;
We wandered, lost to all men's sight,
Beneath the wan white moon.

When in the burning noon of day,
The forest-wind blows sweet,
Forget not us, who made the way
Smooth ground beneath your feet.

We dug the wells we may not drink,
The gold that buys not life,
Spent, in the forest's heart we sink,
Forgotten of the strife.

Though we be old in dearth and toil,
Fallen and faint with thirst,
While ye shall reap the easy spoil
Ye shall not be the first.

Ye shall come after, but no less,
No man can take our pride;
The first that broke the wilderness,
For that gain's sake we died.

The paean of our triumphs yet
Runs ringing down the years;
Ye have the fame, but ye forget
We were the pioneers.—*Selected*

ternal, passing occupations to some inspiring ideal?—dwelt on the efforts of some great character?—listened to good music?—or lived with the poets for a few minutes today?

Have I talked over-much, indulged in gossip or exaggeration, or made merry at other people's expense?

Have I been silent when a word would have helped another?

Have I discerned the lessons of life displayed before me today?—traced the inner working of the Law in any way?—and taken a higher stand accordingly?

Have I kept all good resolutions?

Heroism stirs our hearts to face any sacrifice in moments of deep feeling, to battle desperately with our weaknesses when we see them in all their true hideousness, but these high flights and emotional efforts land us nowhere. By going slowly and following up every effort with calm, impersonal reflection at the close of the day we shall become conscious of failures and blemishes that before we were blind to, for this method is the culture of the perception of character. Some plan of the kind has always been followed by mystics in all religions, and those who are seriously engaged in the pursuit of inward enlightenment know it to be essential. **STUDENT**

The Sunset Time of Life

MINDS imbued with the popular notion that threescore years and ten mark the termination of vigorous effort for a human being, might profit by consideration of an example of useful old age recently noted by an English contemporary.

In a private school conducted for middle class children in a certain town in England, is to be found a woman who recently celebrated her hundredth birthday and who is still serving as a teacher. With faculties unimpaired, keenly interested in her work and all that concerns her fellow men, this remarkable centenarian is truly an example of what old age can and should be to all. It is a point, among many, about which our minds need readjusting. The picture of helpless, unemployed old age, awaiting death with folded

hands, belongs not to the new time. When we come to regard the body and mind as instruments, merely, for the soul's experience, we will be eager to use them to their utmost and to prolong their usefulness.

The life of an unusual woman, which has just closed in New England, is another example to those who excuse lack of effort along certain lines on the plea that they are "getting too old." The mother of a well-known professor at an eastern woman's college (Miss Katherine Lee Bates), she kept her interest in life and the quest of experience and culture so active that waning vitality did not seem to her sufficient reason for ceasing her efforts. Among other achievements she took up the study of Spanish when past seventy-three, and so mastered the language that she translated much of the literature of Spain into English for publication. This instance reminds one that Cato learned Greek when an octogenarian; that Goethe was of the same age when he finished his masterpiece; that Franklin was past seventy when he mastered French, and Chaucer was nearing the sunset of life when he wrote the immortal *Canterbury Tales*.

Madame Mathilde Marchesi, the most famous vocal teacher in the world, and who is still teaching although over eighty years of age, recently began the study of Russian. Queen Victoria was past seventy when she began the serious study of Hindustani. A daily paper just at the writer's elbow contains an account of Mrs. Cary Sanderson, a relative of Alice and Phoebe Cary and herself an author, who has just celebrated her one-hundredth birthday. She does much of her own housework and gardening and still writes for publication. And why not?

On every hand there is cogent evidence of reckless waste of powers, and rare indeed the spectacle of a human being thoroughly energized with the divine life force, utilizing the capacities of body and mind to their fullest extent. With most of us determined effort is spasmodic. An inner urge is felt to be more and to do more; the body and mind respond for an hour or a day, then gradually sink back into the old treadmill of commonplace existence. That such unprofitable expenditure of life's harvest-time is a matter of individual choosing is shown by the inspiring examples we have of grand old men and women here and there who choose to study and serve until the last heart-throb. And why should we not do our utmost until the very end? Why should not life be to us, always, a sacred care, a trust?

With the waning of physical vitality there should come the waxing of the rich inner life of the soul. The indrawing of physical life should be a time for the outward-reaching of the spiritual life and one sign of this is full use of all one's powers—even though waning—until the very end. Those who merely vegetate during the last years of life, thinking that their work is over and that they have earned what they call "a rest," are those in whom the voice of the soul has been drowned by the clamor of selfish desires. STUDENT

Theodosia Burr

IT is nearly one hundred years ago that Theodosia Burr, the daughter of Aaron Burr, sailed from her southern home for New York. The vessel never arrived and the mystery of its disappearance has never to this day been cleared. Recently, however, a minister's wife happened to recount to a friend a certain death scene which she had witnessed in a western poor-house some years ago. The dying man had been in his youth a pirate and his conscience was heavy with the memory of the frightful deeds he had done or helped do in the early days when piracy was not un-

wish with all my heart I had—my own life would not have been spared an instant.

The minister's wife had probably told this tale many times, for she had heard it early in the fifties, but her last listener had in an old family album a picture of Theodosia Burr, copied from an old portrait. She put two and two together and resolved, if possible, to find the original portrait. This she finally located from references made to it in the reports of the North Carolina Historical Society, and from its owner learned its history. Briefly, it had been bequeathed to her father by an old woman who, during her lifetime, had always refused to sell it, saying that it had been given to her by an old fisherman to whom she was much attached and that she had promised him not to part with it. According to the fisherman he had found it in what was evidently a young girl's room on a little sailing vessel that had been stripped by pirates and then abandoned.

The present generation has perhaps heard little of Theodosia Burr Alston, or Theodosia Burr as she is always called, but to their elders the story of her youthful innocence and beauty, her happy marriage, and her mysterious disappearance so soon thereafter exerted a fascination that the years do not efface. Much has been written in the effort to explain the mystery of her fate, but to those familiar with sea-coast conditions during those troublous and turbulent years succeeding the war of 1812 the solution suggested by these occurrences seems the one most likely to be true. Jottings and Doings

(From a Student's Note Book)

THE changes taking place in Turkey, looking towards the emancipation of Turkish women, are significant. In the Kurân women are enjoined "to behave towards their husbands in like manner as their husbands should behave towards them, according to what is just." This is what the most enlightened women of the land are finally demanding—yet what changes does their demand portend! Already many of the highest class are appearing in public without their veils, and are even holding public meetings at which the old, old "woman question" is discussed. The president of one of these Turkish women's organizations is the wife of a prominent physician, and speaking for all members of the body she declared recently that the women of Turkey would not, could not, rest until they stood on a level with the most enlightened of European women.

LADY MARGARET STUART (England) is one of the few women who hold a master mariner's certificate. Recently her yacht, on which she was entertaining a party of guests, Americans, went ashore in a sudden and heavy sea. Lady Stuart had the life-boats manned and sent all the guests ashore, while she herself remained at the helm. Every wave half submerged the vessel, but its plucky skipper remained at her post, alone, for twelve hours, when the wind abated and the high tide allowed the yacht, much damaged, to be floated.

THE KING AND QUEEN OF NORWAY AND YOUNG PRINCE OLAF

common along the Atlantic seaboard. More troubling than all was his memory of having tipped the plank which hurled a certain beautiful young woman into the sea to her death. He said:

On one voyage we captured on a ship bound for New York a beautiful young woman. With others our captain ordered that she should be put to death, and when told she must walk the plank she asked only for a few minutes alone. Her request was granted. Finally the captain thundered that her time had come. Without hesitancy she came out on the deck dressed all in white. I will never forget how she looked.

Calmly she stepped upon the plank and with her eyes raised to heaven and her hands crossed reverently over her breast, she walked slowly and firmly into the ocean, without any apparent tremor or protest. I had hardly time to tip the plank, but watched her, transfixed at her marvelous beauty and amazed at her remarkable fortitude.

Had I refused to perform my allotted work—I

OUR YOUNG FOLK

Trawl Fishing

HOW many boys and girls know how the great sea-fisheries of the world are carried on? Within the last twenty-five years the fishing trade has been so well developed that it now forms one of the most important industries of maritime countries. The new impetus was given to fishing when railroads began to be extended to nearly every nook and corner of the civilized world. The picturesque old-time fishermen who went out in small open boats and brought in a few fish which their wives usually sold from house to house in the village, have been superseded by the newer and much quicker method called steam-trawling.

If we were to go out with a trawler from one of the fishing stations of Great Britain, for instance, we should board a stoutly built boat of from fifty to seventy-five tons, with provisions and coal for a two weeks' trip. The steam trawlers usually fish in fleets, often sixty or seventy boats together. Part of the number is on the ground all the year and the individual boats go to port once a fortnight for new supplies.

The trawl is a great bag-shaped net a hundred feet, or more, long, which is fastened to the boat and dragged along the bottom of the sea, quickly catching in great numbers the fish that keep close to the bottom. The trawl is towed over the ground for five or six hours, and then comes the laborious process of hauling it up. When in the right position the draw-rope is loosened and the mass of fish falls out upon the deck, a writhing, slippery heap. The work of sorting begins at once and all unusable inhabitants of the sea that may have gotten into the net are thrown overboard; the others are packed in baskets, with the different varieties by themselves.

Accompanying each fleet is a steam cutter which collects the fish caught by each trawler during the twenty-four hours, packs them in ice and carries them to market. In this way tons of deep-sea fish are daily landed at the fishing docks and taken by rail to inland cities where they are offered for sale while yet but a few hours out of water.

Besides adding much to the food supply of a country, the sea-fisheries are the means of developing many trades and manufactures. The training for this work develops self-reliance, courage, and forethought, and the men who carry on the trade are said to be an exceptionally fine set. A. P.

Love Me, Love My---Faults

TWO brownies were sitting on the gatepost discussing the problems of the day.

"What most puzzles me," said Homte, "is about Mary and Lucy Bell."

"I know all about them," said Snip, "what is it?"

"You can never puzzle this out, though; I have tried until, as you see, my head is nearly double its former size, and still I can find no explanation."

"But what is it, Homte?"

AN ANCIENT SONG OF WALES

I HAVE been in many shapes
Before I attained a congenial form,
I have been a drop in the air,
I have been a shining star,
I have been a word in a book;
I have been the book originally.
I have been the light in a lantern
A year and a half . . .
I have journeyed as an eagle.
I have been a boat on the sea.
I have been director in a battle.
I have been a sword in the hand,
I have been a shield in a fight,
I have been the string of a harp,
Enchanted for a year
In the form of water.
I have been a rod in the fire.
I have been a tree in the covert.
There is nothing in which I have not been.

"It is this way," said he. "Everyone knows that Mary is very curious. This morning Lucy Bell said to Mary that she wished people would not be so curious. Then Mary became angry and said that Lucy Bell did not love her any more."

"Why, that is easily explained," said Snip. "Mary evidently likes Curiosity, and did not wish Lucy Bell to speak ill of him, that is all."

"But Snip! why then did she say that Lucy Bell did not love her?"

"Well, perhaps Mary has lived with Curiosity so long that she counts him as part of herself, and then, of course, feels that anyone not liking him is disliking herself."

"That makes it a little clearer," said Homte, "but I cannot yet understand."

"Maybe Curiosity has made Mary think he has done her some great service, and she in return has promised to defend him against his enemies, as she would herself."

"Yes, that seems likely, but she said nothing about Curiosity, but only declared that Lucy Bell did not love her."

"Do you think it possible that Mary is under an enchantment, and is thinking that she is Curiosity? Such things have happened."

"Dreadful! No, that cannot be! Very likely Curiosity himself spoke with Mary's lips, and—"

"Hush, Homte! Mary is no slave! I am inclined to think that being so well acquainted, they have an understanding between them, and that Mary has promised to defend him, without using any names."

"My dear Snip! Curiosity is not a fit companion for her. I have heard many of the humans say that Curiosity has a bad reputation, and is not presentable in refined company; and I know that Mary's mother is very particular about whom Mary chooses for a friend."

"Let us give up puzzling about it, Homte! Our heads cannot stand it! Perhaps we shall hear some human explain." AEA

THE first time I read an excellent book it is to me just as if I had gained a new friend; when I read over a book I have perused before it resembles the meeting with an old one.—Goldsmith

Tyrian Purple

THE beautiful color known as Tyrian purple, was made by the Phoenicians, and later by the Greeks and Romans, from a little sea-animal who lived in the clefts of rocks near the sea. Such color-bearing little animals came to be known by the family name of *Purpura*. There are several different kinds of *Purpura*, and they are found in nearly all seas, but the largest and finest have been found in southern waters. They have very pretty thick whorled shells, some having alternating stripes of brown and creamy white.

Aristotle, the Greek philosopher and earliest writer on Natural History, says that the Phoenicians made their famous Tyrian purple from a sea animal having a very large shell with seven turns to its spiral.

The dye, however, is not found in the shell, but in the little animal itself. There is a small band on the lower surface of its mantle, just below the breathing organs, in which it is contained.

Tyrian purple is now known to have been of a deep violet color, although at one time it was thought to have been vermilion red. When the coloring matter is first extracted from the animal it is yellowish. By exposure to the light it becomes a golden yellow, and finally a beautiful tint of violet, the highest color in the color scale. All the coloring matter that does not turn violet, dissolves easily in water, but after the purple color has developed it is insoluble. The rays of the sun cannot fade Tyrian purple; it grows deeper and richer by the sun's magic.

The ancients loved this beautiful color. It adorned the mantles of kings, and they loved to watch the scintillations of the sun's rays in its meshes. Born of the sea, and brought to bloom by the sun, no wonder it was esteemed as the Royal Purple. STUDENT

Wireless Telegraphy

CONSIDERABLE training in concentration is necessary to be an operator in a wireless telegraph station. The messages come in a wave, so that the listener must close his ears to all others and concentrate his full attention on his own special message. This is received through a telephone, then written out in the usual way. An instrument is also used that is supposed to shut off all extraneous sounds and communications. No doubt this will do so, when the different stations are similarly constructed, when they harmonize, so to speak; but at present many messages are lost or missed, chiefly during the daytime. The three operators take the night duty in turn; it is easier than the day work, though always requiring special training. F. B.

FOR a long time India and Egypt had the largest tracts of irrigated desert land in the world, but America has recently come to the fore in the matter of irrigation, and when what has already been planned for the Twin Falls country in the State of Idaho has been carried out, there will be 1,350,000 acres—the largest tract yet—under irrigation. R.

THE CHILDREN'S HOUR

Thorwaldsen

IN olden times, when ships sailed out to sea, there was always a carved wooden figure set high upon the bow, facing outward. Sometimes it was a mermaid; sometimes a great hero; sometimes a god. The sailors always loved these images that seemed to be carrying the stout ship onward, over the pathless sea. They thought that the good spirit of the ship lived in them and watched over and guarded them in times of danger.

On the far northern coast of Europe, on the shores of Norway, Sweden, Iceland, and Denmark, where the people have sailed the ocean for more than a thousand years, many ships still bear upon their prows the carved wooden figure-head.

About the year 1780 there was living near the wharves of the city of Copenhagen a family by the name of Thorwaldsen. They had once lived in Iceland, but being very poor had taken ship for Copenhagen in order to find more work to do. There was a father, a mother, and a little son, Bertel. The father made a living as a carver of these wooden figure-heads for ships.

Little Bertel used to stand around and watch his father as he worked. Chip, chip, chip, and the bits of wood flew right and left, as the wooden mallet came down upon the handle of the sharp steel chisel. Chip, chip, chip, and little Bertel too made believe that he had a chisel and mallet in his small hands, and pounded away at his own tiny fist as if it held the handle of a chisel. You see although his hands were empty, he had what was better for a little boy to have than a mallet and chisel. He had imagination.

When he was a little older, Bertel's father let him have a real mallet and chisel, and showed him how to use them. Bertel needed very little teaching, he had watched his father so carefully. By the time he was fourteen or fifteen years old, being tall and strong, he could handle the mallet and chisel as well as a grown man.

Once his father let him have a block of wood and told him he might carve a figure all by himself. Bertel looked at the block long and carefully. He saw the image he was about to carve standing in the wood. Chip, chip, chip, and the bits of wood flew right and left. Chip, chip, chip, and the hours flew by. Chip, chip, chip, at last the work was done. Clear, bold, and free, the image stood out just as Bertel Thorwaldsen had seen it, covered up in the block of wood. His figure was alive, ready to face the fair weather and storms of many a voyage across the northern seas.

One day when young Thorwaldsen was carving away, with all his heart in his work, his father's employer came into the workshop. He watched the boy in silence for a while. He noted his sure, steady hand guiding the chisel, and the strong, free mallet strokes. "Bertel should be sent to the Academy," he said, "to study drawing and clay modeling."

At first it was only for half a day that he could be spared from work in the shop. Soon he began to win prizes, for drawing and modeling in clay, and an artist took an interest in him. When young Thorwaldsen was twenty-three years old he won a scholarship. This prize enabled him to go to Rome to study art for three years.

noble work and fine, gentle courtesy. Emperors, kings, poets, musicians, felt it an honor and pleasure to visit him in his studio. He was knighted by the king of Denmark and invited by him to return to his native land.

Thorwaldsen carved many fine statues. He sent many of them home to Denmark. He showed his love and gratitude to the ancient Greeks by sculpturing a great statue of Jason, the hero of the Argonautic expedition, who won the Golden Fleece. He made a statue of Copernicus, the great astronomer, and also one of Schiller, the hero poet of Germany.

Near Lake Lucerne in Switzerland is the "Wounded and Dying Lion," of giant size, made by Thorwaldsen in memory of the three

hundred heroic Swiss soldiers who met their death while guarding the King of France at the time of the French Revolution. It is one of the noblest pieces of sculpture done in modern times. It stands as a monument to the lion-hearted heroes of all ages who died doing their duty. B. B.

A Timely Warning

A TINY dog named François is the pet of one of the crew of a British bark. The captain says frankly that François saved the ship at the time of the great hurricane on the Atlantic Ocean, which not long ago tossed the very biggest vessels about like toys. The dog lived in a little house on the deck

and on the night when the gale struck the ship he howled so that no one could sleep. One of the officers of the ship wanted to throw François overboard but the dog's master pleaded for his life. They were all wide awake on account of the dog's cries, when, almost instantly, the whole sea was swept by a furious gale. If there had been any delay in protecting the ship by making everything fast, it would have fared badly in the sudden storm, but François's howling had kept the men awake and they were at their posts in a moment. K. R.

The Fishes' Defense

ONE way fishes have of escaping from their enemies is to change their color suddenly to that of the water they are in, and then, of course, they are invisible and quite safe. The tropical fish can do wonderful things in the way of making these swift changes of color. Red parrot-fishes, seen in an Aquarium, change as you are watching them. You may see some of them 10, 14, or 16 inches long, of a dark green color except the red underpart of the body. All at once they are pink, white, or light green. M.

TWO LOTUS BUDS OF FLORENCE, MASS.

BRIGHT yellow, red and orange,
The leaves come down in hosts;
The trees are Indian princes,
But soon they'll turn to ghosts;
The leathery pears and apples
Hang russet on the bough;
It's autumn, autumn, autumn late,
'Twill soon be winter now.
— William Allingham. (Selected)

In Rome there were the beautiful statues of the gods and heroes of ancient Greece. They made a new world for the tall, broad-shouldered, yellow-haired young Norseman, with the sea-blue eyes. It seemed to him then, as he looked upon those wonderful marble statues, that he had been sleeping all the years of his life. Their beauty touched his soul, as with a fairy's wand, and it awoke.

He began to work with might and main. All his heart was in his work. Now that his soul was awake, he could learn all things easily. As he worked and studied, he kept before him the noble beauty of ancient Greek sculpture. He tried to give his own thoughts just such beautiful form in pure white marble.

Thorwaldsen lived in Rome for over twenty-five years. He became greatly loved for his

THE SECRET DOCTRINE

THE MYSTERIES OF THE HEART DOCTRINE

Prepared by
KATHERINE TINGLEY
AND HER PUPILS

The Theosophical book of the Twentieth century

Tells the story and the history of the Theosophical Movement.

The prices are \$2 in cloth and \$1.25 in paper, which barely cover the cost, for it is printed and bound, not gaudily, but with such carefulness and thoroughness of art and craft as to make it unique among modern edition books.

Order now from
THE THEOSOPHICAL PUBLISHING COMPANY
POINT LOMA, CAL.

Isis Conservatory of Music OF THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY POINT LOMA, CALIFORNIA

Personal applications and inquiries received every Saturday
by the Secretary at SAN DIEGO BRANCH

SOME OF THE ERRORS OF CHRISTIAN SCIENCE CRITICISM

by **H. P. Blavatsky and William Q. Judge**

CONTENTS:

"The Empty Vessel Makes the Greatest Sound"
A Note of Warning

—by **H. P. Blavatsky**

Of "Metaphysical Healing"

Affirmations and Denials

The Cure of Diseases

Replanting Diseases for Future Use

—by **William Q. Judge**

A MOST VALUABLE PAMPHLET. Outside of Theosophy there is given no adequate explanation of the healing that is at times accomplished, nor of its *rationale*, nor of the ultimate price that must be paid and the dangers connected with such practices.

This pamphlet is invaluable to all students.

CENTURY PATH

WEEKLY ILLUSTRATED

Edited by KATHERINE TINGLEY

NEW CENTURY CORPORATION
Point Loma, California, U. S. A.

Entered January 11th, 1907, at Point Loma, California, as second class matter under Act of Congress of March 3rd, 1879.
Copyright, 1908, by Katherine Tingley.

SUBSCRIPTION
By the year, postpaid, in the United States, Canada, Cuba, Mexico, Porto Rico, Hawaii, & the Philippines, FOUR DOLLARS; other countries in the Postal Union, FOUR DOLLARS AND FIFTY CENTS, payable in advance; single copy, TEN CENTS.

REMITTANCES
All remittances to the New Century Corporation must be made payable to "CLARK THURSTON, Manager," and all remittances by Post-Office Money Order must be made payable at the SAN DIEGO Post-Office, though addressed, as all other communications, to Point Loma, California.

Our Multiplex Personality

THE celebrated case of "Miss Beauchamp," a young lady with four different personalities, has often been told; and as it occurs again in a recent number of a periodical, an occasion is afforded for commenting on it from a Theosophical point of view. The story, which is amply authenticated, is as follows:

To the office of a certain doctor came a young lady suffering from nervous breakdown. The doctor hypnotized her and discovered that the personality under which she had come, and under which she had masqueraded for five years, unknown to her friends and even to herself, was not her real self; and he succeeded in establishing once more that real self which had been in abeyance for five years. These two selves he called B 1 (the artificial self), and B 2 (the real self). B 1 was an idealist, self-effacing and pious, and B 2 was sufficiently like B 1 to have been readily mistaken for the same personality. But when the doctor continued his hypnotism he unearthed a third personality, B 3 or "Sally," who was exceedingly gay, mischievous, irresponsible, and ignorant; she delighted in playing pranks on B 1 and in deriding the latter's piety. Nevertheless she had a heart and often showed an anxiety to protect B 1. This third personality did not at first have full control of the body, could not speak properly and could not see; but later on she "got on top" and was able to use the voice and eyes.

Subsequently a fourth personality was unearthed, this time an "Ibsen girl," proud, independent, intellectual, and emotional. The interrelations between the different personalities were curious. B 1 did not know of the existence of B 3; but B 3 knew all about B 1 and used to tell the doctor the thoughts of B 1 which B 1 herself concealed. B 3 was cognizant of all the doings of B 4 but unable to read her mind. B 4 despised B 3 for her ignorance and despised B 1 for her folly; while B 3 was afraid of B 4. Again, B 1 was a physical wreck, while B 3 was always in robust health—and that with the same body!

No Power of Self-Control Evoked

Finally the doctor succeeded in getting the extraneous personalities to disappear and they became blended into one personality, the patient being (supposed to be) completely cured and her present character containing the various strains more or less balanced.

This reminds us of a story by the German mystic Justinus Kerner, which appeared translated in the *Path* magazine, July to October, 1888. In this case the patient is a young girl

who is possessed by an evil spirit in the shape of a ruffian who uses very coarse and abusive language. But she is also entered by a kindly spirit, a sort of guardian angel. Instead of a doctor who ignorantly hypnotizes, there is a Sage who instructs the girl how to use her own will. He discloses to her the very important fact that *not only the evil spirit but also the good one are obsessing forces*, and urges her to get rid of both obsessions. Under his wise directions, she exerts her will to do so. But then a strange thing happens: the "good" and "evil" spirits go into partnership, agreeing to share the body between them. This enables the girl better to see into their common nature, and strengthens her determination to get rid of them both, in which she finally succeeds.

We may learn many things from these cases. Such instances have occurred from time to time all through history; but it is only lately that they have claimed the attention of science; formerly they were treated as cases of possession or insanity. They are but particular and exaggerated forms of what goes on habitually in most people. Our own personalities are equally multiplex; we all have the "Jekyll and Hyde"; but, as in the present case, the number of beings is not limited to two. We are compact of many elements, which get atop at different times and vie with each other. It is but rarely that the nervous system becomes so deranged that the different elements of the personality appear as distinct individuals, as in the above case. Yet we may reflect upon the evanescent character of much that

we dignify by the name of "ourself"; we may see that some thought-form floating from an unknown source into the organism may coalesce

with it and form what we call a personality or self, just as a paper tune may be fed into a mechanical piano thereby creating a fictitious Beethoven. A hypnotist with his subject's evacuated organism before him can play on it any tune he likes, as has been so amply demonstrated by the French experimenters of the Salpêtrière hospital, who caused all sorts of personalities to appear in their patients according to order. Therefore the character of any person is more or less open to extraneous influences, according as his will and intelligence keep it more or less under control. And often what we mistake for the wisest opinions and the most admirable traits in our character are only derived in some such way.

It is also worthy of remark that there may be obsessions of the "good" kind. This is

why so many people find it impossible to get rid of the bad, because they hug to their breasts the emotional "good" obsession which is inseparably joined to the less subtle "evil." Ancient symbology denotes this fact by the symbol of those monsters, the Sirens, the Loreleis, etc., which are so bewitchingly beautiful in their face, but end so slimily in their clawed feet; which first enchant and then devour.

Again, in the case related by Kerner, the physician is no hypnotist who overpowers his subject, but a true soul-physician who *teaches the patient* and directs her to summon *her own will*. A very important point; for hypnotism, even when successful, only replaces the patient's will, leaving him, though "cured" for a time, still irretrievably destined to future attacks, some day, sometime, for so long as he has not trained his own will. Again, hypnotism is by no means always so fortunate as it was in this case, and often results in indelible injury to the patient and probably to the operator also. Hypnotism does not cure. It may stun the psychic nature of the subject into insensibility to the nobler elements of the soul, or strengthen some psychic weakness, but it no more heals than does whisky the drunkard to whom it is fed *ad lib. to keep him quiet*. It will end infallibly, like all abuses, by raising seven devils worse than the first.

These facts about the complicated nature of the forces that rule in our lower nature should emphasize the necessity for *self-control* and balance as an indispensable preliminary to all true occult study, and *not* control by others; and the extreme danger to all who attempt to pursue it without such preliminary safeguards. This is where the danger of "psychism" comes in, against which the CENTURY PATH has so often issued warnings. Those who under the impression that they are developing their own nature, are practising various forms of mental and psychic contortions, may be developing powerful extraneous personalities of the obsessing kind, which will claim control of the life and be extremely difficult to get rid of.

Now many of the practices referred to consist in a deliberate exposure of oneself to the action of any extraneous influence which may come in answer to the invitation, a feeling of warmth, exhilaration, or exaltation, being foolishly accepted as sufficient evidence of the desirability of said influence. And other of the practices consist in an intensification of the personal desires, as for money, self-satisfaction, winsomeness, etc. Therefore either one of these two classes of practice must result in an increasing of the lower forces of our character; for the so-called "will" that is evoked is only desire, and the experimenter will sooner or later find out to his sorrow that it is a master and not a servant, as did the adventurers in the Eastern fables, who evoked powerful genii and then *could not get rid of them*.

Of course the most important question raised in this connexion is, What is our true Self amid all these sundry elements? Who is the King? The answer is that all mere personality is more or less fleeting and delusive; we change continually throughout life, and at

The Master Within

death undergo a complete revolution. The Master that rules our life is ordinarily so little known to our normal consciousness that he seems to be an external power, which we call "God" or "Fate." His will is not our will, not his purpose ours; and he gets his own way whether we consent or rebel. To find this Master, who is our true Self, is the quest of the student of true Occultism. Such a quest implies that we will abandon the worship of the desires and passions, and endeavor to rise to the plane on which that Master exists.

We have the ideal of the *inner Christos* to help us, if we can disentangle it from theological dogma; and we have many instances of great Helpers of Humanity whose life-motive has been delight in service. Anything which like Nature, compassion, sense of honor, sense of duty, music, can give us a foretaste of the possibility of a life free from ambition and the unrest of desire, helps us to understand what the breath of true Life may be. We cannot conquer desire by desire, but by renunciation of desire. Thus alone can all the multifarious elements of the character be brought into harmonious subjection to the one Master-principle within. STUDENT

Our Control Over Conditions

THE human will, rightly guided, is a wonderful magician. Let human attention be but directed to worthy objects, and the results will soon prove amazing. Many cities have awakened or are awakening to the importance of extending the principles of sanitation into every corner and cranny of their domain, and when such sanitation includes the idea of seeing to it that the citizens shall be required to live clean lives amid clean surroundings, an immense stride ahead will be made.

Surely there is no more worthy object under heaven than the emulation of this practical achievement, one that less than a generation ago would have been derided as utterly Utopian! A generation ago, as a contemporary points out, Jules Verne's idea of going round the world in eighty days was looked on as an amiable hallucination. And yet it is now possible to accomplish it in half that time. New York, London, Berlin, Moscow, Vladivostok, Tsuraga, Yokohama, Vancouver, St. Paul, Chicago, New York, a distance of twenty thousand miles, can be negotiated in less than forty days. And if a number of people feel we ought to fly in the air, very likely that too would be a thing of the near future. And if in spite of certain human institutions the advanced nations add to ideas of higher sanitation that of warm international co-operation in the establishment and promulgation of pure brotherly ideals, based on a recognition of man's true place in nature, upon his dignity as a soul with an illimitable past and future, as the most worthy and *practical* of all incentives to human effort, as the one thing above all others humanity is really hungry for — why the world will be a lovely place to live in.

People will learn to recognize that the higher fraternity of man is a more potent force than anything in recorded history. Duty? They will learn that we owe a duty to the other planets in the solar system, that by having our attention too much centered on

material welfare, to the detriment of the noble and beautiful in the world of our inner life — the world where we really live — we are acting as a drag on other worlds than our own. STUDENT

Popular Superstitions and Scientific Facts

IN some parts of Europe it is customary to burn sugar in sick-rooms, a practice, says a scientific contemporary, "which is considered by physicians as an innocent superstition, neither beneficial nor harmful."

But lately a Professor has demonstrated that burning sugar produces "formic acetylene-hydrogen," one of the most powerful antiseptic gases known. Five grams of sugar were burned under a bell-jar, and all sorts of disease germs introduced into the cooled vapor; they all breathed their last in half an hour.

The popular faith in the disinfecting qualities of burnt sugar appears, therefore, to have some foundation.

The humorless innocence of this last remark is wonderful, especially the "therefore." It indicates the method of denying point-blank everything that you have not proved yourself, no matter how many other witnesses there may be. Are we to regard authoritative pronouncements on "innocent popular superstitions" as merely diplomatic and provisional denials, subject at any time to cancellation in the light of corroborative scientific discovery? At least let us bear in mind that however hard may be the words which scientists often hurl at popular belief, they stand ready to eat those words without turning a hair. The most mysterious thing about it, though, is that it all seems to redound to the credit of the scientists; whereas it seems as if it ought to be the other way about. Where ordinary folk would have to do an undignified climb-down, science merely sticks a new feather in its cap. It has reduced a popular superstition to a scientific fact. Now you may burn sugar with peace and honor. It will disinfect with the scientific approval. Laws of Nature, hear and tremble!

There is the superstition about leaning the poker over the fire to make the fire draw. This is so widespread that it is difficult for a sound judgment to believe it a delusion, especially as it is such an unlikely idea for anyone to hit upon otherwise than by experience. But science cannot explain it, and therefore denies it. Tomorrow Professor Somebody may discover the explanation. Then will science climb down? Not at all; it will say: "Nothing escapes the all-seeing eye of science; its latest achievement is the discovery that the popular superstition about the poker is a scientific fact! The days of superstition are fast vanishing before the radiant beam of science, etc."

The same paper reproduces the preposterous "explanations" of the Hindû basket and other tricks, from another scientific paper, and recently noticed in the CENTURY PATH, vol. xi, No. 52. STUDENT

New Use for Fish

IT seems that the rain-water tanks at Tampa, Florida, are now being stocked with small fish, which feed on mosquito larvae. The method is said to have proved very successful, and moreover the fish can live for years in covered tanks. These were often the favorite breeding-places for mosquitos. J.

Some Views on XXth Century Problems

Unexplained Presences

THE argument of Mr. Balfour in his Oxford address might be pressed further into an explanation of "modernism." Evolutionists tell us, he said, that every organ and faculty has been perpetuated by the struggle for existence. Existence is of the individual and of the species. Organs and faculties evolved under the stress of the struggle must therefore all have relation to the problems of food-getting and mate-getting. Any faculty whose germ chanced to appear, but had no relation to these problems, would not have been conserved in the struggle. All but the lower mental faculties, those concerned with the animal life, remain therefore without explanation. Yet they exist. Human aspirations for purity, for the divine, for self-knowledge, must therefore have another cause than the variations and struggles upon which evolution is considered to depend.

"Modernism" opens up a like question. According to any teaching which makes man a created being, he had a creator who knew what he was doing and what he wanted to do. In this sense man's environment is his fellows and his maker. He received faculties enough to do his duty by both, and through the divinely ordained Church he received teachings enough for this duty.

But it presently appears that his constitution is more than (according to the hypothesis) it should be. His urge to know greatly outstrips the teachings furnished him. How came this urge? If it was created with him, why were not the divinely ordained teachings sufficient to correspond? If it was not created, how came he to create it for himself?

"Modernism" is therefore the stirring in human consciousness of something that neither the orthodox teachings about man, nor science, can explain. The urge for spiritual knowledge beyond the contents of the teachings is in one view a sin; in the other, the warrant that such knowledge is ultimately havable by the constant seeker. Man does not as yet know very well how to use his inexplicable faculty, thinks that its field may be in the world of spooks, or its workings the affirmations and denials of empiric pseudo-mysticism. The only key in modern life to the problem is in Theosophy. Theosophy is the line which is the shortest path between two points, man's present state and his half-consciously fashioned ideal.

STUDENT

"Inexorable Law"

"INEXORABLE law, Freedom—two irreconcilables that our philosophy must somehow reconcile at its peril," says a recent essayist, thinking himself perhaps to have uttered a glittering paradox. "Inexorable law," too, was a common phrase from the materialist lecture platform of the last century. (*Last century* sounds like a hundred years ago; indeed it does correspond to an epoch of thought now nearly over.)

"Inexorable law" used to sound like a sentence—not of death but—of non-existence passed upon the soul. Freedom, connoting will, and therefore self, soul, could not be in

a world consisting of a flow of events, a chain, where every succeeding link was absolutely necessitated by the preceding.

So at any rate was the argument; and even now, according to our essayist, any reconciliation of the two must be done by some feat of philosophical magic.

We go upstairs in mental comfort precisely *because* of our reliance on the tyrannous inexorability of law. Knowing that matter, the matter upon which we tread, is not ensouled by irresponsible idiocy, we are confident that the steps will stay where they are. We know something of the laws of matter and are very glad to find them inexorable.

If the whole material universe were as science thinks it, and if all the laws operative within it could be stated in cast-iron mechanical formulae, as she hopes one day to state them, there would still be one more. If the whole could be written down as a blind mechanism, one phase being shown to succeed the previous as one tick of a clock succeeds another, the writing would still require a final paragraph, the most important of all. Configuration of matter A, causes configuration of matter B; configuration C has B for its cause; and so on from A to Z, from the opening of the cosmic drama in nebular mist to its close in the same mist.

Yes; but configuration C, D, or any other in the vast succession, may happen to have a human soul and will and mind, a human willing consciousness, as its cause *instead* of configuration B, C or other—or as its part cause. In other words, one of the "inexorable laws" of matter is its subservience to a willing consciousness. On his own body, man is continually an actor, through his mind and feeling and imagination—all, if he will, the servants of his will. The textbooks must add that other inexorable law to their list. Then the case alters its appearance; it is matter that may begin to lament its slavery, not the man, the soul. If it could look ahead, its lamentations might become pitiable; for it would see that the further human evolution progressed, the more abject became its slavery. It might come to know at last that its forces and laws were ideations of a Great Will put in motion for the evolution of souls and had no other reason of being.

He who will "look" well into matter can find the Great Will still at work, as he who could similarly study the material part of a fellow being would find a human will at work even among the inner *physiological* phenomena.

STUDENT

The Selfless Bee

PROFESSOR GASTON BONNIER is troubled about the bee. He seems to fear that the beehive is a type of community towards which humanity may be moving. The poor bee, he thinks, has lost its individuality. The bee is so completely an automaton, so absolutely a mere item in the hive life, that it has ceased to think of itself at all.

Humanity is certainly a good way from that. Each of us has his consciousness pretty well centered in his own life with its personal ac-

quisitions, losses, pains and pleasures. It is full of I.

But wherein consists pleasure? Is it not in the fulness of consciousness with the feeling of achieving activity? It may have other pleasures, but the keenest certainty comes of *fulness*, of the sense of full *activity*, and of *achieving* activity.

Suppose the bee has this consciousness with the three elements of pleasure, but has it in the hive life instead of in that little fragment of the hive life which *we* regard as himself: suppose that when he feels *I* he is feeling the rich *hive-I*, not the poor little fragment-I which we suppose him now to be. He has not lost *I* but made it 150,000 times richer and fuller. He is content, and has reason to be, that the little free fragment of him shall have only enough of his consciousness to do its duties perfectly. Imagine 150,000 candles each with a reflector behind it concentrating the light of them upon one splendidly glowing area on a white sheet. Each candle will naturally rather feel itself to be that glowing area than any one separate poor little gleam ten feet away.

The individual bee therefore cannot die while the hive lasts. His little body may, but he immediately gets another and light-heartedly goes on with a renewed life.

Is the bee to be pitied; or are we, in that we cannot distinguish between the expansion of *I* and the loss of it?

STUDENT

Nature-Faking

THE starting of the race was delayed awhile because the great athlete Jones, whom everybody expected to win, was not ready. He had had the customary massage by two powerful men; his hypodermic of morphine had been administered; his supply of coca leaves was prepared for chewing; and he had had his venous injection of defibrinated blood with two anti-fatigue serums in solution. But the bicyclist had not yet come. His duty, as most people know, is to keep up a spray of pure oxygen upon the face of the combatant throughout the effort.

"The race is attracting great interest and we need hardly say that all such demonstrations of the physical possibilities of the healthy human body are eminently calculated to react upon the national development of our people and upon the ideals of our young men.

"We may note that the Committee has not yet passed upon the suggestion of Prof. Grimbugge that each candidate should preliminarily be hypnotized and that the suggestion should be then made to him that he will feel no sensation from his heart however prolonged and tremendous may be the exertions required of him. There is little doubt however that this useful idea will be carried out."—(From the *Olympic Flarer*, May 10, 1920)

Perverted asceticism saw in the body an enemy of the soul, and the attempt was to lower its health below the point at which it could be a bother. We have reacted too far. A real "asceticism," whilst controlling the body, will raise it to a perfection of health at which it has no excuse for being a bother. C.

Archaeology

Palaeontology

Ethnology

An "Ingenious Theory" About the Svastika

IN an archaeological note we read that the author of a pamphlet on the *Svastika* discusses the origin of this symbol, considering it to be developed from a *calendar wheel*! "The paper is accompanied by a number of illustrations of calendar wheels and Svastikas, which aid in following the author's ingenious theory."

The Svastika is one of the most frequent symbols of the ancient Mystery-language, and found in every quarter of the world, among all peoples. A knowledge of the true numerical and geometrical relations between the cyclic periods of the heavenly bodies formed an important part of the ancient Mysteries. Some of these forgotten secrets were graven in cryptic form on stones which were set up, where we may look at them now without be-

etary symbols, etc. Before writing books on subjects, people should study up the subjects, as in that way they might learn more about them and decide not to write after all.

With regard to the Svastika, much information will be found in *The Secret Doctrine* by H. P. Blavatsky; and many learned writers, from whom she quotes, have studied the subject. But it is impossible to study one symbol by itself, as the symbolism is a whole science. It is in these mysterious symbols that have survived among so many nations, and which are such a puzzle to archaeologists, that we have one of the best proofs of the existence of that ancient Science to which they belong. The Svastika, or "Thor's Hammer," with its four equal and bent arms, it may be briefly mentioned, symbolizes, among other things, the four principles of external or man-

dered into two as God and Satan. The restoration of ancient symbols implies the restoration of the ancient ideals they stood for. H.

Totems

THE foolish descriptions of early missionaries as to the "idols" of the Indians of the Northwest, are no longer credited. It was convenient to have something to show for the work they were doing, and the description of the totems of Alaska as heathen objects of worship was as good as any other exhibit to the audiences in England, who attend meetings and contribute funds for the conversion of people who are perfectly happy as they are, to a system of civilization which does not suit them.

If the conditions were reversed we should have Indian missionaries in Europe deriding and condemning in rough terms our crests and heraldic devices, and having the ignorant audacity to teach us that the coats-of-arms of our warrior-ancestors are relics of pure savagery and worship of devils. In fact, some of the griffins and dragons and other heraldic devices, such as lions modeled on the type of dachshunds, are quite as grotesque as any totem. But knowing our chivalry and civilization to go back several hundred years, how indignant we should be at such unwelcome teachings! It may be assumed that we should not be satisfied with silence. We should not have the self-control.

How much then are we to admire the silence of the Indians whose totems date back certainly many thousands of years longer than our English system of heraldry! The Welsh who delight in genealogies are popularly credited with a family whose genealogical tree must be unrolled several yards before the side remark is noted: "About this time occurred the Flood." This is a joke. But the totem poles of the Alaskans are anything but a joke. One of their grandest missions has been and is to preserve family relationships that were scattered over thousands of miles by the flood ages ago. A stranger of a different tongue — and among these remnants of a once mighty civilization there are many more tongues than the whole of Europe can boast — is welcomed by the members of his own totem, even if he is of an enemy's tribe.

Can the Christian teachings which everybody preaches and nobody really believes to be practical, carry the love of one's enemies farther than this? And as for the totems and images that stand for principles in nature: the eagle, the bear, the salmon, the frog, and the whale, they are less idols than the lamb which the Christians revere, and the golden calf which the lamb supplanted (?), and the goat of the Israelites as adopted by the Christians from them. We hear some one protesting: "But all these had other meanings, and are symbolical; and, well, of course, it is so difficult to make one understand without a long explanation, — in short, these are holy symbols, not like the heathen idols —"

Indeed?

A. M.

Lomaland Photo. and Engraving Dept.

THE KERGAVAT DOLMEN, CARNAC, BRITTANY

ing able to decipher their meaning. Hence the connexion between the Svastika and the calendar.

While the author is about it, he might as well develop a few other geometrical symbols from the calendar wheels; as for instance the cross, the circle, or any other sign made up of simple lines and curves, including the nine digits and the alphabets. Or he could vary the process by tracing these signs to some other figure, say the human figure, the perpendicular line representing the nose and the horizontal one the mouth. But then, why should people have thought the Svastika important enough to be carved up all over the world on giant stones and temples; and why should so many ancient peoples, from Scandinavia to America and Tibet, have been so mad about perpetuating this evolutionary product of the calendar wheel? Then there are so many other symbols: there are those in the zodiac, and all the crosses, serpents, plan-

ifested Nature, in Man and also outside of him, revolving perpetually about a motionless center. The symbol is a summing up in a single word of the whole science of learning how to *balance one's powers and to find that stable center in one's character*. The mystery of the Four Elements and how to control them was one of the things taught in the ancient Science — part of the Riddle of the Sphinx. To those who knew of and revered this Science, the Svastika was a most sacred and venerated emblem. The emblem of Christianity is also regarded as most sacred; and, like the Svastika, is considered to have a magical power. It is a Cross, but there is no suggestion of the central or balancing principle. In older Crosses, however, we find this deficiency filled; for the Egyptian *Ankh* or Ansated Cross has a circle on the top. Thus the Christian symbol is a mutilated emblem, as the Christian idea is a half-truth — the Verbum or Divine Word having been sun-

The Trend of Twentieth Century Science

The Table Toxin

SOME of the laboratory methods which the physiologists hope to employ in the detection of crime have recently been employed in the exposure of one of the chief causes of crime—alcohol. One of these methods is to pronounce a series of words to the subject, he in return pronouncing such others as these suggest to his mind. His mental power and range are estimated by the speed with which the reply forthcomes and by the kind of reply. The lower kind of mind is likely to reply with words similar in sound to, or rhyming with, the words given. In higher minds the link will be more likely an idea than a sound. In the first case *book* might suggest *hook*; in the second *page* or *author*. Some experiments of Kraepelin's, quoted in an article on alcohol by Dr. H. S. Williams in a contemporary, began by fixing for certain individuals the proportion of these two kinds of reply made by each. That done, it was found that the smallest quantity of alcohol raised the first kind at the expense of the second. Other experiments, made by Fürer, quoted in the same article, show that this effect upon mental action lasts for at least three days, notwithstanding that the subject feels in perfectly normal condition. He is first tested for several days at the same hour in the way described above; the speed of reaction, the power to memorize and the facility for addition, are also noted. On the day following, in Fürer's experiments, he was allowed to drink two litres of beer. It was then found that in all the tested respects his mental powers were lowered, not fully recovering till after the third day.

It was also found that the opsonin-producing powers of the blood were impaired or destroyed. Opsonins are chemical substances fabricated in the blood for use against bacteria. They paralyse the invading germs so as to make them an easier prey for the defending white cells.

Deléarde, working in Calmette's laboratory at Lille, showed that alcoholized rabbits are not protected by inoculation, as normal ones are, against hydrophobia. Moreover he reports the case of an intemperate man, bitten by a mad dog, who died notwithstanding antirabic treatment, whereas a boy of thirteen, much more severely bitten by the same dog on the same day, recovered under treatment.

A number of experiments concerned with several other diseases gave the same precise indications.

As to heredity, Dr. Spratling, reporting from the Craig Colony of Epileptics, finds parental alcoholism in about one third of the cases, and alcoholism further back in more than half. Professor Hodge, giving alcohol to a pair of dogs, reports that of 23 puppies born in four litters, "9 were born dead, 8 were deformed, and only 4 were viable and seemingly normal." This is of course in line with what we know of man. Demme, studying ten alcoholic in comparison with ten normal families, found that of the 57 children of the first group 10 were deformed, 6 idiotic, 6 choreic or epileptic, 25 non-viable, (that is, so organically defective as to be incapable of living for more than a very little while), and but 10 normal.

In the other group 88 per cent. were normal.

Alcohol is one of the toxins. When bacteria are allowed to develop freely in a nutrient medium they soon cause such changes in it that long before its nutritive elements are exhausted it is poisonous to them. They either die or cease their activities and go into the spore state. They have made their own home uninhabitable to themselves. The yeast fungus developing in suitable media, is our maker of alcohol; and it is the alcohol they make which presently renders the medium too toxic for themselves to develop any further in. This toxin is the great "stimulant" in modern life!

The Two Musics

A MUSIC journal objects to the phrase *a musical language* on the ground that as there are so many sounds and no more which are possible to the organ of speech, and as nearly all languages contain nearly all these sounds in one or another combination, no language can be essentially more musical than another. The journal also objects to the use of the word musical at all in this connexion, even as applied to poetry.

We certainly seem to need another word, for music can exist in two dimensions as it were—on the flat and vertically. Modern music is of the latter variety, even when sung; roughly speaking its whole effect is achieved by ascents and descents in pitch. The regulation of these constitutes melody; harmony is but the ascent and descent of two or more simultaneous threads.

Music on the flat is entirely different, so different as to warrant another name. It is this kind of music which belongs to poetry and it may be combined or not with the other. A line of poetry may be absolutely musical when given in monotone, without any rises and falls of vocal pitch, the "music" here depending on the flow of vowels and consonants. Measured time-rhythm the two musics have in common. Most of the charm of some poetry is in this flow. Independent of meaning and said in monotone

Low, low, breathe and blow
Wind of the western sea!
Over the rolling waters go,
Come from the dying moon and blow. . . .

is beautiful. Of the laws governing this kind of music we as yet know almost nothing, nor hardly in what its beauties consists. Among some of the older nations it may have achieved a much fuller development than with us, and our sole reliance on ups and downs to get our effects might seem to them absurd and the results thin and poor.

A language may therefore be beautiful in one or the other musical sense. It might be adventitiously beautiful like ancient Greek because the speakers of it were accustomed to use much up and down inflection, to make a musical phrase of every word and a melody of every sentence. Most modern languages would sound to an old Greek like the bubbling of water from a bottle and the scratch of sticks against railings.

In the other sense the beauty of a language

would rest on the richness of its vocabulary, its supply of complete or partial synonyms, enabling the speakers to select words whose flow of vowels and consonants would be musical. Such a language would naturally be the property of peoples who demanded that kind of music. We are not among them. Our speech is not musical vertically because we do not so speak; it is not musical horizontally because, having but little ear for that sort, we do not properly arrange the words we have nor add others to our list with that intent.

STUDENT

Wordless Thought

PEOPLE who speculate whether thought can be carried on without language (usually concluding that it cannot) forget that their question is already answered by every intelligent deaf-mute. The training of these unfortunates is now begun so early that fresh opportunities for collecting data will soon be very difficult to get. But some few of them, after acquiring language, have given us their experiences of a world that had no sound. The two classic cases are those of Mr. Ballard and Mr. D'Estrella, reported a quarter of a century ago by Samuel Porter in the *Princetown Review* and since quoted a good deal.

The former, as early as his ninth year, could think without words metaphysically enough to question himself how the world came into being. He also speculated in metaphysical astronomy, if that adjective is permissible. For instance:

I believed the sun and moon to be two round, flat plates of illuminating matter; and for these luminaries I entertained a sort of reverence on account of their power of lighting and heating the earth. I thought from their coming up and going down, traveling across the sky in so regular a manner, that there must be a certain something regulating their course.

The second of the two was still more metaphysical. Arriving at the belief that the moon was alive, he proceeded to test the matter in various ways, getting his belief satisfactorily confirmed. She then became more than merely alive to him; he loved her, took her in some way into his moral life and regarded her as his helper in his spiritual struggles.

Here then are ideas and feelings which in our minds are associated with some such words as causality, life, spirit, divinity; but which in the minds of these little children existed without the verbal basis, and existed clearly enough to be reasoned about, the reasoning being of course also wordless.

The examples are useful, but they are not necessary to establish the point. Anyone who is accustomed to watch the inner processes of his own consciousness knows that there is as it were a robing room somewhere behind. Further back yet, his profoundest thought is going on without words. Some of this comes forward into his ordinary thought life, receiving, as it passes through the robing room, the dress of word and picture. Meditation is the transference of attention to the other side of that room.

A Practical Naturalist

THE work of Baron von Berlepsch at Castle von Seebach, in Thuringia, is attracting some attention on account of the practical aid it has afforded to the cause of bird protection, which is quite as necessary as the more negative protection by legislation. There are 500 acres divided into 19 acres of park land, 61 thickets, and 400 acres of wood. The part of the estate immediately in the neighborhood of the castle is especially interesting on account of its botanical treasures, among which are examples of all the trees of Central Europe. The Baron has devoted much time and trouble to the questions of breeding-opportunities for birds, of providing them with food in the winter, and of protecting them from their numerous enemies.

It is pleasing to note that he has been rewarded for his efforts in the birds' interests by a great diminution of the excessive number of caterpillars and moths' larvae, and a consequent regularity of excellent fruit crops.

Shelters are provided for birds nesting in the open, in the shape of bushes regularly trimmed, and for birds nesting in holes artificial nests are provided which reproduce the conditions of the natural habitat. The latter is a boon to the woodpeckers, which under the modern forest laws are especially unfortunate in that all rotten trees are felled.

For winter feeding there are several clever devices. One, a small tree, is covered with hot sticky food: meat, hemp, and insects' eggs, made up into a mixture which is poured hot over the branches. Another is in the shape of a little house in which food is provided. There are also arrangements for such birds as prefer to take their food from a perch or from a covered receptacle filled with hemp seed. This is not favored by the troublesome and noisy sparrows and is more appreciated by the gentler birds. The sparrows are, as everywhere, considered a nuisance. With their chatter and squabbling they interfere with the other birds. They are classed with the proscribed enemies such as cats, polecats, weasels, martens, sparrowhawks, goshawks, jays and magpies. Squirrels, crows and shrikes are undesirable also in places where they exist in any number.

The world is indebted not only to the Baron for his humane efforts in the birds' behalf, but

Coleridge

MILD Splendour of the various-vested Night!
Mother of wildly-working visions! hail!
I watch thy gliding, while with watery light
Thy weak eye glimmers through a fleecy veil;
And when thou lovest thy pale orb to shroud
Behind the gathered blackness lost on high;
And when thou dartest from the wind-rent cloud
Thy placid lightning o'er the awakened sky.
Ah such is HOPE! as changeful and as fair!
Now dimly peering on the wistful sight;
Now hid behind the dragon-winged Despair;
But soon emerging in her radiant might
She o'er the sorrow-clouded breast of Care
Sails, like a meteor kindling in its flight.

also to Martin Hiesemann, the author of the book which has made known his splendid example and the practical knowledge he has acquired. Such work is constructive in the realm of nature, and in this age of wanton destruction that is saying much. P. A.

More Brains in Farming

IT is coming to be recognized that the principal muscles are in the head, so to say, and that a man who uses his bodily strength in order to save his brains, works at a great disadvantage. The maid-of-all-work finds it easier to bring up the things one by one in her hands than to collect them all on a tray; and a brainless brawny laborer may prefer to bang away at a hard stump rather than sever the roots where they are thin and soft. We rightly honor toil so long as each drop of sweat means adequate results; but when energy is spent in overcoming the obstacles that energy raises, we have a case of "force devoid of judgment destroying itself by its own momentum," and our honor is misbestowed.

According to the Forest Service, an Indiana farm hand has written to President Roosevelt to say:

I have been a farm hand just long enough to learn the cause of so many sons and daughters and well-meaning reliable farm-hands leaving the beautiful farm and country and going to the city. A lack of order and system on the farm and too long hours for a day is what is driving the best minds from the farm to the city and shop. What can we expect of a hand, or the farmer's wife and her posterity, in the way of intellectual development when they get out of their beds at 3:30 in the morning and work from that time until 8 or 9 P. M.? And no attention paid to the sanitary conditions of the home, and necessary conveniences on the farm for

doing the farm work with the least labor and time.

Education pays, he continues, and the farmer who plans out his work shortens his hours.

So many farmers measure everything from the standpoint of muscle, and are extreme in some things and slack in others. I decided several years ago that life is too short to work for Peter Tumble-down farmers.

Make them study their business, he says; "give me the educated farmer and the educated farm hand." The majority of farmers, it seems, are "eight-hour men"; that is, they work eight hours *twice* a day; eight hours before noon, after noon eight hours! But if the family arises at 5, the wife and daughters attend to the household duties, and the farm hands and sons do the "chores" and go to the field at 7, working till 11, and again from 1 till 6, and then supper and evening chores — they have done a day's work. Lack of system has driven men from the field and keeps them from going back to it. If the farmer wants to keep his sons he must use brains. T.

Path

Freedom

HOW hard it is for men to be free! Look at the pitiful tragedy that is being enacted in the world today and see how hard it is for men, long used to subjection, to be free. They long for freedom, but fear to grasp it; they are dazzled by the prospect but alarmed, and secretly they dread to lose the shelter of the old abuses under which they have lived, if it can be called living.

Look at the history of this country in the early days; how men left the land where they were not free to worship the God of their choice in the manner of their choosing, and came to a new land and established a religious tyranny as cruel as that from which they had freed themselves; and now they have chosen the God of Gold as their tyrant, and established a system of soul-slavery to a soulless Lord that is grinding out of the people all that goes to make a nation free.

It must be a very old story, this worship of false gods, for it is the basis of the oldest epics in the world. There is the legend of a race of dwarfs that make and fashion the gold and gather and hoard it, a race skilful, crafty, cunning, tireless in work, relentless in purpose, knowing neither pity or remorse, the makers and the guardians of the gold; and then there are the Gods, with their wisdom of joy and love and freedom, "who sit at the endless feast." And then there are the men-folk, made by the gods and sent to people the earth and master the former races and subdue them, and bring the earth into subjection, and make it a fit dwelling for Gods, and themselves to become as the Gods that gave them birth. And the dwarfs are jealous of the Gods and hate and despise this new race of men, who live for a few years and die, who fear, and repent, and hesitate and pray for help to the Gods. For the dwarf-kind know no fear nor repentance nor pity nor remorse, and they live long like the Gods, and their wisdom is deep and old. And they weave a web of craft and deceit to snare the Gods when they come down to earth and walk the earth in the guise of men. And the Gods are caught in the snare of these Lords of the earth and are forced to buy their freedom by giving up the secret of the origin of gold. But the secret carries its doom along with it: the curse of the gold, that shall fall upon all who become the slaves of the gold. Can we not see the old drama being enacted out under our very eyes today? And then the All-Father sends down to earth a sword for the hero who is to kill the ancient dwarf-kind who guarded the gold in the earth for endless ages. And this weapon of the Gods is so mighty that the one who wears it dreams that by its aid he shall win his way, still living, to the home of the Gods and be with them, and the giver of the sword himself must come in the midst of the battle

and break the sword that knew no other master, and call the hero home, through the open gate of death. But the broken pieces of the god-given blade are gathered and saved, till the child that shall do the deed may be grown strong. Then comes the forging of the sword.

What else is this but the history of the wisdom of Theosophy, of its presentments, shattered and then gathered again and welded by the hand of the hero himself into a new sword? All is in the legend even to the attempts of the old dwarf king, disguised as the master craftsman, to make a sword for the hero that shall deceive him, but shall fail him in his need, and leave the last of the dwarfs triumphant, to restore the ancient order wherein the dwarf-kind ruled and knew no ruth. Failing in this, the dwarf thinks to use the hero to kill the guardian of the gold and then himself grasp the prize and rule the world, and wipe out this race of men whom the gods have made to rule the world, but who are so weak and wavering that they could not stand at all but for the help of the high Gods and the will of the All-Father.

And as you follow the ancient legend out, you see the curse that clings to the gold, bringing destruction to all, yet ever the agent of destiny in the evolution of man. The curse of the gold is greed, which breeds tyranny and slavery—the woes that make men yearn for Freedom. Not until the gold is given back to the Gods can man be free from the curse. Not until the greed of man is burnt out can he know freedom. But with all his weakness and greed and fear, man has in him the gift of the Gods, the breath of the soul, the eternal,

I am that which began,
Out of me the years roll;
Out of me God and man;
I am equal and whole.

God changes, and man, and the form of them
bodily: I am the Soul.

But ever and ever man makes for himself
new Gods, or new names for his old enemies,
and worships them, and the Soul cries:

O my sons, O too dutiful
Towards gods not of me,
Was not I enough beautiful?
Was it hard to be free?

Yet even these false gods are born of the
search for the true and the yearning for free-
dom. And the soul looks down and says:

I that saw where ye trod
The dim paths of the night,
Set the shadow called God
In your skies to give light;

But the morning of manhood is risen and the
shadowless soul is in sight.

In the confusion and degradation that
wraps the world today, there is sign of the
dawn that is the herald of the new day. The
sword of the Gods is fashioned anew and held
by the child of the Gods for the freeing of
the world, and the name of the sword is
Râja Yoga.

Life in Sections

WHAT is the keynote of modern life? Look where you will, there seems to be a clashing of interests, a mass of separate units seeking separate ends. Employer and employed too often act as if their interest lay in war, not in peace. The sacred name of friendship has been prostituted to baser ends of mutual aggrandisement. On all

sides the point of view can be largely summed up in "How little can I give, and how much can I get." This of course speaking generally, for there have always been some few unselfish Souls in the world or the case would be black indeed. Moreover the possibilities and potentialities of each one of us are far above what we realize, for living a nobler and happier life. Is it not because we have for so long been living our life in sections that we have lost the knowledge and power that belong to the larger life that is ours—not a thing of parts, but a *Unity*—that everything has gone so wrong with the world?

Perhaps you wonder what I mean by living life in sections. It is this way. Complicated machinery is often made and put together, part by part, and each part complete to *some extent* in itself, but still *only a section* of the completed whole, and only of full value when all parts are working harmoniously together. And so it is with our lives. There are three aspects to our natures, the material, the intellectual and the Spiritual, which should be balanced in harmony and then the machine would run smoothly. Practical Theosophy, or Râja Yoga, teaches us how this may be done. Then again, this knowledge of ourselves teaches us that the interests of men are in common and not opposed, that when one section of humanity suffers all suffer—the human machine is out of gear; and so too with prosperity and success. No woman can draw her skirts around her and no man can button up his coat, and shut out universality.

The pairs of opposites are universal: courage and fear, love and hate, calmness and anger, selfishness and self-sacrifice, are states of feeling that may be felt by all. Neither poverty nor wealth is a bar against a loving thought or kind deed; neither is it to the opposite. It is always the man or woman who counts, and not the outer circumstances of life, which are but the experience that particular soul needs for its expansion and extension of consciousness. Happy are they who crack the nut and extract the kernel of each earth-life experience, and therefore do not need a repetition of the old lesson but may go on in the next life to some new one—also necessary on the path towards perfection.

Then again, we view life in sections and limit our aspirations and efforts when we take one earth-life to be the whole of life, with, may be, a problematical heaven thrown in at the close. Life is continuous. We have our periods of rest and activity, our days and nights, to both the inner and the outer life, and all is part of the great supreme Plan of eternal progression and perfection. Do we not need larger ideals and a deeper knowledge of our responsibilities, that we may take up our bounden duty with an undaunted spirit and a courageous living heart, and so become conscious "co-workers with Nature in our mighty destiny," as is outlined for us in the teachings of Theosophy?

This we can begin at once to do, if, in the words of Katherine Tingley, we "assert and realize our potentially all-dominating Soul-existence, making the mind and memory register beyond all future doubt or cavil what we then know to be true; and then holding ourselves at our true dignity, guide into right action all the elements of our nature, mind, body and emotions. From that moment we shall maintain a strength and joy in life." E. I. W.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question

The belief in a Personal God is the sublimest principle in religion, and the one that most encourages and helps men through the sorrow-strewn journey of life. Possessing this belief we are enabled to go on our ways in confidence and trust in spite of the awful nature of modern conditions. If it is a fact that Theosophy recognizes no personal deity, how is it to become a "living power of encouragement and purification"?

Answer

Theosophy shows that there is a god in everyone, and introduces order into the universe. The Law ordains and orders all things, and there is not in all the borders of existence so much as the equivalent of a pin out of place, but the whole of manifested being is at work to replace it. Here is firm ground for your feet: all events that concern you or touch you in any manner flow out of actions done by yourself, out of thoughts in your mind, or out of your undeclared character. Go astray? These systems and all the immeasurable inward depths of consciousness are concerned that you should not go astray; and although no power can interfere with your will, although if you will you must, and take the consequences; yet are you continually urged forward and protected by the Law. Out of your own doings proceed all things that befall you. Break the laws of life, and life will readjust the matter; swing the pendulum to the side of wrong-doing, and its swing back will be in the nature of pain: no pain of any kind can ever come to you, but is such swing back from your own deeds. Here is natural law, and no fancy; you may test the matter at any time for yourself.

Nature means you to eat a certain amount of food, with the object of maintaining your body in health. Eat more, and for gratification's sake; and the body cannot help advertising to you its grievance. You are to hear of the matter in aches and pains and the troubles of digestion. Is not this hint enough? Then worse disorders will follow. So with all stooping to ignoble courses on behalf of sense pleasure. Nature sets her sign-board up in that direction; "*Thou shalt not trespass. Thou shalt not bow down to these material divinities.*" She will have us be soul and not body; insists that we shall be enthroned, and cease wallowing.

We in our turn treat her as a fool commonly, and are always overstepping her boundaries. When the penalties come for payment, we attribute our griefs and losses to other causes, blaming environment, heredity, dear knows what or what not, so that it shall not be our own selves and actions. The whole matter is as plain and simple as it may be; we must stand on our own feet, do good service, and look to our dealings.

When danger threatens shall we rush off for refuge to something we imagine can avert it, such as coal-tar drugs or a personal god? Shall we desire some cog of world-machinery unscrewed, and the whole engine to stop working on account of some little trouble of our own? Are we to leave our lesson unlearned, and balk the wholesome thing that would make full-grown men of us? Remain, in inkstained bewilderment and the kindergarten, till old age overtakes us?

Let us, for heaven's sake, have an impersonal man (the saying is an old one) — and

we shall speak less then of a personal god. Nature is aiming at that, say what we will. She desires above all things, and insists upon having, men who can throw off personality, who can stand up quite free from fear and anger and selfishness; servants of the world. For this end the Higher Law is; and unless we are fools we shall exult in its supreme splendid mercy. Stand up against the unknown; banish fear out of your life. You are not here to pile up riches of any kind, not even spiritual riches, for yourself; but to do man's work, your duty; that which of all the duties in the universe is elect and only appropriate for you.

So the Law speaks to all of us; very patient in curing our weaknesses, but bent in its relentless compassion on their cure. It is inevitable that you shall be a god at last, but the whole work and credit of becoming is reserved for yourself. If that duty of yours is feebly done, or scamped altogether, is not the whole universe the loser, and must it not ache in the place until a cure is made? That ache will be your pain or punishment, designed to instruct and lead you into sanity.

To your duty then; for the Universe's sake, and for the sake of the Supreme Self of the worlds; you shall never need nor heed personal god to whom to fly for refuge. Because the roofing of your shrine and holy sanctuary shall be the whole blue immense empyrean; you shall stand in this world as a king within his own castle, and conjure up hosts of potent allies from every event that the moments bring. No mountain but shall have unspeakable treasures for you; no river nor sea, out of which gods shall not rise at your passing.

Did you ever consider what you yourself are? An open road, along which probably you have never troubled to go far in either direction; and do not know whither it leads. Yet that curve a little ahead of you is not the end: if you were to approach that resolutely, and pass it, you would see the way winding through greener vales and over nobler mountains. Will you camp forever at that tawdry wayside shrine, and waste your aspirations on the tinsel image in it? On beyond there, the road will bring you into the temple and palace of the Sun; into the Throne-room, and to the Throne itself.

For the Supreme Self is also within you and is your Self; and this Universe is actually based on a huge joy and exultation, the door to which is only closed on selfishness, that immeasurable lie by which we human beings are perpetually hoodwinked, and cheated everlastingly out of our inheritance. S. V. R.

Answer

II. Much misunderstanding has arisen from taking the statements of the Bible in a literal and materialistic sense. Thus in *Genesis*: "And God said, let us make man in our image, after our likeness"; the common idea now prevalent among the mass of Christians is that somehow God is a Big Man.

But it is not generally known that there is a mistranslation in this statement as we have it in the Bible, and that God, the Infinite, Supreme Source of all is not meant. For the correct translation is: "And the *Elohim* said" etc. The word *Elohim* is a plural noun, and refers to a hierarchy of lesser builders, thus showing that there were many gods concerned

in the creation of man, as is more fully shown in the teachings of Theosophy.

Then, too, all through the Old Testament, God is represented as saying "I" did this, and "I" am thus; e. g., "I the Lord thy God am a jealous God." And further, with the majority of people, the purely personal idea of Jesus is greatly accentuated, and at the same time it is taught that he is the only Son of God, and is God. As a matter of fact, however, Jesus taught men that they could become like him; that they should do greater works than he; that they should become perfect even as their Father in Heaven is perfect. Moreover, quoting from an ancient scripture, he said: "Said I not unto you, ye are gods?" And Paul in his *Epistle to the Romans* declares that we are "heirs of God, and joint heirs with Christ." Paul also says: "There be gods many and lords many."

An altogether false glamor has been thrown over the meaning of the word *personal*, and as a result, instead of man in the image of God striving to become like Him, we have, in the popular conception, God in the image of man — and not of man at his best — with human attributes and human frailties. All this is fostered by the teachings of the Old Testament as ordinarily interpreted.

Turning to the New Testament, however, and taking the teachings of Jesus, we gain a much higher conception. There we come to think of the Father in Heaven; of the kingdom of Heaven which "is within you"; of Christ as the "Word," or Logos, the "Light that lighteth every man that cometh into the world"; we have too, the promise of Christ, that "If a man love me . . . my Father will love him and we will come unto him and make our abode with him." All this has a deep mystical sense, though as ordinarily interpreted it too is taken in a personal sense. Deeper study, however, will show that it is not so meant, and cannot be taken literally.

For a personal God can mean no other than a God outside of man, separate from him, which is entirely contrary to the teachings of Jesus just quoted. Personality means limitation, and this is certainly contrary to the other general idea of God as infinite. To speak of an Infinite Personal God is a contradiction in terms. If God be one He cannot be the other. Let anyone think of himself as a person, and what his personality consists of, and he will be able to see that this is true. But let him look deeper into his own nature, and he will discover something which is not personal, something which links him with all men and all Nature, something Impersonal, Divine.

When do we find man at his best and highest? When he is personal, or when he rises absolutely above personality, when he forgets self in love for the world? It is this transcending of personality that has made the great heroes, martyrs, and helpers of humanity; it was this that made Jesus what he was. It is in this that we approach Divinity and become likest God. It is not personality, nor the idea of a personal God — which would mean nothing more than one of the "gods" spoken of by Paul or Jesus, as above referred to, or one of the "*Elohim*," — it is not this idea that is man's most cherished possession, but the Impersonal Divine Ray that is in the heart of every one and "lighteth every man that cometh into the world."

STUDENT

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West.

Explosive Manuscripts

ACCORDING to a religious contemporary, the "Holy Mountain," Mt. Athos, the easternmost of the three peninsular promontories jutting southwards from Macedonia, is now "served by regular steamship calls, visited by holiday tourists, and over-run with Russian emissaries." It therefore "may become a spring resort or a hotbed of political intrigue" — not incompatibles.

But it may become more renowned for other reasons. It contains an enormous number of churches, chapels, oratories, and monasteries — many Greek of course. The monks of some of these have curious traditions concerning the foundations of their orders and homes; traditions which they assert to be corroborated by documents and manuscripts in their libraries. They trace themselves back, in some cases, to the earliest Christian centuries, and claim to be able to fill, if they choose, and when they choose, many important gaps in Church history.

Those who make this claim do not at present choose, and they have various reasons. In at least one case they claim to be awaiting the right time and the right person, the right person meaning the person who shall show that he or she knows what to do with the facts they will supply.

When Irenaeus and others were erecting their edifice of dogma and associating it with the name of the Galilean teacher, their annexation of misunderstood pagan rites and symbols and of equally misunderstood leakages of Platonic esotericism, was pungently exposed by many learned Gnostics and Neo-Platonists, and especially by the earlier Celsus. Some of the best of these exposures, including that of Celsus, became serious hindrances to the "Christian" propaganda and had to be somehow suppressed. In one way and another this was tolerably well done. If however no copy of the work of Celsus "has descended to our present generation of scientists," says H. P. Blavatsky,

it is not because there is none extant at present, but for the simple reason that the monks of a certain Oriental church on Mount Athos will neither show nor confess that they have one in their possession.

But the day is not far off now when the discovery of many curious manuscripts, not only in the crypts of Mount Athos, will clear the figure of the Galilean from the structure

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

MEMBERSHIP

which was so fantastically built up about it. Not until then will his real personality and his teachings come out for the first time into full view.

STUDENT

"The Rubicon"

One other bitter drop to drink,
And then — no more!
One little pause upon the brink,
And then — go o'er!
One sigh — and then the lib'rant morn
Of perfect day,

When my free spirit, newly born,
Will soar away!
One pang — and I shall rend the thrall
Where grief abides,
And generous Death will show me all
That now he hides;

And, lucid in that second birth,
I shall discern
What all the sages of the earth
Have died to learn.
One motion — and the stream is crost,
So dark, so deep!

And I shall triumph, or be lost
In endless sleep.
Then, onward; whatso'er my fate,
I shall not care!
Nor Sin nor Sorrow, Love nor Hate
Can touch me there.

(William Winter in *Putnam's and the Reader*.)

THE Divine nature of man consists of the Higher Triad, which comprises:

The Higher Self: Atmâ, the inseparable ray of the Universal and ONE SELF.

The Spiritual Divine Ego: the spiritual soul or Buddhi, in close union with Manas (the mind-principle), without which the former is no Ego at all, but only the Atmic Vehicle.

The Inner or Higher Ego: Manas, the "fifth" Principle, so-called, independently of Buddhi. The Mind-Principle is only the *Spiritual Ego* when merged into one with Buddhi. . . . It is the permanent *Individuality* or the "Reincarnating Ego."

(*Key to Theosophy*, p. 172)

Manas is a dual principle, part of it being associated during life with the animal or pas- sional nature of man. This association forms the false personality which becomes dissipated after death, while the higher part of Manas

forms in conjunction with Buddhi the permanent Individuality or the real Man, who endures throughout the cycle of rebirths, and enjoys after each bodily death, the bliss of *Devachan*.

With each life on earth the Higher Triad blends with itself more and more of the aroma distilled by the mind from its experiences, thus completing its

own nature and evolving the perfect God-man. In time the man will have so far perfected himself as to be able to retain during earthly life a consciousness of his real individuality, and then death will not be for him such a leap in the dark as it is now. In ancient Mysteries a "mystic death" is spoken of, whereby the candidate *died* to all earthly passions, and triumphed over the illusion of the false personality while still in the flesh.

We should not infer that death always has been, always will be, or even is now for everybody, the mystery that it has been for the generality of people during the periods comprising our historical knowledge. Death is a truly wondrous mystery, ever reminding us of the great Beyond which stretches like an ocean both behind and before the island of our life-time. From that ocean we emerged, and into its restful bosom we shall sink again when the life within bursts its earthly husk.

The poet sings of knowledge to be revealed in that coming day. But what of the knowledge that *was* ours ere we entered the clay? And does not that knowledge exist all the time? The Soul knows, though its little pupil, the brain-mind, may not yet be old enough to understand. It is most important to realize that the higher knowledge is attainable, in varying degrees, without our having to await death; in the latter case, we shall have no brain-mind to interpret it. "Knock, and it shall be opened unto you." Let us illumine the understanding by dispelling the phantoms of the brain. Let us escape from beating our wings against the cage of vain selfish desires, and mysteries may be unfolded. STUDENT

To the follower of the true Eastern archaic Wisdom, to him who worships in spirit nought outside the Absolute Unity, that ever-pulsating great Heart that beats throughout, as in every atom of nature, each such atom contains the germ from which he may raise the Tree of Knowledge whose fruits give life eternal and not physical life alone.—H. P. Blavatsky in *The Secret Doctrine*, ii, 588

THE THEOSOPHICAL ADDRESS AT ISIS THEATER

THERE was a large attendance at Isis Theater last Sunday evening at the meeting of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, and much interest was taken by the audience in Professor Cranstone Woodhead's lecture on "The Progressive West."

The music for the evening was furnished by the Râja Yoga Sextet, and included the following selections:

Finale from Sextet, op. 53	Boisdeffre
Cello solo <i>Kol Nidrei</i>	Max Brusch
Andante from Sextet, op. 53	Boisdeffre
Sarabande	Carl Bohm

In the lecture Mr. Woodhead gave his hearers a bird's eye view of the successive waves of civilization that have swept over the world, beginning with the most ancient of which we have any historical record. In studying the various races of humanity, the speaker referred to the great difference in intelligence and general advancement. At one extreme we have the Australian Bushman or the African Pigmy, and at the other the product of our American and European universities. Between these extremes the range is so wide and varied it would appear at first sight difficult to mark the chain of progress in any definite way, over the geographical surface of the globe. Yet there is one general idea which careful examination makes clear, and to give this its full value, study is required not only of ancient and modern history, but also of geography and archaeology. He then referred to the works of Madame Blavatsky, which have brought to the light of day so much of the forgotten lore of the past. This general idea briefly stated is that while the earth revolves from West to East, the progress of man's evolution is from East to West.

Beginning with China, with its four hundred millions of human beings belonging to the Mongolian or Turanian race, we find the remnants of a race which originally inhabited one of the lost continents, that of Atlantis, the Fourth Race of humanity. In some of the islands of the Pacific there are the last decadent remnants of a still earlier people, the Third Race, the Lemurians. Passing Westward and coming to Central Asia, once a populous and cultivated land, the seat of long-forgotten and glorious empires, afterwards a sea, and then again a desert—this comparatively unknown country should be sacred to the nations of the West, for somewhere here was the cradle of the Aryan races which now over-spread Europe and America. To the South, too, the Aryan race spread, and founded the ancient Hindû Empire; westward, the Persian, Babylonian and Syrian empires; later still and more to the Westward, the Greeks and Romans; while to the North we see the ancient homes of the Gothic Aryans along the shores of the Baltic, a race that brought about the destruction of the Roman Empire fifteen centuries ago, and then mingling with the conquered nations, and pressing Westward, founded the nations of Western Europe. The tide of progress rolled Westward with the sun.

For a thousand years this progress Westward was stayed by the European Atlantic shore line. The most powerful nations of the world were on that sea-board, and at last

the time came, some four centuries ago, when the shore of the vast unknown sea could no longer stay the impulse Westward.

Mr. Woodhead then gave a brief sketch of the peopling of the American Continents, and pictured the gradual pressing forward of the wave of civilization until at last it reached the Pacific Coast. As we look down upon the shores of the great Pacific Ocean we naturally remember that we began our outlook from the other side, on the coast of old China. From the oldest of lands we have passed to the newest. One may naturally ask what is to be the next step in this great march. To this, of course, we can give no definite answer, as it is hidden from us by the veil of the future. Millions of people have come to the West to better their conditions, and have prospered. Unconsciously they have obeyed the law of the world's advancing life. Centers of learning will open, and cities will be built on new and progressive lines; the fountain-head of the world's wisdom and knowledge will gradually focus itself on this Western land.

In this connexion it is worthy of note that the Headquarters of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY is upon these shores. It represents the very essence of all those ideas of progressive growth which have lain back of every movement of reform in all ages.

OBSERVER

God, and Gods

PROFESSOR FLINDERS PETRIE, in the recent Oxford Congress on the history of religions, is reported to have said:

The modern frame of mind brought up to the idea of a "jealous God" that excludes other worships, must be entirely set aside; no such conception entered into the feelings of an Egyptian, nor, indeed, of most ancient worshippers. The God under whom a man was born and lived was the god to him, and equally it was right in his view for every one born under other gods to worship them. The common references to "God" or the "Great God" in religious inscriptions mean naturally the god of the place. The farther back we can trace the history of the gods the more we find that they were originally separate, until remotely each is the local god or goddess of one monotheist tribe or town. Hence each man naturally worshiped his tribal god, and it was tacitly assumed that there was but one divine entity as far as he was concerned. This appears to be the basis underlying all the complex mythology, which was the result of unifying dozens of tribes into a single connected government.

So the difference between the modern god and these ancient gods is that the former is jealous and intolerant, the latter friendly and tolerant. But one naturally reflects, Why this difference? and the answer comes that the ancients must have had some bond of union which the moderns lack. And they had; for it was only the untaught among them who confined their speculations to the limits of the tribal deity; that may have been enough for them, but it was not enough for the wise, who knew then, as they know now, that there can only be one ultimate Unity and that they must therefore seek higher than any tribal or even racial deity. This is what united the diverse cults; this knowledge, on the part of the wise, of a parent Religion embracing local cults as nations embrace families.

The Romans of the early Empire could not understand why the Nazarenes should not be willing to share the general tolerance which people of other faiths showed to each other. The mistake was that these Nazarenes had, as it were, "profaned the Mysteries" by trans-

forming the One-All into a sectarian deity, and claiming for that deity the paramouncy above all other deities. And to this day we confound into one the two conflicting ideas of a Universal Source and a racial deity. "I am the Lord thy God; thou shalt have none other God but me." "Neither shall anybody else," adds modern intolerance.

How different is the wisdom of the *Bhagavad Gîtâ*, which shows so clearly the relation between gods and the One Eternal:

Those who through diversity of desires are deprived of spiritual wisdom adopt particular rites subordinated to their own natures, and worship other Gods. In whatever form a devotee desires with faith to worship, it is I alone who inspire him with constancy therein, and depending on that faith he seeks the propitiation of that God, obtaining the object of his wishes as is ordained by me alone. . . .

The ignorant, being unacquainted with my supreme condition which is superior to all things and exempt from decay, believe me who am unmanifested to exist in a visible form. . . .

Even those also who worship other gods with a firm faith in doing so, involuntarily worship me too.

So we must distinguish between the ignorant and the wise in ancient Egypt, even as we distinguish between Socrates and the Athenian mob, or between Cicero and some Italian peasant. But even this does not cover the ground; for, with the wise, those numerous gods of the pantheon merely represented the various aspects and functions of the One-All. As All-Father It was Osiris; as All-Mother, Isis; their offspring was God Manifested, the world, Horus. And so on.

The Professor seems to advocate a theory one meets with in books, that the Egyptian theogony and religion was wholly a synthetic product created by the amalgamation of tribal gods when the tribes themselves amalgamated. But such a view will not bear the light shed by a study of religion generally, which is much more favorable to the opposite view—that minor and local cults are *offshoots*, broken fragments, of an integral Religion. In fact the view which seeks to represent religion as a synthesis of tribal superstitions is a scientific dogma pertaining to a mistaken "evolution" theory which is applied to everything—animals, languages, races, etc. But, while it is true that an organism which is growing may draw to it all kinds of elements from outside, it is equally true that it must first have possessed the growing power which would enable it to do this. In other words, the One true Religion must have been implanted in those who were able, out of sundry foreign elements, to construct a religion.

The learned gentleman likewise obviously confuses the *names* under which the gods were known, with the one spirit common to the human mind of aspiring towards its Source. Whatever *name* a god may bear, who will assert that the spirit or meaning back of the name, the *object* of the aspiration, is other than the same for Hindû, Egyptian, Syrian, or Greek, however much the names, rites, and philosophies may vary?

Therefore we say that there has always been a true Religious Knowledge, known to the wise, and based on the intuitive perceptions of the purified understanding; and that this eternal esoteric Religion is the basis or substratum of all exoteric creeds. Kipling said, "there are nine and forty ways of constructing tribal lays and every single one of them is right," but a working knowledge of Theosophy illumines their unity. STUDENT

Welsh Industries

AN interesting work is being done by the Welsh Industries Association in fostering the old-time industries and manufactures of that country. Founded ten years ago, its activities and usefulness have increased year by year till now it has become self-supporting, has branches and salesrooms all over the Principality, and is doing a magnificent work among the cottagers and miners of Wales.

It was founded with the object of developing and improving native industries, particularly through the improvement of textile fabrics. Its first work was to collect the old designs, select the best of these, and distribute them among the workers in the farms and cottages; providing, as funds permitted, salesrooms in the different cities where a market was provided for the articles manufactured. The makers put their own prices on the goods, a twenty per cent commission going to the upkeep of the salesrooms.

In old times much pottery was made in Wales, but the art and industry had practically died out. Now, however, it is again flourishing, owing to the efforts of the Association. The old forms, glazes and patterns were unearthed; classes were established in the little country towns, in which all the branches of the art were taught. In many places communal workshops were instituted, the peasant workers bringing their own raw materials and paying rent in butter, eggs, and farm produce generally. Welsh pottery, with its quaint shapes and colors, its salt glazes and queer conventions of flower forms, is said to bear a certain resemblance to Mexican ware. Bookbinding, metal work, embroidery, spinning, and lace-making are all going on now in thousands of little Welsh homes, thanks to the efforts of this Association.

In all the arts that a nation has cultivated, in its own natural speech, its folk-songs and dances, its rural and intimate living—in these things lies the life-source of the people, keeping them close and wholesomely to their native soil, feeding their imagination; inspiring them with a sense of the life behind these visible things. That brute thing which we used to call civilization—we are growing wiser now, and our civilized life is coming to have sweeter and saner elements in it—was right and left threatening all this with murder. The peasant was to come away from the soil; he was to forsake the purple of the mountains, the impetuous music never-ceasing from the streams; and sell milk instead in a London or Liverpool semi-slum, amid squalor and untold monotone. Where was life to waite in this man? And his poor children—what were they to become? God forgive us those conditions and the denaturalization of so many! Denaturalizing and denationalizing; almost the two are one. The town with its perpetual call: *There is money to be made here, excitement to be had here; always excitement to be had. How can you stay away?* And gradually those gray, dull, meaningless streets; those greedy, remorseless streets, draw the man's soul out of him; and for whatever of good he had with him once, he has now little but alternate smartness and listlessness (most loathsome of all loathsome qualities); you cannot call him a citizen, you cannot call him national of any land; almost you will balk at calling him a man. At least in many cases.

Much can be done by bodies like this one in Wales to make home life and country life have some of the old time meaning and sweetness. No doubt such a body will do much to keep the peasant from that terrible townward emigration. But before the problem is settled we shall have to come back to Theosophical and ancient ideals. Man is a soul, and does not need the crowding incident, but the ability to live deep. Agriculture was a sacred science at one time; and when you broke the sod with your spade or plow, you knew well enough what Goddess it was that you were very practically worshipping. She sent the currents of her power through your being; your body became strong, and your mind clear and clean through the contact. Exercise merely? Any exercise will do the same for you? What, does the Developer behind your bedroom door build up your manhood like this?

But you must know the divinity of it all; you must know and love the benign influences, holding them as intimate things very near to your own heart, before the true joy of work can come. Given that knowledge the world is a gay place for you indeed, and you would not part with your fields and mountains for any commercial prosperity on earth, or any personal advantage. "Realism" has come to have an ugly sound in our ears; we think immediately of the divorce court, then of prisons, slums, and so forth. Bosh: they are all a monstrous unreality, an abominable sickening sham! Wake up, old Humanity, it is but the nightmare that oppresses you! The beautiful things are yet out there upon the mountains; the immortal voices are yet whispering among the pines. You *will* not see or hear them; not, you *cannot*. Forsake those fools' ideals and you will perceive the naked truth of what the poets would have told you, if they had dared.

Let anyone go out and dig a patch of land for the sake of the Divine Spirit in all things, and he shall be convinced; he shall fling off the dunce's cap that was—he all unsuspecting it—clapped down over his weak eyes, and be amazed at the vision before him. He shall hear the comfortable message of the winds; exult and be renewed in the immemorial fountains of the earthbreath; take into his being the whole bardic and extravagant glory of the sun.

V.

Cuba Today

ACROSS the island from Havana to Santiago de Cuba, the sixteenth day of October, 1902, proved a vastly different journey from the same route taken in February 1902.

The contrast was both surprising and comforting. How gladly the mind relinquished the painful impress of its past experience and effaced the pictures of gloom, of poverty and despair, creations from the awful devastation, the blight that follows the cruel ravages of war. A hopeless, straggling, listless people, emptied homes; no sign of life upon the soil, but wreck and ruin everywhere.

But now a smiling land was revealed to us, under cultivation on every side as we rushed on.

Life, life in homes; flocks and herds half hidden in rich meadow grass; refinement and peace smiling from veranda and doorway. The Cuban is awakening. The island is bristling with activities. Factories, Mills, Workshop and Mart are whirling centers of force, and "industry with its hundred hands, knocks at the golden gate of the morning."

When the mind opens, becomes receptive to the law of Rebirth—basic in nature, then may nation do justice to nation. Without its truth, the order and proportion of all that lives, from glow-worm to star can not be explained, for the human mind cannot relegate this meeting of extremes in the ebb and flow of life's resistless tides to chance.

How else deal justly with the immortal soul?

How petty it seems to those who feel life's deeper meanings to see the wasted effort of comparative science, of historian, or archaeologist attempting to interpret great nature without this law, which is an open sesame to the mysteries.

"The truth is obscured by that which is not true, and therefore all creatures are led astray."

So imperfect is the judgment of today without this lost chord to resolve the discord to harmony.

The Cuban nation holds a remnant from the civilization of a great past.

The majority of those remaining belong to a lower order of civilization. It is in the method of nature that more advanced souls, those who have attained, shall strengthen the faltering steps of the struggling lower order.

"Brotherhood is a fact in nature." The power to help is born of knowledge. Great Nature would conserve her most advanced, her highest, to urge onward and upward the Whole.

Without the flower the tree would bear no fruit.

A nation's flower destroyed what shall its fruitage be? That which is true of each unit of the human family is also true of the whole body of a nation.

That which is true of a soulless being, is also true of a soulless nation.

A part of the flower of the old Cuban race is preserved. They represent the soul of the nation. Preserved to help to bring back the flickering soul-light.

To lift the mass: to energize with power its flagging forces; to help in building better mansions for the soul; to conserve the lofty spirit, the fruitage of a high civilization, that past and present may meet; then, would the great Law through its instruments of power advance the evolution of this people to *knowledge*, which alone gives power worthy of attainment.

Then will the Cuban nation be restored, and one with nature in her beauty and bounty in this their island home.

The true spirit here is not dead, but its struggle is not over.

Its foes are the avaricious self-seekers, be they Americans, Spaniards, English, or what not.

Those who see only what profit the island may yield them. Those who in the name of commerce choke the open avenues of trade that give a general prosperity to the workers here, thus filching and stifling the means of honest growth which unite a nation in a common interest. "Vox populi vox dei."

Combinations and factors working to selfish ends, are more subtly worse than the evils of the former régime. That caused rebellion which broke out into open warfare. But these foes, working in mask today in their midst, in this hour of their freedom, embitter.

Other foes there are, who blind the eyes and bondage the soul, withering the heart of the people.

While all this is true, here is the Rāja Yoga School—International, unsectarian, with its hundreds of children carrying a torch, whose light is soul-light. It is impossible to describe the result already achieved in this work, right here in Cuba, under such awful odds.

In this lies an immeasurable victory, that stretches beyond seas and across oceans to all lands and to all times.

Radiation-Pressure

WE read that radiation-pressure causes "fine particles" of matter in comets' tails to be repelled from the sun. But if the finest particle is made up of innumerable "electric stress" centers separated by wide intervals, its behavior must be conditioned by that of such centers. The theory is therefore that these *dimensionless* centers are subject to sun-repulsion when few, but when many to sun-attraction. You draw an imaginary sphere around a group of them and say pressure (or repulsion) varies as superficies and attraction as cubic capacity. Then why should the south pole of a solid steel magnet repel the south pole of a compass-needle? Are there not enough of fine particles? The truth is, science does not yet know gravitation. Besides, cometary matter is not made up of our kind of particles. F.

Art Music Literature and the Drama

Welsh Literature—The Twelfth Century—Eleventh Article

IT will have been seen that it would be rather hard to make an absolute line of distinction between the literature of the first, or Sixth Century period, and that of the second period, in the Twelfth and Thirteenth Centuries. The writers of the latter took up the work of their great predecessors, and used them as a kind of stepping-stone to work more definitely their own. So the Prydydd y Moch took Myrddin's *Hoianau*, and added verses to it suitable to his own time; and as, naturally, there would have been more demand for these than for the original verses, and they would have been more often sung, what we have now is almost or entirely a production of the Twelfth Century. So, too, some unknown bard took the spirit and tradition of *Culhwch and Olwen*, and wove them into that new wonder-tale, *The Dream of Rhonabwy*.

But the main part of this second-period literature is of another kind, and well understandable in the light of the condition of Wales at the time. Gruffydd ab Cynan, heir to the throne of North Wales, had recently returned from exile in Ireland, where he had been educated by the bards. His assumption of the kingship of Gwynedd brought to an end a long period of anarchy and oppression there; while in the south a similar part was played by Rhys ab Gruffydd, whose exile had been in Brittany. Gruffydd ab Cynan brought with him Irish bards into the north, and Rhys, Breton bards into the south. Either prince held great Eisteddfodau or song festivals, and did all he could to foster bardism and culture and education. At that time, too, the Norman war was beginning, though it had not yet come to have its strangle-hold on the life of Wales; and this peril was a great rouser of the patriotism of the people; hence also of song. A revival of literature was the result: bards sprang up on all hands, and the whole nation resounded with their singing. The chief blessing we have from them is that they preserved the older writings; and but for those two princes it is reasonable to suppose that the four great bards of antiquity and the priceless prose stories would hardly have lived through the terrible times that were to come.

The first poets of this time were Meilir of Trefeilir in Mon; his son Gwalchmai, greatest of the three and type singer of the age; and his son Einion. This Einion figures in a fairy-tale; he was lured away from his home by the fairy Lady of the Greenwood, and kept wandering about the world by her for years. Owing to a ring that he had, she was unable to harm him; and by its power he was eventually freed from her spells and enchantments. Owen Gwynedd, Gruffydd ab Cynan's son and successor, a mighty warrior, was perhaps the central figure in the earlier part of this period from the historical (not from the literary) point of view; his victory over the fleets of Denmark, the Irish Danes, and the Normans, supplied Gwalchmai ab Meilir with the subject of his finest poem,

Arduwyrain Owen. This stands out among all battle poems, and must be called literature for its heroic spirit and immortal vigor. You get nothing of these in Gray's translation (Gray of the *Elegy*), nor would it be other than folly to attempt an English version of it now. Those days are gone, and the fire of events in which that kind of poetry was forged at white heat is altogether lacking. The backward roll of the crimson flood tide of Menai, or anything that could be said of it, would be a poor representative for "A Menai heb drei o drallanw gwaedryar." It would need a magician of words, and an inspiration from circumstances equal to Gwalchmai's own, to reproduce the strident, imminent clashing and battle music, so that you could hear and see the whole clamor and confusion, and the Dragon of Mon vivid and triumphing through it all.

For the time of peace and learning inaugurated by Gruffydd and Rhys was quickly followed by about two hundred years of perpetual warfare, which did not cease until after the English conquest in 1283. There was no time

A noiseless, patient spider,
I mark'd where, on a little promontory, it stood isolated,
Mark'd how to explore the vacant vast surrounding,
It launch'd forth filament, filament, filament, out of itself,
Ever unreeling them, ever tirelessly speeding them.
And you, O my soul, where you stand,
Surrounded, detached in measureless oceans of space,
Ceaselessly musing, venturing, throwing, seeking the spheres
to connect them,
Till the bridge you will need be form'd, till the ductile
anchor hold,
Till the gossamer thread you fling catch somewhere,
O my soul.—*Walt Whitman*

even to till the ground, since every able-bodied man would be half his time fighting the Normans, and the rest of it going through the military training imposed by necessity on practically the whole nation. Giraldus Cambrensis gives a graphic description of these exercises, as indeed of the whole life of the people in his time; whenever there was peace, it was made more severe and absorbing than war itself. It was a barbarous and terrible time. Except under the two Llewelyns, the Great and the Last, the Welsh were always disunited, rent by fierce rivalries, at strenuous warfare among themselves; which warfare the invading Norman barons fostered as best they might. Then always those barons, and often the king of England himself would be pressing upon them. Their old Celtic Quixotism forbade them the use of any defensive armor in battle, and they had against them men cased in steel, without a touch of Quixotism, thoroughly practical, and determined at all costs to obtain possession of the whole land. Queens would lead armies against the invaders; queens, like Gwenllïan, Rhys ab Gruffydd's wife, were beheaded by the victorious Normans after the battle.

One can tell what kind of literature would flourish in such a period. It would have main-

ly one subject, and that one war. Hywel ab Owen Gwynedd indeed, filled Wales with the renown of his love songs, and Owen Cyfeiliog Prince of Powys, made the Hirlas Horn a kind of symbol of heroes, of proud, high-souled men, dragons of battle victorious and fallen: these two names, with that of Gwalchmai, are outstanding. For the rest, it would profit little to name names. They all sang of war, of the prowess of their princes, of the sorrow of their fall. The true bards were in abeyance.

One ought not to leave unmentioned Gruffydd ab Arthur, called also Geoffrey of Monmouth, the historian; from whose book Shakespeare had the plots of *King Lear* and *Cymbeline*; nor the ever-living and ever delightful Gerald the Welshman, Giraldus Cambrensis above-mentioned, whose *Itinerary* through Wales is as fresh and vivid now as when it was first written; for these works, though written in Latin, essentially belong to Welsh Literature. It was Gerald of whom Gwenwynwyn, Prince of Powys said: "Many and great wars have we Welshmen waged with England, but none so great as his, who fought the king and the Archbishop, and withstood the might of the whole clergy and people of England for the honor of Wales"; and of whom Llewelyn himself said: "So long as Wales shall stand, by the writings of the chroniclers and the songs of the bards shall his noble deeds be praised throughout all time." Why? Because being an Archdeacon himself, and a man of great influence in church and English circles he strove with all his might to drive out those foreign influences which made or were making the old and pure Celtic Church Roman, and subordinate to Canterbury. A WELSH STUDENT

The Gagliano Violin

THE famous Gagliano violin which was for a time in possession of Ovide Musin has been purchased finally by a wealthy American, it is stated. Few violins have had a succession of more distinguished owners than this one. It was made in the first place expressly for dear old Arcangelo Corelli who used it until he died, which was in 1713. Corelli bequeathed his treasure to Tartini whom he considered the greatest violinist of his time, as he doubtless was. It was Corelli's pupil, Veracini, by the way, from whom Tartini received the Corelli art and tradition, not from Corelli himself, a fact of interest to violinists, for Tartini's school at Padua was the Mecca for violin-students in the early eighteenth century and his compositions yet stand as classic models.

As it chanced, this violin passed into Tartini's hands the very year in which he composed that weirdly beautiful *sonata* which is at once the fascination and the despair of budding *virtuosi*, *Trillo del Diavolo*, and it was upon the precious Gagliano that Tartini played this for the first time in public.

After Tartini's death the violin came into possession of Pugnani, one of his pupils, (teacher to Viotti), and later was purchased by a wealthy French merchant who presented it to Charles de Beriot. In turn this violin came to be owned by Ole Bull, Miska Hauser and Ferdinand David.

What must not be wrapped up in the very atmosphere of it! Gagliano, the maker, lived in Naples and was a contemporary of the Stradivarii. STUDENT

Consideration for woman is the measure of
a nation's progress in social life.—Gregoire

"The Lion of the Law"

THE Lion of the Law"—such is the title given to one of the Great Teachers of mankind, one of those who incarnate to help their less fortunate fellows. These Great Beings are our examples; they point both in word and deed to the true path of humanity's progress. They live as Gods on earth as well as in heaven, which Jesus taught was in the heart; for through their purified natures they have dominion over the "powers of this world" and are above the petty ambitions, desires, and ideas, of those who seek good for themselves regardless of others. They are the human Lotus Flowers who have worked their way up through ages of effort, from the mud of material existence, through the fascinating mirror of reflections and sensations into the free air and pure bright sunlight to bloom there, golden hearted, in all their beauty of infinite wisdom and divine compassion.

How great is the ignorance about life outside the vast stores of wisdom embodied in the teachings of Theosophy and handed down through the ages by its faithful custodians unto our own time! Gleams of these truths here and there shine out through the débris of man-made creeds, showing to those who can see that the original Teachers were those who had the Light, but that their followers, neglecting the spirit of the original teachings, lost the key, and so accretions and misinterpretations have covered them, like tender flowers in a garden of weeds. Then came the Purifiers, the "Lions of the Law," to tear away these outer coverings and once more unveil the Truth.

Study the world religions in the light of Theosophy and you will see what sort of Teachers we have had in our three Theosophical Leaders. And it will help you to realize the destiny of humanity and the dignity of human life. All great Souls who live but "to benefit mankind" as they did and do, and as the Great Teachers have always done, are

"Lions of the Law," becoming, as Katherine Tingley has said, "directors of universal Law."

And this is the destiny of all men in the ages to come, some sooner than others, according to their devotion and power of service to the human race. But sometime each human soul will gain the mastery of the fleshly, earthly dwelling, and so be free to act as a God upon all planes of nature. There comes a time in each life, taught H. P. Blavatsky, when a sinning mortal first steps upon the path that leads towards enlightenment. Why should it

WE overstate the ills of life, and take
Imagination (given us to bring down
The choirs of singing angels overshone
By God's clear glory) down our earth to rake
The dismal snows instead, flake following flake,
To cover all the corn; we walk upon
The shadow of hills across a level thrown,
And pant like climbers: near the alder brake
We sigh so loud, the nightingale within
Refuses to sing loud, as else she would.
O brothers, let us leave the shame and sin
Of taking vainly, in a plaintive mood,
The holy name of Grief!

—Elizabeth Barrett Browning

not be *now*, in this present life? "It will never be," said William Q. Judge, "easier than it is now."

"To study the universe in the light of Theosophy; to aim for action, not speculation; to train the human mind to broaden its vision and emerge from the conflict of delusion is my urge"—this, one of the latest utterances of Katherine Tingley. Could we who love humanity do better than follow the teachings of these modern-day "Lions of the Law"? For we have more than their words, impassioned and inspiring as these are: we have their example, the example of their every selfless act, the record of daily, yearly, heroic service to all that lives and struggles, to all that suffers and strives. EMILY T. WILLANS

The Turkish Woman An American Woman's View

THE following are extracts from recently published accounts of Turkish life, written by an American woman who has lived for a number of years in Constantinople. In many particulars they contradict current notions of what woman's position really is in the Sultan's domain. H. H.

Not polygamy, but divorce, constitutes the grievance of the Turkish woman. Few houses contain more than one wife, but divorce is frequent and attended by few legal complications. The husband can always remarry his wife three times. If after that he divorces her and wants to remarry her she must go through the formality of being married to another man and then divorced from him.

This practice has given rise to a new profession, that of proxy husband. The proxy husband is generally blind and relinquishes his bride without regret as soon as the legal processes have been gone through.

Sometimes, however, he insists on holding her. There was a man living on the shores of the Bosphorus who quarreled with his wife and divorced her as many times as he legally could. But although he had difficulty in living with her in peace, he had no sooner lost her than he found he could not get along without her. How to remarry her for the fourth time was the problem.

At this crisis a friend offered to play the role of proxy husband. His offer was accepted. When the legal ceremony had been performed he refused to relinquish her. The angry husband raved and threatened, but the friend asserted his legal rights and kept her.

This story, however, is no more typical of Turkish life than the 10,000 wife desertions in Chicago last year and the 1000 divorce cases now on the docket in Ohio are typical of American life. The Turk has no statistics, but it hardly seems as if he needed to tie his knots much tighter to compete with us.

The only way a Turkish husband has of getting even with a teasing or bad tempered wife is to threaten her with divorce or a second wife. While divorce is thus trifled with, there are checks upon it, such as the obligatory return in full of the wife's dowry.

In Turkey it is the prospective husband, not the bride's father, who settles her dowry upon the bride and thrifty parents see to it that this is commensurate with the bridegroom's position and in case of divorce sufficient to secure to the woman independence and dignity.

In Turkey the bride brings nothing; yet when she leaves her husband's home for good she takes with her all her personal property, even to her slave girls, bed linen, and the kitchen utensils.

Though supposed to be oppressed and suppressed, she is pre-eminently a woman's rights woman, fully aware of her privileges and insistent on getting them. Though at home she is confined within barred cages, when abroad she goes about freely.

Though supposed to be shy, compliant, without force of will, she is neither shrinking nor retiring. The Turkish woman is not only self-sufficient but self-assertive.

Her rights, and especially her legal rights, are more frequented thoroughfares, although they were

whom he knows, he will not greet her till she has greeted him. . . .

In Turkey the policeman becomes a monitor, a judge of social observances, and enforcer of rigid conventionalities. If people don't know what is the proper thing to do or are so careless that they won't do it, he is there to lead them back into the right path. For instance, I was told of the case of a newly married young Turkish couple who . . . overlooked the regulations and began to take walks together. For this purpose they chose the quietest, most secluded streets in the immediate neighborhood of their own homes, instead of taking to the more frequented thoroughfares, although they were both what might be called emancipated. Their action,

mination on the part of persons of extreme opinions to press to the front their advocacy of the complete abolition of the tie of marriage." It is the growth of selfishness, and of a mercenary calculating way of regarding life, that is interfering with the sanctity of this tie.

Marriage calls for self-sacrifice, which persons invoking the name of Love should be willing and eager to make. For those who care to marry it is an opportunity to step out from the narrow sphere of self into a larger

I SORG ("GRIEF"): TEODOR LUNDBERG

Lomaland Photo. and Engraving Dept.

than the rights of women in many more advanced countries. In the first place she enjoys the right to protection. Everywhere and always she is under the protection of society.

Inside her home she is as if in a shrine; outside her home she is an object of especial concern to every policeman. . . . She is never spoken to on the street. For a man to speak to a Turkish woman on the street or offer any attentions would be as much as his life was worth.

In Turkey no man speaks to a woman when on the street or accompanies her in public. Fathers pass their daughters by without a greeting, brothers their sisters, even husbands their wives. The reason for this is not far to seek.

With all the women veiled, except as to their eyes and mouths, it is almost impossible for a man to tell one woman from another out of doors, and when he thinks he is greeting his wife, say, he may be addressing a total stranger. Such a situation would be intolerable to the Turkish sense of fitness.

So far do the Turks carry their desires for the complete social separation of the sexes in public that it is rare for a Turkish gentleman even to look at a Christian woman. For the same reason, if he chances to meet a European or American lady

The marble of this group is in the National Museum, Stockholm, Sweden. The sculptor, Teodor Lundberg, a Swede, is still in the prime of life and has modeled a number of notable pieces, among them: *The Foster Brothers* (1888) which was a commission by the Swedish and Danish States; two marbles, *St. George*, and *Spring*, for the Royal Palace in Stockholm (these in 1896); a bronze group *Industrial Art*, for the portico of the National Museum (1897); *The Wave and the Shore*, a marble done for King Oscar in the same year; *Svea* (Sweden personified) also done for the king at a later date; and others. *Grief* was put into the marble in 1897.

however, did not escape the vigilant eye of a police officer. . . .

Such a breach of etiquette smacked unmistakably of European license and cried aloud for conviction. The policeman interfered. He had to. As a representative of the Ottoman Empire and as a Turkish gentleman there was nothing else left him to do. He told that guilty pair of married lovers that they really would have to stop . . . and stop they did.

Marriage Demands Unselfishness

THE Committee on Marriage questions, of the recent Lambeth Conference, England, called attention to the contrast between the development of the idea of the sanctity of marriage by missionaries to native converts, and the open violation of that sanctity now progressing in civilized countries, coupled with "an avowed deter-

life. It should be understood that both parties undertake to *give up* in order that they may experience the joy of a life wherein other motives than care for

self may reign. Still more of this willing self-sacrifice is called for when children come.

If the parties could declare that they undertake to endeavor to overcome selfishness, and by their united efforts to live more worthily of the true ideal of Manhood and Womanhood; and if the church, in ratifying the marriage, could assure them of the blessing of a palpable God—the God that is *in* all of us—a real tie might be formed and be lasting, and a beneficent union assured. There are still many such marriages, though they do not claim the attention of the news purveyors. For the spiritual perceptions of man are stronger and more enduring than the waves of shallow, mis-called "philosophy" that sweep over him now and again. STUDENT

OUR YOUNG FOLK

PURITY

E. L. W.

CONSTANCY

Her canopy
Of heaven's eternal blue,
Verdure's veil
Around doth trail
The sunlight glancing through,
Within her bower
She's a flower
That to her nature's true.

With self reliance
Unconscious defiance
She throws where passions sway.
To fill her place
With simple grace
She seeketh if she may.
Her heart to feel,
Her hand to heal,
Stronger day by day!

Simplicity
Disdained by thee?
Then quickly go thy way.
Perplex her not
With twisted thought
Or fickle, wanton play.
Match thy white
To hers, 'tis right:
Bring here no wind-blown spray.

Chivalry
Declared by thee?
Then Knight with colors unfurled,
True as steel
Come woe, come weal,
Perchance these petals curled,
Covering their gold,
Are for thee to hold,
And proudly bear thro' the world.

The Flowers' Journey in Lomaland

(This can be used as a Flower Puzzle, by reading the story without the names of the flowers, leaving these to be guessed and filled in by the listeners)

FIVE wise men, Red, White, Black, Blue, and Garden Sage, set out on an expedition at Sunrise or Morning Glory. The emblem of a great republic was represented by three of them taken together, Red, White, and Blue.

Their heads were variously covered with Monk's Hood, Skullcap, Blue Bonnets, and a wig of Maiden Hair, all of which were decorated with Bridal Wreath and Prince's Feather. Some wore on their chins Goat's Beard, and some wore in their ears Lady's Eardrops. One wore upon his back Joseph's Coat and the rest wore Lady's Mantles. Some clad their feet in Lady's Slippers and some in Indian Moccasins; but all wore on their hands Fox Gloves. Their costumes were completed by one wearing Dutchman's Breeches and the rest Woolly Breeches.

Expecting to meet with adventures, they all carried weapons. These were Spanish Bayonets, Ithuriel's Spear, Red-hot Poker, Larkspur, Cupid's Dart, Hercules' Club, and Devil's Walking-stick.

They first met a churchman, Elder Berry, and his pastor Jack-in-the-Pulpit, followed by the unfortunate man who refused to carry the cross of Christ, the Wandering Jew; then, a

charming girl Su Mac, and a buxom lass called Bouncing Bet; and soon after three women, one with a large family — Mother of Thousands, and two with none — Old Maid and Mourning Bride; then an aged pair known as Old Man and Old Woman. Following these was an American author, Hawthorn; a beggar in tatters, Ragged Robin; some beautiful ladies, Canterbury Bells, carrying in their hands Ophelia's Bouquet, Rosemary, Rue, Pansies, Fennel, Columbine, and Daisies. Then came one of the heavenly twins, Castor, and an educated American Indian, Sequoia.

The artist of the expedition had with him an Indian Paint Brush.

They found along their path much poor building stone, Shamrock, near a great pile of which they beheld a huge monster, Giant Snapdragon; but their brave hearts, strong arms, and loyal weapons, soon laid him low in the dust. Then they rested on Titania's couch of Wild Thyme, after which they took a ride in Cinderella's coach of Pumpkinshell, and stopped for refreshments in a Maiden's retreat or Virgin's Bower. Here they feasted on the delicacies of the season, their bill of fare consisting of Mouse-Ear soup, roast Dragon's Head, fricasseed Elephant's Ear, baked Hubbard Squash from the mouth of the cave near by, a stew of Cat Tail and Colt's Foot, pickled Lizard Tail, Bread and Butter, and Cherry Pie. The feast being ended, they had a Crane's Bill to pay, which was no small matter for gold and silver they had none, and it was before the days of greenbacks. They had only two pieces of small change, Penny-royal and Moon-Penny, in a Shepherd's Purse fastened with a Bachelor's Button. The thought of their situation made their cheeks wet with Job's Tears. However, the musician among them played such exquisite music on the Angel's Trumpet that their host not only forgave them their debt but supplied for their journey Hen-and-Chickens, Finger-Tips, Popcorn Flower, Wild Cucumber, Butter-and-Eggs, Devil's Apples, and other dainties.

With renewed vigor and courage they went forward on their journey and soon met rushing by them at a furious rate a fiery troop, Scarlet Runners; but they went on undaunted. When it rained they got under the Umbrella Plant. When they tore their clothes they mended them with Adam's Needle and Eve's Thread. When their hair got tangled they combed it out with Cock's Comb. They carried with them to light their way in the night the Lantern of the Fairies, and they saw wonders in the heavens, — Shooting Stars.

But before their journey was ended they were so weary that they slept on couches of Bed Straw a long sound sleep that lasted till the hour of Four O'Clock in the afternoon of next day, and this sleep was so sound that the loudest ringing of all the Cathedral Bells could not disturb it till the time for waking came, and then the silvery tone of the Fairy Bells, or the soft tinkling of the Harebell, or the lightest whisper of the Whispering Bells, was sufficient to awaken the sleepers.

Refreshed with rest, they soon reached the end of their journey, which was the end of the rainbow, Iris, and here they found Pot-Mari-gold, and feasted on the food of the gods, Ambrosia, and sipped nectar from the golden chalices of the Columbine.

BANDUSIA WAKEFIELD

Curious Trees

IN Madagascar there is a curious tree something like the banana. The mid-ribs of its leaves are trough-shaped and the rain and dew run down through these to a reservoir at the base of the tree. Here the thirsty traveler can always obtain a cool and refreshing drink. Hence it is called the *Traveler's Tree*.

In Australia one of the curious trees is the *Bottle Tree*. Its trunk is small at the base then bulges out like a bottle, tapering again at the top and spreading out into several large branches with long narrow leaves. These trees sometimes reach a height of fifty or sixty feet, and many of them live to be a thousand years old.

The *Angry Tree* is another curious one growing in Australia. It looks like a century-plant but grows to a great height. If it is touched or handled, the leaves rustle and the whole tree seems disturbed. If it is transplanted it appears to be very angry; its leaves stand out in all directions and give out a very disagreeable odor. Sometimes an hour passes before it resumes its normal state.

In Malabar is found a tree with very curious but useful seeds. When they are boiled they produce a kind of tallow that can be used to make very good candles. It is called the *Tallow Tree*. M. G.

THE glaze on the common gray or brown crockery so useful in kitchen and pantry, is made by shutting off all the draughts of the kiln when the fire has reached its hottest point and throwing salt on the fire. Salt is a compound of the metal sodium and chlorine gas, and the great heat drives the two constituents apart. The sodium of the salt-fumes unites with the glowing sand and clay on the surface of the vessel. Together they form a kind of glass or glaze. This glaze makes these vessels water-tight, a most useful quality. It adds but little to the cost, which is very desirable in vessels of their homely but useful character. O. W.

IN the Zoological Gardens in Amsterdam, Holland, there is a department not usually found in exhibitions of this kind. It is a room devoted to insects, not dead ones only, but living butterflies, moths, flies, beetles, grasshoppers and crickets, each species in a glass house with whatever is necessary for food and the proper environment. A complete study of the different species is made possible by means of supplementary boxes attached to those holding the living insects. These contain specimens in various stages of development, showing the kind of butterflies which come from certain caterpillars, etc. R.

THE CHILDREN'S HOUR

The Cave Man's Thanksgiving

POINT LOMA lay in silent majesty listening to the deep music of the Pacific, listening to its stories of a long forgotten past and tidings of the present.

The Cave Man sat on a rock, his harp on his arm. He gazed towards the horizon where a fleet of the Râja Yoga children's golden boats were seen, gleaming in the setting sun. Long he sat thinking, grateful for the stores of happy thoughts with which the boats had been loaded, and felt a warmth at his heart when he thought of all the joyous feelings and strength that would come into children's hearts where these boats were unloaded.

He arose and looked at the tidal-rock, one of his time-keepers when the sun-dial could not be used. "Ah!" he said, "It is time I go to see that everything is ready for my guests; they will be here soon."

The Cave was adorned for Thanksgiving. Lights were glittering from pure crystals in which the sunbeams had been artfully enclosed; the walls were covered with shells in all the colors of the rainbow, and around them hung festoons of kelp and seaweed in which were entwined corals and pearls, taken out for the occasion from the deep treasury of the ocean. The Cave Man's grand chair, a gift from King Neptune, was standing in its place. It was wrought from mother-of-pearl with the art and skill of the greatest craftsman in the kingdom of the sea. Around it were placed in groups smaller seats made from gray polished stone, richly inlaid with gold from the mountains.

A soft music was heard in the distance. The Cave Man took his harp and played a sweet welcome, and to its rhythm the guests stepped in with graceful motions, two by two—elves and gnomes, fairies and nymphs from land and sea. They greeted the Cave Man and took their seats.

"I have called you hither," the Cave Man said, "that we together may give thanks to the Good Powers which we are serving. Soon your faithful guard at Loma's caverns shall be rewarded. The time will come when you may again serve men wise enough to obey nature's law."

Strains of joyous music now announced that more guests were coming. They were the fairies sailing the golden boats, who had just returned. The whole fleet of them lay now safely anchored in the fairy harbor. The fairies told of their adventures and of many sad and lonely children whom they had seen and made happy by gifts from the golden boats.

"I sailed for England," one said, "and when I had unloaded the boat there were the Lotus children ready to pack it full again with the most shining, beautiful thoughts you ever saw. They looked like rubies, diamonds and pearls; they wanted to send them to Point Loma."

"I sailed to Holland," said another one,

Lomaland Photo. and Engraving Dept.

DARK-TAIL, A TAME ENGLISH SQUIRREL

and the children there filled my boat with the most beautiful stars—you would think they had picked them from the sky."

"I sailed to Germany," said the next one, "and the children filled my boat with long chains; they shone like sapphires."

"I sailed to Sweden," said another, "the Lotus children there loaded my boat with gold hearts. I believe that a song was in each, because I heard music all the way back. They also gave me a lantern for the boat, with 'Northern Light' in it."

"I sailed to Cuba," said the next, "and when I had unloaded my boat, the children of the Râja Yoga Schools filled it with roses. Their petals glowed like rubies in the starlight and the fragrance spread out to all the ships we met on the way."

Some had sailed to Finland, Ireland, France, Spain, and many other lands; others to Japan, New Zealand, and all around America; and they told of most wonderful things which they had taken in their boats for those countries, and of beautiful tributes brought back.

All the treasures were now given in charge of Fairy Silence, who each day gathered the Râja Yoga children's thoughts to be sent in the golden boats out into the world.

"We shall soon have to add many more golden boats to our fleet," she said, "if children in those lands continue to send such beautiful thoughts. We shall have enough to give to all children in the world every day, and the earth will be happy and beautiful. Oh! This is Thanksgiving!"

Time had come for the guests to depart.

As the Cave Man played on his harp, two by two with graceful motions they went, and he was again alone.

He chanted to himself as he played his harp: "Children, learn to be grateful! There are wonderful blessings hidden in gratitude. Seek and find them! Use them! Give them!" SKULD

About Squirrels

DEAR CHILDREN: The tame squirrels of the woods have this summer grown a good deal, in trust, in self-reliance, and in action. Too much action sometimes! For Dark-Tail does not notice whether Man is busy writing, or free to play "hide-and-seek" with Barcelona nuts, and as he, Dark-Tail, has not yet learned to open drawers where they are now often kept, he asks Man to help him. He begins by begging: sitting up, with his fore-paws just meeting across his white chest; then he hunts up and down the room and climbs all over Man, just as if he were a mere tree, searches the writing-table and finally makes a grab at the hand with his claws and in a moment is on the floor with Man's pen; his tail whisks and talks with indignation; he persists again and again, refuses to go, and shows not the slightest fear.

Three squirrels run about the house quite at home. You meet them along the passages and on the staircase; for they know their way about, and should a particular window be closed, know it is possible for them to gain an entrance through the door, when open. Smooth-Ears and Ear-Tufts now eat nuts in the same room without any scolding noise; though should one have a nut and the other none there is a chase. Smooth-Ears came to tea with two children, not long ago, when he showed his method of getting nuts out of a small tin box, which was placed on the carpet. First he turned it down on its side; from the bottom end he pushed it along with his whole strength—the little body showed real effort—then he ran round and pulled off the lid with his teeth.

The eyes of squirrels when seen in full light are a lovely ruby color. Dark-Tail is the most beautiful English squirrel I know, with a rich brown coat and a fine full tail, quite kingly in sweep. He is naturally alert and active, intelligent also, and young. He is in need of Râja Yoga. I wonder if he ever dreams about the New Forest and what a great, great chance there is in Mrs. Tingley's schools of learning to be of use and how best to help all nature? You see Dark-Tail has learned to love and trust beings quite different from himself.

SOME OF THE ERRORS OF CHRISTIAN SCIENCE CRITICISM

by **H. P. Blavatsky and William Q. Judge**

CONTENTS:

"The Empty Vessel Makes the Greatest Sound"
A Note of Warning

—by **H. P. Blavatsky**

Of "Metaphysical Healing"

Affirmations and Denials

The Cure of Diseases

Replanting Diseases for Future Use

—by **William Q. Judge**

A MOST VALUABLE PAMPHLET. Outside of Theosophy there is given no adequate explanation of the healing that is at times accomplished, nor of its *rationality*, nor of the ultimate price that must be paid and the dangers connected with such practices.

This pamphlet is invaluable to all students.

Hypnotism

THEY are opening "Psychic Clinics" at certain of the Universities now, and experimenting in hypnotism and suggestion; setting the seal of orthodoxy on such things. These are signs of the times, and ought to make the world turn for guidance where guidance can be given — to a philosophy of life that does not quietly ignore three-quarters of its subject.

Old materialism has lost her jaunt and swagger, and her gay garments are showing worn places; that is the truth of the matter. Like dogmatic religion she limps a little these days. The world has tried her, and is peering after some better guide. Now is the time of huge advertisements of cheap spiritual and scientific wares. The unknown, the psychic, the super-physical, stretches out before a race gorged and wearied of the assertions of materialism. It does not matter that these realms are deadly; the lure of adventure is strong upon us — and it all offers such prizes to the ambitious. One man's power over another by means of brute force we have known about for centuries. We have done something in a legislative way to restrain the heavier club or fist, or the readier fire-arm; realizing that society must stand somehow, and aiming, in our half-dazed way, at a kind of freedom. But now another weapon is being brought into fashion, through which our criminals may put a direr kind of infliction on their victims, and without much chance of detection or legal penalty. Hypnotism is specious enough in its promises, but the casual observer can see that it may readily be a highroad between the criminal and his design, practically beyond the reach of human law.

A New Means of Domination

It is quite true that the evils of the day have gone almost beyond the skill of doctors to cure them, and that we do need spiritual remedies. But the term "spiritual" is one that we fling about loosely, and heed not to inquire into its meaning. That man is the most spiritual, who in virtue of inward Light, has most given himself up to unselfish labor for humanity. Hypnotism and faith-healing are not spiritual at all, and they do not *cure* at all; they are ultimately tenfold aggravations of the evil. It matters little to the patient, really and ultimately, whether the hypnotist is Fellow of a university, with a high reputation and doubtless excellent intentions, or a masked criminal intent on hell's own service. He is robbed, the patient is, in either case, of his will, the one weapon he had for fighting the evil that may be troubling him; and it does not

Hypnotism only Dams Back the Evil

matter so very much who will be the thief. We need to pause, and study life and the universal law. There is no royal road in evolution. Man includes within himself the power of will, even if it be mostly atrophied; and it is through the exercise of will that we grow and are made free. The sensualist and the drunkard are in the last resource curable only through their own volition. Hold them away from their instrument of destruction by all means; force them to keep sober till they are able to see and face their own condition; but *you* cannot cut the cancer out of their souls. The means of growth is within themselves; since they too are a part of the universe; since they too are founded upon divinity. Look you: we are not cut adrift; we are not floating spars of a universal shipwreck. We are living beings; our roots are deep in the center of things. We are men by virtue of the Supreme Spirit at our core; the Central Spiritual Sun rays out through us; all powers and majesty are locked up and embryonic within ourselves. The hooligan, the savage, the outcast, even the degenerate, has the means of growth in him; his path stretches out before him, leading him up, if he will take it, from depravity to godhood. Without using that power of will he cannot take one step forward. True, it may be that not till after untold suffering, will he come to the point of knowing how to make the first effort; and in any case help ought to be extended to him; this can be done by one with some knowledge of human nature, and something like compassion in his heart. But to dabble in hypnotism proclaims you ignorant of the first elements of the Science of Man. But you say: The will as often leads us towards evil as towards good. Is that true, or is it that selfish desire has got the mastery over the will? Here is where the insanity of the age damns us; we have been taught to unrecognize the everlasting foolishness of selfish motive. Will, like the spirit, is universal; and can only be used for universal ends. It is but its shadow and counterfeit that is used otherwise; a deadly hindrance and sap to our inward vitality. The course of life is upwards; the end of all experience, recognition of our unity. Do we not need above all things a true philosophy of life, to make straight the tragic tangle and bewilderment of our ideas?

Man's Own Will is within themselves; since they too are a part of the universe; since they too are founded upon divinity. Look you: we are not cut adrift; we are not floating spars of a universal shipwreck. We are living beings; our roots are deep in the center of things. We are men by virtue of the Supreme Spirit at our core; the Central Spiritual Sun rays out through us; all powers and majesty are locked up and embryonic within ourselves. The hooligan, the savage, the outcast, even the degenerate, has the means of growth in him; his path stretches out before him, leading him up, if he will take it, from depravity to godhood. Without using that power of will he cannot take one step forward. True, it may be that not till after untold suffering, will he come to the point of knowing how to make the first effort; and in any case help ought to be extended to him; this can be done by one with some knowledge of human nature, and something like compassion in his heart. But to dabble in hypnotism proclaims you ignorant of the first elements of the Science of Man. But you say: The will as often leads us towards evil as towards good. Is that true, or is it that selfish desire has got the mastery over the will? Here is where the insanity of the age damns us; we have been taught to unrecognize the everlasting foolishness of selfish motive. Will, like the spirit, is universal; and can only be used for universal ends. It is but its shadow and counterfeit that is used otherwise; a deadly hindrance and sap to our inward vitality. The course of life is upwards; the end of all experience, recognition of our unity. Do we not need above all things a true philosophy of life, to make straight the tragic tangle and bewilderment of our ideas?

Man's Own Will Must Make Him Free

Man's Own Right Thoughts Alone Avail

Perhaps we may say that the will is a divine quality from which we may deflect something to base usage; thereby in time cutting ourselves off from all power to use it. It is this which has happened to these neurotics and

vice-victims and sensualists, whom now it is proposed to cure by hypnotism. Will has gone from them, or rather retired into the depths of their beings, far beyond the reach of ordinary cognition and thought. And what is it that you propose to do for them? Drive it yet farther away, smash down ruthlessly the bridge-way of its return? That precisely. The hypnotist substitutes his own volition for that of his victim-patient. Suppose he is really benevolent through and through and merely suffering from this intolerable and abhorrent ignorance; he can hold the poor wretch up for awhile, hold back the evil from manifesting for a little time perhaps; but he cannot prevent the evil of it from collecting and collecting behind the artificial dam he has built. When this dam has weakened, when the hypnotic current has been withdrawn—perhaps by the death of the operator—then the waters must overflow and sweep all before them; then the victim finds himself helpless, resourceless, and prone, inevitably so; his last state is a thousand times worse than the first; and the hypnotist remains with the blight and Karma on him of the loss of a life. Why are so many of the supposed cures of the different kinds of Faith-Healers followed by sudden death, of no apparent disease whatever? "Don't monkey with the buzz-saw," says the Western proverb. These tyros are monkeying with forces a million times more perilous than this or any visible and material peril in the world, and shall we expect no disaster to come? Look to it that the cause grow not, till disaster threaten the whole race.

Hypnotism
Prevents the

of the different kinds of Faith-Healers followed by sudden death, of no apparent disease whatever? "Don't monkey with the buzz-saw," says the Western proverb. These tyros are monkeying with forces a million times more perilous than this or any visible and material peril in the world, and shall we expect no disaster to come? Look to it that the cause grow not, till disaster threaten the whole race.

You who desire to be hypnotized: whatever you may be suffering now, you ought to know that it *came out of your own acts*. You would not be called on to endure it, except that it might effect your cure, and is the best and only way to effect your cure. Go to a good physician against whose name there was never breathed any suspicion of these practices, and let him do what he can for you; above all, do you every sane thing you can for yourself. *Work*; for

Self Effort and
Right Work
Must Succeed

God's and man's sake, *work*; therein lies the remedy. Get away from yourself; learn the glory and tonic of a little altruistic endeavor, and—*work!* Turn your trouble out of your thoughts, by filling them with that which does not revolve on self. Our universe was never designed to have this fool-things selfishness figuring in it; and you cannot expect it to be appeased until you set yourself to driving selfishness out of your own life.

K. V. M.

The Origin of Cults

IT seems to me that it would be very premature to chant a *De Profundis* on the wrecks of the exegetical methods and theories which were flourishing twenty years ago. Though it be evident that the so-called anthropological school is steadily gaining ground and is more sympathetic to younger scholars than any other, the different systems based on euhemerism, on ancestor-worship, on solar and astrological myths, can by no means be considered as discarded. Professor Tyler's animistic theory is now, I believe, universally admitted; but the holders of more recent ones are still engaged in warfare. I have even been struck of late by some symptoms

of reaction against the extensive use of anthropological documents and the comparative method on a large scale, which strives to elucidate the problems of Greek and Roman mythology by adducing evidence from the beliefs and customs of savage peoples.—*M. Salomon Reinach at the Oxford Congress on the History of Religions*

When we believe that we have struck truth at its root, continued the speaker, we must bear in mind what history teaches us about the rise and fall of systems. "*Cadent quae nunc sunt in honore*"; but "*multa renascentur*." He was reminded of the latter saying when he witnessed the actual revival of the hypothesis on astral mythology. Some of Dupuy's favorite ideas in his *Origine de tous les Cultes*, were making their way upwards again, and—

The question is rife: What is the bearing of primitive astrology and star-worship on the formation of the Oriental and Greek myths?

This excerpt will suffice to show the confusion that reigns in scholastic circles on the question of the origin and meaning of cults. When we read the views of a single scholar, we may perhaps be impressed; but there are too many of them. What with the anthropological fad, the animistic fad, the linguistic fad, the astrological fad, and all the other fads, one does not know where he is. But "in the multitude of counsellors there is safety," and the safety in this case consists in our unwillingness to follow any of them in their divergent paths.

We must never forget that our culture is at present still very immature; for our civilization represents but a short period as historical ages go. Our knowledge has been very isolated; for we have been shut in both by the scantiness of our sources and by strong prejudices. We still look upon the past and upon other races as from a pinnacle, forgetful of the recency of our own emergence from the untaught state. The scraps of ancient culture that came to us from past civilizations were haphazard and fragmentary. We are now in the midst of a new Renaissance, in which more information about past history is floating in from many different sources and upsetting our previous notions and revealing to us how isolated our culture has been. People are busily at work trying to digest this new material, and their great desire is to reduce it all, if possible, into agreement with "comfortably settled" opinions. One, who has a master-key of his own in "evolution," tells us about the evolution of religions; another, ridden by the astro-myth theory, bids us see everywhere poetical imagery representing the sidereal phenomena; another has a scheme of races into which he desires to fit all the facts; and so on. We must take these speculations for what they are worth, remembering, as the professor tells us, that they rise and fall like other things in history.

There is one explanation of the origin of cults—the one put forth by H. P. Blavatsky. She says:

As cycle succeeded cycle, and one nation after another came upon the world's stage to play its brief part in the majestic drama of human life, each new people evolved from ancestral traditions its own religion, giving it a local color, and stamping it with its individual characteristics. While each of these religions had its distinguishing traits, by which, were there no other archaic vestiges, the physical and psychological status of its creators could be estimated, all preserved a common likeness to one prototype. This parent cult was none other

than the primitive "Wisdom-Religion." (*Isis Unveiled*, vol. II, p. 216)

The Secret Doctrine was the universally diffused religion of the ancient and prehistoric world. Proofs of its diffusion, authentic records of its history, a complete chain of documents, showing its character and presence in every land, together with the teaching of all its great adepts, exist to this day in the secret crypts of libraries belonging to the occult fraternity. (*The Secret Doctrine*, vol I, p. xxxiv.)

With this key, all confusion vanishes. The truth-seeker will surely give it a trial, as such a one will catch at everything that offers him a chance of solving his doubts. But modesty is needed; and he who accepts this key must be one who either is willing to climb down or has no climbing down to do. He must be prepared to admit that what we have been all this time calling "history," is largely but a superficial record of events; that even what we have has been edited by people whose very names have been forgotten and whose narrow ideas we should now repudiate; and that the Sacred Knowledge has always been known to some, if very few. The perpetual existence of this sacred knowledge in the midst of rising and falling civilizations is revealed by its continual outcroppings, giving rise to fresh outbursts of enthusiasm and culture; and it runs like a thread all through the ages, preserving the continuity of its doctrines in a way that is a standing puzzle to scholars. Greek culture was no isolated fact; the same culture, though with different local and racial coloring, has sprung up again and again. For the source of inspiration is never absent from the human heart; though in the multitude it may slumber, in individuals here and there it flames up and puts them in touch with the ever-burning fires of Knowledge. Such people become initiated—initiated into the deeper mysteries of the divine-human nature. It is the existence of Teachers whom the world knows not nor suspects that keeps alive the fire. To them has been due the founding of the various great schools of learning in antiquity and the various great awakenings that have come all through history. There, knowledge is not speculation; it is based on the eternal truths revealed to the unclosed eyes of the seer.

STUDENT

The "Road to Ruin"

THE Roman Church seems to have a low opinion of the piety of this country.

Two out of three of us are "infidels." The Rev. Mr. McCloskey, of St. Francis Xavier's Roman Catholic Church, denouncing marriage between Romanists and non-Romanists, recently said:

We are confronted by the danger of perversion on the part of Catholics who give themselves to such a union. And it means spiritual ruin for the children of mixed parents. That fact must be taken into consideration with the figures of the last census, which gave the number as 75,000,000 people in this country. Of this number the statistics show that 50,000,000, when asked by the census enumerators, professed no form of religion. They may be reckoned as infidels.

So we are not only mostly infidels, but in no small number of our marriages are opening the doors of "spiritual ruin" for the resulting children.

Statistics show that 60 per cent of men who marry non-Catholics give up their religion. The home life of a Catholic who marries a non-Catholic lacks that spiritual strength necessary to faith.

So anyone leaving this one and only Church has consequently "given up his religion"! C.

Some Views on XXth Century Problems

Mental Limits in Religion

THE young man who a couple of years ago set some fraction of the religious world a-boiling with his "New Theology" appears to have climbed up on a larger horse than he can manage. It has taken him to Determinism and to the Pantheism of Spinoza, goals at which he can hardly have expected to arrive. Moreover a good many of his quondam comrades have rather hurriedly dismounted. He still talks about God, still thinks he has a religion good for the people's acceptance, and still preaches the usual number of times on Sunday.

Definitions come very glibly; the intellect is quite competent to understand and explain everything. You want to know what God is? Certainly! God is "the universal substance," "the all-inclusive consciousness of being." What is man? The same as God but smaller. "If there be an eternal throne, you are on it now; there never has been a moment when you were not on it." One of these men seated on the eternal throne, but also in one of the pews of Mr. Campbell's church, perhaps asks from what source apparently external to himself there enter his consciousness at one time impulses to sensuality and passion, at another aspirations for purity. The only answer can be that they are both from God "the all-inclusive consciousness of being." To follow one is therefore just as good a way to God as the other.

Why not take note of the line beyond which the brain cannot go? It is obvious that everything which is, is because it partakes of or is grounded in the principle of being. It is equally obvious that that principle cannot be inspected or theorised about; that is, it cannot be brought, as a piece of knowledge, into a mind or consciousness of which it is the root. It is beyond, the *para*. . . . Nor could any mind understand the method or process of its own primordial origination in or from that. It could not span the gulf back from the existence of itself to the notness of itself. Any such transcendental understandings of consciousness could not go into mental terms, and the attempt to put them there has been the cause of all the religious quarrels that have ever darkened counsel.

According to ancient philosophy, upon or within the abstract principle of being arose the first *Is*, a divine ideal of the whole toward which the whole subsequently moves stage by stage. Mind can make little of this either, though the light of the ideal is within every consciousness as its inspiration. It would be possible to call that ideal field God; but then the mind would instantly seize the word and make pictures and definitions that could have little to do with the reality. Is it not possible to let the heart feel and aspire and finally in a transcendental way *know*, without letting the chatter of the mind in upon the silence?

That is the second field of being, appearing within the infinite field of the principle of being. Within this second is born life proper, represented by the infinity of living units, from the archangel to the molecule, in every one sounding the verbum, the voice Come-up-

higher. And this, in man, is his conscience, urging him towards the ideal of himself. The activity of his being is to will; will is himself in action; he can turn his face and go whither he wills. But if he departs from the ideal, so far as he feels and sees it, the disharmony he has made comes back to him in pain.

Man's soul is at once himself and not himself. In his highest moments it is himself, his ideal self; but few take the pains to reach those moments. When he is short of that, it is a presence within and beyond him. Strictly speaking it is always beyond him, for it is a conscious light-stream coming down to him from the supreme ideal on to whatever level of evolution he has attained.

All this is of course but the slightest sketch. But the complete philosophy, Theosophy, of which it touches a very few points, is making itself felt more and more widely as the only answer to human difficulties. Mr. Campbell seemed at one time to be moving on towards it. But he has turned up the side way of Spinozism, a side way with no outlet because that thinker worked with his intellect only, not seeing that it was incapable of solving the problem of its own being. Where it stops, the work of another faculty begins.

STUDENT

The Philosophy of Hope

A MAN born blind who suddenly found that he could distinguish light from darkness, merely that, would feel himself reborn, born into a new and undreamably splendid world. We, more favored, who not only see light but see what light illuminates, might not think much of the quondam blind man's new great gift.

To every man is a step of growth possible, a world of new light upon which he may open his eyes. Each of us is, for some world of light interblended with this one, a blind man who may, if he will, open his eyes. Old men, even middle-aged and younger men, look back regretfully at sins of youth and think the stains too deep to wipe out. Old follies have perhaps dimmed the memory, blunted mind and perception, even ruined health. But are the remaining years therefore useless and without promise and possibility of attainment? Must a new birth and a new body be regretfully and passively and hopelessly waited for?

However low down the mountain side may any man be, he can take one step upward; as however high he may be he can still take *but* one—at a time. And whether he be close to the top or at the bottom, the taking of that possible one is like the opening of the blind man's eyes; a new world of light has come into view. One man's possible piece of progress, when achieved, however abject he may have been and may still to others seem, is to him as glorious a gain as another's to *him*. It is not only never too late to try but never too late to achieve. The ratio of what I can be to what I am, whoever and whatever I am, is always unimaginably great.

And in another way it is easy to be misled by appearances. A man whose youth has

been stained by drink and vice but who has painfully outgrown both by years of fighting, may be much further up the mountain side than another who has never left the path of respectability.

He who does in his inner nature what is possible to him, may justly hope. The divine message and promise to every man is that it will fill his cup if he tries to keep it ready; and a full cup is a full one whatever its measurement.

"Conversion"

A RELIGIOUS contemporary wonders somewhat sadly why the "conversions" of children are so apt to be impermanent, to die out as the serious business of life is entered upon.

Luther Gulick, desiring to know the average age of "conversion," sent the following question to a number of officials of the Y. M. C. A.: "At what age were you first deeply affected by religious influences?" About 550 replied. Beginning with the age of 6 and ending with 21, the number of conversions increases up to the middle, between the ages of 11 and 15; being least at each end. Professor Coe, examining more than 2000 cases, gives the average age as 13.7 years.

Have we not the answer to our contemporary's question? At this age of conversions, vital physical changes are going on, attended with the influx of a corresponding stream of new feeling. This feeling is made use of in conversional work, married as it were to a certain set of religious statements and pictures. Later, the feeling passes naturally into quite other associations, the old ones being merely left behind by the wayside.

The maneuver was not fair to the child. Its age was one at which, least of any, should emotion be stimulated. It should have been converted from the very first; that is, led to fixed, quiet realization of itself as divine, a realization beginning as the sense of power to control its lower nature, as the sense of duty to so take command and stay in command, and as pleasure in winning its daily victories. It grows up knowing itself more and more fully, further and further from that confusion of self with impulse and whim and passion which is the only cause of men's blindness to their Divinity. Surely self must first be known before that Light of which self is a radiation can be known. Yet the ordinary teaching given to children begins with that second step and never touches the first at all. The Light is called God, necessarily figured by the child as a big and sometimes terror-inspiring *man* in the clouds. Between ordinary self-feeling, associated as it is with all the sensual and impulsive and passional elements of life, and the Light, is a gulf which can only be crossed by self-feeling which has been purified of all these elements, which has learned their externality and at any rate *begun* to learn to dominate them with the power born of—and only to be born of—that knowledge. Self thus purified can appreciate its identity of essence with the Parent Light. These are the two steps of real conversion.

Megalithic Circles in Orkney

THE Standing Stones of Stenness, between Lochs Stenness and Harray, in the Mainland of Orkney, consist in the main of two circles: the larger, known as the Circle of Brogar, occupying the bleak moor between the two lochs, while the smaller, the Circle of Stenness, stands a little to the south. Between the two circles are occasional smaller stones, and at the southerly end of the bridge between the lochs stands the monolith known as the Watch Stone.

Surrounding the circle of Brogar are many tumuli. The large circle occupies an area of $2\frac{1}{2}$ acres, the diameter being 366 feet, and is surrounded by a trench 29 feet wide and 6 feet deep, broken by two causeways. At a recent period there were only 14 stones standing, out of about 60, while a number were prostrate and others had been removed altogether. The stones are about 17 feet apart on a circle with a diameter of 340 feet, and their height runs from 6 to 14 feet, the greatest breadth of any one being about 8 feet.

The smaller circle has been almost wiped out, owing it is said, to the vandalistic propensities of a farmer, who pulled down stones by harnessing oxen to them. Until lately, only two were in a position, while a third was prostrate. The two measure 17 and 15 feet high, and the prostrate one is 19 feet by 5 by $1\frac{1}{2}$, weighing something like 12 tons.

These circles have long occupied a prominent position in the archaeological arena, and have given rise to many questions of more than passing interest. In this connexion speculation has been rife as to the place from which the stones were procured, how they were conveyed to their present site, and for what purpose they were erected.

Government has taken steps to restore the circles, raising the fallen stones. The symbol is significant of the rehabilitation of ancient knowledge overthrown by vandal hands. On raising one stone they found an inscription in runes, consisting of five letters with a cross beneath; it occurs on the most northerly stone of the circle.

The stones were found to have been kept upright by being placed in a socket in the earth 18 inches deep and wedged with smaller stones, sometimes having also a flat stone under them.

The work of preservation and restoration was not undertaken too soon. The ages had worked sad havoc with these imposing and weird relics of the past, and the process of decay and defacement was still going on. Now, however, this has been checked, and the stones as they stand at the present time serve more than ever to call up imagines of the civilization that brought them into being—a civilization that was capable of overcoming the forces of nature, of securing co-operation and organization in the community, and of producing a great and lasting memorial of family affection or public worth. (Particulars from an article in *The Scotsman*)

Lomaland Photo. and Engraving Dept.

STREET IN THE COMMERCIAL QUARTER OF ADEN

We must bear in mind the wide distribution of such stone memorials in many far-separated countries of the earth, and then we shall gain an even keener appreciation of the prowess of the builders who worked on so vast a scale. In these time-defying monuments are preserved important data connected with ancient astronomical and geographical knowledge and the law of cycles, which, when the missing clues are supplied, will prove an invaluable aid to historical research. And doubtless in due season some such fortunate discovery of clues will be made. But that will most likely be when we have shown a greater disposition to profit by the knowledge we already possess. Let us accept frankly the evidence we have, and reason fairly from it, instead of trying to force it upon a Procrustean bed of theory, and we shall have earned the right to more evidence. Meanwhile a motive, whose springs lie deeper than the surface strata of our intellect, constrains us to protect these ancient witnesses against a time when we shall have a better use for their testimony.

Nürnberg, a Center of Light

LITTLE is known of Germany's prehistoric times; clouds of darkness cover the remote history of our country. In a time when, as in that of today, the Light of Theosophy shines again, one may hope that in our Fatherland many long-forgotten things will become clear and known, and will manifest themselves, according to the Law of cycles, with a still greater glory.

The lively interest in ancient lore is created by the forebodings of coming revelations.

The spirit of reverence for the lofty and noble, a trait of the German mind, is manifesting itself again; the deep longing to understand the mysteries of Nature wakes anew.

Among venerable sacred spots, devoted to the service of the Gods, Nürnberg must be numbered, according to the researches of a well-known linguist (Johannes Schmidtkontz, in No. 18 of the *Mitteilungen des Vereins für Geschichte Nürnberg*). In this treatise the author tries to explain the name Nürnberg. According to his opinion the origin of this name is indicated by the sandstone rock on which the "Burg" stands to this day and which was called in the earliest times Nuorinberg, a name which designates a sanctuary of Wodan, surrounded by a wall. The question whether Nuorinberg was really such a sacred place is answered by the author as follows:

The answer results from a close observation of the locality. All circumstances point to the conclusion that originally the mountain was fortified for no other reason than that it was a place devoted to the service of a deity. This does not mean that the *Hegering* (wall) could not have served on extraordinary occasions and for a very short time as a military fortification, just as in historic times graveyard walls, churchyards, and church towers have not infrequently been used for similar purposes. A knowledge of the meaning of the name Nürnberg may not teach us much, but what it teaches is really of the highest importance. Awe-inspiring and venerable is the place itself, as well as the name which was originally given it. With the sound of this name a something rings in the ear of the initiated like a mysterious whisper filling him with the awe of forebodings; and for those who can claim Nürnberg as their home the words of the Bible may be applied in their literal sense: "The place whereon thou standest is holy ground." Special Delusions

SIR WILLIAM HUGGINS, in a recent letter to the Editor of *Photography and Focus*, described the very instructive results of an attempt which he made five years ago to get the spectrum of radium. The usual method is to use an electric spark passing between two poles moistened with the solution of a radium salt. He thought he would come nearer home and use the glow of radium itself. The resulting spectrum was much too faint for the naked eye and a photographic plate was employed. An exposure of twenty-four hours gave almost no result. Two hundred and sixteen hours did much better—but the result was the spectrum of nitrogen, not radium! The bombardment of the radium emanations, or one of them, had caused the nitrogen of the air to glow and the spectrum of its light was that which the plate had taken.

There are at least four or five emanations from radium, and one of them is light; though this is not low enough down the octaves to affect our sight, the rays being known as X or Röntgen. We know that this group is capable of exciting or stimulating luminosity in the molecules upon which it falls.

We have some reason for thinking that every element and compound on earth is to some extent radio-active, is emitting rays of some sort, is emitting light belonging to one of the octaves which we collectively call X.

A great many elements and compounds exist only as gas, and large or small quantities down to the minutest traces of these must be in the air. Among metals, the lightest, hydrogen, is a gas; and it has lately been found that gold, one of the heaviest, at the other end of the weight scale, is volatile, is always escaping in however small a quantity as a gas, and must therefore be in the air. It is a presumption that the numerous metals of intermediate weight and the few that are heavier, are also in their degree volatile and in the air. The air also contains particles perhaps down to molecules in size, swept up by the winds and hurled from volcanoes. And as only within the last ten years several entirely new elements beginning with argon have been discovered in the air as their natural home, it seems quite probable that there are many more not yet suspected.

In other words the air may be a weak solution of everything in or on the earth and of a number of other things not on the earth. It is also traversed by rays emanated from the earth, perhaps of innumerable kinds. Radium alone, for example emits: (1) positively charged ionic atoms; (2) negative electrons; (3) X-rays; (4) heat rays; (5) one or more new elements, known as "emanations"; and perhaps many other things not yet detected. Some of these rays, not only from radium but from a thousand other things, are capable of exciting or stimulating luminosity in the thousand contents of which the air is a solution. Of the electrons there are certainly several kinds. They are not the prototype of which chemists are in search. A stream of them is unequally deflected by a magnet, is spread out into a band or patch, a sort of

spectrum, doubtless if fully analyzed by methods to come, as septenary as everything else.

Through this crowded mass of elements, compounds, and orders of etheric vibrations, filters to us the light of sun and stars and planets. After it has run the gauntlet we look at it through our spectroscopes and from the resulting spectrum think we can read the constitution of the celestial body from whence it came. Is it not as natural that by this method we have determined that the constitution of all the celestial bodies is chemically identical with our own, as that a man who looks at the scenery through spectacles of red glass should determine that everything was red?

STUDENT

Tricks in Botany

THOUGHTFUL plants must be continually wondering what man will be doing next to them. They are accustomed to their own quiet ways of growth, to their leisurely variations, to their long sleep at the end of autumn. Man is interfering with all of these to suit himself. He has found out that an electric current sent through the soil will expedite and increase growth, and that the same effects follow from static electricity sprayed down from above. In this case wires are strung over the field three or four feet from the ground, studded with points and connected with a frictional machine in a shed near by.

They are shocked into wonderful variations by skilful cross-pollenization.

And they are made either to do without sleep, or to have it so deepened that a little of it goes a long way. The methods of deepening it—for that seems the explanation—are by etherization and by chilling. Plants do not seem to suffer as we do by the inhalation of ether. But then they do it much more passively. A man who inhales it does so actively, by the muscular respiratory efforts. The plant sits quiet and lets the vapor permeate it. After a couple of days of this permeation, it appears to be refreshed by the extra profundity of its sleep, wakes up and proceeds to bloom as if it had lain quiet the whole winter.

The chilling method is so far of scantier applicability, indeed to have been applied only to potatoes. Just after the tubers are harvested they are exposed for two weeks to a temperature immediately above the freezing. This satisfies them as well as a whole winter.

Chilling and etherization seem then to deepen normal sleep and multiply the value of a little of it. It is not yet certain whether the methods of keeping plants awake entail either a subsequent longer rest or a diminished growth. The chief of these methods is immersion in a bath of hot water for several hours. The best temperature varies with the plant and so far it has been applied mainly to cuttings. A suitable cutting, thus bathed at the end of autumn, will begin at once to throw out buds or to develop those which it has, and finally will flower. In the case of whole plants about to enter on their rest, but which are desired to bloom, the static current

has been successfully used along with warm housage.

In both these ways, and, it is said, by the admixture of blue light with the white light coming through the glass—which is also a stimulant at any time—sleep may either be postponed or altogether prevented. But that may have to be paid for subsequently. W.

Soil Magic

FEW of us realize the activities going on in the dead-looking soil at our feet. It is digesting, altering, oxidizing, deoxidizing, purifying; it is crammed with bacteria, some of them carrying the organic back to the inorganic, some raising the inorganic to the organic, making solids of gases and gases of solids. Only a little of this teeming work is yet understood. We are only beginning to know why a current of putrid water, flowing over and through some soil finally passes away pure and sparkling. That the impurities remain in the soil deodorized and altered, we know; exactly what detained them we do not yet know.

A light soil exposes a vast surface to the air. Professor Whitney finds that on the average a gram (15 grains) of such soil contains from two thousand million to twenty thousand million grains or particles. What is the surface area of all these? Considering a cubic foot of soil and regarding all the particles as spheres, Professor Whitney estimates the surface area as somewhere between two and three-and-a-half acres. A light soil is filled with air and a cubic foot of soil therefore presents that enormous surface for expiration and inspiration, the current being maintained by the changes of temperature due to day and night.

Soil consists of inorganic mineral matter and of organic humus. Part of the latter, the larger part, we regard as dead; it is decaying vegetation. The rest consists of bacteria. The value of a soil mainly depends upon its proportion of humus, for it is in this that the bacteria dwell. Their business is of several kinds. They deal with the plants' excreta, bodies whose composition is hardly yet understood but which are very poisonous to the roots which produced them. By means of bacterial work upon them they are slowly oxidized and made harmless, so that a soil which has become heavily poisoned by a succession of similar crops, will ultimately recover itself. Fungi and bacteria also stand between the roots and the organic matter, breaking down the dead leaves and twigs and old root-hairs into compounds which the plant can take as food. They also take nitrogen from the air and work this up into food compounds. The more we know, the more probable appears the proposition that without the soil bacteria, plants could not live. To prove it, it would be necessary first to sterilize some good soil, to plant effectively sterilized seed in it, to water it with sterilized water, and to filter the air through cotton wool.

If we could look at soil with eyes finelier tuned, the spectacle of a busy city would in comparison be poor and dead. STUDENT

Studies

Sunset at Point Loma

NATURE in all her moods and changes is instinct with lessons which teach us the joy and fulness of life. And this is especially so when the sun having enriched us with his light, leaves his watch, at parting, to her whose vigils end the cares of day and enfold us in her pinions of rest; when he offers a most fitting farewell, as if his fidelity through the day had not been sufficient, but he must needs emblazon the vault through which he has been coursing, and paint upon the vast canvas every image around his own titanic form, in a symphony of multi-form colors, and with a strength and gorgeousness worthy of the king of day.

What can be more sublime than to watch the sunset from the first flush of the sky until the west is robed in many-colored vestures, which at their departing leave a trail of glory that the queen may be ushered in with fitting ceremony?

And if this daily departure abash the ablest masters of description, then what of those rarer moments when the elemental spirits stir the heavens, and the bowels of the earth, and forthwith assembles a galaxy of potentates. The wind sweeps the clouds and wreathes them into marvelous landscapes, weird castles, grotesque monsters, and the heaving ocean mirrors the ecstasy. Unable to contain the impetus, she bathes her crests with milky foam, the thunder reverberates through the heavens, the lightning dashes across with coils of fire. The master is pleased, the monarch of the day descends from his throne in the west, and bids farewell to the spirits who do him homage. Yea, he robes them with wondrous garments, whose colors radiate and sparkle and glow. The sky is transfused with gradations of rapturous tints; crimson where it meets the ocean, and above with streaks and splashes of orange. The clouds are iridescent jewels, with tints as diverse and as fleet to change as their shapes. The sun peeps through them and nods to the ocean, and she palpitates with diadems. Every heave, every wavelet, every ripple spreads the message of color to his brother, and even the spray of

Lomaland Photo. and Engraving Dept.

A PACIFIC SUNSET SEEN FROM POINT LOMA HEIGHTS

the billows tosses up a shower of opals, rubies, and sapphires.

And shall we miscall the ancient Egyptians primitive because they stood with bowed heads before the sinking orb, or were the Greeks wanting in wisdom because they did likewise? Shall we despise all the great nations of old from whom the departing luminary evoked a prayer? May we too keep alive the spirit which the sun inspired in them; for there was a wisdom that we know not of among the nations of the past.

Half the Wood Wasted

A CONSERVATION circular states that we are now cutting timber from our forests at the rate of 500 feet board measure a year for every man woman and child. In Europe they use only 60 board feet. In less than 30 years all our remaining virgin timber will be cut. We probably still possess enough forest land to grow our own wood, and may yet preserve our forest independence. But at present the wastage is enormous. In the case of yellow pine, for instance, it is estimated that in 1907 only one-half of that which was cut was used, the other half—wasted! This half was 8,000,000 cords. And such wastage, adds the circular, is typical. Economy is one of the primary factors of

true wisdom, according to Lao-Tze, the founder of Taoism, and to many other Teachers. Twenty per cent of the yellow pine is simply left in the woods. The rest of the waste takes place in the mill; most of the material rejected there is susceptible of further use, if we were intelligent and economical.

Besides the loss from waste, there is a loss due to the unintelligent management of forests, especially in replanting. They could be made to produce three or four times as rapidly as they do. Wasteful competition carried on constantly between the rival trees, the leaving of trees which have stopped growing, too severe cutting-over, and fires, are among the causes of loss in this respect.

These and similar facts prove that we do not stand in need of additional resources at present, but require to develop the resources of our own character, to the end that we may acquire that instinctive economy which means wisdom in life. Our present civilization has become so much more potent, by reason of its inventions, than those which have recently preceded it, that a far higher standard of individual responsibility and character is demanded, in order that stability may be insured. In fact we must bring up our moral standard to the level of our opportunities, or civilization will destroy itself by its own energy. T.

Path

From THE PRELUDE

(SONGS BEFORE SUNRISE)

Algernon Charles Swinburne

A LITTLE time we gain from time
 To set our seasons in some chime,
 For harsh or sweet or loud or low,
 With seasons played out long ago
 And souls that in their time and prime
 Took part with summer or with snow,
 Lived abject lives out or sublime,
 And had their chance of seed to sow
 For service or disservice done
 To those days dead and this their son.
 A little time that we may fill
 Or with such good works or such ill
 As loose the bonds or make them strong
 Wherein all manhood suffers wrong.
 By rose-hung river and light-foot rill
 There are who rest not; who think long
 Till they discern as from a hill
 At the sun's hour of morning song,
 Known of souls only, and those souls free
 The sacred spaces of the sea.—Selected

Which Way?

STUDENTS of the scheme of cosmic development revealed by H. P. Blavatsky, and proved by a wealth of illustration to be the mainspring of all progress in the universe, will have recognized the vast scope of the great cycle which results in the full realization of the eternal man.

At the dawn of manifestation when the universe came into being, spirit and the spiritual forces of the universe became involved in matter. This process of involution continues until the outermost bounds of manifestation and the densest plane of materiality are reached. From this point the action of the Great Breath that formed the universes and the worlds, is reversed—the outbreathing is changed to inbreathing—and once more the spiritual powers are indrawn into the great heart of Nature enriched by the experience and added wisdom of their long journey.

It would seem as if this all-important turning point were worthy of our most careful study, so that we may not only recognize it, but, by giving it the fullest scope, add to its potential force, and accomplish the destiny which lies behind the great “cycle of necessity.”

Possibly the daily attitude which we assume towards the minor occurrences of life has more to do with this, than we at first suppose. The question is, shall we assume the attitude of *getting* or of *giving*? Shall we still try to attract to within the sphere of our personality; or, by ceasing to care about ourselves, shall we, with *positive insistence*, draw from the central well of our being—which is the heart of our life—those forces which lie hidden there, and give them out to take their part in the general unfolding?

As an illustration we may perhaps know of

some who in all the circumstances of life look only for that which shall benefit them personally—whose attitude is summed up in the one question, “What is there in it for me?”

This attitude seems to be the old one which has dominated humanity from the beginning of time. It implies a desire for food from *external* sources, and dissatisfaction if you don't get it. The tentacles of desire are waving eagerly, in an atmosphere clouded by a veiled self-seeking.

Let us suppose that this attitude could be reversed. Once entirely convinced that every tiniest detail of our surroundings is exactly as the Law has formed it, and that every comrade is doing his best to fulfil his obligations, we could then look with dispassion and calmness upon every situation, and *seeking nothing*, strive to *give* to the uttermost.

If the laws of involution and evolution mean anything at all, they apply first and foremost to the daily consciousness of man. He who is convinced that within him is a hidden deity, will strive to find it, and bring it forth that it may shine by the light of its own divine tolerance, and animate others by the power of its helpfulness. The forces which have been running for ages in one direction, must be reversed, and made to run in the opposite way, that their great object may be accomplished. This is no easy task. It involves a constant dwelling on ideals to which we are unaccustomed—the changing of our inherited and acquired habits of mind and body—the momentary watchfulness of the warrior who is fighting in the noblest of all contests.

And so we gradually recognize the harmony which lies behind an apparent discord—the sweetness of a calm disclaiming of personal merit or right, the eager willingness to draw the waters of life from the exhaustless well within our hearts that they may flow for the benefit of all.

And finally we come to know that whilst we cannot run even the smallest corner of the universe to suit ourselves, we can always give it a mighty push on its destined course, if we recognize the laws by which it is governed.

STUDENT

Karma

Be not deceived: God is not mocked: for whatsoever a man soweth, that shall he also reap. For he who soweth to his flesh shall of the flesh reap corruption; but he who soweth to the Spirit shall of the Spirit reap life everlasting.

He who soweth sparingly shall also reap sparingly, and he who soweth bountifully shall reap also bountifully.

THEOSOPHY has come to bring back to the minds of men the memory of this universal truth; to revive the knowledge that this law of cause and effect, the law of eternal justice, which in the terms of Theosophy we call the law of Karma, acts not only in the material world but in all worlds. With the advent of Theosophy we can no longer deceive ourselves: we can no longer mock God. The world is full of apparent injustices in the life of the individual, of the nation, of the race. But all life is one, and the Karma of the individual has made the Karma of the race. No man lives to himself or dies to himself, all lives are indissolubly linked together.

“But,” someone may say, “how can you explain the case of Mr. So and So, who lives in ease and luxury, wanting nothing which

this world can give him—a beautiful family, love and popularity; yet, I know him to be a man of low principles, selfish, and utterly regardless of the welfare of others. Is he reaping as he has sown?” Yes, without doubt, reaping as he *has* sown, in some past existence; but the fruit of the present sowing is not yet ripe. No gardener expects to see his seed blossom into maturity at once, and time must intervene before the full fruition of our acts.

Men have so long tried to shift their burdens to the shoulders of another: have so long expected to be saved by someone else from the results of their actions, that it comes with somewhat of a shock that they must absolutely save themselves by their own efforts, by a recognition of their own innate godhood.

We are quite willing to accept the Karma accruing from good deeds done, we enjoy the praise of men and the happiness which always follows right action. But if we reap with joy the harvest of good deeds, must we not reap just as certainly and with sorrow, the harvest of unkind, ungenerous, and unbrotherly thoughts and actions?

It is the teaching of Theosophy, the most ancient teaching in the world, that man returns again and again to earth-life to reap his harvest where he planted the seed. So when we see a sweet, unselfish soul, that is having a hard struggle, with apparently few of the joys which go to make most lives seem worth living let us remember that only the souls that have grown strong through hard experiences are able to fight, and after the battle *they* have the only *real* joy—that of noble victory.

Then we can regard no longer as bad Karma, poverty, trouble, and hardship, for without warfare there can be no victory. The real warrior knows that pain and pleasure are but momentary and that a life is but one scene in the great evolutionary drama.

In the words of W. Q. Judge:

If we look at the question entirely from the plane of this one life, this personality, then of course what is disagreeable and painful in life may be said to be bad. But if we regard all conditions of life as experiences undergone by the ego for the purpose of development, then even poverty ceases to be “bad Karma.” Strength comes only through trial and exercise. In poverty are some of the greatest tests for endurance, the best means for developing the strength of character which alone leads to greatness.

The circumstances in which we are now living may not be what we would like, but we alone are responsible for them. This knowledge may not make our present lot less unhappy, but it will make it easier to bear; and we shall know that duty faithfully performed with the highest motive will bring about happier conditions and larger opportunities in another life.

There is nothing that so stunts and cramps a life like the continual nurturing of the feeling of injustice being done to one's self or others. Clear the mind of this false idea and life immediately assumes a new aspect. When we realize that this law of perfect adjustment is true we will bravely hold up our heads, and with firm step and earnest purpose go through life undoing wrongs which we perpetrated in past lives—and thank the good Law which gives us the opportunity to right ourselves.

And not only this, but also to lessen the burdens of our fellows; to sow seed that shall bring a harvest in which all may share; and thus help in upbuilding the world. M. H. K.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question How far is Theosophy reconcilable with the conclusions of modern science?

Answer So long as science confines herself to relating facts and tabulating them, she is road-fellow with Theosophy, and receives a welcome and a glad acceptance. This universe has to be known, thoroughly known within and without, since man has allowed his natural faculty for knowing it to become dull and mildewed over with the accretions of selfhood; let science work hard in her own way toward the attainment of such a knowledge. But when materialism intrudes; when she begins to dogmatize stridently on subjects of which no knowledge has been granted her; then let all talk of identity cease, for Theosophy is not a thing that can gain authority from any man's endorsement. The brain-mind is an excellent tabulator of facts, an excellent borer into material things, so to say; but a mere fool at explaining the universe.

Science finds the world full of law, and lays bare at least a physical nature all ordered and complete and harmonious. But she hardly guesses the truth and significance of this, and lacks the power of interpretation. For all truth remains barren for us until interpreted into our own language, our human language, and science does not irrefutably show that these things have any real concern with ourselves. We have no longer the instinct for understanding nature; the hieroglyphics and ideographs wherewith she has adorned her walls are but utilitarian, but ornamental, but grown unwonderful with custom to us; they are not now luminous to our natural sense, and glimmering over with meaning or incitement or warning or good cheer.

We have a whole world within ourselves, and that is what concerns us most nearly. We have a wild democracy of thoughts and feelings; a March-hare anarchy wherefrom King Soul has been dethroned, and all is riot and confusion. Are not those politics of utter moment? Is there any question so intimate as how we shall deal with overmastering desire? Its wild irregular cavalry is ravaging, maybe, every acre of landscape within us; ruin and exhaustion are ahead, and what idea have we of how we shall checkmate this peril? Here is all this populace of thoughts, all this potential energy and workmanship, going to waste; the citizens have left their stores and workshops, and bacchanalia are in full swing through the public streets; bacchanalia unseemly and perpetual; the squandering of all the wealth, spiritual and mental, with which we have been entrusted.

Why, look, look within you, and do you not find matter for consideration to last you for the rest of your days? Assert your mastery in there, and reduce the chaos to order and decency, and you will find yourself equipped with all the potencies of genius; whatever man has been great in this world, he was great by the use of the human faculties; he throned himself firmly first within his own kingdom, and why should not we do the same thing? Ah, but first we must find out how that throne is to be won, and by the aid of what potent allies.

Now there is nothing else in the world that matters very greatly, except these dominions within ourselves; or rather let us say, everything else matters in proportion as it bears relation to them. For cast your eye round about the world today, and you shall but see the exact picture of what is within you; however many millions of human beings there may be on the earth's surface, nearly all of them are in greater or less confusion within; there are many ordered minds of a sort, it is true, but with what kind of order, and above all, how attuned with the rest? A pretty orchestra, this world, is it not, wherein every player is puffing and scraping and squeaking away for all he is worth, to drown all the others; or else discouraged, and only sawing or wheezing out a sound or two now and again? You can hardly wonder at the slums, can you? Or at the yellow press, or at the great armed camps which are the nations; this one and that one up on its feet ever and anon, like a tiger, tail erect, back arched and fur all bristling, spitting and snarling at each other from this and that side of ocean or frontier?

What *do* we live for, in the name of all that's wonderful? Pleasure, ambition, personal fame, to get rich? Every one for some different end, concerning only himself? Good heavens, what does it matter what becomes of *you*, that you should be flinging away the energies of your life; flinging away the power of thought, the energy you waste in desire, latent imagination, the amount of will proper to one human being, and time, time, time; sacred time that was ordained for evolution to be pushed through in — all in the consideration of it?

We must find out how that inner throne is to be won, and by the aid of what powerful allies. These last will be the whole of the forces of evolution, if we care to make treaty with them. For the soul knows well enough its oneness with all life, and has, as the saying is, no ax of its own to grind; its only aims are universal. Order is to be established within, only as we draw our interest away from the petty self and its cravings. The soul only can restore itself to power; the soul only can quell those murderous irregulars, and set the bacchanalians to the quiet of their looms and mills again. Nor will it set itself to that work for the benefit of the personality; your own soul is opposed to all your selfish ambitions and desires; not one of them how high-flown and vaunting soever, that can rouse its momentary interest and acquiescence. Labor for humanity, set your shoulder to the wheels of evolution; in that way alone shall you come to your own inheritance.

Now then, what has science to say to all this? Absolutely nothing; she knows no more of it than she does, say, of the ultimate nature of matter or force or consciousness. It is not for her to find out any ultimate thing, or the ultimate nature of anything; at least, not with her present paraphernalia; not with test-tubes and retorts and crucibles and scales and analysis. Nor can we blame her that she does not know and can throw no light on them; only when she hints that the crux and kernel of things lies in another direction can we begin to blame her.

Chase matter down towards its final manifestation, and you are to come on something

that has ceased to be matter at all, something imponderable and akin to consciousness; so too, the brain-mind with all its logic and analysis and ratiocination is quickly at the end of its tether, and the secret of things no nearer to being found.

Theosophy deals with noumena, is the science of that from which all manifestations flow. Science deals and can deal only with phenomena, which it can tabulate to a degree, but must fail to understand lacking the keys which only Theosophy can supply. Let no one reproach the greater because the less has not yet come into agreement with it. S. V. U.

Answer II. If the conclusions of modern science were invariably and wholly true, then, taking the position that Theosophy is — not new in itself — but new to the majority of the minds in our Western civilization, there might be some excuse for our hailing Theosophy before the tribunal of Science. But once it is understood what Theosophy is, and also how faulty, incomplete, changeable and often self-contradictory are the conclusions of modern science, it will be at once evident that some mistake has been made in stating the case, and that somehow the cart has been put before the horse.

The science of Physics puts forward a theory of the atom and the ultimate constitution of matter wholly different from that on which Chemistry builds its theories. The Astronomer, the Geologist, and the Biologist cannot agree as to the ages of the earth and of man — the difference in the time computed amounting in some instances to hundreds of millions of years. So too in estimating the heat of the sun, modern scientists differ in their computations by thousands of degrees of temperature.

Can we accept, for instance, the conclusion of science that man is the lineal descendant of an arboreal ancestry? — a conclusion which in spite of all research stands as unproved as on the day when it was first made. Coming a little nearer still, — some modern "psychologists" are investigating the psychic powers, dabbling in spiritualism and, to their shame be it said, some of them practising hypnotism; but what is the right use and purpose of these powers, what it is that communicates with them in the séance room, and what really takes place in hypnotism, they *do not know*.

Shall we then look to Science by which to gage the Truth? For Theosophy is Truth, Divine Wisdom, and to it must modern Science at last come for guidance and instruction. Day by day it is coming nearer to and treating with more respect the knowledge of the ancients, and finally the position must be taken that science cannot stand apart by itself, but that the acquirement of knowledge cannot be separated from ethics and religion. When this position is finally taken, a great step forward will be made towards Theosophy.

The student may look to the discoveries of modern science for *corroboration* of the teachings of Theosophy, but for a reconciliation between the two, Theosophy must be taken as the standard. The real test is in the practical application to everyday life, to the needs of the inner as well as the outer life. Test Science in this way, and then ask, Which shall be our standard of life, our standard of knowledge — Theosophy or Science? STUDENT

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West.

Duty

A VERY commonly accepted view of duty is: *Doing disagreeable things because we have to.* Pictorially it might be represented as a stern figure with a lash in one hand, while with the other she points out a flint-strown pathway winding uphill amongst the crags. But to the ready, eager souls who run in Duty's ways she always turns a smiling face. Only the rebels and the laggards ever feel the stern compulsion of the lash. Duty consists in living day by day that kind of life appropriate to our position on the ascending stairs of evolution. Pastime and recreation are as surely part of duty as the activities proper to our daily calling and quite indispensable to any comprehensive, wholesome scheme of life. A kitten, who devotes the sunny hours to chasing her elusive tail, is just as truly occupied with duty, as a sad-eyed philosopher engaged in writing learned books on the Unknowable. The path we have to go leads frequently among sweet-scented meadows, often it winds between the rocks, but in the hearts of those who travel on with perfect trust an inward spring of satisfaction rises so that the pleasures and the hardships of the way lose their perturbing power by ever lessening degrees. At last they enter into Nature's secret place and throb in perfect unison with the majestic pulses of the sun.

He who has no ambition but to do his duty stands like a rock immovable among the roaring waves of opposition and the shifting tides of life. Agent of Universal Will, only desiring to fulfil its purposes, all Nature's forces are combined to hold him in his place. In this superb alliance he becomes divine and works as one of the creative gods to smooth the rugged pathway of his younger human brothers and the lower creatures struggling up into the sunshine from below. We never need be anxious as to failure if we try to do our duty, for though complete success continually eludes our grasp in our first ventures upon hitherto untrodden paths, the only failure that we need to fear is failure to sustain the attitude of cheery, resolute attempt. Duty may be postponed, but never ultimately shirked; sooner or later all the tremendous cosmic powers will be in league to scourge the wanderers back into the path. A kingly dignity and inward stillness mark the bearing of that man

MEMBERSHIP

In the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

who at each moment and in every place tries to conform his conduct to the Law. Can we imagine more congenial work, a more absorbing occupation than to forget ourselves in giving all our powers to help the unnumbered throngs of living things a little higher up the long ascent?—assured that in some far-off day the age-long purpose will be carried out and happy to assist in urging forward the inevitable end.

STUDENT

A Broken World

IT was away out there—beyond Mars perhaps. A beautiful world, peopled by souls robed in living vestures of finer stuff than the mountains and valleys around them.

These souls had come from afar to make this their home, to weave a new world-spirit from the depths of their being, that from the planet's richer life might be born a new and more glorious habitation.

Meanwhile, amid the ebb and flow of being, matter-robing forces waxed, waned, and waxed again. Life grew more and more material; divine knowledge and vision became clouded.

Races and nations appeared and disappeared, yet the deeper worship and wisdom was preserved by the Guardians in sacred temple and crypt, wherein the too overmastering illusions of form and materiality were shorn of their power.

Then the turning-point drew near.

Materiality was nearing its culmination. Dense were now these forms, and the inner energies of the spirit took shape outwardly in a marvelous conquest of physical forces.

But the balance had to be struck. Would the initial impulse and purpose be strong enough to swing the race back along the spiral of re-ascent? Were there enough incarnate who had preserved the inner light of divinity?

Not hastily could this be decided. Outer forms of the sacred ceremonies alone remained in full view. Yet many were they

who had penetrated beyond these to the inner arcana.

Next a strange thing happened. Some of those who had so penetrated were nevertheless under the sway of an inner illusion so powerful that in time they broke from the guardian-companies and founded systems which superficially retained sacred meanings, but on close examination were

only adumbrations of the truth. Purely meta- and parametaphysical powers and principles were euhemerized, and the unthinking people were induced to accept as special incarnations of Deity certain personages, who were moreover alleged to have appointed certain ones in spiritual authority over the people. Thus was born priestcraft.

The wielders of this became in time powerful beyond measure, arrogating to themselves power over the souls of their fellow-men, who had by this time completely forgotten their divinity. Except a few. The huge system thrived well for centuries and centuries, and the *illuminati* seemed to have vanished.

But the hour finally struck.

The planetary spirit found itself enthroned in a world where the system had dulled the souls of its inhabitants, most of whom really believed in nothing now but the realm of the physical senses. And they gabbled about mutual toleration, nevertheless.

The secret assemblage of the few remaining illumined groups was held at the time appointed. In one supreme moment their inner beings were swept with the planetary spirit to another center in space.

No longer restrained by the inner divine power, the living body of the planet was left in charge of elemental forces alone. These at once swelled out from the center and with one terrific explosion the whole planet was shattered into a thousand fragments.

You can see its vestiges in a telescope. J. D.

It is by endeavoring to do the great things rather than the small things that we fail to find and follow the Law, that we fail to realize that our hearts are pulsating every moment in harmony with the finer forces of Nature, which are at our command, and with the inexpressible and unseen vibrations of Life. To be attuned to these things, to know the Law in thought and feeling, to feel its inspiration in every act is to have Spiritual Knowledge.—*William Q. Judge*

THE THEOSOPHICAL ADDRESS AT ISIS THEATER

A MOST appreciative audience attended Isis Theater last Sunday evening to listen to a paper by Dr. Herbert Coryn on "The Modern Spirit."

The musical program by Students of the Isis Conservatory and always a delightful feature of these meetings, included the following:

Overture	<i>Prometheus</i>	Beethoven
Selection from	<i>Lohengrin</i>	Wagner
Polonaise, op. 61		Schubert

man compensates himself for his inferior strength by a contriving mind. This, according to science, was evolved slowly for the service of the body, as the animal evolved its strong beak or claw. But the curious thing is that the mind reasons about the soul and God, and asks itself what itself is. It is out of order altogether, behaving badly in the church of science, saying that there is a shining center of that which was not evolved for bodily service, and is not on the scientific program, and must have had some origin of which science does not speak.

he can obtain all knowledge and finally reach to God. The soul of man, today working as the modern spirit, is wandering about searching everywhere.

The life of the soul is part of the Life and the Power that upholds the universe. We who look at each other as beings coated and frocked, forget that within, sometimes, in quiet, we get very near the Truth. Some of our acts, the unselfish ones, that is, those that are for others' good, are of the very nature of the soul. Jesus said, "The Kingdom of Heaven is *within you*." OBSERVER

Lomaland Photo. and Engraving Dept.

SCHLOSS BABELSBERG, POTSDAM

Dr. Coryn in opening his subject gave the illustration of a restless boy in church, tired of sitting still, who, not interested, has too much vitality to remain quiet. The modern spirit, he declared, is vitality of another kind, but acts in somewhat the same way. It will not let us sit still in church nor will it let us sit still in the church of science. It is like a naughty boy in two places at once. This vital spark in the modern mind asks questions, than which it is well known there is nothing more irritating—that is, if you cannot very well answer them. It does not want to know so much what is this or that outside thing, as what itself is.

The speaker then referred to the general views put forward under the name of science, that we are thinking-animals evolving from below; man being, according to science, only the highest of the animals, the most evolved, with the best faculties. According to this view his powers and faculties are only for the struggle of life as an animal, in which

Asking what is this shining center in the mind which behaves so badly in the two churches by wanting to know things, the speaker discussed the question as to what man really is, as to who the strong man is, the man who is free. In answer to this question he gave the Theosophic teaching that man is much more than the animal; that the real man is the soul, and possesses and informs an animal body which in its turn has its animal nature.

Back of all questions is the other one: Who am I? Created by God, is one answer given, and the question arises: "Created out of nothing, or from the Divine's own essence?" If out of nothing, the answer does not in the least help, nor does it help if it is said that we must not or cannot pry into these mysteries. If it is said that man is a ray or fragment of the Divine's own essence, then man is himself divine; no knowledge possessed by the Divine can ultimately be hidden from him, and by looking into himself little by little

The Churches Day by Day

Vaudeville in the Pulpit

THE pastor of a certain church in Illinois, has, says the *Habana Post*,

decided to add vaudeville to his Sunday evening service in the hope of drawing a larger attendance. In the local newspapers he announced that on the next Sunday evening before the sermon the pastor would perform the famous handcuff act. With a heavy steel chain he will allow any one in the audience to bind both wrists and fasten the chain securely with a padlock, and he promises to release himself in ten minutes. Permission is given the audience to examine the chain and to furnish the padlock if so desired.

Indignant Pastors

A PASTOR of Indiana, speaking at a church convention, pleaded the cause of the "forgotten laborers" as follows:

Shall not the unscriptural, unchristian notion that the support of the ministry is based on the instinct of charity be bravely encountered and struck down dead? Shall not men who hold themselves eminently worthy to be the censors of other men's orthodoxy

but who haggle over the minister's salary be rebuked as heretics of the first order? Shall not churches which sacrifice the health, usefulness and prosperity of their ministers by the multiplicity of their demands and an unjust division of labor which leaves the minister to be prophet, business manager, household visitor, packhorse, and drudge be told that the blood of the martyrs is on their hands and that only the most sincere repentance and the most lavish care of the servants of the Lord who may hereafter serve them can atone for their sin? How else shall strong, capable young men be persuaded to give themselves to the ministry as a life work, their sensitive natures feeling now the danger that they may be pauperized in their old age, or by some sudden blow of misfortune?

Is it not a pitiful commentary on the spirit of the age that people should insist on receiving religious services and yet decline to pay adequately for them? They will not give up the churches and pastors, neither will they rightly recompense them. They seem to regard religion as a kind of patent medicine in which they have not much faith but which they dare not quite leave off; and want to get it as cheap as possible. The honest pastor is certainly in a disagreeable position; his self-sacrifice and devotion are called forth, his labors demanded, and yet he is not supported. But one fears it is impossible to show him a road by which in this age he can win both worldly comfort and spiritual satisfaction. If it is the former he wants, there are ways of extracting money from the people's pockets; if the latter, he must be prepared for ingratitude and even persecution. He may be a servant of Truth, or a hireling of the churches. But surely, if he has genuine convictions, he will deem any sacrifice worth while in the cause of Truth.

A Clergyman Refuses to Preach Hell

A BAPTIST minister is reported as follows:

I do not believe in a literal hell with fire and brimstone and I cannot preach it. Many members of my congregation live in the sixteenth century and want me to preach sixteenth century doctrines. I am weary of the discord in the church and so I have resigned.

Who *really* believes in that hell? Ask it in the asylums. Does anyone outside an asylum really believe that though he (or she) may be safe, many of his friends, and perhaps close relations, will be eternally tortured? Anyone professing such a belief is either insincere, self-deceived, or heartless.

Clearly people may be contemporaneous without being coeval in development, and they need sorting. Does government by "the people" mean government by people who think you ought to be in hell? There needs to be some just way of separating "the people" into two classes, one to govern and one to be governed. But two classes would not be enough. People are of very various grades and ought to be classed accordingly, if only we had a way of properly sorting them. They are actually sorted according to current ideals, which at present are chiefly financial. Thus the medieval minds count for too much.

English Much Stupider than Asiatics

A BISHOP of Mid-China, speaking at a church missionary service in London, told the congregation that English people are very dull of intellect compared with some of the races of the Far East.

This is surely a most important statement. An influential society sends out this missionary with episcopal honors to enlighten the

heathen, and he comes back and tells the society that the heathen are much more intelligent than they themselves.

It is to be presumed that after this announcement from the Bishop of Mid-China, the missionary society will now change its policy, and ask the Chinese to send missionaries to England. But then perhaps the English are better than the Chinese in some other respects—say general morality or economic justice. No doubt, if the missionaries have anything to teach worth knowing, the heathen will find it out and turn it to good use.

Take this in conjunction with the following, a recent Chinese edict:

1. Viceroy and governors are directed to open at least a hundred preparatory schools in each provincial capital within twelve months, with a student roll of fifty children each. The government will defray all expenses.
2. Rich Chinese must in addition open as many schools as possible and establish educational societies in all districts to teach the benefits of education.
3. All boys over eight years of age must go to school, or their parents or relatives will be punished. If they have no relatives the officials will be held responsible for their education.
4. All wealthy Chinese opening schools will be rewarded.
5. Every prefecture must have forty preparatory schools, and every town or village one or two.
6. The viceroys and governors must report the opening of the schools, and an official be sent to inspect them.

Well may we ask what will happen when these millions of people "far more intelligent than the English" have mastered European learning?

Laying on of Hands

A PASTOR in America has revived the old "apostolic" method of anointing with oil, laying on of hands, and invoking the Deity; and the papers give a description of his performances in this respect. But he obviously mixes up the spiritual with the psychic, using the words "suggestion" and "divine healing" together and interchangeably. Thus any energy that may be evoked by the patient or the pastor may be considered as "God," though it be but a nerve-current sent down from the spine from a brain heated by the "suggestion." It is to be hoped that the patients may find it as easy to turn off this divine influence as they have found it to turn it on; also that gratitude for their cures may enable them to live better lives in the future. E.

The Web of Destiny

GOING home one day, I was surprised to find a workman repairing my gate. He said he had been sent by Mr. Brown, the owner of the house. I told him that Mr. Brown was not the owner of this house, whereupon he showed me a postal card in which Mr. Brown directed him to repair the house. Looking at the card, I saw that the house number was the same as mine, but that the street was Fifth street, the 5 being so badly written as to look like 8, the number of my street.

However I let the workman finish the gate; and at the end, when replacing some bricks which he had taken up, he found he had half a brick too much and threw it into the street.

That evening two boys came tearing down the street on bicycles. One of them in swerving to avoid a clergyman who was crossing, struck the brick, and was thrown upon the clergyman with such force as to knock him down, fracturing his skull and killing him.

Thus this clergyman had his death-warrant signed by a total stranger who made a 5 like an 8. And I wondered if someone might not even now be signing my own death-warrant. (Abridged from *New York Sun*.)

Of course all events are interwoven in an endlessly intricate pattern, linking cause to effect; but these striking instances bring the truth more vividly before our eyes.

But what is the most striking lesson of the story? Is it the carelessness of the workman? Had he been a thoughtful tidy man, this accident probably would not have happened.

But again, what took the victim to the crossing at that particular moment? Was he too "off his guard"? The slightest difference in his movements would have saved his life.

All these happenings are called "casual" by those who do not understand the laws governing them. But "casual" is merely a descriptive term, not an explanatory one, implying that things do happen but not explaining how or why. If we had more discernment we might perceive that our actions are largely determined by impulses whose source is often untraceable. Thus we are to that extent at the mercy of unknown influences. A man suddenly decides to cross the street and cannot tell what it was that moved him to do it at that particular moment. The truth is that we swim in an ocean of mind, like fishes in water; the astral light is full of *elementals*—the souls of actions, so to say—which may at any time impinge on our unguarded organism and set it in motion. But this subject is so vast, and involves speaking of so many things for which our language has no adequate vocabulary, that it can merely be hinted at here. But how very little we do know, after all, about ourselves and the world we live in! And how much there is that we *can* know if we set about it! STUDENT

Clipped From the Press

"I should reprobate in the severest terms the Catholics in those states (or in any other states) who refused to vote for the most fit man because he happened to be a Protestant, and my condemnation would be exactly as severe for Protestants who, under reversed circumstances, refused to vote for a Catholic." (From a letter of President Roosevelt's to Mr. J. C. Martin, published November 9, recent.)

"I would like to say two things about the letter. First, it is well worth reading and pondering; second, I knew it was coming out."—Cardinal Gibbons, upon being shown a copy of the letter of President Roosevelt quoted above. (From Press reports.)

"We do not accept this government or hold it to be any government at all, or as capable of performing any of the proper functions of government. If the American government is to be sustained and preserved at all, it must be by the rejection of the principles of the Reformation (that is the government by the people) and the acceptance of the Catholic principle, which is the government of the Pope." *Catholic World*, quoted by *The American*, Jan. 28, 1898.

"In case of conflicting laws between the two powers, the laws of the Church must prevail."—Pius IX.

"The will of the Pope is the supreme law of all lands."—Archbishop Ireland, quoted by *The American* of above date.

"No man has a right to choose his religion."—Archbishop Hughes, quoted by *The American* of above date.

According to the *Kansas City Times* of recent date, the Rev. P. A. Doyle, rector of the Apostolic Mission House, in Washington, has informed the Vatican of the progress made by the mission in America. "The object of the mission is to convert Americans to the Catholic faith, and Father Doyle says that it will not take long to realize the project. The hope is entertained that the entire English-speaking people will be converted to Catholicism." (From a daily paper.)

Art Music Literature and the Drama

"Sumer Is Icumen In"

ONE of the oldest and most delightful part-songs that have come down to us from the beginnings of modern music is the charming English lyric, *Sumer is icumen in*, set to music for four or six voices. It belongs to the first quarter of the 13th century, and has been attributed to Walter Odington, an Englishman who wrote a learned treatise on counterpoint in 1217. This authorship, however, is by no means certain. The song was copied down in a monk's commonplace book or *omnium gatherum*, and was found in the British Museum about 1776 by Sir John Hawkins who was writing a history of music.

The little poem has the double distinction of being one of the oldest English lyrics and the first to be discovered with the music to which it was sung. The lilt of the verse is so musical that it almost sings itself, the inflections which early English still retained from the Anglo-Saxon lending a flexibility to the lines that gives the spoken tune almost as distinctive a character as the written melody.

This famous part-song is the earliest example of English polyphonic writing and seems to be the highest point reached by the musical writers of the time. It is most interesting from many points of view. Historically, it is the highly-organized artistic result of the impulse given to music by Charlemagne, who established schools of music all over Germany and France, whence the influence quickly spread to England. These schools were originally established for the study of the Roman chant, or *cantus firmus* as it was called, which was very early introduced into England, A. D. 604 being given as the date when the Roman singers paid their first visit to England, enriching the church service with their melodious chanting. This *cantus firmus*, or chant, at first fell under the laws of Latin prosody, a long syllable being represented by a note of long duration, and a short one similarly by one of correspondingly short duration. Thus it was characterized by a fixed rhythm; but later, when the prose liturgy came to be chanted, it lost even this distinction and was marked only by the rising and falling of the voice at given intervals. The first amplification of the simple chant was accomplished by the addition of sequences or ornamental passages intoned on single vowels. This slight variation was further developed in the monasteries which were the centers of musical culture of the time.

At St. Armand, in Flanders, the monk Hucbald, about the last decade of the ninth century, studied the musical system of Pythagoras and as a result of his study wrote a treatise on harmony and formulated its laws so far as he was able. He also varied the chant by the introduction of part singing; to his two

treble parts he added two bass parts by repeating the treble an octave lower in the bass. This proved an enrichment peculiarly grateful to the singers, who, gaining skill and confidence, availed themselves of the opportunity afforded to ornament these additional parts. The chant, *cantus firmus*, or melody came to be carried by one singer, called the tenor, from the Latin *teneo*, "I hold," while another voice added the ornament above the fixed chant. This further amplification became known as

the art of descant, consisting virtually of descanting freely upon a given musical theme. The descanter usually improvised his ornament, although later, as a system of measure came into general use, the descant was written. As the descant developed and became subject to law, it grew into what later became known as counterpoint, which, although based upon the same musical laws, differs from modern counterpoint, and which then consisted of adding parts both above and below a part already selected.

From counterpoint developed the musical device known as "imitation," by means of which one portion of a melody is made to serve as the second voice to another portion of it. For example, at a given interval the bass would take up a part already heard in the treble, and sing it over, while the first singer continued uninterrupted to the end of the strain.

The originator of this device is unknown, but it was first found in the writing of Perotin, a composer of the French school about the middle of the twelfth century.

When the imitation is exact as to the intervals of taking up the recurring melody, it is called a "canon." In the development of the canon to artistic perfection and beauty the scientific knowledge and skill of the composers were taxed to the utmost, as the laws governing the canon were mathematically exact, and a strict canon was in reality more of a scientific triumph than a free musical expression. Nevertheless this form of musical writing served to acquaint the early composers with the materials of their art and with its possibilities.

The song *Sumer is icumen in* is a strict canon, yet despite the severity of the laws which governed its composition it has a distinct beauty of its own. Why is it never sung today?

Cuccu, cuccu
Wel singes thu cuccu,
Ne swik thu nauer nu.
Sumer is icumen in,
Lhude sing cuccu,
Groweth sed and bloweth med,
And springth the wode nu,
Sing cuccu.

The Art of Conducting

WHEN composers conducted their own works, as was the case in early days of symphonic music, writes Henderson, there was no need of an interpretative conductor. But when the composer had long passed from the land of the living and the traditions of his readings had been obscured, or when his works were to be introduced in a foreign country—as in the case of Beethoven's symphonies in France—the interpretative conductor became a necessity. Furthermore, when the art of conducting began to be recognized as a specialty, it was conceded that composers were generally poor conductors of their own works, and the orchestral director became a distinct species. Hector Berlioz, for example, could not play any instrument save the guitar, and Richard Wagner was only a very poor pianist; yet both were admirable conductors. STUDENT

I speak of the great need which our successors in the Society will have of unbiassed and clear judgment.—HELENA PETROVNA BLAVATSKY.

Mental Work for Women

IT is the golden mean we are, or should be striving for in everything. A great deal has been said about the dangers of over mental work for women; so much so that some perhaps may be losing sight of the dangers of *under* mental work. There is an enormously large class of women more apt to neglect themselves in this way than men in the same class, because circumstances render it possible for them to do so. Being provided for, rather than providers, they can do as they please very often, and not everyone makes effort of any kind who is not forced to it. So many women, after fulfilling their necessary duties, which perhaps call forth effort not distinctly mental, spend the rest of their energies in enjoyment. Another enormously large class, whose circumstances are less easy than their sisters, are forced to spend the most of their time and strength in labor which involves the exercise of muscle, ingenuity, delicate skill, adaptability, judgment, patience, faithfulness, and many moral qualities, but not of much mental effort. Others less fortunate seem destined to drudgery; and so on. As one runs over the subject, there seems to be a relatively small class who are in danger of too much mental activity, and a very large one whose brains are lying fallow. Of course there are plenty of all kinds who wear themselves out through *worry*—but that is quite another matter.

Apropos of this subject, some quotations from the mouth of one of our alienists of repute are interesting:

Insanity is slowly increasing. But work, mental work, does not make people insane. The mind craves work, it needs employment just the same as any muscle, or other function of the human body. Deprived of work, the brain shrivels and becomes atrophied, the same as any muscle that would be denied motion or exercise. It is not work that drives Americans insane today. It is strain and worry.

Extreme examples indicate tendencies. And although very few would go to this length,

still it is evident that an absolute lack of mental training, operating with other causes, can produce insanity. Nothing but a rounded development can bring about and maintain health. And as so much has been said about over mental training for women, I think it is not out of place to remind them that no one can be healthy without some genuine, honest, hard, mental work. Even if only for a half hour daily, it will help to balance the other activities, give a spice to life, and not fatigue but *rest*. It is using the same faculties eternally which wearies. Those who know how to work, and how to change from one kind to another, need comparatively little rest.

INQUIRER. But if actions on the material plane are unsatisfying, why should duties, which are such actions, be imperative?

THEOSOPHIST. First of all, because our philosophy teaches us that the object of doing our duties to all men and to ourselves the last, is not the attainment of personal happiness, but of the happiness of others; the fulfilment of right for the sake of right, not for what it may bring us. Happiness, or rather contentment, may indeed follow the performance of duty, but is not and must not be the motive for it.

—H. P. BLAVATSKY in *The Key to Theosophy*

And those who late in life look well preserved and feel young, are those who have used all their faculties freely, mental as well as other, without "crankism" of any kind. STUDENT

Then and Now

A VERY remarkable illustration of rapid growth made in America, in the past hundred years, is the changed condition of women's lives. It is hard to believe that the same century produced the quaint little figure of our great-grandmother's time and that vastly different type of woman—the American girl of today. It is equally hard to imagine an American woman, at any time, demurely and without question—expressed

at least—conducting herself, in all the details of her life, according to the straight-laced, quaint notions of propriety which hemmed in the lives of women less than a century ago.

Woman's "sphere" was created for her in those days. So well-defined was the path laid out for her to tread, that there was not question enough to call forth discussion even over the quilts at the village "quilting bee."

If a woman of our grandmother's time had her home, that was the beginning and the end of her "sphere"; up to that time it was her father's home; and the years of her girlhood were devoted to spinning and weaving and learning housewifely arts for the time when she should marry and have her own home. For she would marry, of course; and that, in all likelihood, before she was out of her teens. There was nothing else for her to do.

A hundred years ago, a woman reformer who begged for thick-soled shoes and outdoor exercise for women was denounced with scorn. Croquet afforded the most violent exercise allowed. One which required strong muscles, vigorous lungs and a slightly shortened skirt would have been unseemly, to say the least.

How the times have changed! No, how *we* have changed! With what fine scorn the modern American girl would contemplate croquet, or a walk, the length of a village street, with mincing steps, in high-heeled, thin-soled shoes—she who can drive a golf ball 150 yards with ease. The athletic girl is the rule today, no longer the exception, and American women are world-famed for the freedom and buoyancy and clear-souled honesty of their lives.

Side by side with the revolution brought about in the physical life of women in the last fifty years, has come about a marvelous revolution on other lines.

While American women have much to learn before they stand above criticism and in their true position, let us not be unthankful that a larger, saner, and more useful life has opened to them, and its beneficent influence is being felt throughout the world. STUDENT

The Secret of Joan of Arc

THERE is another work on Joan of Arc, this time by one of the greatest Frenchmen of letters, Anatole France.

She is as much a mystery as Shakespeare. Labeled saint, genius, enthusiast, visionary, none of the labels have the secret. The point is that she was saint, genius, enthusiast, if you will—visionary, *from the first*. She began with the whole program of her being, putting all of it into immediate practice. She shocked France, then heartened it, roused it, and won all her victories because she had heartened every soldier. For war was then infinitely more an individual matter than now. France was not only despairing, but, as it were, content to be so, abject. And all the vices following upon abject despair were eating away the soul of the people. As a people, France well might risked ceasing to be, from utter degeneracy. Duke Charles of Orleans, in a ballad, marked these rotting vices as gluttony, pride, sloth, covetousness, a contempt for justice, and licentiousness.

Joan of Arc might perhaps have written treatises against these things. But there is a method sometimes more effective than treatises, especially in a time like her own when almost no one could read. She elected to *become* a treatise. She caused herself to be talked of all over France, from the most abject peasant upward, as being in her own person an incarnation of the exact opposite of these cancerous vices. She showed with electric effect that to be such an opposite was the one way to win victories, and she won them accordingly. In that sense the victories may be considered incidental, by way of proof of her sermon, vivid demonstration. It was the only demonstration that would have suddenly attracted and held attention.

Then she went on to the treatise. She routed the corrupt Church in a public three-months' debate, wittily, crushingly.

Then there was sent out a final tremendous shock that thrills yet—her cruel martyrdom.

She had awakened France. There may have been a reaction; but to that there was another. The rhythm persists yet. France will never be what it would have been if she had not come; it can never lose her touch. Some of the ideals in the hearts of Frenchmen today live because of her, the spirit of them handed

How is it all to be explained? Christians at any rate ought to have some idea about it. They hold that death does not close all, that the soul, the best of the man, the diviner part, lives on. Where? How? Can they not imagine souls too great, too compassionate, to accept any kind of rest or "heaven" while they can do good on earth? If Christians will not believe in reincarnation for themselves, they yet might, they must, for those, at least, who love humanity too much to leave it so long as there is work they might do for it. And if there is divine law anywhere operative in the world, in the process of things, surely it is competent to arrange the incarnation of these greater souls where they can do best work.

This is the teaching of Theosophy. And Theosophy adds that those who are thus great enough to take up the work of humanity do so consciously. The body is their instrument, and though, once incarnated therein, they may not see and know and remember as they saw and knew and remembered when they assumed their task, they are yet unconsciously guided and inspired by the spirit of their pledge and by that divine law which facilitates every effort at human welfare. OUR YOUNG FOLK

Bretagne

BRETAGNE, in the north west corner of France, holds much that suggests the far distant past; for here are found great numbers of the stone monuments which were set up thousands of years ago by the wise men of a race of giants. These stones were erected to be lasting records of parts of the world's history now long forgotten. For the language of symbol outlasts the written forms; and all over the world are symbolic records which will be understood by a race having the wisdom possessed by the men who placed these stones. The largest of them is found in Morbihan, Bretagne; and here and there on the moorland stand separate stones, or menhirs, small groups of stones with a capstone, as in the illustration, and long avenues of hundreds of them, as at Carnac.

The Bretons are a people who cling to old customs and old ideals. No doubt the mystery their land holds has an influence upon them. Only in the towns have modern ways been adopted; in the country the people preserve their old manner of life, and farming is carried on according to primitive methods. The picturesque costumes worn add to the effect of the "something different" that visitors feel when they go there.

Their language is Celtic — not French; and is akin to that formerly spoken in Cornwall, and that of Wales. The Bretons have a stock of legendary lore which is still on the lips of the people in song and story. Belief in fairies is common among them. Bees they are very fond of. Almost everyone keeps bees and regards them with a kind of affection. In fact the Bretons as a people seem to be close to something in life that has been forgotten by many in this busy world. Perhaps when the Râja Yoga ideal spreads among them, and Theosophy with its clear explanation of the mystery that lies in the stones standing there like faithful guardians of knowledge, reaches them, the Bretons will be found to be in sympathy with both.

Opposites

HOW strange, that the duller a person grows on the *inside*, the more exciting things he demands from the *outside*; and vice versa, the brighter the inside, the less a person depends on the outside.

Young men or women of independent thoughts and with a purpose in life, do not feel the need of stimulants, as do poor, dull, weak-willed ones with empty minds. Having nothing in themselves, the latter depend entirely on outside things.

They are not able to read a book, whether instructive or filled with wonderful facts and beautiful fancies, unless it is written so that they are carried along by means of exciting events. They remind one of music-boxes

which play as long as anyone winds them up.

They laugh or cry with the characters the author has depicted; they are noble, mean, jealous, aspiring, just, or indignant, as the case may be in the book; and when the book is ended there they are again, the same empty beings, craving for more to give them the sen-

IN the morning, when you find yourself loath to rise, have this thought at hand: "I am arising to a man's work. Shall I be annoyed at having to set about the work for which I was born, and for the sake of which I was brought into the world? Was I designed for the purpose of lying among the blankets and keeping myself warm?"

"But," say you, "this is pleasanter." Were you, then, formed for pleasure, and not at all for action and the exercise of your powers?—*Marcus Aurelius*

sations of life which they are too weak and dull to bring forth in reality.

They are of the kind who say: "The country is too dull for me," or, "Nothing is going on." They are attracted to the crowded city, where they can find a variety of exciting amusements.

There would not be much for the poor wretches to live on if they were the only kind of people, as they are parasites; but they live on the froth which is without nourishment and thrown away in contempt by more independent natures. They are pitiful whether they be young or old. But there are others. These are not to be pitied, even if in sorrow or difficulties, which are only helpful lessons to them. They do not depend on

any book to give them thoughts, or amusement to give them happiness; nor even on the noise of a crowded city to keep them awake. They need no one else to weave enthusiastic pictures to arouse an interest in the things around them; they do not live on others; they are the ones to do and give. Ah! here we have struck the secret! They *give*, the others *take*.

They give, and grow rich; the others take, and grow poor. That is all. AEA

Simplicity

"SIMPLICITY does not consist merely of low ceilings, loose garments, and the absence of bric-a-brac. Life may be conventional and artificial in a log-cabin. . . . Simplicity, in truth, is less dependent upon external things than we imagine. It can live in broadcloth or homespun; it can eat white bread or black. It is not outward but inward. A certain openness of mind to learn the daily lessons of the school of life; a certain willingness of heart to give and to receive that extra service, that gift beyond the strict measure of debt which makes friendship possible; a certain clearness of spirit to perceive the best in things and people, to love it without fear and to cleave to it without mistrust; a peaceful sureness of affection and taste; a gentle straightforwardness of action; a kind sincerity of speech—these are the marks of the simple life, which cometh not with observation, for it is within you. I have seen it in a hut. I have seen it in a palace. And wherever it is found it is the best prize of the school of life, the badge of a scholar well-beloved of the Master." (From *The School of Life* by Henry van Dyke)

IN BRETAGNE, FRANCE

THE CHILDREN'S HOUR

HOW THE LEAVES CAME DOWN

Susan Coolidge

"I'll tell you how the leaves came down,"

The great Tree to his children said:
"You're getting sleepy, Yellow and Brown,
Yes, very sleepy, little Red.
It is quite time to go to bed."

"Ah!" begged each silly, pouting leaf,
"Let us a little longer stay;
Dear Father Tree, behold our grief!
'Tis such a very pleasant day,
We do not want to go away."

So, for just one more merry day
To the great Tree the leaflets clung,
Frolicked and danced, and had their way,
Upon the autumn breezes swung,
Whispering all their sports among—

"Perhaps the great Tree will forget,
And let us stay until the spring,
If we all beg, and coax, and fret."
But the great Tree did no such thing;
He smiled to hear their whispering.

"Come, children, all to bed," he cried;
And ere the leaves could urge their prayer,
He shook his head, and far and wide,
Fluttering and rustling everywhere,
Down sped the leaflets through the air.

I saw them; on the ground they lay,
Golden and red, a huddled swarm,
Waiting till one from far away,
White bedclothes heaped upon her arm,
Should come to wrap them save and warm.

The great bare Tree looked down and smiled.
"Good-night, dear little leaves," he said.
And from below each sleepy child
Replied, "Good-night," and murmured,
"It is so nice to go to bed!"—*Selected*

A Fairy Tale of Science

WHEN the white light of the sun strikes the tiny drops of water hanging in the air as clouds, in just the right way, seven beautiful colors shine out. We call the lovely band of colors a rainbow. We can make a tiny artificial rainbow on the wall of a room, if we let a sunbeam fall in just the right way upon a glass of water, or better still upon a three-cornered piece of glass. Such a piece of glass is called a prism. By means of the prism we can do to the white sunlight just what the raindrops do. We can make the sunbeam fairies who are all dancing together with joined hands, drop hands and dance each by himself. Then we see the seven different colors shine out separately. For sunlight is really a fairy band dancing all the time.

We can see only seven of these fairies, those that go to make the rainbow. The color fairies make a picture on our eyes as they dance. Some of them dance faster than others. Red is the slowest dancer of the color fairies and violet the quickest. There are other sunbeam fairies whom we cannot see. Some of these dance more slowly than the red fairies, so slowly in fact that they make no picture on our eyes. We cannot see them; we can feel them however. These are the heat-fairies, and a wonderful band they are too. They are stronger than the strongest

giant. It is the heat fairies who carry all the water from the earth up into the air, tons and tons of it, and pile it up as clouds. They are very good natured fairies, too, for they let men harness them to draw their trains of cars, and to send their steam-boats plowing through the water.

There are other invisible fairies in a sunbeam besides the slow-dancing heat-fairies. These fairies are invisible because they dance so fast that they make no picture on our eyes. They dance faster than the violet fairies. Hence they are sometimes called ultra-violet. These ultra-violet fairies are also very powerful. They have a magic secret, which no one has ever guessed. By its power they help the plants and trees to turn the air that they breathe in with their leaves, and the sap that flows through their veins, into wood and bark, flowers and leaves. They are also ready and willing to help man. The unseen ultra-violet fairies make all our photographs for us. Although these unseen little fairies make no picture on our eyes, when the little lid over the eye of the camera winks, they slip right in. There on the sensitive plate back of the eye, they draw the picture of all that the camera's eye sees. Great care must be taken not to let in too many of these very active little fairies, for then they will spoil the picture. This is the reason why the inside of the camera is so black. It shuts out all the light so that none may enter except through the little eye, or lens.

When the sensitive plate is first taken out of the camera, the fairy picture drawn upon it is very faint. This must be brought out clearly before it can be seen. So the camera is taken into a dark room, where no little invisible fairies may slip through, nor for the matter of that, any of the color fairies except one set. This is the band of red fairies. They dance so slowly that they cannot touch or spoil the fairy picture on the sensitive plate, as the quicker fairies can. The dark room where the photographer develops his picture has a tiny window with a red pane of glass, or a red lantern in it. This lets only red fairies into the dark room, and by their help the photographer sees to do his work. In this way the red fairies do their share toward making photographs.

The picture on the sensitive plate, like writing on a looking-glass, is made backwards, so that it must be printed off on paper to set it right. In this work the ultra-violet fairies are also made use of. The paper, like the plate or film in the camera, is made sensitive by dipping it in certain salts dissolved in water. These salts are really a kind of sleeping fairy. When the ultra-violet fairies touch them they wake up, and the two kinds of fairies join hands to make the picture.

UNCLE OSWALD

SLOTH makes all things difficult; but Industry, all easy; and he that rises late must trot all day, and shall scarce overtake his business at night; while Laziness travels so slowly that poverty soon overtakes him.—*Franklin*

In a Minute

"I'M waiting for you, Jack."

"In a minute," and Jack turned back to his book. His little brother waited for a while, but the minute lengthened into five and then ten, and Bobbie grew tired. The sun was so bright outside and the grass so green, all nature seemed calling to him, and already in imagination he felt the clear cool water refreshing his hot, weary little body.

"I'll go along first," he said.

"Right you are," Jack replied, "I shall be after you in a minute."

Bobbie picked up his towel and went out. Coming to the beach, and still no Jack, he first pulled off one boot and then another, and finally undressed; the next step was to paddle—how lovely it was! He went a little deeper. "I do wish Jack would come," thought the little fellow with a sigh, "then I could swim, and I am sure it is better to do things yourself than read story-books about what other people do, nearly all day long." He stooped down in the water, curled up his feet, made a stroke or two, looked round to see if his brother were coming, another stroke, and he turned to stand, but his feet found no bottom, and the water was over his head.

Jack came back to his surroundings with a start, as the clock chimed the hour, to find that Bobby had gone. With an uneasy conscience, he caught up his bathing things and hurried after him; for had not his mother given his little brother into his care that morning before she went away, and had he not promised that he would look after him? He thought as he dashed along the path of her dread of the water. Will he ever forget what he felt as he reached the water's edge in time to see his brother's golden curls disappear under the water!

"No, dears, he was not drowned," Aunt Emma replied to the questions of her listeners, "but have you never noticed how very particular Uncle Jack is about prompt obedience, and how careful to fulfil the smallest promise that he makes?"

"Was little Bobbie, *Father*?" asked Ernie.

"He was," she answered.

Gus whistled softly, "I beg your pardon, Auntie," he said. A little later looking from the window she saw one very radiantly happy little boy riding his elder brother's bicycle under his approving tuition, while the other waited his turn in cheerful patience.

"Bless his dear heart!" said Aunt Emma, "he only needed the heart-touch; how many bright boys are waiting for just that!"

ETHNE

If you looked into the store-room of a Hopi Indian you would see a pretty sight where the corn of different colors is piled up neatly in stacks—blue, black, spotted, pink, red, yellow, white, lilac. We have only yellow and white corn, but the Indians have ears of all these colors. One of the most beautiful songs the Indians have is the *Corn Song*.

THE SECRET DOCTRINE

THE Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogenesis
Vol. II treats of Anthropogenesis

THE MYSTERIES OF THE HEART DOCTRINE

Prepared by
KATHERINE TINGLEY
AND HER PUPILS

*The Theosophical
book of the
Twentieth century*

Tells the story and the history of the
Theosophical Movement.

The prices are \$2 in cloth and \$1.25 in
paper, which barely cover the cost, for it is
printed and bound, not gaudily, but with
such carefulness and thoroughness of art
and craft as to make it unique among
modern edition books.

Ancient Eclipses and Modern Astronomical Tables

THE *Journal of the Royal Astronomical Society of Canada* has an article on the bearing of solar eclipses on ancient history, in which the theory is advanced that the ratio between the lengths of the day and the year has been slowly changing throughout history. By means of this hypothesis, which has been arrived at through the laborious researches and calculations of Mr. P. H. Cowell, F.R.S., Chief Assistant at the Royal Observatory, Greenwich, it is claimed that many perplexing problems of ancient history, connected with the dates of events, can be solved. It is clear that we can correct the historical records in the light of our astronomical tables, or rectify our astronomical tables in the light of the historical records; also that if we can produce a harmonious interrelation between the various records of eclipses, we shall be enabled to correct both the records and the tables. It is claimed that by adopting this hypothesis as to the varying length of the year in days, harmony is produced among the eclipses.

Halley, continues our authority, first showed that the month was very slowly changing in length; and the amount of this change was first measured correctly by Professor

Simon Newcomb, who, in 1878, discussed the times of nineteen eclipses of the moon recorded by Claudius Ptolemy. But it never occurred to Newcomb to consider the possibility of a change in the length of the year; and when he turned his attention to solar eclipses, he found they did not accord with his calculations — which proved bad for the records, for he rejected them as untrustworthy. But Cowell's inquiry gives reason to suppose that the want of accord was due to a secular change in the ratio between the lengths of the day and the year.

He took five historical eclipses of the sun, namely:

Nineveh	B. C. 763
Archilochus, at Thasos	648
Thucydides, at Athens	431
Agathocles, near Syracuse	310
Tertullian, at Utica	A. D. 197

and found them self-consistent; also the rate of change in the length of the month deduced from them agrees with Newcomb's result mentioned above. The record of a still older eclipse, discovered by Dr. L. W. King on one of the cuneiform tablets in the British Museum, also fits in.

Now the records of these ancient eclipses

have not so far fitted in with our calculations regarding them, and it has been customary to attribute error of recording to the historians. But, now that a single hypothesis regarding the accuracy of our astronomical tables will (as alleged) suffice to produce harmony between all these records, it is obviously more feasible to rely on the accuracy of the records and impute the discrepancy to the inaccuracy of our tables. Moreover, the errors of the historians, if err they did, would not all be in the same direction, but would tend to neutralize each other. The lunar eclipses examined by Mr. Cowell, though of very much less value as evidences than solar eclipses, also confirm his hypothesis.

The remainder of a somewhat lengthy paper is occupied with detailing the case between astronomy and history as regards certain historical eclipses, and is too elaborate to be considered here. But the author of the hypothesis claims to have afforded a means of setting at rest many discrepancies in dates which he maintains to be due to a wrong assignation of the dates of the eclipses owing to our use of defective tables.

It will naturally occur to a student of Theosophy that secular variations in the periods of celestial movements may be cyclic and not continuously cumulative; and that they may be due to eccentricities in some of the larger cycles (unknown to modern astronomy) — eccentricities regularly repeated like those of the smaller orbits of which we know. So far as our astronomy extends, it has shown us that small cycles must be compounded with larger ones, and these again with still larger, and that we must go on adding our +003t and +00004t², etc. to the nearest approximation we can, and still remain

in doubt whether there is not a t³ and a t⁴ to be added yet. It is the claim of Theosophy that ancient Mysteries included a knowledge of the larger cycles, together with a comprehensive clue to the quantitative and proportional principles upon which the whole system of cosmic movements is based; and that the loss of this clue has involved the science in a maze of unsymmetrical ratios and indeterminate quantities. The possession of such a clue would enable one to reduce to harmony and simplicity the whole science of celestial movements and chronology. But there seems to have been something about this ancient knowledge which placed it beyond the reach of ordinary intellects; and when it was found no longer possible to teach it to men various subsidiary systems of computa-

tion we can, and still remain in doubt whether there is not a t³ and a t⁴ to be added yet. It is the claim of Theosophy that ancient Mysteries included a knowledge of the larger cycles, together with a comprehensive clue to the quantitative and proportional principles upon which the whole system of cosmic movements is based; and that the loss of this clue has involved the science in a maze of unsymmetrical ratios and indeterminate quantities. The possession of such a clue would enable one to reduce to harmony and simplicity the whole science of celestial movements and chronology. But there seems to have been something about this ancient knowledge which placed it beyond the reach of ordinary intellects; and when it was found no longer possible to teach it to men various subsidiary systems of computa-

tion were introduced in various lands; as by 60's, by 10's, by 13's, and so on. Proctor in his Encyclopaedia Britannica article, quotes that the Emperor Fû-hi, 2857 B. C., labored to instruct his ignorant subjects in the mysteries of astronomy; but as they were not enlightened enough to comprehend his theories, he was obliged to content himself with giving them a rule for the computation of the time by means of the numbers 10 and 12. STUDENT

Psychic Messages: A Protest from Relatives of the Deceased

AN amusing side-light on "spirit communications" is thrown by an incident recorded in the Press. A learned body, formed for the purpose of inquiring into such matters, has been receiving what are alleged to be communications from one of its most noted members, now deceased. These were transmitted through a medium in the form of "automatic writing," and are said to bear internal evidence of authenticity. But now the near relatives of the deceased have written to the papers what can only be described as a protest, though the language in which it is couched is guarded. They say that they have found, after a very careful inquiry, nothing which they can consider of the smallest evidential value.

As imagination bodies forth
The forms of things unknown, the poet's pen
Turns them to shapes and gives to airy nothing
A local habitation and a name.
Such tricks hath strong imagination,
That if it would but apprehend some joy,
It comprehends some bringer of that joy;
Or, in the night, imagining some fear,
How easy is a bush supposed a bear!

Shakespeare speaks particularly of lovers and poets; but his words are of more general application. It seems that we may apply them to that peculiar semi-scientific, semi-literary, ponderously sapient cult engaged in psychic exploration. It is not suggested, of course, that the researchers are deceived in the ordinary way; but the deception, if of another class, is a deception still. Nothing is more evident than that the "intelligence" speaking through the medium is of that adaptable and plastic kind referred to by the bard; ready to assume any shape which the thoughts and wishes of those concerned in the experiment may give it. And it will correspond the more closely with the expected type the more accurately the sitters are able to frame that type in their imaginations. The plastic agency thus "bodies forth" the ideas impressed upon it. This plastic power of the imagination, and of the *linga śarīra*, is doubtless responsible for many self-deceptions, apart from the particular case of psychic research. People may fancy themselves haunted by the supposed malignant phantoms of other people, when the fact is that their imagination has bodied forth the very shape with which they themselves have impressed it; and in certain cases the process may go a step further and result in something more nearly approaching tangibility than the ordinary imagination.

A Theosophist would sympathize with the relatives of the deceased in protesting against the idea that the departed one exists at the beck and call of any mediumistic circle. Without doubt it would be found, were experiments to that end to be conducted, that the same individual could communicate to differ-

ent circles at the same time; indeed, there are cases on record where such has actually occurred. This, of course, still further confirms the illusory character of the phenomenon. A little knowledge concerning the *linga śarīra* or plastic double of man would enlighten the researchers as to the wonderful feats of which it is capable. An explanation of the sundry kinds of spiritistic and psychic phenomena is given in the *Ocean of Theosophy* by William Q. Judge, and in Theosophical Manuals, Nos. II and V. STUDENT

Revolutionary Theory of Terrestrial Heat

IT is small wonder that Kelvin was reluctant to admit that radium and uranium could have any influence on the question of the earth's heat and on the calculations as to the age of the earth based on thermal considerations; for on the one hand was his own arduous life's work, and on the other the inchoate investigations and premature conclusions of the newer school. But Kelvin has passed and the radium school is in all its youthful vigor and promise.

Professor Joly lectured to the British Association on this question. It is beyond doubt that radium can evolve heat capable of raising the thermometer, and continue to do so for a period, which, by all ordinary comparisons, is enormous. It is equally unquestionable that the invariable association of radium with uranium in the earth's crust indicates a derivative connexion between the two. Lately Boltwood has discovered *ionium*, which acts as the connecting link between uranium and radium, thus filling a gap which had previously constituted a difficulty. There is enough radium in the earth's crust, according to the combined result of many investigations, to much more than account for all the heat which is passing out from the earth according to the ordinary temperature gradients. Hence it has been inferred that there is little or no radium at all inside of the crust. From this we reach the remarkable conclusion that the inside of the earth may actually be kept hot by the crust! This is a reversal indeed.

But, as Professor Joly says, there is much more to be done in the way of experiment before we speak authoritatively on such a complex subject. All this, however, shows that scientific dogmas, however authoritatively enunciated, need not be regarded as the last word of truth; and that if we accept them as a basis of morality, our morals will be as liable to sudden reversal as the dogmas. It seems as if our teacher, Nature, had said: "You can throw away your spelling books now, and I'll begin to teach you. The first chapter shall be on radium."

We have built a universe out of toy bricks, which would stay where they were put, and it worked very fairly, though needing surreptitious pokes to give it a semblance of life. Now we have to learn how to make a universe out of lively materials that have a will of their own. The universe is made up of atoms, and the atom has proved to be itself a universe. The *vis vitæ* of the universe was supposed to have been originally derived from some unknown source and to have been occupied ever since in running down. Now we find great storehouses of it in every grain of sand, and the universe winds itself up. STUDENT

Wireless Telephony

ONE of the most remarkable things about scientific invention is that some of the contrivances which we invent by inductive reasoning surpass in their results all that was calculated and accomplish things that the theory will not suffice to explain. For instance, in the telephone we find that the most complicated sounds, such as the music of an orchestra, and the most delicate shades, such as those that cause recognition in the tone of a voice, can be transmitted; and yet the mechanism which effects all this is a very small metal tympanum whose effective movements are limited (according to the theory) to to and fro vibrations in front of a magnet. It is the variations and combinations of these minute to and fro movements that are made responsible for the reproduction of the almost infinite complications of the sounds transmitted. This seems like heaping too much on too small a cause, and as if there must be other mysteries in the telephone which were not calculated on but have been discovered incidentally in practice.

Two men, one in Paris, the other in Brest, separated by 310 miles, conversed without a wire, this being the longest distance they could accomplish by using the Eiffel tower. But as the height of the starting-point seems to be the only limitation, more ambitious achievements are expected, even talking from Paris to New York.

It has been suggested that wireless electric transmission be used to impel aerial machines, thus enabling them to dispense with carrying their own motive power; torpedo boats have already been directed from shore in this way. In this case, by the way, the aerial machine in a foreign country might be at the mercy of the foreign government.

A contemporary expatiates on the marvelous feat of "conquering the ether," which promises so many revolutions in mechanics for the future; and comments on the circumstance that we know so little of this ether. No one knows that there is such a thing, or has the least idea of what it is composed. It is not air; if it exists at all, it is present in all solids, liquids, and gases; in the earth, and beyond the remotest star. It has no weight that we can measure, and yet may be heavier than anything we can weigh. Clearly this ether is as yet but a hypothesis so far as science is concerned; the name stands for a whole collection of unknown forces and substances in Nature, and the contradictory character of its alleged properties is probably due to our having confounded several different things together under one name. But why must we needs have the *same* ether for transmitting electricity, and light; as a substratum for physical matter; as an excelsior stuffing for "space," and so on? May there not be many grades and above all else other *qualities* of supra-physical substance? We need to get rid of the idea that all matter and all media must necessarily be like physical matter, and that anything not such becomes thereby reduced to virtually nothing.

One important thing we are learning — that the properties of physical matter do not reside in physical matter itself, but are found in greater exuberance where that particular matter is not; for physical matter is but the vehicle for subtler kinds. T.

Some Views on XXth Century Problems

Forbidden Research

THE Pope has sent a gentleman to this country whose duty is the instruction of Romanists with respect to the dangers of "psychic research." The *Chicago Evening Post*, abstracting from a lecture which he gave before the students of St. Ignatius College, describes him as "sent by the Pope to warn Roman Catholics against dabbling with psychic phenomena." The *Chicago Daily News* makes him a member of the Psychical Research Society, adding:

Dr. Raupert will exhibit photographs of "ghosts" taken by himself at a continuation of the lecture to be given tomorrow at the college in the effort to convince his hearers that there is a tangible "presence" which appears at spiritualistic séances and performs at the will of the experimenter.

The same paper reports the lecturer himself as saying:

The Pope is aware of the growing spread of occultism in all its forms and its importance to the moral and spiritual life. He considers it necessary that the public should learn of the truths, for in the general recognition of them lies the remedies that, if neglected, might prove harmful to the Catholic faith. . . .

Speaking of spook research he said, according to the same report:

There is intelligence behind it all, but the exact nature of it has not yet been established. . . . We, as yet, are ignorant of the nature of the "intelligence."

Romanists, however, must not investigate. The other paper quotes him:

The attitude of Catholics must be absolutely negative. They must not experiment in any way with this unknown power. It is a real power, but at present from its manifestations it would seem, at least to the theologian, to be the power of demons, for it denies Christ. . . .

Two or three points strike one with some surprise:

First: that the Church, which received the Keys of Peter and the knowledge of all the mysteries, should be "as yet, ignorant of the nature of the 'intelligences'" at work; so ignorant, that its appointed delegate should find it necessary to attend séances with a camera and to be a member of the Psychical Research Society. He said:

The subject can no longer be put aside—it has come to stay. It is no longer connected with fraud and deceit and has passed out of the hands of charlatans.

Passed, then, into the hands of reputable and proper investigators: is not that the inference? But:

Secondly: that these investigators may not be Romanists!—apparently with one exception, Dr. Raupert himself. The subject ought to be investigated, is being investigated; but the investigation is irreligious and forbidden! The public ought to be instructed, but the knowledge upon which the instruction is to be based may only be obtained by those outside the true pale—with the one exception. "Demons" may be at work, but it must be men of science, and non-Romanist men of science, who alone can determine that point!

If Dr. Raupert will read a little Theosophy, he will know more about spooks in a few min-

utes than the investigators will get in years. The spooks are not demons and may be made to affirm Christ or anything else as readily as to deny. It depends on the conscious or unconscious views of the investigators, which are faithfully reflected in the communications. They are psychic shells just as a dead body is a physical shell. Supply a substitute for the vitality they once had, and they will turn out streams of phrases which mix up with those coming from the minds of the circle.

Spook research will doubtless continue. But not indefinitely; for whilst on the one hand real paths of knowledge to post-mortem conditions will open out, on the other this nosing into the astral graveyard will be presently found to be infinitely harmful to the sanity of those engaged in it and to the health of the truly vivisected medium. As to the special force concerned in psychical manifestations, it is already coming into the field of normal healthy science. STUDENT

True Strenuosity

WE had already got half hypnotized by the idea of The Strenuous Life, hypnotized into the belief that we lead that kind of life: when suddenly the hypnotism was completed by the magic of the triplet of words.

As a matter of fact we lead a very easy life, because we do what we like. The strenuosity is external. We keep up a great physical rush from place to place, and a great mental rush from plan to plan. But this is no true and virile strenuosity. Steady will is represented by its substitute, desire. The business man, panting to be off to his beloved Exchange, eager to manipulate a coup which he had conceived in the night, who should put all this aside and spend two or three hours sitting by the bed of a sick friend, would have exemplified a real strenuosity perhaps the greater for its inconspicuousness.

In other words the really strenuous life is the life of willing as against that of desiring, the life of decision as against that of impulsion.

The ancients had an idea of freedom which we have lost, an ideal to be reached through the narrow gateway of the really strenuous life. In the center of the picture is the man, the willer. Around him, within his nature, are the straining imps and animals of desire. Around these is the field of his daily life, the field for the satisfaction of his desires.

We consider a man to be free when his path in that field is unobstructed. The ancients looked deeper. To them a man was only free when he had reduced his desires to order, to utter silence if he chose.

Any desire may master, and some of them when they have done so may make the man, their victim, seem masterful. It is said that Dr. Johnson could not pass a post by the curb of Fleet Street without laying a hand upon it. He had permitted an utterly casual whim, which in the beginning would have died by one day's neglect, to master him. If he had swaggered along, insolently elbowing away or

knocking down anyone standing between himself and a beloved post, he would have been a "masterful man"—yet an abject slave. Is a "money king" any better?

Nor is the strength of will which leads to freedom to be got by letting one desire master another. The love of money-getting with its need for a clear brain, might master gluttony. The man has transferred his servitude and is still not a free man.

The path to freedom, which is the inwardly strenuous life, consists in the habitual selection of a duty against a pleasure where the two are simultaneously offered; in the habitual selection of the least pleasant and the most arduous of a number of simultaneously presenting duties of equal weight; in the attempt to get a cheerful evenness of liking for whatever happens; and in the readiness to put aside any occupation whose immediate doing is not a duty, for the interest of someone else. Whatever its outward show, such a life is strenuous; desires are finding their master; the will is growing and in no long time will be adequate to any victory in the field of the man's own nature to whose achievement it may be set. And when he has made all his needs legitimate, he will find that the flow of "blind" circumstance washes their answer to his feet. STUDENT

Sounding Brass

"THEY somehow ring false," says a religious contemporary, speaking of the causes of the ineffectiveness of sermons. The writer then analyses the falseness of the ring but without getting far enough into the difficulty.

A preacher cannot do anything for his hearers which he has not previously done for himself. He cannot show them a path which he has not traversed. One which he has traversed he can show, and he can inspire them to go upon it after him though his vocabulary consist of but Hodge's six hundred words. Otherwise he will fail with Milton's nine thousand.

Oratory, in our use of the word, is the exact fitting of lofty words to lofty feeling. Rhetoric is the fitting of fine words to less fine, to other, or to no feeling.

Analogously, real preaching is the exhortation of hearers to do for themselves *what the preacher has done for himself*. Ordinary preaching is their exhortation to do what the preacher has *not* done for and in himself. The exhortations to find the voice of God in the heart, to triumph by divine power over human failings, and assertions that the hearers are sons of God—all, in whatever garb of words, is useless unless the preacher has in his own privacy realized to the fullness what he talks of.

Nor will he carry his hearers' imagination farther than his own has gone. The preacher must have imagined and felt and done and struggled through all that he calls upon his hearers to imagine and feel and do and struggle through. There is the key to the ineffectiveness of modern preaching, with or without the various garnishings. STUDENT

Archaeology Palaeontology Ethnology

Tombs of Amasia

AMASIA, in the Turkish province Anatolia, though the modern town is mean in appearance, is interesting for its antiquities. These include rock-cut tombs like those illustrated, which are remarkable for their resemblance to Etruscan tombs in Italy. Seeing what a mystery still enshrouds the Etruscans, this fact is interesting. In Lydia there is a tomb of Alyattes, on the banks of the Hermus near Sardis, which has one chamber, in the center of a circular pyramid, not sloping directly up from the ground, as in Egypt, but having a high molded stereobate at the starting, some three-quarters of a mile around; a structure which would create no surprise if found in Tuscany, and which, in still further emphasis of its Etruscan affinities, appears to have been surmounted by five stone pillars.

Amasia was the capital of Pontus under Mithradates VI, whose ancestors of the same name lie buried in its tombs. Asia Minor is the seat of many an ancient civilization; as the complexity of its archaeological tokens indicates. It is only the Theosophical key, as given in part by H. P. Blavatsky in *Isis Unveiled* and *The Secret Doctrine*, than can unlock these mysteries.

STUDENT

Phrygians and Hittites

AN archaeological expedition sent to Asia Minor by the University of Liverpool has been studying the country occupied by the mysterious "Phrygians." In exploring the more ancient ruins, it has adopted the hypothesis that they are "Hittite," that is, pertaining to a people that emanated from Syria between the Orontes and the Euphrates and whose capital is said to have been Carchemish.

Boghazkeui, says the report, was visited, and is regarded as having been the Hittite capital between 2000 and 1000 B. C. It is situated between Angora and Amasia near the 40th parallel. Excavations there revealed the ruins of a temple, the ancient city walls and gates and several examples of "Hittite" sculptured art. At another place two new sphinxes were discovered, and at Caesarea a number of Hittite inscriptions and antiquities.

Phrygia was the name of a large country inhabited by a race which the Greeks called Phrygians. Its boundaries were vague. The Phrygians seem to have been quite Hellenic in their type, and some think they may have migrated from Europe; but one is not bound to accept the idea that Hellenic civilization was European in its origin and that everything

Lomaland Photo. and Engraving Dept.

OLD FOUNTAIN NEAR MARSOVAN, ASIA MINOR
(TURKISH WORK)

classical found in Asia must have migrated thither from Europe. Where did the Greeks themselves come from?

According to Greek tradition there existed in early times a Phrygian kingdom in the Sangarius valley, ruled by kings among whom the names Gordius and Midas were common. It was known to the ancient Greeks of Iona and the Troad as something *great and half-divine*. The Phrygians were said to be the oldest people and their language the original speech

on the relics of an older civilization, whose monuments, found in Lydia, Phrygia, Cappadocia, and Lycaonia, point to the existence of a homogeneous civilization. These are the remains spoken of above as "Hittite." They contain hieroglyphics which have not yet been deciphered.

Ancient Phrygian art has great individuality and is distinctly non-Oriental. Most of the favorite types in early Greek art can be traced in Phrygia. Bearing this in mind in connexion with the recent discoveries of Mykenaeen civilization in Crete, one can see how the traditions of the Greeks themselves about their own origin are borne out.

And this wonderful Phrygian empire was built on the ruins of a *still more ancient one*, whose remains show that it too was of an advanced type.

If the Hittites mentioned in the Bible are the same as those mentioned in Egyptian and Assyrian inscriptions, the Bible writers seem to have preserved but a confused recollection of them and jumbled them with other and Semitic tribes whom they encountered in Palestine.

The older Hittites seem to have had a very extended empire and to have been rivals of Egypt and Assyria, from both of which nations they differed in type and language.

Is it not evident that the more we probe antiquity the more extensive and complex does civilization seem to get? Instead of running down the branches of the human family to that main stem and finding the "Aryan ancestor" in his ancestral home, or *Pithecanthropus* learning how to become *erectus*, we find ramifications expanding in all directions. Instead of finding the end of the clue we are following, we find the beginning of other clues, and our goal resolves itself into a group of finger posts. Old races "appear to have had several branches" and to have been preceded by still older races. Yet in face of all this, some archaeologists still go on trying to prove the old formulas, their task being easier according to the number of facts which they are ignorant of or ignore.

The outlines of human history given by H. P. Blavatsky twenty years ago in *The Secret Doctrine*, and before that in *Isis Unveiled*, are the

key to such problems; a key of which it is probable that some writers have availed themselves, though we look in vain for an acknowledgement of the authoress. Fortunately those works are extant, together with the dates and circumstances of their authorship; so that it will be easy for Theosophists to establish their claim to priority in these matters, if the occasion should arise for doing so. STUDENT

ANCIENT ROCK-CUT TOMBS NEAR AMASIA

of mankind; *their kings were the familiar associates of the Gods*. Archaeological evidence, as usual, confirms tradition, and in the mountainous region between Kutayah and Afium Kara Hissar are numerous monuments of great antiquity, showing a style of marked individuality and implying a high degree of artistic skill.

The Phrygian kingdom seems to have arisen

The Trend of Twentieth Century Science

More Light or More Sight?

THE prayer for more light which came from the lips of the dying Goethe, might have been changed in his case, and might be changed in ours, into prayer for more *sight*. Not only spiritual, but physical light is around us in plenty; indeed the universe consists of these two. For the physical world, that statement is now science. The world we see, the ponderous world of matter, is really not only a blaze of radiance, but nothing but that. We are merely in want of better eyesight. Of the scales of color, maybe infinite upward and downward, with which the ether is pulsing, we see but one.

We have heard of the smiling cat which gradually vanished until nothing but the smile was left. So in the hands of modern science, poet in spite of itself, shining matter has vanished until nothing but the shining remains.

A ray of yellow or blue or other-colored light is an etheric vibration of a certain frequency—in the trillions—and amplitude. A ray of orange is the same, but of less frequency than the yellow; a ray of red, of still less frequency. If the frequency becomes still smaller, the eye no more sees it, but the skin may feel it; for rays of such frequency are called heat. Of still less frequency, they are called electricity or rather electric waves.

If the frequency is higher than violet, the eye again fails to follow; but the skin could detect them if they were played upon it long enough, for they are caustic. Somewhere up in the octaves beyond the ultra-violet are the X-rays.

Matter has disappeared in electricity, that is in light. Subdividing it to the finest, we come at last to the little "bodies" called corpuscles. But these we learn—not unwillingly—are electric centers, electricity. It has been shown that if still, which they never are, they would have no materiality, no mass. Materiality is rapid motion, motion which resists being deflected or stayed. The more the rapidity, the more the resistance. By way of a rough illustration, if an etheric scalepan were placed in the path of a corpuscle moving downward—supposing space to have a downward—the other scalepan would go up in proportion to the speed of the corpuscle. The corpuscle would have a "weight," which is a measure of its mass, proportional to its speed. A slow corpuscle would be pushed sideways off its path of advance; it is less and less deflectable in proportion to its speed. It is thought that if it were moving at the rate of 186,000 miles per second, no force could deflect it. It would have infinite mass; if an etheric scalepan were placed flat against it in its path, the scales would show that it had infinite weight. But it is electricity; matter is electricity. It is not that the cat has disappeared; there never was any cat; the smile stands by itself.

The motion of these electric points throws the ether into vibrations, especially when the motion changes its speed; certain of these vibrations, when intense enough, appeal to our eyes and to the spectroscope, as light.

A number of corpuscles, of luminous or light-making units, from 1000 up to say 250,000, grouped together and moving with inconceivable speed amongst and around each other make up an atom—which is therefore a radiant point of color. A few atoms grouped together make a molecule. A sufficiency of molecules in a mass constitutes a bit of coal, or a dime, an eyelash, or a bullet. If we heat the bullet sufficiently, that is add a variety of light to it, the heat is absorbed by the corpuscles as added motion. When they have absorbed enough of it some of their own light becomes visible to us and we say the lead is red or white hot. Examining the light of the lead through a prism, we find it to consist of all the colors: examining it otherwise we find it radiating above and below the prismatic octave, perhaps very far both ways.

Would it not be well for us to get into the way of thinking of matter, all kinds of matter, as *light* instead of as dull dead *weight*? We might find the other kind of light, spiritual light, presently more conceivable. And the intervals, space, ether, would also be light. For the ether is omnipresent thrilling light, thrown here and there into visibility to our eyes.

Sometime, in the course of evolution, humanity will have eyes of some sort that will not be limited to one poor little octave, but will habitually see the universe as radiance.

A World of Automata

MR. BURROUGHS, the well-known naturalist, objects to the view that animals do any reasoning. He says:

The longer I observe and consider the lower animals, the more I am persuaded that the old Cartesian view of them as mere automata is nearer the truth than the more recent view of them as possessed of a fair measure of human reason.

He gives a number of examples which he thinks confirm his opinion. One will stand for the rest:

Another bee upon which Fabre experimented builds a cell of masonry, fills it with honey, lays an egg in it and then seals it up. When the bee was away, Fabre punctured the half-filled cell and let the honey flow out. When the bee returned, it appeared to be disturbed to find its honey gone. It examined the hole through which it had escaped curiously, but made no attempt to repair it, and continued to pour in the honey the same as before. After it had brought the usual quantity—the quantity her forbears had always brought—she laid her egg into the empty shell and sealed it up. The machine had done its work, and it could do nothing not laid down in the ancestral specifications.

But it examined the hole curiously, though without being able to understand it. Would an automaton, to say nothing of an unconscious automaton, do that?

Whatever ancestors have habitually done, that, because registered in constitution, the descendant does. But it does some minute thing in addition; it stretches its powers of mind a minute area farther out into life. In other words it does, with relation to what it had previously done and what its ancestors had previously done, just about what that man did

who first thought he would try to make a flying machine. To the ten thousand million things that all other men do, he added that one by a powerful effort of reasoning and construction. Because of that we shall be presently flying through the air as part of daily routine.

In the same way each generation of insects adds some minute thing of its own to the previous stock, usually a thing far too minute for us to see but yet demanding the full powers of the insect's consciousness. The sum of such, through the ages, at last amounts to—let us say the constitution of the beehive and the powers of the bee. Would a man from another solar system, inspecting the attempts of the flying machine pioneer, be able to say that he was doing something not heretofore done by the other sons of Earth?

The power once attained and registered in constitution may *perhaps* be placed outside consciousness. That is the economy of nature; consciousness is wanted for the attainment of the next point of power.

But it is not altogether outside of consciousness. We no longer give our conscious positivity for instance to walking; it is "automatic"; but yet we are somewhat conscious of it; can be fully so in a moment; and certainly will be if there is an obstacle requiring a little modification of movement or if there is a touch of rheumatism in the walking-muscles.

The idea that we alone reason is merely the continuance of the idea that the earth is the center of the universe and man the only being in the universe. It is a permutation of egoism.

STUDENT

Cumulative Age

AN Italian physician tries his hand at a theory of old age, producing something that looks reasonable and in part is certainly true.

By means of various errors in diet, and insufficient exercise, as well as in other ways—all the ways, in fact, in which we sin against the laws of health—we accumulate toxins in the muscles and organs generally. When they have reached a certain amount, an explosion follows—say a bad cold. Most of the accumulation is thus burnt and otherwise expelled. But there is a residuum. Then despite the succession of small maladies, all clarifying if we understood and treated them as such, the accumulations of the fine *residua* explode. This explosion is more serious and means a considerable illness. At the end of his illness the patient emerges clean. But not even then entirely so. A still finer order of residua has been untouched. It is these which produce the changes in arteries and cells everywhere which constitute the phenomena of senility.

As a physician he naturally devotes more space to the methods of aiding the normal eliminations and properly treating the explosions than to prevention by reform of habit. But in any case we all know a good deal more about the latter than we practise, so the larger part of our treatment is in our own hands. We need not have the residua. STUDENT

The Self-Sacrifice of the Century Plant

THE flower of the Century-plant (*Agave Americana*), shown in the accompanying plate, is at present an attractive feature of the gardens at the International Theosophical Headquarters, Point Loma, California.

The Agave is commonly, but erroneously, called the Aloe. Although not unlike the latter, the Agave or Century-plant belongs to a different family, the *Amaryllideae*, and is a native of the warmer parts of America. In 1561 the Agave was carried to the Old World and it now grows freely in southern Europe and Northern Africa.

In Mexico the different varieties of the Agave are turned to practical uses. The fibrous leaves of some are suitable for rope-making, and the juice ferments into a very seductive intoxicant (pulque) which works much mischief. The roots and sap of the *Agave saponaria* have strong detergent properties and provide an excellent soap.

The popular idea that the Century-plant normally blooms once in a hundred years is a myth, for in its natural state it comes to maturity in less than ten years. It may, however, take twenty-five or even a hundred years to blossom if grown under unfavorable conditions. The specimen shown in the plate is about ten years old.

The Agaves, like most of the plants native to semi-arid regions, possess very thick leaves which permit the minimum of evaporation. They are slow in growth, but the formidable array of hooks and spines on the leaves preserves them from the depredations of hungry animals. Suddenly, after years of quiet preparation, the mature plant throws up a graceful stalk (the "scape") vibrant with stored-up energy. When this attains the height of twenty-four to thirty-six feet it bursts out into a thousand sweet-scented flowers which are quickly fertilized by the bees. This floral crown of beauty is a supreme effort of joyful self-sacrifice, for the sap, which has been jealously matured and preserved for the purpose, mounts rapidly out of the humble cluster of leaves and lets them die of inanition. After a year or more of glorious life, the chrysalis state left far below, the destiny of the plant is fulfilled and its seeds are scattered far and wide by the wind. Then the whole crumbling fabric falls to dust.

The photograph shows the withering leaves just as the stored vital forces are attaining their highest expression in the stately blossom. In the foreground may be seen another Century-plant comparatively young. C. J. R.

CENTURY-PLANT IN BLOOM IN THE GARDENS OF THE THEOSOPHICAL HEADQUARTERS

Giant's Causeway Turned into Road-Metal

MENTION has been made of the transporting of columns from the Giant's Causeway in Ireland to America for private decorative purposes; and now it seems that the beautiful ancient formation is being exploited for the purpose of making road-metal. Four quarries have been opened, says a report, and about 1200 tons of the basalt shipped to Wales, where it has been broken up for road-metal. A moving spirit is mentioned as being a London importer of Rhenish basalt for road-making. It is said that many sea-walls in England are faced with basaltic columns from near Cologne; and the freights from Belfast to New York are so low that it would be profitable to ship the Irish basalt to New York to be used as ballast and help settle the dust problem.

If it is all a question of commercial profits, this is the way scenery is likely to go. But what interest have we to set over against the commercial interest? As has been said, the Giant's Causeway does not come under the head of ancient relics within the meaning of acts for Governmental protection; so it remains to be seen whether public feeling will be strong enough to secure legislation which

will cover such cases. There are already societies for protecting places of scenic as well as historic interest, and such bodies would probably be the right ones to agitate for Governmental powers.

If it is asked, What is the use of preserving beautiful scenery? then it is a sign that we are falling into the way of judging everything from the so-called rational or utilitarian standpoint and losing our hold on sentiments that appeal to a higher court than this rationalistic reasoning. If such sentiments, including patriotism, altruism, duty, etc., are to be made questions of materialistic science, then we are indeed in the rationalistic age, and may as well accept the fact. But it is to be hoped that there remains enough appreciation of the beautiful for its own sake to move people to preserve things because they are beautiful, if for no other reason.

But there is another reason. It is that the sense of the beautiful and sublime needs to be kept alive in man; for it is his greatest savior from animalism in living, materialism in science, pessimism in philosophy, bigotry in religion. It is the principal channel by which the Soul reaches the lower mind. The thrill that can be felt by responsive natures in answer to a touch of the beautiful is a reminder of the glory of the Soul-life within. But we should not stop short at the enjoyment of feelings,

for we should take their inspiration into our hearts and ponder over it as something that may possibly be made to blossom out in our lives. By beautiful objects, says Plato, is the Soul reminded of the experiences that were hers before she entered the body, and that are hers when she is freed from that encumbrance. In an age of infatuation with the brain-mind and of great progress in material development, we are in danger of losing touch with the truer life behind the veil; which life is nevertheless the source from which all our life flows. Hence the importance of doing anything and everything which will help to foster the spirit of reverence for the beautiful and enable it to achieve a victory over the all-pervading spirit of grasp and get.

This fully answers the question, Are not Nature's resources meant to be used? The question ignores the circumstance that there is more than one way of using a thing.

The word *use* may be made to stand for *abuse*, and the argument made to palliate the most questionable practices. Again, for whose use is Nature made? Yours or mine or everyone's? Evidently Nature's resources were not made to be scrambled for, but to be wisely used for the general good. STUDENT

Karma and Reincarnation

A MIDST the turmoil and confusion of modern life, with its complexities of desires and vague aspirations, there is one clear well-defined demand of humanity which will be heard sooner or later, no matter how much power may be used to suppress it, or what sophistries may be employed to smother it—the cry for justice. In innumerable instances students of history may trace from century to century the cumulative effect of an act of injustice whether to an individual or a party, and note the inevitable reaction, often so terrible in its results, which invariably follows.

Why these acts should have been done by one person and not by another, to one nation and not to another; why Caesar should have been born Caesar and not Brutus; or Alexander conqueror instead of slave, history does not attempt to explain because historians, no matter how exact their records may be, or how profound and exhaustive their observations upon human affairs, cannot give a comprehensive view of the pictures of the past, unless they see them by the light shed upon them by the Laws of Reincarnation and Karma.

All theories of life, to be complete, no matter what the point of view, must take these two into consideration, otherwise our innate conviction that justice must prevail is outraged.

Religion, as taught today, has a view of life which it urges us to accept as final, but requires as an absolute condition that we submit to an authoritative interpretation of it, no matter whether it seems reasonable to us or not. But we are not children, we have intelligence, we can reason for ourselves, and above all, our intuition—that divine essence within us, though for ages it has been stifled by wrong teaching—is once more making its voice heard. Because of this we are more able to discriminate and can see that religion as now presented, because of its limitations, cannot satisfy our craving for justice.

Our reason rejects the idea of a theological God, who, it would seem, as creator of the universe and of man, might as well have provided a world of happiness and joy, free from sin and temptation, peopled with Gods instead of "weak and miserable sinners." An omnipotent creator would need neither repentance, devil, or hell, to bring about man's regeneration.

As it is, those within, as well as those without the fold, appear to suffer unmerited wrongs. The faithful, earnest Christian man may have a dissolute son, uncontrollable and evil, while the boy of his atheistical neighbor may be all the fondest father could desire. A loving, virtuous, religious mother may have her life made miserable by a vicious daughter who squanders every opportunity to become a

wise and useful woman, while the daughter's children may grow up to be noble and good even amid the most unpromising conditions. The fervent prayers of the God-fearing father and mother would seem to have been unheard and their efforts fruitless. How are they to be recompensed for all their heart-aches and tears?

"Oh it will all be made right in Heaven," say their fellow-believers; but it may be said that no Christian seems to have very much faith in the Heaven he clings to so desperately. His intuition tells him that there is some reason why he suffers here, and impels him to believe that there must be some state of being other than this, where all his perplexities will be made plain, and the soul come into its own. In common with the rest of the world he needs to know about Reincarnation and Karma. All mankind is seeking for the knowledge which an understanding of these laws would bring. For it is Law that governs the universe, not a denominational Father or an arbitrary, creating personality; but an omnipresent, omnipotent, immutable Law, through which impartial, unerring justice is done throughout all the kingdoms of nature, from below the jelly-fish to man, and beyond, upward through higher planes of life which we cannot now even realize, with our as yet imperfect and undeveloped senses.

Because of the law of Karma we enjoy or suffer in exact proportion to our merit. We do not find happiness through another or suffer through another unless we have brought it about ourselves. We are absolutely our own creators, the makers of our own destiny.

Every line of investigation of life is forced to acknowledge the existence of this law under some form. Religion calls it God; science, the law of the conservation of energy. Materialists call it chance; while the careless and unthinking, although professing to believe only in luck, or chance, yet speak of meriting or deserving this or that.

The law of the Conservation of Energy says that "No energy can be lost. When it disappears in one form, it reappears in another." The law of Karma completes this, and applies it to all states of being, while science limits itself to the investigation of physical phenomena only. Theosophy applies this law to every phase of the vast ocean of human consciousness.

One of the activities of life of which both science and religion have neglected to realize the full importance of, is the activity of thought. Theosophy declares that it is important that man should understand the power of thought and should realize what a potent influence for good or evil it may be according as it is unselfishly or selfishly directed.

The law of Karma works ceaselessly for justice and harmony. If we think toward the happiness and freedom and true progress of our fellows we become agents of the Law and will have greater and greater opportunities to add to the joys and lift the burdens of others. But if we maliciously or seriously disturb the happiness of others, or if we think harshly and angrily of them we shall find ourselves brought under that aspect of the Law through which we not only suffer ourselves but are the means by which others are made to suffer.

H. P. Blavatsky, in the *Key to Theosophy*, says:

No one can sin, or suffer the effects of sin, alone. In reality there is no such thing as separateness, and the nearest approach to that selfish state which the laws of life permit is in the intent or motive.

In the consideration of the law of Karma we need to be careful not to jump to conclusions. To quote again:

The question of our own personal merits and demerits looms too large before the eye. But though perfect justice is done to each unit of humanity it might be better if we were less anxious about our own particular case. The comradeship with our fellows which is so necessary and so precious to us involves us in a system of give and take, as to the exact adjustment of which it is not the part of a generous nature to inquire too closely. We throw in our lot with others for better or worse, and get our fair share of the good and bad luck plus the inestimable advantage of comradeship. (*Theosophical Manual*, III, 45.)

The pain brought upon us by our mistakes creates the opportunity by which we learn not to make them again. In the state of existence in which we now are our greatest lessons come through contrasts, we come to realize the meaning of true joy through sorrow, and the joy of the Light because of the darkness through which we have passed. Virtue has tenfold the meaning because of our struggle with vice, and happiness because we have passed through the valley of pain.

We partly realize that we cannot live for ourselves alone. We know that we share the joys and griefs of our families and our friends, but we are not so conscious of our unity with the nation and race into which we are born; but this wider relation, whether recognized or not, is a fact.

We cannot strive toward perfection without making the pathway a little clearer for all the world. We cannot do evil without making it harder for all humanity to do right.

All mankind must recognize this Universal Brotherhood of Humanity before any of the much sought for reforms of the day can be effectual. Karma continually gives us the opportunity to recognize this, through many lives and probably much suffering, until at last we become conscious that we are a part of a great whole, one unit in the body of the race.

The doctrine of Reincarnation seems to have made more of an impression on the public mind than that of Karma. Novelists and playwrights make use of it and people seem more ready to accept it, probably because of its strong appeal to the imagination.

Existence appears as a hopeless puzzle unless we accept these two doctrines; but the apparent injustice we see all about us becomes more reasonable when we realize that our life is but an episode in the great journey of the soul, only one step on the ladder. Without Reincarnation there would be no use in living at all. Why should we be thrust into life, without our knowledge or consent, only to spend our childhood and youth irresponsibly and recklessly, our middle life as a continual compromise between the higher and the lower impulses of our nature, and an old age in helpless and worn-out impotence? But a sense of our divinity urging us on, the regenerating truths of Reincarnation and Karma will transform our whole view of life. With aroused courage and determination we shall find inspiration for every effort, and shall come to feel that we are builders in the great Temple, not separately or disunited, but in fellowship with all that lives.

M. C. G.

THEOSOPHICAL FORUM

Conducted by J. H. Russell

Question In the Theosophical teaching of Karma, if a man is the result of and bound by his past, how is he free, and how is freewill possible?

Answer Karma is a matter of perpetual adjustment; and the thing to be adjusted is mainly a condition of the mind, or rather of what is beyond and beneath the outer mind, character. There are two things the matter with the thief, we may suppose: for one of them the human legal institution is most eager to punish him; the other the divine Law sets itself very patiently to cure. The first is that he has given way to an impulse, that he has done the thing, perhaps has acquired the habit of doing it; has made brain the plotter and hands the instrument for carrying out a physical action, theft. This our social polity takes alone into account, being the only thing over which it has any control; but we can see that the other matter is the more important. This is, that the man has such and such a tendency within him, that he is unguarded against the temptation to steal, has no feeling of his responsibility; and it is this that mostly concerns the Law. It constitutes of course a weakness or imperfection in him; he is that much less than he ought to be; it is a flaw, which is another thing that nature abhors. For she is the true artist, and will let nothing go from her in an imperfect state; in the long run she tolerates only perfection.

Each man is some little cog or wheel in the universal engine, and if he is bent or broken in any way, must not the whole machine be affected, and work so much the less readily? Will there not be just thus much more of halting and irregular beat? Yet it is not a machine in reality, but a great living being with a will towards health, which directs the motions of all its parts; and the unvarying tendency to get right, to get back to the right, the sane, natural, normal, is what we know as Karma.

Now this normal is that man is a god, and when the last word is said, depend upon it the Law will tolerate him in no pose but that of divinity. We confound the normal with the mediocre; that is all our abominable folly; it ought to mean genius, and the flower of compassion; we shall have had our surfeit of mediocrity some day. The Law pays no attention to our arguments for animality but brings us forward step by step; lacks all interest in our plea to remain half god and half beast. This was not the place designed for man in the divine economy and scheme of things. There it is written down: *Manas is within him, the Divine Mind; and Manas he shall be; using himself divinely; manifesting mind, and the divine; in no wise mistaking himself for desire, or any principle in nature characteristic of some kingdom below his own.*

So we are to be driven back to this divinity; by hook or by crook nature will have us back. She has no commission indeed to club us back willy-nilly, nor power to do so either; but she will in her own way vex and war upon and harry us until of our own freewill we rise up and resolutely go! When we are there, it is to be presumed that we shall be sensible

no longer of any seeming conflict between our freewill and the Law. That can only appear when what we desire is license, the opposite of liberty; and that being pernicious, and the beginning of all enslavement, we are not permitted to remain long in this or any department of being.

But since we have lived and lived, and in all our lives strewn the future with actions whose results spring up at our approach to confront us, can it be said that we have any liberty remaining, or are we not hemmed in always by the fruition of our past? Indeed in a certain sense we are; we have peopled the way we must travel, and are to meet this populace of our creation. So all the events that shall befall us are predetermined, we may say tentatively; but not the treatment we shall accord to those events. It is not the nature of the happening that constitutes it reward or punishment, good or evil; but what we ourselves make of it when it comes. Think, for instance, of two business men, to both of whom commercial ruin comes. This man is overwhelmed by the disaster; he makes no fight, he dare not meet his creditors; his anchorage is totally gone, life holds no more meaning or sweetness for him; perhaps he quits it through the door of suicide. That other man faces himself sternly, finds out in what department of himself, if in any, the fault lies, and mends that; does the best he can; goes to work again, it may be at the bottom of the ladder; fights very resolutely; pays off his creditors as he can, and is a stronger and better man for the rest of his days because of it. The Karma was there for the one man and the other; the first was bound by it, and the second free in spite of it; indeed, all the freer for its coming. So it is that the will of man, if he will take the pains to use it, is always stronger than Karma; it may use Karma, and move on triumphantly over adversity. And it is the will of Karma as we may say figuratively, that man shall come into that heritage of will; and its patient eternal action is all of it to that end.

And then there are the thousands of lives that you have lived to be taken into consideration, and how some of them have probably been more good than evil, and some the reverse. There are multitudes of good and evil things awaiting you, we may surmise; Karma alone can say which of the two may predominate. Which are you to have first of these two kinds? Which shall you expect and prepare for? The Teachers say, expect and prepare for neither, but only for whatever comes, that you may draw the fullest use out of it; for right resignation is plenary armor against mishap. And be assured that although we may say You will get whatever you deserve; we may also and better say You will have whatever you need; for it is man who invented this idea of revenge, and the Great Law knows nothing of it whatever. Its whole design is to teach, to lead, to cure; it may be called as well the infinitely merciful as the infinitely just Law, since it always takes the most economic measures towards its end.

Note this especially; that Karma in no sense interferes with our freewill, if we have any freewill in us; and if we have none, it is ever at work to bring freewill within us into being; since what it asks and demands and *will have* is that we shall be

men, full, complete and glorious in our humanity, perfectly exercising thought and will and compassion, filling this whole world with the excellence and aroma of our nobility.
R. F. D.

Answer II. Instead of the teaching of Theosophy affording any ground for doubt as to the possibility and existence of freewill, it is the only teaching that explains it and shows how it exists, dormant it may be or but feebly active, but nevertheless potentially in every human heart.

Under any other teaching freewill is either but a mere theory or impossible. Take for instance modern science, which is almost wholly materialistic in its premisses, method and aim: in it freewill cannot be anything but a mere theory, for science itself has no certainty outside of anything that can be investigated by physical instruments. Modern psychology, to which department of science the study of the will properly belongs, presents divided opinions and gives no sure footing, no knowledge; while in the theology which teaches the doctrines of original sin, predestination and the atonement, freewill as a logical conclusion is inadmissible and has absolutely no place.

In the teachings of Jesus, however, freewill is fully implied, and is a logical necessity. Take for instance his teachings: "Be ye therefore perfect, even as your Father in heaven is perfect." "Ye are gods." "The kingdom of heaven is within you." For these teachings are Theosophy, and they show, as is more fully exemplified in Theosophy, the only basis on which freewill is possible: *viz.*, the divinity of man.

It would have been well if the questioner had stated what he meant by freewill, for there is much misconception regarding it. Briefly stated, one of the fundamental teachings of Theosophy is that the whole Universe, and every part of it from the greatest to the least, and every being from the highest archangel to the smallest infusorium, is subject to law. Man's freedom of will therefore cannot go so far as to act outside or beyond the sphere of law, though he may put his puny strength to act contrary to it and may appear to succeed for his little day. In the kingdoms of nature below man, evolution takes place according to hierarchical law, but when the human kingdom is reached, man must progress by "self-induced and self-devised efforts, checked by his Karma." And it is taught that this is possible because of the presence in him of the divine spark, and of the awakening in him of this divine spark, by virtue of which he is man.

We are none of us wholly free in actuality but only potentially; and so too we are none of us wholly bound; but the extent to which we are free or bound *depends on ourselves*. And as the bonds by which we are bound have been woven by ourselves strand by strand, so strand by strand can we unwind them and free ourselves. The doctrine of Karma instead of being contrary to that of freewill, is, in conjunction with that of man's inner divinity, the only one by means of which it can be understood in the condition in which we find ourselves, "bound by the hundred cords of desire," slaves to habits and modes of thought, not rulers of our household, not now free, save to choose to enter upon and to follow the right path.

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

The Public Must Reform the Newspapers

A COLLEGE president says that newspapers are the chief agents in forming public opinion, by which the American people are really governed; but that the reform of the newspapers must begin with the people. Our statute books are full of laws which have not been enforced because public opinion was not behind them; and public opinion is fashioned by the newspapers. But the newspapers are the people's servants, and will print whatever they find the public will buy. Consequently it rests with the readers to initiate a reform, which they could do well by avoiding objectionable newspapers, both for reading and advertising purposes.

This is a very old story. The people is fond enough of asserting its rights; but, when it comes to duties, it is another matter. The people claims to be the real governing power, and yet it is always making out that it is the victim. Why does it not make good its claim to be the governing power by governing itself the way it professes to want to be governed? Newspapers are made by a section of the people; and all on the same principle as that which governs our dealings in other matters — the principle of making profit by gratifying each other's desires. Who is to blame for the candy habit, the makers of candy or the consumers? People indolently and self-indulgently pick up a paper and skim the most attractive and exciting parts, skipping the rest. The publishers are ready to oblige them.

To sum up: the whole solution of this and questions like it lies in the emergence of a responsible self-conscious body of opinion from out the seething mass of the population; and when the public gets into such difficulties that it finds itself compelled to "evolve a national conscience" or "invoke the aid of a god" (from within), these things will be set right. It is open to everyone to set about considering whether he will continue to act as a piece of drift-wood or whether he will begin to take a more serious view of his responsibilities and his opportunities as a human being and a member of society.

Each one in his own small circle can begin at any moment to take this more serious view; and the opportunities for putting it into effect will not be slow to follow such a resolve sincerely made.

T.

MEMBERSHIP

In the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

Initiation

By one pervading spirit
Of tones and numbers all things are controlled,
As sages taught, where faith was found to merit
Initiation in that mystery old.

SO sings Wordsworth, the poet of Nature, in one of those moods of intuition to which Nature wafted him in answer to the adoration with which he ever worshiped her august presence. The bare words used by the sages may be found still in many a school text-book or Sunday magazine, together with samples of the kind of effect they have produced on minds which did not have the faith to merit an initiation. But as to the *teachings* of the sages — why that, you see, depends so much on the capacity of the pupil, does it not? You can take a horse to the water, but you can't make him drink; and probably Pythagoras and Plato might have lost their way trying to find an entry into the minds of some modern interpreters of the classics.

We see here a recognition of the fact that real knowledge depends upon merit, and that sages could teach only those who had it. This teaching that number, sound, and harmonious proportions underlie the cosmos and all its workings was a cardinal teaching of the SECRET DOCTRINE; and we still have a few hints as to what Pythagoras and Plato taught in their private Schools. The Sacred Books of the East, too, are found to be full of the same subject; but to those who have not the key (mentioned by Wordsworth) they seem very abstruse or even nonsensical.

To understand Nature, we must harmonize ourselves with her; whereas the fact is that we behave a good deal like a pest to her. And besides devastating Nature to provide the materials for our artificial life, we insult her with our theories. Our idea of fathoming the mystery of life is to dissect dead bodies; Nature was to some of the ancients a goddess; to us she is a clock. We have so hardened our faculties that we have lost the power of perceiving the real conscious life of Nature;

and such slight perceptions there-of as we do retain we relegate to the domain of poetry, "the art of producing an excitement of the imagination."

But one has only to point to civilization as it is to prove the failure of our science. This science is the natural companion of a religious spirit that is concerned with the question of personal salvation after death, and that is a complete stranger, when not a foe, to the reverence of Nature. The Eternal is within us and around us; its worship means the making of our lives pure and lofty. Knowledge and revelation are within the reach of all, if they have faith in the Divinity that is with them and all around them. By reverencing all that is pure and noble in character, we can refine our perceptions and prepare the way for initiation into a greater wisdom of life. But by scoffing in our narrow self-conceit at the wisdom of others, we but shut ourselves out from the light.

H.

A Novelist on Reincarnation

THE well-known author of *She*, Mr. H. Rider Haggard, has recently testified to his belief in Reincarnation in the pages of a popular magazine.

"I am of the opinion," says he, "that all the people in this world today — at least the large majority of them — have been on this globe before and will probably be here again after they have passed through the mysterious condition which we now term death."

There seem to be three stages in the acceptance of any new presentation of truth. First the idea is scouted as transparently absurd. Next it is tolerated as a fairly reasonable hypothesis which cannot however be demonstrated. And finally it is universally embraced as a self-evident fact. It really seems as though the idea of many earth-lives for the soul, which Madame Blavatsky was ridiculed for teaching, is now beginning to enter on the third and final stage of its career. STUDENT

THE Self wakes from the dream, it is borne swiftly off to a new body, and then, just before birth, it sees for a moment all the causes that led it to *devachan* and back to the life it is about to begin, and knowing it to be all just, to be the result of its own past life, it repines not, but takes up the cross again — and another soul has come back to earth. W. Q. J.

THE THEOSOPHICAL ADDRESS AT ISIS THEATER

LAST Sunday evening at Isis Theater, Mr. Kenneth Morris lectured on the subject "Teachers, True and False."

In opening his subject Mr. Morris referred to the idea that certain would-be teachers taught that religions can be invented, and who itch for fame, not just ordinary fame, but the sonorous sempiternal kind, such as a dozen in all history attained, and who not only grasp at notoriety, but at great fortunes as well.

There have always been true Teachers in the world, and there have been quacks, and men have confounded the two, but time always separates out the one from the other.

The one kind are after money, and have an eye always for the effect; they are specious

Mammon," said the Teacher of old. Oh that those simple sayings of Jesus might be branded right into our consciousness, that we might realize their awful scientific validity. Why is it that we hear so many spread-eagle preachers screaming up and down their insistence that you shall save your souls; that you shall escape now, by some acceptance of dogma, by some ferment of the emotions, from the wrath to come; that you shall dwell upon and brood over, and morbidly coddle your own soul, your own fate, your own salvation—and so little said of those marvelous exact maxims which Jesus gave out to be a means whereby men might in truth work out their own and the world's salvation?

The true teachers in all ages taught the divinity of man, and out of the fact of human brotherhood they drew all their ethics. They

ner of means shall you escape the exact consequences. Such is the burden of the teaching of Katherine Tingley today, as it was of H. P. Blavatsky and William Q. Judge, her predecessors, and as it was in other days of every great teacher that ever regenerated the life of his people. This is the mark of the Truth—you will not call that a dogmatic statement—it is the mark of the Truth, because it gives firm ground for you to tread on, because it is as simple and natural as the solid earth beneath your feet. (OBSERVER)

Antics in the Pulpit

AMONG the phenomena of the age are not a few which the churches provide for us.

Not a few, and not uninteresting, if we go to them with a philosophic mind. It is said that a clergyman in the East has been adver-

Lomaland Photo. and Engraving Dept.

GENEVA, MONT BLANC IN THE DISTANCE

To the left of the bridge is seen the narrowed end of the lake; to the right, the beginning of the rapid, blue waters of the river Rhône

and theatrical; but can you not distinguish gold from tinsel? The others, the real teachers, are very simple and direct in their living; they have a grand necessity laid upon them by compassion, and they must go forth and obey.

All the old Teachers were possessed of the same Theosophy which they were at pains to give out to the world. Not one of them had the intention as such of forming a new religion; such an idea would have been utterly foreign to their whole thought and method. Nor did they have anything new to preach, since all their doctrines had been put forward ages before, time and time again, by a long line of their predecessors.

Think how very human, in the worst sense of the word, but how very undivine, how inconsistent with Theosophy, is the money-getting spirit in religion. Here, if anywhere, is the thing that marks out a lying superstition from true Religion. That which is of the spirit has no more to do with money-getting than a pig-sty with metaphysics. But is not this the thing which our modern faith-inventors have most copiously borrowed and improved upon? "Ye cannot serve God and

taught that the body existed for the soul, that the soul might gain its experience through it; and that the soul and mind do not exist for the sake of the body. Now, however, there are teachers of body-worship, the end of whose religion is to make the soul and all the hidden powers of man's nature minister to the body, who degrade faith into a means of evading well-earned aches and pains. Render unto Caesar the things that are Caesar's, and unto God the things that are God's. The inner powers of mind and soul cannot be degraded into selfish uses except under penalty of what we may call blasphemy. The ill goes back from the physical into the moral or the mental nature, and the last state of that man is a thousand times worse than the first.

The true teachers taught the infallible law that the Cause brings its Effects, and that all suffering is the wholesome and natural result of wrong-doing.

The true messengers can be recognized always by their message. They teach stern truth and no shams. They thunder out the inexorable Law—Do right and you shall prosper, prosper in reality, whatever the appearances may be. Do wrong, and by no man-

tising that he will perform, at his Sunday evening service (or services; we do not know whether the thing had any "run" as the saying is), the "famous handcuff act," with chain and padlock and all accessories.

The truth is, you cannot put new wine into old bottles; and the world ought to be at pains now to find the fitting vehicle for the strange new fermentations that are agitating it. The cry is all for life, more life; and our old methods of thinking are reversed and brought to nothing. When your mental and bodily horizons were the same, slowly vibrating ideas would satisfy you, and the old dogmas and methods were not easily exhausted. But now invention has changed all that, and news travels by hours and minutes, not by months and years. Antiquity has loomed up before us splendid, mutely arraiging our self-conceit. The pagans have shown us that they too are men; often better men than ourselves. This earth itself can no longer be deemed the central and only palace of life; thousands of stars have their life-bearing planets as well. Will the worn-out systems suffice us? Our minds are quickened; our horizons have receded by millions of miles. We must have

something vast to live by. We speak sometimes of the craze for sensation, lamenting its increase. But how could it be otherwise, since we are not permitted to be somnolent any longer; since the huge universe has broken down the barriers we set up against it, and is impinging upon us irresistibly from all sides? To it, Dame Partington! Be spry with your broom there; it is the Atlantic that demands entry. Half the world is playing Partington nowadays—at least, half the churches are.

Life, more life! cry the people. *We must have something that will jump with our own riot of feelings. Lead us not into mediocrity; deliver us from dullness. Life is quick work now, and the old-time droning will soothe us no longer.* So this great problem is set up for the churchmen to crack: how they shall bring the people to the churches. From all sides the lamentation arises that the congregations are getting smaller and smaller. The urge after "life" is taking men and women to the vaudeville, where they can see something which is at least, on its own questionable plane, living enough: that is, at least the working out of "ideals" (God save the mark!) of their own, of one kind or another. All that goes on in such places is in answer to some unrest and striving in the popular mind; which is by no means an excuse for it. The catchy music is demanded; so is the athletic dexterity and so on. But the churches—what have they to give? What human longing do they meet? It was bread that was asked of them; not stones, and not scorpions.

Evolution insists that man's nature shall be enlarged. The Higher Law is a great remover of boundaries, lest we should crystallize and mummify within time-honored limitations, and meet with no more growth. This world is unstable as the ocean; you are tossed hither and yonder, and must grow to be beyond the possibility of sea-sickness. How are you to call yourself man, if all new things are to fling you from your standing? On shipboard, we that are poor sailors yearn for the solid earth, and have no thought but this yearning. Can we go through life profitably, yearning for the time when cessation of discovery will end this abominable rocking and jolting of our minds, and give us firm ground for an undisturbed faith? The only firm ground is in character, is in our own divinity; man's soul is the Rock of Ages which neither storm nor earthquake can move. Earthquakes, mental and spiritual, have been multiplied upon us fearfully in the last few years, and the old landmarks have gone. Let them go. We shall find better ones within our own souls, being of the proud, divine race, humanity.

Now man is twofold, and whenever any cry arises for life, it comes from both parts of him. Then, when the *soul's* need is unmet, the *passions* will edge their way to the forefront, assured that at least their clamor and howling will not be in vain. As long as there are drink, vice, drugs, sensational printed stuff, vaudeville, and so on, the lower craving for life in us may go on gorging itself and demanding more, unless we ourselves assert our authority. These two natures are at warfare. Feed the soul, and the passions wane; deny the soul its proper food, and the result will be as we see it in the world today. Oh churches, if you had had the good food to give, the people would not have deserted you! The

bread was fossilized that you gave out, a veritable and profitless stone. You have exhausted the thing, there is no health in it. What you had is used up, and over-used, and re-used a million and a million times again. True things do not wear out. The true philosophy of life will serve as well in America now, as in Greece or Judaea of old. The human soul is always contemporary; no times nor lands are foreign to it. Thought-fashions and dress-fashions change, but all the issues of life are still pouring forth out of the heart of man. They cried to you for life—why did you present them with a ditch-water universe and a twice-cooked religion? Why did you take the pivot of our activities out of this present world, and store it away in the lumber room of the worlds to come? Life? Why, the soul itself is the fountain of life; follow the higher nature, and the universe becomes alive and magical for you; every event comes packed with meaning; no circumstance but is intense, dramatic, bursting with glory and sunlight. Each day comes to have its ordered place in your history; that history extending from the dawn of the world. Each day sees subtle legions and opposing pandemonia scattered before you. Monotony is gone, and the sky and the sea and the world, and all the lives of men are flaming and magnificent; they start up before you in all their richness; your moments go caparisoned like kings.

Was there no doctrine to teach here? Would not this truth of our inborn divinity have served your turn? It would not: it would have left no power in the hands of the priest.

It is Karma! The things wherewith you stifled and stultified men's souls of old, O churches, are the things that drive men away from you now. Men will have life, be it heavenly or hellish; *you* would give them only dry bones and sawdust. To turn to satisfying sensational tastes now will not help you one jot or tittle.

But sensationalism and so forth will not satisfy *your* cravings, you errant congregations. You will always want more and more. The goal of excitement-seeking is vice; vice never satisfied; *its* goal is ruin and decay. If you require life and satisfaction, the Higher Life is open to you. The divine center is in you: do your work for that center, and your days will be afire with all beauty and wisdom, and the whole joy of life. M.

Paradoxes in Astronomy: The Planet Venus

ALTHOUGH Venus, Earth's twin among the planets, approaches us more closely than any other primary planet, and gives us more light than any other heavenly body except the sun and moon, there is no certain knowledge of its physical condition, speed of rotation, or inclination of axis. Authorities differ bewilderingly; for instance, many hold that Venus' atmosphere is saturated with water and that vast cloud-masses obscure its permanent features; others, among them Professor Lowell of Flagstaff, deny this, claiming that dry dust-bearing winds blow almost continuously over enormous sandy areas, and that sharply defined outlines and shadings are easily seen. Venus, therefore, is either a dry, desolate, and barren planet, or a steamy, moist, and probably fertile one! There seems no

doubt though, that a mountainous region exists near the southern pole.

An alternation of day and night probably occurs on Venus, but even this is considered doubtful. One school declares positively that Venus makes but a single rotation during its whole journey round the sun, and therefore one hemisphere alone always faces the sun and enjoys perpetual daylight, the other being plunged into eternal night. Other competent observers insist that a rotation-period of twenty-four hours is conclusively proved. Among these are Jenssen, and, more recently, Stepniak and Hansky, who have made an exhaustive spectroscopic and telescopic study of this problem, favored by good atmospheric conditions on Mt. Blanc, Haute Savoie, France.

Another mystery is the true inclination of the axis of Venus. Some declare it stands in a nearly vertical position; others are convinced that it inclines fifty degrees!

Poor Venus! With an upright axis and a rotation period equalling its period of annual revolution, it can have neither alternations of light and darkness nor seasonal changes, and as its orbit is almost a perfect circle the amount of solar light and heat received must be practically uniform. Then as Venus has no moon there can be no lunar tides or months. If all this be true, existence on Venus would seem to be very tranquil, though decidedly uncomfortable from our point of view. If, on the contrary, Venus has a twenty-four-hour day and a highly inclined axis, great extremes of climate must exist and conditions would not be much better for us there.

Until something definite becomes known, speculation is pure guesswork, but there is one phenomenon which may lead to unexpected revelations. As Venus has no moon, intense darkness must prevail upon its night side, only relieved by the faint light of stars; yet, at irregular intervals, an inexplicable phosphorescence, or light, is seen dimly illuminating the shaded part. It is not confined to the poles and so does not appear to be auroral. H. P. Blavatsky speaks of Venus as being a highly advanced planet, "the most occult, powerful, and mysterious of all the planets, the one whose influence upon and relation to the Earth is most prominent," and "a little sun in which the Solar orb stores his light." In respect to planets in general, she quotes from an ancient Oriental classic:

The Spheres of Being or Centers of Life, which are isolated nuclei, breeding their men and animals, are numberless, and not one has any resemblance to its sister companion or to any other of its own special progeny. (*The Secret Doctrine*, II, 36.)

After all, then, perhaps we need not pity those living beings who are naturally adapted to the conditions on Venus or other planets; it may be they look upon us with compassion.

King Alfonso Sees Play Founded on Separation of French Church and State

PARIS, Oct. 19.—King Alfonso and Queen Victoria left here last evening for Madrid, after having been away on a visit of several weeks. Their Majesties attended the theater Saturday night and saw Paul Bourget's new drama, which was founded on the separation of the church and state in France. At the end of the third act Alfonso summoned the author to the royal box and congratulated him.—*La Lucha*, Havana, Oct. 20, 1908.

Art Music Literature and the Drama

Our Student Traveler in Dresden

AGAINST the curving background of the richly wooded Saxon hills rise the domes, spires and massive buildings of beautiful Dresden. Surrounding the city are lovely villas, set in the midst of fragrant gardens; encircling these are woodland stretches and verdant rolling meadows that in summer glow with vivid color like an Eastern carpet. Through these lovely changes curves the deep-bosomed Elbe, on her stately course into the Saxon city, which she endows with a character and charm hardly surpassed by any city in the world. Terraced gardens rise along the banks, and many bridges span the stream. There is an air of tranquil dignity and culture about the city. Dresden is sometimes justly called "Florence-on-the-Elbe," for like the famed city of the South it is a rich treasury of art and objects of worth.

The *Grüne Gewölbe* (green vault) is like Aladdin's cave, room after room surpassing each other in splendor. The walls of some of them are lined with objects wrought from jasper, malachite, agate, and lapis lazuli. Magnificent vases and founts of heavily ornamented gold and silver stand about; there are flagons and beakers of carved ivory set in chased golden bases; and chalices of mountain crystal, pure and sparkling as the lordly Elbe when it springs from the heart of the Riesengebirge. The room containing the crown jewels fairly dazzles the eyes with its lavish profusion of precious gems. In this room is treasured the double-handed coronation sword of the German Emperors.

The Royal library is a building full of noble interest and containing hundreds of thousands of books, including the most complete collection of historical works in the world. There are many beautiful illuminated manuscripts from the Middle Ages among its treasures, and also some early Greek works; a valuable and historic *Korân*; writings of Melancthon and Luther; and a manuscript volume with pen and ink sketches by Albrecht Dürer; as well as some of the first books ever printed—one by two of the inventors of printing themselves, Faust and Schaeffer, printed at Mayence in 1457. Of special interest to Americans is the ancient Maya manuscript on paper from the leaf of the aloe.

The very choicest treasures of Dresden, however, are the superb paintings in the Art Gallery. They were collected by August the Strong, King of Saxony, whose equestrian statue is one of the first objects of interest to greet the incoming stranger. The Dresden Gallery is a veritable Walhalla, where a glorious company of immortal creations are assembled, paintings that are known and loved in all quarters of the globe where Western art makes an appeal. To see these creations of genius before one in all their splendor of color, play of light and shade, and subtlety of expression, after knowing and loving them for years in the sober black and white of books and prints, is like an apotheosis of beauty.

You feel for a moment as if suddenly transported to the seventh heaven, where you are surrounded by the glorified images of your most cherished friends. The burst of color makes you feel as light and joyous as if walking on air, so generously have the painters poured their joyousness into their work; it breathes from their canvases like the fragrance of flowers. You feel this especially in the paintings of Correggio, of which there are some of the very finest in the Dresden Gallery. Correggio's true name was Antonio Allegri of the town of Correggio, "Antonio the Happy," we might call him in English. That he was happy, one need only look at his chubby angels to know without a doubt. He loved little children with all the warmth of his ardent Italian heart, and he studied their un-

derived from the worship of Dionysos; and the name "tragedy," which means "goat-song," is connected with the goat-skins which decked the limbs of the Dionysiac dancers. But the objection is that Dionysos was the god of mirth and joy; whether we consider him in his degraded form as the god of wine and license, or in his earlier and undegenerate form as the god of inspiration and divine enthusiasm—still he was associated with joy. But Greek tragedy is noted for sombreness and mournfulness of strain. As the critic says:

The natural man cannot but think it odd that when the Athenian set out to be really jolly, he should seek exhilaration in the lyrical presentment of a long series of lugubrious chapters from the sagas of his ancestors.

conscious grace as well as all their dear, funny, sincere little ways, and he hardly ever painted a picture without painting them into it. Like real babies, the sprightly *putti* are always doing things. STUDENT TRAVELER

New Theory About Greek Tragedy

THE theories which we find in books about the origin of ancient classic cults are no doubt extremely positively laid down; but they are none the less liable to sudden and complete revision; consequently we should always take them with a grain of salt and keep an open mind ready for the revision.

As one gathers from an article by William Archer in the *Morning Leader*, London, a professor has enunciated a new theory of the origin of Greek tragedy, which certainly removes some well known objections to the old theory. It has been supposed to have been

And the professor says that tragedy arose before the worship of Dionysos was introduced, and that that worship was afterwards tacked on to it. The real origin of tragedy he seeks in funerary rites.

The real origin of tragedy is this: it is a high art-form, intended to convey to the understanding of the masses a glimpse of those truths which were imparted in fuller and more definite form to the candidates for initiation into the Mysteries. Thus Aeschylus conveys a profound and intense realization of the workings of retributive justice. The drama, in short, had its origin in the Lesser Mysteries, in which much of the instruction was given in dramatic form. From this original status of the drama we may then trace successive developments, as it became less sacred and more popular. At the present time we note a marked tendency to return to the original purpose of the drama as a teaching power. H. T.

A RECENT visitor to the land of the Northern Lights, one Captain Amundsen, since his return from his long voyage has expressed himself as having been amazed at the musical gifts of the women of the Esquimaux. He found them capable of singing part-songs by no means of the simplest character without the slightest deviation from correct intonation. Among the Gilzaks of Northern Siberia the lyrics of the tribe were all the composition of the maidens. But the latter do not append their names to their compositions as the men of the tribe do not consider it fitting that a young girl's name should be publicly known or mentioned. Captain Amundsen remarks that this trait of primitive peoples may explain why so few women's names have been handed down to posterity; but with all due respect to this opinion, the writer begs to note that it has been a very common trait with peoples not primitive, even our immediate ancestors.

All close students of musical history are familiar with the struggle of Fanny Mendelssohn to win fame as a composer, a struggle which she abandoned in the early stages rather than face the settled opposition of her father and her brother Felix. So she unselfishly poured the wine of her own rich musical life into her brother's. A number of his *Songs Without Words* are, however, known to be hers, and the great composer frequently used her themes in his own compositions. It is historic that upon one occasion Queen Victoria, wishing to compliment the composer, who was at that time her guest, played for him one of the *Songs Without Words*, adding that it was her favorite one. Felix Mendelssohn, although sufficiently bound by conventional ideas to oppose his sister in her desire to win fame for herself as a composer, was too honorable to accept praise that belonged to another, and as the little *Song* played by the Queen was not of his composing, but his sister's, he said so, to the Queen's

Woman's Work in Music

great surprise and yet her evident pleasure.

Not wholly dissimilar was the history of the three women of the Couperin family who lived in Italy some hundred years after Elizabeth Claude Jacquet of France had won the praise of Louis Quatorze for her organ compositions. Except for current prejudice much more musical composition might have come

TWO powers fight for the mastery of the human soul while it is fettered within its temporal body. One serves the idea of the Eternal, the incorruptible, referring the human spirit to its origin and final goal—both at bottom one and the same thing. It tries to make the free will follow trustingly the path leading thereto. The other serves what appears in the world of senses, the finite and transitory, consequently the corruptible, and tries to lead the free will to occupy itself above all with everything that belongs to that world.

Both are rulers of strong forces, within as well as outside of man; both have rich persuasive powers and attractions. Whichever of them man should follow he can know by the voice of the conscience; even the testimony of the world's history shows it to him, if rightly seen and taken as a whole; and true religion above everything lights him with its hope of eternity, its promises of release from the restraints of time, and its victory over mortality.

—King Oskar II of Sweden — (Translated by a Swedish Student in Lomaland)

from women's hands, all down the ages, in spite of the slender educational advantages almost universally accorded women for many hundred years until today. Our biographical dictionaries should furnish a much longer list than they do of names of women composers. So remarkable a woman as Miss Sarah Glover of England, inventor of the tonic sol-fa system of music-teaching—a system that whatever its merits is now being used in nearly every country on the globe—is not even men-

tioned in the English Dictionary of National Biography.

It is related that the fame of one Djemile, of Medina, who lived in the first century of the Hegira, was greater as a musical composer than that of any Mussulman of her day. Yet Djemile was a slave-girl who learned all that she did learn of others by listening to a neighboring musician improvise upon the lute. Soon she found that she, too, could compose melodies and that they often turned out to be prettier than those of her neighbor. By teaching what she could of this gift to her master's daughters Djemile finally earned her freedom and, after a visit to Mecca, she became one of the musical glories of the East.

A recent writer says, anent later conditions:

A blank of centuries occurs without a mention of woman in musical history. The Middle Ages and the Renaissance pass on, the art of music is built up, instruments are invented, counterpoint and harmony created, and woman has not set in the tiniest corner, supplied one stone to the great edifice—that is, so far as documentary evidence goes. How far woman's influence inspired and shaped the work claimed by man is another question altogether. But there was a reason for her silence, apart from a want of ability. It was not that she had no desire to work that her heart and brain did not call her to the great creation of the day. She was simply shut out. Music was for the churches, for the divine office, and there woman was not allowed to enter. She filled the churches then as she does now, she gave her means for their support, her life in their service; but liturgical rules kept her strictly outside any active part in religious ceremonies. The cathedrals resounded with music, but a woman's voice was never heard amidst the swelling numbers. Many people trace the absence of musical initiative and force in women to these centuries of restraint, but that seems going to unnecessary lengths for an excuse.

Times have changed, however. Today the woman composer is everywhere to be found and some of our most serious and masterly works are from woman's hand—as *Les Amazones* for chorus and orchestra, and a Suite for orchestra by Mlle. Chaminade; the

Fantasia in G for piano and orchestra by Dora Bright which was not long since performed by the London Philharmonic, the first instance of an orchestral work by a woman ever being admitted to the programs of that society; the Gaelic Symphony and Mass in E flat (the latter written for soli, chorus, orchestra and organ) by Mrs. H. H. A. Beach; the Suite No. 20 of Agathe Backer-Grøndahl of Norway; the operas of Carlotta Ferrari of Italy; the Symphonies and Overtures for full orchestra of Jeanne Louise Farrenc, whose work was so remarkable that Robert Schumann, in reviewing it, considered it impossible that she had done it unassisted, which was however the case; Clara Schumann's Trio in G minor for piano, violin, and cello, op. 17; the operas of Paradis, blind almost from her birth, and whose work was so admired by Mozart; the Symphonies of Emilie Mayer of Germany, and doubtless many others, could time be taken to secure data, not to mention numbers who have composed in the lighter forms.

In a recent paper we read of the public performance of a serious composition by one of the German royal princesses, and tomorrow we are likely to read almost anything. Times change, and the old order passeth, giving place to the new. STUDENT

Women in Landscape Gardening

NOTABLE among the growing number of women who are taking up landscape gardening as a profession is Miss Harriet Cullen Bryant, a descendant of the poet of that name. She has been called "an artist to the finger tips" and has achieved almost marvelous results in the way of transforming gardens. She has turned many a miniature and unpromising spot into a fairyland of beauty and one of her delights is to undertake the transformation of abandoned farms. Miss Bryant studied her art for two years in the Royal Botanical Gardens at Kew, England, afterwards serving as a practical gardener for three years in the Isle of Wight.

Several California women are gaining fame for notable work in this line, among them one, who in addition to practical work, is well known as a writer on gardening subjects. Regarding her most recent work, the landscaping of the grounds about one of California's new palatial hotels, she said recently:

One cannot come into California, though one is well trained technically elsewhere, and be a successful gardener. I presume I have "prescribed" for more gardens in California than any man or other woman, and wherever I go over the State I meet my own designs or developed suggestions and plans. When I was a mere slip of a girl I designed three country parks, and these have since brought into value four hundred acres of land.

My life as a professional gardener has developed slowly, and, although I have never made any attempt for recognition, I have in the last two years executed several important commissions. Lately, with

the aid of my husband, I have been able to take up architectural details that formerly appalled me. The varying conditions of the climate and soil in California necessitate study.

The — is a stately and dignified structure of the most approved modern type, and in its lines a certain formality exists, which must impress even the most superficial observer. In this garden I shall endeavor to express this same simplicity of design, but shall with carefully chosen color schemes lend life in beautifully blossoming flowers to the already splendid scene.

Of course the proximity to the ocean has to be considered in the choice of every tree and plant. In planting these grounds, we shall draw from the flora of the West Indies, the Canary Islands, Brazil, Mexico, Australia, Japan, and China. H. E.

A NATIVE BELLE OF PANAMA

Theosophy and the Home

IT has been often said that "home is where the heart is." The heart is the seat of life, the center from which radiate forces that go to make up the sum total of life, the fountain-head from which flow the streams and rivulets that water and keep green the garden of our existence. Yet if this great center radiates only evil forces or the fountain sends out only bitter and poisonous streams, what must be its influence?

Around the name of home cluster the sweetest memories of life, of tender association, of love and shelter. When buffeted by the storms and sorrows of life, we instinctively turn to this one spot or center, *Home*. Just a little word, but oh, the magic of it! There are homes and homes, but sad it is that not to all is given the comfort of looking back to a home fraught with these memories.

If Theosophy were understood and lived, then would there be unselfishness and love and always kindly thought for others. Not the sentimental idea that *my* home, my children, my position in life are the best; but parents would recognize the force of this mighty power, its influence either for good or evil, that is working through them upon their children and children's children, upon all with whom they come in contact. They would realize that Brotherhood is a fact in nature; that all are bound indissolubly together; and that as we live our lives each day in our homes or elsewhere, so will it be well with us — or ill — in future incarnations. They would realize the necessity of making the fountain-head pure, and sweet, and wholesome, so that only love and harmony may flow from it; that the great home dynamo should generate only the force that gives life and joy to all, running so smoothly that there is never danger of waste power or explosions; that the father and mother of the home should be as capable engineers, recognizing the great source of strength by which they are enabled to guide and guard this holiest of holies — the home; that it is in and through and by this divine power, which is their Higher Self, and in the overcoming of their lower natures, that they alone can gain strength to influence and guide aright the little lives entrusted to their care.

Parents must realize that Theosophy is practical; that it may be lived here and now; that it teaches the sacredness of marriage, the purity of the home, and that it is never too late to begin to adjust and set right; that every effort, either in a right or wrong direction, increases the joy or sorrow of the world. They should teach their children that real happiness is not in the accumulation of wealth — which so soon takes wings and flies away — but that love and kindly thought for others' welfare are the only treasures we can *keep*, and that the home, as a center, should be the real nursery, the real fountain-head — the soul, the divine consciousness. STUDENT

Jottings and Doings

(From a Student's Note-Book)

FOR twenty-seven years the light-house of Santa Cruz (Calif.) has been tended by a woman, during which time the light has never gone out nor has a wreck ever occurred upon the Santa Cruz coast. The only recreations this happy and faithful woman says she cares for are an occasional day's outing and the gathering of shells and sea specimens, in knowledge of which she has become an expert.

A LARGE number of women in New York state have recently united in a determined effort to do away with unclean literature. Said one of their number recently:

Public opinion is indeed a mighty regulator of conduct and to arouse a better public sentiment in this matter not only lies in our power but is our duty.

OUR YOUNG FOLK

John Milton

THREE hundred years ago in Bread St., London, there lived a family who loved music, art, and poetry. They were very religious too, and had high ideals. The father was a notary, but was also one of the best musical composers of the time, and the mother was well known throughout the neighborhood for her acts of charity. In this happy home, on December 9, 1608, one of the greatest English poets was born—John Milton.

With harmony in his home, and a father who gave him every educational advantage that was to be had, it is not surprising that the boy grew up with noble aims. His youth was pure and blameless. He kept always in mind a great work which he intended to accomplish and he bent all his energies to preparing himself for it. At first his father wished him to be a clergyman, but he loved music and poetry dearly himself and could not refuse his son permission when the latter pleaded that poetry was his chosen field of work.

Milton kept on with his studies for many years, writing beautiful poems from time to time. Two of these were companion poems, *L'Allegro*, a sketch of true lightness of heart and innocent joy, and *Il Penseroso*, one of the grave, earnest, thoughtful nature. Milton had a friend, Henry Lawes, who was one of the chief court musicians often employed to present masques on festive occasions. It was through him that Milton came to write the words of *Comus* and *Arcades*, both of which were produced with music by Lawes.

A period of travel followed the student years in England. Milton went to France, Italy, and Switzerland. Everywhere he met famous scholars and literary men and won their admiration and respect. In Paris he met Grotius, the great Dutch jurist; in Italy he visited the great Galileo, then old and blind; in the literary academies he made many friends. He wrote Latin poems that delighted them; and as he spoke Italian like a native, enjoyed to the full the companionship of the cultured Italians. It is said that most of all he enjoyed the music he heard; for Milton had been a student of music from boyhood. He was in the midst of collecting books and music, and was planning a visit to Greece, when the news reached him of the troubled state of affairs in England. Then he turned his face homeward, as he "thought it base to be traveling for amusement abroad while his fellow citizens were fighting for liberty at home."

When he returned he found that his old friend, Charles Diodati, was dead. In his grief he wrote a beautiful poem in Latin, *Epitaphium Damonis*, in honor of his friend. This is not so well known as *Lycidas*, a poem he had written on the death of another friend, Edward King, but it is a cry from the poet's heart, and in it we learn that Milton was planning to write a great poem about King Arthur. This he never did, however.

For twenty years, after this, Milton wrote

Lomaland Photo. and Engraving Dept.

IN UTRECHT, HOLLAND

STANZAS FROM MILTON'S HYMN ON THE MORNING OF CHRIST'S NATIVITY

RING out, ye crystal spheres,
Once bless our human ears
(If ye have power to touch our senses so),
And let your silver chime
Move in melodious time,
And let the base of Heaven's deep organ blow,
And with your ninefold harmony
Make up full concord to the angelic symphony.
For if such holy song
Enwrap our fancy long,
Time will run back and fetch the age of gold,
And speckled Vanity
Will sicken soon and die,
And leprous Sin will melt from earthly mould,
And Hell itself will pass away,
And leave her dolorous mansions to the peering day.
Yea, Truth and Justice then
Will down return to men,
Orbed in a rainbow; and like glories wearing
Mercy will sit between,
Throned in celestial sheen,
With radiant feet the tissued clouds down steering,
And Heaven, as at some festival,
Will open wide the gates of her high palace hall.

no more poetry. He gave all his time to writing pamphlets, tracts, and letters on questions of the day. He considered it his duty to help to form public opinion, and he spared no effort in trying to do this, sometimes using great severity in his earnestness. Milton was the champion of freedom for the press, and liberty of conscience. Roger Williams, who fought for the latter so bravely in America, was a friend of Milton's. Under the Commonwealth Milton was Latin Secretary, and even after he had become blind in 1653, continued to compose state papers.

His last years were spent in retirement, and then, ripe in years and learning, he wrote his great poems *Paradise Lost* and *Paradise Regained*. Blind and poor though he was, he

never lost courage. He said: "In the night with which I am surrounded the light of the divine presence shines with a more brilliant luster. God looks down on me with tenderness and compassion because I can see none but himself." Scholars from distant lands sought him out because of his great learning, and friends came to share the long hours. Among those who frequently visited him was the poet Dryden.

Milton was always a lover and student of music. And it is with stately organ music that we associate his verse. We honor him because, with the words of the language we speak and love, he made this mighty music that delights and trains the ear. STUDENT

In Holland

IN Holland December 6th is a festive day for the young folks. On the evening of December 5th Santa Claus makes a special visit to Holland. The Dutch young folks do not call him Santa Claus however; among them he is known as St. Nicholas, and St. Nicholas Eve holds for them all that Christmas Eve brings to boys and girls in other countries. St. Nicholas then appears in the homes, dressed in a long, richly trimmed robe, wearing a high cap, and holding a staff. He knocks at the door and enters on a merry scene, for the whole family is gathered together and the children are singing and dancing. He greets every one by name and seems to know the record every boy and girl has made since his last visit. Next morning it is found that he came with a full pack, for there are gifts for every one. THE blessed work of helping the world forward happily does not wait to be done by perfect men.—George Eliot

EVERY noble life leaves the fibre of it interwoven forever in the work of the world; by so much, evermore, the strength of the human race has gained.—Ruskin

THE CHILDREN'S HOUR

A Remembered Tale

ONCE, upon a time, in a land over the seas, there lived a poor woman who had an only daughter whom she loved very dearly. From sunrise to sunset this good mother worked in order to earn the money to take care of the little child. To do this she was obliged to go to the nearby town every day, leaving the little Irmgarde in charge of the neighbors. This was not good for her as the mother knew.

One Sunday when they were out in their tiny garden together, the lady of the castle passed and stopped to speak to them. Something in the poor mother's face as she chided her little daughter for pulling a flower to pieces, caught the lady's attention. Soon by her gentle winning way, she won from the mother the sad story of her life, and her fears for Irmgarde.

"Let her come to the castle," the kind lady said, "and she shall be taught all things necessary to make her a happy, useful woman. When she is old enough to take care of herself and of you, she shall come back again." Irmgarde was delighted with the idea of going to the castle, and clapped her hands for joy. Her mother, thinking that it was for her good, consented. It would have been a happy day indeed for Irmgarde, if it had not been for a tiny seed of evil deep down in her heart.

In the castle a new life began for Irmgarde. Her kind mistress gave her many opportunities. She was taught to read and write, to cook, to clean up, to sew, in fact all that was necessary to make her a useful, happy woman. But as Irmgarde grew up her mistress noticed with pain that the young girl was selfish and vain; for she thought very little of her hard-working mother in the humble cottage, but always of herself. Irmgarde had learned to sew and embroider very well, and nothing pleased her better than to spend her spare time in making pretty frocks and dainty caps and aprons for herself. At Christmas time, instead of taking the money which she received as a present to her mother to put away for her old age, she bought with it a pair of high-heeled red shoes, which she hid away in her box.

One day Irmgarde's mistress called her and said: "My dear, it has been long since you have visited your good mother. Go to see her this afternoon and take her, with my compliments, one of the fine big loaves of bread that you helped to bake yesterday. You may stay several days." Irmgarde was delighted. "I shall wear my red shoes," she thought, and dropped a hurried courtesy and left the room.

Irmgarde set forth very blithely in her new pink muslin frock and bright red shoes with the high red heels, with the loaf of bread tucked under her arm. "If I only had not to carry this old bread, how happy I should be," thought Irmgarde. It was a very large, round, thick loaf of bread, dark brown, hard, and shiny on the outside, but sweet and wholesome within. Irmgarde never thought of that, however, nor how welcome it would be to her

mother. She thought only of herself, of her pretty dress, and of the bright red shoes. Especially of the bright red shoes.

So she went tripping along daintily, her head held high, when all at once she came to a muddy place in the road. "How can I get over this horrid puddle without spoiling my pretty red shoes?" thought Irmgarde. "Oh I know!" and as quick as a wink she threw the big loaf of bread into the mud and sprang lightly upon it. But oh, horror! the moment her feet touched the bread, Irmgarde felt herself begin to sink. She tried to jump off, but the high red heels stuck fast to the bread, and down, down, down she sank slowly through the thick black mud, till all at once she settled down with a heavy "plunk!"

"Why, who in the world is this?" asked a rough, harsh voice, and a coarse, ugly face peered into Irmgarde's. She wanted to answer, to toss her head in reply, but she was so covered with mud from head to foot that she could only blink her eyes in indignation. In-

The wind is passing by.

deed, as the days passed, Irmgarde found that she would never be able to move again. Her feet were stuck fast to the bread, and as the mud hardened about her, she found that her whole body became as hard as stone; even her pretty hair, of which she had taken such care, was stiff and coarse with mud. But worse than all, Irmgarde's heart hardened too, and it was like a rock in her stony breast. Only her eyes moved restlessly to and fro, and she could hear all that was said around her and in the upper world as well. So she knew of her poor mother's grief and sorrow, and the pain of her gentle mistress over her disappearance.

Irmgarde had fallen into the kitchen of an ugly old witch, who didn't feel sorry for her, but, instead, called in her evil companions to

laugh and jeer at her sorry plight. Besides this, the witch's kitchen was filled with ugly flies and gnats that buzzed about her ears all the time, and stung her face and hands. Being stiff with mud, she could not lift a finger to drive them away.

You would think that during the dreary days and nights in the witch's kitchen, that Irmgarde would have looked into her own heart and found there the cause of her fall, but no, she always blamed her mistress for sending her on that fatal visit to her mother, and the heavy round loaf of bread for dragging her down. Just as the sun's rays never brightened the dull gloom of the witch's kitchen, so no thought of gratitude to those who loved her penetrated her heart.

In the upper world, where the sun shone, Irmgarde and her sad fate were not forgotten. Often fathers and mothers would tell her story as a warning to their children. One day a mother with her little daughter walked out into the spring sunshine to gather flowers. After a while they sat down to rest on a grassy knoll. "Tell me a story, mother dear," the little girl said. So the mother told her the story of the girl, who, to save her pretty red shoes, had trodden upon bread.

"Poor Irmgarde," said the little girl, "how I wish I could help her." And two tears of compassion fell from her eyes.

The crystal drops sank through the earth, and down, down they fell on the stony heart of Irmgarde standing alone in the witch's kitchen. She suddenly felt her heart soften and grow warm. Tears started to her eyes. "Oh, how wrong I have been!" she exclaimed, "Mother! Mistress! can you forgive me?" and poor Irmgarde clasped her hands over her heart.

The little girl looked into her mother's face and smiled. Just then she saw a bird spring from the ground, flutter its wings timidly, and fly away toward the sky, losing itself in the golden light. O. W.

A Polite Fox Terrier

MAX was his name and he was known to be very courteous to any dogs who came to visit the household. He would even stand by and see his playthings chewed into fragments by a visitor, especially if it was one he was well acquainted with.

One day Max was given a new ball. He was proud of it and enjoyed playing with it. A few days after a young bull terrier came for a visit. Max's mistress knew that this would be the end of the new ball and she called to him to put it away in a safe place. Max looked everywhere for it, but, when he found it, there it was in the paws of the visitor. Max then licked her nose and, as he did this, picked up the ball, and then ran off with it. Then he very quickly put his old ball in its place, for her to play with and tear up if she liked. He is a courteous dog, you see, but he is careful too. Before changing the balls he glanced at his mistress as if to see what she thought he had better do. G.

THE MYSTERIES OF THE HEART DOCTRINE

Prepared by
KATHERINE TINGLEY
AND HER PUPILS

The Theosophical book of the Twentieth century

Tells the story and the history of the Theosophical Movement.

The prices are \$2 in cloth and \$1.25 in paper, which barely cover the cost, for it is printed and bound, not gaudily, but with such carefulness and thoroughness of art and craft as to make it unique among modern edition books.

Order now from
THE THEOSOPHICAL PUBLISHING COMPANY

SOME OF THE ERRORS OF CHRISTIAN SCIENCE CRITICISM

by **H. P. Blavatsky and William Q. Judge**

CONTENTS:

"The Empty Vessel Makes the Greatest Sound"
A Note of Warning

—by **H. P. Blavatsky**

Of "Metaphysical Healing"

Affirmations and Denials

The Cure of Diseases

Replanting Diseases for Future Use

—by **William Q. Judge**

A MOST VALUABLE PAMPHLET. Outside of Theosophy there is given no adequate explanation of the healing that is at times accomplished, nor of its rationale, nor of the ultimate price that must be paid and the dangers connected with such practices.

This pamphlet is invaluable to all students.

An Astro-Myth Theory

IT has frequently been urged in this Review that the teachings of Theosophy, and especially the writings of H. P. Blavatsky, contain information which affords a key to the many unsolved problems of human history; for these teachings are based on traditional knowledge that has been preserved unbroken from time immemorial by the Guardians of ancient Wisdom. Nor is it necessary to rest such a claim upon assertion alone, since the validity of the key is determined by its power to do what is claimed for it — that is, unlock the aforesaid mysteries. And H. P. Blavatsky has sufficiently proved, to the sincere and candid seeker for knowledge, that the few hints which alone she judged fit to give, can effect this result. For she takes the various facts admitted by archaeologists and historians, the various accessible records and traditions, and the conjectures of various students of ancient lore, and, by the aid of these hints, weaves them all into a symmetrical pattern; thus revealing to the unprejudiced mind the fact that what appears to the various detached phases of modern thought as a mere jumble is in reality a self-consistent whole — completely so.

In this age of easy publication one finds a number of curious and conflicting theories put forward by students whose studies have covered only a restricted range of facts, and whose conclusions are therefore premature from their not having taken into account many other facts which though well known to other theorists, have not come under their own observation. Were these various theories all brought forward in a debating club, the friction of opinions would eliminate the contradictions, and the summing up of the chairman would render a more mature and comprehensive view. But, as it is, each one rushes into print on his own account, and each one is able to endow his own case with that air of plausibility which always attends the presentation of one side of an argument — until the other sides have been heard. If there could be more collaboration among the different researchers and theorists, then the pooling of their results might produce riper judgments, and the weighing of evidence might precede instead of following publication.

Patchwork, Mutually Destructive Theories

In a book entitled "The Judgment of Paris and some other legends astronomically Considered," reviewed in the *English Mechanic* (which also alludes to an earlier work by the same author, called "Ancient Calendars and Constella-

tions"), we find such a theory set forth. It is stated that —

On linguistic grounds Max Müller was led to the belief that many of the myths of the Aryan races were solar myths, based on the observation of the for ever recurring struggle between Light and Darkness. . . . But if the teachings of archaeology have been rightly understood, and if we may now credit the races of mankind at a date as early as, and probably at a much earlier date than, 4000 B. C., not merely with admiring observations of the greatness and glory of the sun in his daily course across the heavens, but also with a scientific observation of his yearly course through the stars — stars already mapped out into signs and constellations — we may go further than Max Müller, and expect to find, not merely solar, but also astronomical and sidereal myths imbedded in the religions of all early races. . . .

We answer: "It is the very last thing we should have expected, under the circumstances, to find." That the nations of antiquity, observing the annual journey of the sun through the ecliptic constellations, should thereupon agree with one consent to chronicle the details of that phenomenon in the most marvelous, elaborate allegories, which we find in their mythology, is impossible to believe. Even if we admitted that one nation might do it — and that would be a very generous admission — and even if we went further and allowed that one or two other nations might copy the system from the first nation; still even then we should never "expect to find" these myths "imbedded in the religions of all early races." To continue the quotation:

We shall then picture to ourselves Athena and Hera, the deities who especially espoused the Grecian cause, as deities presiding, more or less definitely, over calendrical and cosmic years originally counted as beginning at the winter solstice.

Aphrodite, the friend and protectress of Troy and its allies, we shall think of as a goddess presiding over the midsummer season of the year. . . .

Advancing one step further, let us now assume that not only the deities favorable to Greece and Troy symbolized astronomic and calendrical facts, but also the Grecian princes and heroes symbolized phenomena connected more or less closely with the winter season and that the Trojan princes and heroes were similarly connected with the summer season.

Similarly, we are told, the history of Achilles, Ulysses, the two Ajaxes, Agamemnon, and the stories of the Laocoon and the Wooden Horse are dealt with.

And we are seriously asked to believe that the whole mythology of ancient Greece had this origin and this sole purpose! But this is not all; for we cannot refuse the same theory for the still more voluminous symbology of ancient India, nor for the ancient Scandinav-

The Assurance of Self-Sufficient Ignorance

ian legends, nor for those among the tribes of America, nor for those of any ancient race whatever. The theory is so very far-fetched that almost any hypothesis seems preferable. The marvel is that so many people claiming the status of scholars should be found to consider such theories seriously; it will certainly

**Credulity
in Place of
Thought**

be for future generations the stock instance of the credulity of the present age. That the matchless art of the Greeks should have been inspired by no other idea than that of symbolizing astronomical facts; that the sublime tragedies of Aeschylus should have had no other inspiration and purpose; that generation after generation of men, from the far north to the equatorial plains should hand down long and elaborate epics, the fathers teaching them to the sons and the mothers chanting them over the cradles, and all for no other purpose than to preserve astronomical facts — exhausts the possibilities of language to comment adequately upon it.

Will the Theosophist be thought a crank if he seeks other sources for the universal inspiration of these myths and epics and works of art? There is only one thing that could be worthy of being enshrined in such a beautiful and elaborate structure, only one thing that could have inspired so much devotion, achievement, and universal interest. That one thing

**The Pilgrimage
of Man the
Great Epic**

is the great SECRET DOCTRINE of the ages — the Science of Being, which was always taught in this allegorical form, that it might be a revelation to those who had "ears to hear," a blind to those who had not, and an indestructible shrine for the truth. If Herakles represents the human Soul, and his twelve labors the various victories which the Soul has to win in its pilgrimage to freedom and light, then the myth has a meaning worthy of itself; but if Herakles only stands for the sun going through the constellations, how great is the disproportion between symbol and meaning! There is a connexion of course between the solar zodiac and the story of Herakles, but that naturally arises from the fact that both are symbols of the same thing, for the cosmic phenomena are themselves intimately connected with the drama of human life. And the zodiac? It is spoken of as though there actually were twelve pictures painted on the heavens, whereas a

**Man a Related
Part of a
Harmonious
Universe**

mere glance ought to assure the most credulous that nothing of the sort is to be seen in the sky. Whatever the origin of the twelve zodiacal figures, it is clear they were not derived from the shapes of the constellations. We must therefore seek some other reason why a certain arc of the ecliptic should have been denominated the Bull and another the Lion. When the sun reached particular stages of his course, particular influences were shed by him upon the earth, which the ancient mystics recognized and made use of. Also in the inner nature of man are various powers of the Soul, corresponding to the various cosmic influences. These matters were studied by the ancient Science; and that Science had a symbolic language just as much as ours has with its H_2SO_4 and $\frac{1}{2}mv^2$. It is among the fragments of this ancient and universal symbolic language

that modern scholars are fumbling and trying to fit together the odd pieces they find, but it needs wiser heads to make out of them a harmonious whole.

STUDENT

Are the Churches Doomed?

"ARE Evangelical Churches Menaced?" writes a contemporary, at the head of an article on that subject; but, as the question in that form might seem to imply that other kinds of churches are not menaced, it would be better to leave out the descriptive adjective; for the remarks made certainly apply with equal force to churches of every class.

The writer says that religions are based on the yearning of mankind for completeness of life and for the adjustment of their spiritual aspirations with their material circumstances; and that people value religion only in so far as it is able to do that for them. Hence the churches are doomed to extinction because they can no longer fulfil the requirement. He says it is of no use to know that another went about and did good, unless we can find the principles which enabled him to do it and apply those principles to our own case; and that we cannot rest satisfied with the reflection that another was the "Word made flesh," unless we can find something corresponding in ourselves.

All this is very true, and has often been said in these pages; it is said with ever greater frequency in the columns of the daily press, where the ministers must read it to their chagrin. Where is the "Spirit," that holy and inspiring influence whose shedding the churches are supposed to render possible? Instead of inspiring and leading men, they are humbly following in the wake, doubting with men, and with men seizing upon every passing straw of hope. That these institutions in their present form are superannuated there can be no doubt; as men must have a faith, there will be a reorganization; and, as always, that reorganization will have its origin from without. It was the dawn of a wider knowledge, of history and culture, that forced the renovations of ecclesiasticism in past centuries. It is the new Renaissance which will force the present renovation. The enlarged knowledge of ancient history is rendering many of the old claims of the churches absurd. The pressure of modern conditions is rendering imperative a religion which can give men the strength to cope with them. Ordinary prophets may see in the future but little hope amid all the decaying faiths and headlong propensities of civilization. But when the THEOSOPHICAL SOCIETY AND UNIVERSAL BROTHERHOOD was founded, a seed was planted that was destined to be the center of a new life in the time of need when all men will be asking everywhere for something real and permanent.

STUDENT

Afraid to Tackle Abuses

RECENTLY certain statesmen argued against the introduction of legislation prohibitive of juvenile smoking, on the ground that the forbidding of the tobacco would only make it more desirable to the boys, and that thus the law would defeat its own object. It seems scarcely credible that people of prominence and repute should commit themselves to such a sophistry. Are govern-

ments to bow in fear before the children, in hopes of cajoling natures which they fear to offend by commanding?

The statesmen in question may have other good grounds for opposing this legislation, but that does not affect the weakness of the above argument. We meet the same argument in the much lauded policy, affected by some, of letting people talk and plot as much as they please, so long as they do not *do* anything; this is called a "safety-valve." We meet it again in the wild theories about letting children have their own way.

Such arguments derive their only show of plausibility from the fact that they are reactions from the opposite extreme of unwise coercion and petulant interference; but the circumstance that something else is also an evil does not make them good. This refraining from action for fear of arousing the enemy is a weak attitude, arguing a lack of conviction of the merits of our cause. The adversary owes much of his ascendancy to sheer "bluff," which succeeds as long as it is not challenged, but disappears under firm handling. The defiance of the children is a challenge to us to do our duty firmly, and such action on our part would be welcomed by those whom it benefited. For do we not owe the children, above all things, protection? And is it protecting them to place temptations in their path and at the same time deny them help against these temptations? Shall we shirk our duty?

STUDENT

The Crumbs and the Loaf

THE three Times lodged with the World-Man a complaint against the time-man.

The Past: He wakes me up. I would fain sleep and even be in some of my members dead. He drags me into the hard daylight and I am rudely jostled by the youthful energies of the present.

The Future: Before I am born he evokes me and twists me out of shape. When in my due season I come naturally I am already aged and deformed.

The Present: From me came the Past and from me will come the Future. I am the parent of both, yet he gives me no honor. His attention is forever upon these my two children.

The Past and the Future, together, to the Present: Our parent indeed! You do not even exist. You are but the line between us two.

The World-Man: I made you all three to be the mere temporary nurses and teachers of my child, the time-man. I made you from the shadow of the ever radiant Now. Let the time-man come back to me and I will dissolve you.

The time-man: To be crystallized in an eternal monotony? Woe is me!

The World-Man: Poor little time-man! Why should it pleasure thee to see the great light of the Now through the shadows of Was, Is, and Will-be? Whatever they show thee dim and partialized, that is in the Now radiant and whole. Dost thou prefer the dim and partial? Clouds across the solar splendor of the Now, such is the time and the Times thou lovest. Knowest thou not that what thou really lovest is the gleams between? Come! Look.

STUDENT

Some Views on XXth Century Problems

Civilized Longevity

AN eminent statistician, Mr. William Graham, writing in a contemporary, makes the following remarks:

There seems to be a general willingness to believe that modern hygiene, sanitation, medicine and surgery have effected increase in human longevity throughout that portion of the civilized world that enjoys such improvements. Unfortunately there are not reliable data of previous censuses to confirm the theory or give support to this deduction, plausible as it appears. Much of the heralded advances undoubtedly serves only to prolong the life of the young weakling, who must eventually succumb with a gift of a few added years or days. If adult longevity has increased appreciably under the strain of latter-day nervous activity, particularly in America, it remains to be statistically established.

It might provoke a little useful thinking if that were printed on New Year's morning in every newspaper. For the public has been gradually taught the contrary. It is the few years or days added to the life of the young weakling, and especially the better understanding of the dietetic hygiene of infants, that has lately advanced the death-rate the two or three years of which we talk so much.

Averages result from individuals; the public is made up of individuals. If the average is to be altered noticeably or quickly, the individual's attention must be brought in upon himself, not thrown out on generalities, upon the progress of medicine and surgery, and upon the inaugural addresses at Hygienic Congresses and Congresses to consider Tuberculosis. He must ask himself whether his own personal ways in his private life are such as promise to conserve his vitality for the longest service, and whether they are better in this respect than those of his father and grandfather. If they are not better, then so far as he is concerned nothing has been done to increase the public longevity. He may not give beer or starch to his infant and thus may negatively add 34 years to the common fund. Yet the infant, when older, may commit a few more physiological sins than he, as he than his father.

Roughly speaking, there are two elements involved: ways in which vitality is wasted, and those in which it is injured. Avoidance of the latter may do nothing for the former. Thus it is *injured* by *bad* food; it is *wasted* by *excess* of food, gluttony. It is *injured* by overcrowding in the foulness of great cities; it is *wasted* by the nervous strain of the frantic rush for money. It is *injured* when the youth is invaded by tubercle bacilli; but he may have previously *wasted* it in debauchery.

We are doing something to prevent the injuries. We are moving toward the betterment of cities, the purity of food, the general application of the laws of external hygiene. But if the individual's waste of his life remains what it was, there must soon come an end to the results of the outer betterments. And if his waste is more prodigal than was his father's and his grandfather's, no efforts can stay the *shortening* of the average life, now concealed by a deceptive lengthening.

None of this is said to divert any man's, or any Body's efforts to better external conditions and promote hygienic knowledge; it is merely to point out that nothing much can be expected of them until the individual has been taught to look critically at his own life, at the twenty-four hours of his day. STUDENT

The General Paralysis

THAT ethical maxims are matters of ordinary commonsense, even selfish commonsense, is a truth not often suspected and never yet fully seen. It has to wait upon a better psychology.

We are agreed that it is ethically improper to hate anybody. But we have not commonly seen that it is selfishly unwise and even suicidal, that it is an attitude that makes for one's own loss of health and even life. Still less that it blunts and blinds every mental power.

How much inspiration could come upon a musician or poet who was in an active mood of hate? What chance would a scientist have of one of those flashes of intuition that have suddenly made order in a chaos of facts or opened a new path to research?

But an outburst of hate or anger is only a culmination of much more innocent-looking states of feeling. At other places in the same scale come envy, little spurts of irritation at the habits or tricks of others, irritated criticism of others, suspicion, and generally that instinctive half-conscious attitude of slight hostility to all those who are not positively one's friends. We are always on guard; the bristles are always ready to stand out.

In respect to our attitude to other nations, the matter is obvious. The war-feeling is ready to flare up at any moment; one incautious word of a foreign ambassador or potentate may start it.

Psychology, in spite of the little it does know of "telepathy," has never yet broached the conception of a general mental atmosphere as truly breathed by the minds of all as the physical atmosphere is breathed by our lungs. But it exists; we are born into it; our minds are conditioned in their workings, and limited by it; considering what it contains, it might be said that we are poisoned by it. For its general color is the mean of that scale of feeling which has hate at one end and instinctive on-guardness at the other. It is permanently active, however slightly, on all minds somewhat in the same paralyzing way as a state of hate or anger is acutely active on the mind of the poet, the musician or the scientist. It is this which holds humanity back from knowledge that might transform our whole lives and ways, even the very earth itself. By the automatic working of things we are thus held off from great physical secrets which if discovered now would but enable us to destroy each other—would be at once so employed.

Hate, or any of its lesser representatives, is the working in human consciousness of a nature-force, the force with which nature destroys what is no longer useful. It should be left where it belongs. As an element in his *feeling*, man should never admit it. For as

it goes through him it works on him, in some degree, as he consciously or unconsciously wants it to work on his antagonist or on any one whom he despises. It stains and poisons the reservoir of feeling through which he lets it pass and with which he energizes it. Its presence there is as abnormal as a dose of morphine in the blood. Man's feeling must work with nature in her life-sustaining, combining and progressing works. Not until he has divorced it from her other works can he gain his proper place and powers. The ethical precepts are all of them hard commonsense.

STUDENT

Which Am I?

A VOLUME of lectures delivered by himself to the Bible Teachers' Training School, just issued by the Rev. G. Campbell Morgan, exhibits in an extraordinary degree the lack of definition in word and thought which hampers the current Christian systems.

The writer uses the Pauline classification of the elements which make up man—body, soul, spirit. He puts them in that order as corresponding with their ascent in importance. The last, the *highest*, needs culture and salvation.

The first business of human life is the culture of the spirit; and because of sin the very first necessity thereto is the salvation of the spirit. A far more important thing than that I should have a place to lay my head . . . is that this spirit of mine should be right with God.

From which we learn that the spirit is sinful and in need of culture and salvation; and that it is the property of the man—"this spirit of mine"; and that the man who owns and can culture and guide it is its superior who must himself put it "right with God." Who or what is then the man? As the lecture then goes on to speak of the duty of care of the body, the inference is that man is a soul. Now the soul must be either sinful or not sinful. If sinful, have we two sinners in us? How in that case can one help the other? If not sinful, how came it to have permitted the spirit to get so?

But we learn in a few lines that man is *not* the soul but the spirit over which he has to watch. Man "is a spirit, the offspring of God who is Spirit." And then it turns out that the spirit, now called "spiritual nature," is not the one in need of guidance but the guide. For:

No man will have learned what it is to live as he ought to live with his fellow-man until he has discovered his own spiritual nature in the discovery of the spiritual relationship between man and God.

The way out of the confusion is very simple; it is in the last sentence. Man is a "spiritual nature" which in the rush of mind and impulse has lost consciousness of itself as such. But not altogether. For when in some silent moment he gets back into himself he finds that in the fulness of selfhood he never has forgotten. And in that new (self) consciousness is the "salvation" of which they talk; through and after it comes knowledge of God. C.

Archaeology Palaeontology Ethnology

Totemism

And they painted on the grave posts
Each his own ancestral totem,
Each the system of his household,
Figures of the bear and reindeer,
Of the turtle, crane, and beaver,
Each inverted as a token
That the owner was departed.

—Hiawatha

ALASKAN tourists have their attention drawn to curious uncanny-looking poles, grotesquely carved, and usually erected near inhabited or abandoned Indian villages along the West Coast of British Columbia, Alaska, and adjacent islands. These are called Totem Poles and referred to in guide books as "weird monuments of family pride."

Totemism is common to probably all native races, though it has been more associated with those of this continent from the fact that its relics are seen by more people through being on a path of travel. From this it is a fair inference that it has within it the germ of truth barnacled over through long centuries of accretions, which has led earnest students of ethnology to put forward many ingenious explanations.

Totemism is defined as "A system of tribal subdivision denoted by Totems," and the *Encyclopaedia Britannica* says:

"A totem is a class of material objects which a savage regards with superstitious respect, believing that there exists between him and every member of the class an intimate and altogether special relation. . . . The connexion between the man and his totem is mutually beneficent; the totem protects the man and the man shows his respect for the totem in various ways, by not killing it if it be an animal and not cutting or gathering it if it be a plant. As distinguished from a fetish, a totem is never an isolated individual, but always a class of objects, generally a species of animals or plants, more rarely a class of inanimate objects, very rarely a class of artificial ones."

Practically it is this: all over the world native races hold certain animals, birds, fish, trees, or plants, in veneration. It is their belief that these are either their individual or clan totems, or what we should call guardian spirits. These attachments to animals, plants, etc., divide the races into clans; for some belong by birth to one group, some to another, united by ties of consanguinity. Certain tribes of the great Iroquois race venerate the turtle, while the Omahas have appropriated red wheat, and the Choctaws the cray-fish. The Elk Clan of the Omahas reveres the male elk, certain Australian tribes the scorpion, the Rakalas of West Africa the calf crocodile or the monkey; and so on.

From this has evolved a social system deeply imbedded in a very large number of primitive races—the extension of the personal totemic idea over all those belonging to the clan. The individual acquires a personal totem, the male or female a sex totem, a mother hers, a child his; yet they may all three have a common group totem.

There is a conflict of opinion on the question of Totemism between American and European ethnologists. The former claim that it is a religious institution, the outcome of savage man's attitude towards nature, its social aspects being secondary. The latter say that Totemism is essentially a social institution, originating in the matriarchal state of society and constituting the basis of clan organization. The American has probably more basis of fact, for the reason that the study of the North American races during the past half century has been enormous and carried on under most favorable conditions. Our Indians, if on the savage level at present, must

Lomaland Photo. and Engraving Dept.

A CORNER OF THE OLD WALLS OF BYZANTIUM (CONSTANTINOPLE)

have had at some time a finer environment, if any solution is to be found of the wonderful folk-lore among a great number of them, particularly the Zuni and Pueblos of Arizona. May they not, after all, be the descendants of some great race?—for races rise and fall, as history so well testifies.

Ethnology passes too lightly over the evidence afforded by Indian races, and known to the few whites who have studied them at close range, of a vast fund of so-called myths—really, however, great truths clothed in legendary garment even as the parables of old. The Zuni Indians of Arizona have a most wonderful and jealously guarded oral lore, bearing on the creation of the world and other subjects, much of which has been collected by Cushing, who not only lived among them for years but was initiated into their priesthood and taught part of their philosophical system. This is now on record in the Bureau of Ethnology of the Smithsonian Institution at Washington. It is not possible to read these myths of peoples regarded as savages without being reminded of the well-known saying that God is no respecter of persons, and asking whether this so-called savage, with his "longings, yearnings, and strivings," may not after all be considered as much within the great evolutionary plan as the more civilized nations.

What prevents ethnology from obtaining a broader and more correct conception of Totemism is the persistence with which it insists on looking at the savage man's affairs from the generally accepted point of view; which leads Hill-Tout to say:

"In the study of primitive man the greatest difficulty the sophisticated student has to contend with, I have found, is the essential difference of his own from his subject's plane of thought—in other words, the difficulty to see things from the native point of view. He can make no satisfactory advance till he has emptied his mind of all its preconceptions regarding primitive man, which more often than not are founded on early misconceptions and limited knowledge of his life and thought. We have been studying the savage more or less systematically for a quarter of a century now, yet I am convinced we are but just beginning to know and understand him as he really is."—*Language and Culture of Salish* (1905)

Even students who have lived among the native races for years find it very difficult to understand their belief in animated nature. The idea that there should be real living entities in the world of trees and flowers, in the roaring waters of great rivers, on the bosom of peaceful lakes, or hidden in the everlasting hills, is to them wild heathenism, childish belief of primitive man in matters now only to be found in the nursery.

As yet the belief in the existence of active entities, called nature-spirits, pigmies, brownies, etc., on flower and leaf, crystal and rock, is to be found in all the legends and myths of primitive peoples the world over; and when a common belief finds acceptance among peoples scattered from pole to pole, there are good grounds for believing that it has some reason to be, that it has in it a germ of truth. There are people living today who have a much longer unbroken past than we Anglo-Saxons; the Welsh, the Irish, the West Coast Scots, the Bretons, the Basques, and others, were in existence, as such, long before Britain was established, and are still doing business at the old stand. We are apt to be carried away because we build sky-scrapers and ocean greyhounds and gridiron the country with railroads. Civilization is a good thing, but it clouds

a mass of knowledge of incalculable value to the race but now held at arm's length through sheer conceit.

There is undoubtedly a relation between Totemism and Heraldry which opens out an interesting study. This will of course be denied by students because they have given out that Heraldry had its origin in the early days of British history. This statement is in line with that made about the Druids and Freemasonry: the one said to be of early English growth, the other due to bands of craftsmen who wandered around Europe in the Middle Ages. These illustrations serve to show the narrowness in dealing with the origin of cults; for Totemism, like Heraldry, Druidism, and Freemasonry, has its origin far back in the night of time. Its value for us today lies in the fact that its study is calculated to bring us into close relation with the remnants of "native" races, races who have had their day and may soon cease to be. But for many a year to come, the Totem Poles along the Alaskan route will continue to interest travelers, and perhaps draw forth a kindly feeling to a race whose present status is due neither to *pollatch*, fetish, or totemism, but to the greed and lust which a so-called civilization has made possible among these children of the forest, lake, and plain. Mammoth from Siberia

LAST January the skeleton of a mammoth was found by some Yakuts in the sandy bed of the River Sangar-Yurach in Siberia, and it was in such an excellent state of preservation that the Russian authorities undertook to convey it at great expense to the museum of St. Petersburg, where it has now arrived. The journey lasted six months and cost \$8500. The skeleton is not of remarkable size, but some parts of the carcass which have not been previously found were preserved. The carcass weighed 3600 pounds and it took the experts six days to prepare it, as they had to work in a tent at a temperature far below the freezing point. It is especially noteworthy that this mammoth has the first uninjured specimen of the proboscis that has been found, and this appendage has been put into spirits. The skeleton will be mounted in the museum at St. Petersburg, and it is expected that this will take at least a year. T.

The Trend of Twentieth Century Science

Our New Gland

IT would have hardly seemed possible that at this late day a new gland should be found in the human body. But a gland has been found, and of considerable size. It has hitherto contrived to be regarded as a cushion of fat and in that way has preserved its secret. If an officer's epaulet were pulled in till it rested against the side of the neck, it would be covering the gland. Processes or fingers of it spread out in various directions, one of them crawling up under the muscle nearly as far as the ear. It corresponds to the hibernating gland in some of the lower animals and is in the same situation as the neck lymph-heart of the pig. It develops in the embryo from a pouch in the wall of the jugular vein, the communication closing up. As to its function little is known, though it belongs to the ductless class of glands. What evidence there is suggests that it may have the duty of finally destroying the worn out red blood cells. There is one on each side and from their situation they have been named the "interscapular glands." M. D.

Too Much Light

THE War Department is determined to settle the question of the best clothing for our troops in tropical climates, and the necessary investigations have been placed in the hands of Colonel Havard.

It is agreed that the special danger is not heat. Sunstroke and heatstroke are *light-strokes*, and the light is at the upper or chemical end of the spectrum.

To settle the underclothing question, Colonel Havard placed squares of silk upon bromide plates. The squares were nine in number, the seven prismatic colors and black and white. An examination of the colored plates after their exposure to sunlight showed that the black square had excluded all the chemical rays and the white square almost none of them. Between black and white the colors ran in degree of exclusive effectiveness: red, orange, green, blue, indigo, violet, yellow. The department has consequently issued orders for 5000 suits of underclothing, dyed orange-red. If, over this, white or light khaki is worn for the exclusion of the heat rays at the other end of the spectrum, the protection should be complete.

What is the action of the chemical rays, of violet and ultra-violet light? Up till quite recently the question could not have been answered. But we know now that they shake atoms to pieces. If a kaleidoscope is tapped, the fragments of colored glass fall together into a new pattern. Violet rays might be regarded as doing something like that to the atoms of matter upon which they fall. The thousands (sometimes more than two hundred thousand) of "corpuscles" or electrons contained within the atom fall together into a new pattern.

But something else happens. A few of the corpuscles are so violently stimulated by the vibrations of the light that they break loose from the atom altogether and rush into space,

dissipating some of their energy in the form of electric waves in the ether. The atom therefore has begun to break up and if the process went on long enough it might be wholly resolved into corpuscles. It has received energy, but the energy was more than it could bear.

On the same line is the Theosophical teaching that the tiredness of evening and the desire for sleep are due to excess of life. The cells have been absorbing it all day and are in a state of interior commotion which if maintained would kill them. They must have time to quiet down.

Upon the effect of X-rays and violet light on the atom, some scientists are beginning to hope for the force of the future. The immense energy locked up in the *molecules* of a ton of gunpowder can be set free by the tap of a hammer. If our tap could only set free the energy of the few grains upon which it actually fell, we should have a symbol of what we can now do with the *atom*. By various methods we can make partial use of the energy of *one* of its thousands of corpuscles. A battleship could be taken across the Atlantic with the total released energy of all the atoms of a fragment of matter the size of a dime. But man will not be *permitted* to get that secret till he is civilized enough not to think of using it to kill his fellows. Some of the gates of knowledge are locked and the keys in very capable and beneficent hands. The tendency of atoms *as wholes*, to come together, is all we may now use for our production of heat and electricity. We may not unlock them and use the energy of their inherent elements. STUDENT

The Colors in Horticulture

WE are yet in the alphabet of knowledge respecting the effect of colored light upon the growth of plants. It seems reasonable to suppose that each of the colors which together make up the white ray has its special influence upon growth. The plant life consists of many activities and the plant body of many tissues. It is possible that each activity or each tissue has its special stimulant ray or etheric food from the combined light. The complexities of the problem may explain the diversities of results. For example, many years ago General Pleasanton found that the growth of vegetation was stimulated when one pane in seven of the covering glass was blue. The plants therefore got about a seventh less of the usual proportion of red and yellow, though of course no added blue. Yet other and later experiments have shown that red is a stimulant to growth in size. A writer in *La Nature*, reporting on Flammarion's work in this line, strongly confirms this. A photograph of four begonias grown under red, white, blue, and green, shows the first of them at least twice the height of the others. "Under the influence of the red light," he says, "vegetables grow with great rapidity; whereas under blue alone they scarcely grow at all." This is by no means necessarily inharmonious with Pleasanton's result, for his proportion of blue glass was

but one-seventh. If the other six-sevenths had been red, he might have found a still greater result, whilst the problem would have manifestly become very complex.

But the blue appears to do more than merely restrain or not encourage growth. Flammarion and his colleague sowed beans in pots which stood in the open air till germination occurred. The total nitrogen in some of them was then analysed and found to be 4.5 per cent. of the weight; *albuminoid* nitrogen being 0.276 per cent. They were then distributed under colored glass — white, red, green, blue. A month after, analysis of the nitrogen gave: for those under white, 5.11 per cent; red, 6.06 per cent; green, 6.32 per cent; blue, 6.82 per cent. Albuminoid nitrogen had risen from its 0.276 per cent to: white, 4.53 per cent; red, 4.76 per cent; green, 4.83 per cent; blue, 5.41 per cent.

These results suggest that whereas the fixation of carbon, upon which gross size mainly depends, is stimulated by red; the much more complex fixation of nitrogen and its organization is least affected by red, of the colors, but more than by all the colors together in white, and less than by green, and still less than by blue. Evidently the field is still open for the workers. STUDENT

Wings versus Balloons

AN argument from electricity is advanced in *Prometheus* in favor of winged versus ballooned flying machines — in favor of machines of the heavier than air type.

The electrical sign of the earth is mainly a sphere whose general surface carries a negative charge. This charge, however, rapidly falls off, and at a short distance from the earth the air is usually positive. At considerable heights on a cloudless day the amount of atmospheric positive electricity may be very great. For the first part of its ascent a balloon is like an ambassador's house in a foreign country. As the latter is a bit of the ambassador's country transplanted, so the balloon is a bit of the earth on a voyage and with the earth's electrical sign. But it must presently assimilate itself with its surroundings. The equilibrium may be reached gradually, or by means of a brush discharge or exchange, or through sparking. In case gas is leaking, either of the two latter methods may ignite it. On the return the same danger presents itself. The balloon has the sign of the air and at a little distance from the earth a spark may pass between. Generally, however, it would be close enough to the ground to make the situation dangerous rather to the balloon than to the occupants. The disaster to Count Zeppelin's airship may have had this cause.

For this and other reasons it is not likely that the balloon type will be the choice of the future. We must study wings and planes. Gravitation still keeps its secret, but when understood we may do our flying even without them. To understand it might bring the power to suspend it with respect to our flying machine, perhaps reverse its sign. STUDENT

Forest Fires

ONE of the earliest recorded, says a Forest Service *Bulletin*, was the great Miramichi fire of 1825. It began its greatest destruction about one o'clock in the afternoon of October 7th, at a place 60 miles above the town of Newcastle, on the Miramichi River, in New Brunswick. Before ten o'clock at night it was 20 miles below Newcastle. In nine hours it had destroyed a belt 80 miles long and 26 wide. Over more than two and a half million acres almost every living thing was killed, and even the fish were afterwards found dead in heaps on the river banks. 590 buildings were burned, and a number of towns, including Newcastle, Chatham, and Douglastown, were destroyed. 160 persons perished and nearly 1000 head of stock.

The Peshtigo fire of October 1871 was still severer. It covered an area of more than 2000 square miles in Wisconsin. Between 1200 and 1500 persons perished, including nearly half the population of Peshtigo. In Michigan a strip about 40 miles wide and 180 long, from Lake Michigan to Lake Huron, was devastated. The estimated loss in timber was 4,000,000,000 board feet; and several hundred persons perished. In the early part of September, 1881, great fires covered 1800 square miles in various parts of Michigan; over 5000 persons were made destitute and from 150 to 500 lives were lost.

The most destructive fire of recent years was that which started near Hinckley, Minnesota, September 8th, 1894. Hinckley and six other towns were destroyed, about 500 lives lost, and more than 2000 persons left destitute. For many day before the high wind came, the fire had been burning slowly close to Hinckley and could have been put out. T.

Can Plants See?

IN an article in the *Scientific American* it is pointed out that if seeing means making appropriate movements in response to light, then plants can certainly see; for plants do make appropriate movements in response to light. But even if we extend our definition of seeing so as to make it mean

"THE OLD MAN OF HOY," ORKNEY

HARMONY, SOUND, NUMBER

Wordsworth

BY one pervading spirit
Of tones and numbers all things are controlled,
As sages taught, where faith was found to merit
Initiation in that mystery old.
The heavens, whose aspect makes our minds as still
As they themselves appear to be,
Innumerable voices fill
With everlasting harmony;
The towering headlands, crowned with mist
Their feet among the billows, know
That Ocean is a mighty harmonist;
Thy pinions, universal Air,
Ever waving to and fro,
Are delegates of harmony, and bear
Strains that support the Seasons in their rounds.

PONTAMMAN, AMMANFORD, WALES, FROM THE RIVER

the formation and the apprehension of images of external objects, still it is quite possible that plants may see, even in this sense.

The upper and lower surfaces of leaves are covered by a thin transparent skin, which, under the microscope, is seen to consist of innumerable compartments or cells, containing a clear watery sap. The shape of these cells is such that they act like convex lenses and bring light to a focus within the leaf. Some scientists are mentioned as having taken photographs of different

objects through these cells, with a photomicroscope and by other processes. The pictures thus obtained, some of which are reproduced in the *Scientific American*, resemble the images formed by an insect's compound eye — that is, the object is repeated a great many times. (One must demur, however, to the statement that a beetle would "see" things in this way; seeing consists mainly in an apprehension by the sense-organ of the *mind*; we ourselves do not see double, though there are two images formed of every object we look at.)

Whether these lenses help the plant in receiving impressions from light and in responding to them, either by movement or by chemical action, is matter of discussion; but it is certain that the lenses do converge the light into foci within the leaf. The question whether plants see depends largely on what definition we give to the word "seeing." If responding appropriately to light constitutes seeing, then the plant sees — sees the light, if not definite images. We need facts as to whether any plant shows a discrimination between light from different sources or as reflected from differently shaped objects. If we had proof of this, then we could say that plants saw not only light but also shapes and colors. The fact of their responding could be regarded as defining the difference between seeing and not seeing, though in that case the word "seeing" is used in a restricted sense. The question whether plants have mind is involved and everything goes to show that they have a kind of mind. STUDENT

Path

WINTER

J. H. K.

NIGHT—So softly enters the Goddess
Who invites her children to rest,
Her footfall as light as a snowflake
And we hasten at her behest.

A little while for the teaching
Of others along the way,
Then to put our house in order
And prepare for another day.

Ah, those who have done for others,
For all have lightened the load,
For these the night is untroubled
At the end of the weary road.

So, looking ahead to the morning
And falling asleep with a smile
To awaken refreshed on the morrow,
For a new and better trial.

On "Doing Good"

MOST people would like to "do good," especially if it does not cost them too much, for it brings with it a comfortable feeling of wellbeing. No doubt every effort towards helpfulness or making others happy counts, in degree, since Theosophy teaches that "no effort, not the smallest, whether in the right or wrong direction, can vanish from the world of causes"; but when one becomes a student of Theosophy the question takes on a deeper aspect, and shows a greater responsibility.

We find that we have no thoughts or feelings of "our own" in the sense that they affect no one else, that there is, so to say, a common atmosphere of thought and feeling in which we all share, and that the sense of personal isolation is purely illusory. There is no bar to thought or feeling except the state of consciousness we habitually live in, it is one of vibration, not distance; and *like* attracts like indeed. As the bees are attracted towards sweet flowers, and the flies to carrion, so do we attract the nobler or baser thoughts that surround us in the mental sphere, to make or mar our lives, by *our own mental attitude*; and the same applies to feeling. We strengthen or weaken the action of the powers of good and evil in the world with every breath we draw, albeit quite unconscious that we are so doing.

It is the mission of Theosophy to extend our consciousness and open our eyes to the place that we occupy in the Universal scheme of evolution. For this object H. P. Blavatsky wrote her wonderful books. Have you read them? They are mines of wealth to the searcher for Truth, and explain the constitution of man and his relation to nature and natural forces. Through them we learn of our great power of "doing good," by performing faithfully the duties that lie close at hand, the little homely duties, and the old as the world axioms of right action, inherent

in our divine natures, and transmitted to our ordinary consciousness by the voice of conscience. So the real "doing good" will consist in the right use of all our powers to fulfil the behests of the inward voice.

From this aspect do we not owe our lives in service to our fellows, since we are parts of the One Great Life, each focal center a possible vehicle of the expression of the Supreme? Does it not also give a firm basis for our love and gratitude to those who *have* so become, and whose lives are spent in the service of humanity? More and more shall we come to understand the great teachers of the world, and more and more will our hearts go out in gratitude to them as we become impressed with the meaning of "doing good" from the Theosophical standpoint.

It is only by keeping the lower nature in subjection that we gain the powers of true insight, kindness, and all round genius of the man, or woman, who can adapt themselves, and work on unmoved for the good of all under any conditions. Those who stand undismayed and face and conquer the forces of evil that invade their own nature are "doing good" such as will uplift the burden of millions. It is the tiny green shoot of irresistible growth, that splinters in fragments the solid rock.

W.

Stray Thoughts of a Literary Philosopher

THERE is no one who has had even a small experience writing down his thoughts, who will not have been led to wonder at some time or other, what part he himself has played in the creation of his mental pictures and ideas. When laid aside for awhile and afterwards reviewed, they may appear in quite a different light. Sometimes an error of judgment is perceived which casts an obscuring tendency throughout the whole. At others we are surprised to find how true has been the conception and we begin to wonder how we ever wrote it.

The more we ponder upon the reason for all this, the less are we inclined to believe that we stand as sole creators of our verbal fashionings. We begin to suspect that the part we have played in each of these confessions is more of instrument than of actor. Had the instrument been more perfect the result would have been better. Our limitations have been that of our age and race, and of our present character and tendencies. We begin to see that there is a universe of mind and feeling to which we have not yet attained, and if by adopting the right attitude, a little of this has become apparent to us, the force which lies behind it is the impelling cause. If we knew how to open the door in the right way, all of it might be ours. And so it will be in course of time, if we pursue the path pointed out by the sages, who have already passed that way.

One of the most effective ways of opening this door, seems to be the complete recognition of the potential quality of every man to assimilate and to give utterance to every shade of mental idea and to experience every phase of consciousness.

The capacity of each one of us to help others is at the apex of countless efforts of ourselves, and others. And the more we look at this idea, the less are we inclined to

pit our insignificant selves against all these others, of our age and race, or to draw an imaginary boundary line between our supposed merits and abilities and theirs.

This being so, are we not sometimes too apt to fancy that some illumination we have found ourselves, is just as luminous to our neighbour? To us, it looms large on the horizon of our thought and consciousness, because it is new—a step onwards perhaps. But to another, it may be trite and commonplace, either because he knew it before, and takes it as a matter of course; or because his standpoint—although perhaps *more advanced in other directions*—is not sufficiently advanced for him to recognize the ideas in question. He sees nothing in it. No two of us are exactly at the same point of evolution. Our capacities differ and well it is for us that this is so. A great Teacher has said "We learn almost entirely from one another." No doubt this is caused by the fact that a thought, whether uttered or unexpressed, becomes a power, affecting in degree the whole mass of human minds according to the intensity and strength that we have given to it. Minds of similar mold are naturally most affected by it, but its transformation in the mind of every other man reaches out to the furthest limit of the human mind at large.

Many years ago a well known writer in a high class philosophical magazine, was once heard to say: "Oh, I have no time to read any articles except my own." This is a tendency everyone has felt. We are apt to hug to ourselves the products of our own creation, and turn them over in our minds as something special. Another sees them in a different light. There seems to be no escape from the fact, however unpleasant it may be, that we are compelled to take ourselves at the general valuation!

But it would seem to be wiser to give them no valuation at all. W. Q. Judge wrote in the preface to one of his books:

No originality is claimed for this book. The writer invented none of it, discovered none of it, but has simply written that which he has been taught, and which has been proved to him. It is only a handing on of what has been known before.

Once we can take up this attitude, we are approaching the path of wisdom. Whether we know it or not, everything we write or think, has its influence upon the world. Once out of grasp, it cannot be recalled, and it is useless to lay claim to it. Why not let it go and lay it consciously on the altar of humanity, relinquishing at once and for ever any personal interest? STUDENT

WHEN your modern philosophers will have succeeded in showing to us a good reason why so many apparently innocent and good men are born only to suffer during a whole lifetime; why so many are born poor unto starvation in the slums of great cities, abandoned by fate and men; why, while these are born in the gutter, others open their eyes to light in palaces; while a noble birth and fortune seem often given to the worst of men and only rarely to the worthy; while there are beggars whose *inner* selves are peers to the highest and noblest of men; when this and much more is satisfactorily explained by either your philosophers or theologians, then only, but not till then, you will have the right to reject the theory of Reincarnation.—H. P. Blavatsky

WATER-WHISPER

From the Swedish of Viktor Rydberg
(By F. J. D.)

BELOW the Palace
The lapping water
Melodious plashes
In pearly glitter.

A sunburnt urchin
In time-worn liv'ry
The late hour passes
On the Doge's stairway.

A wavelet-whisper
His heart is filling
With something secret
Yet needing telling:

See son so noble!
Of Gods the equal!
Shall he inherit
His empire regal?

Lo still we wander
In earthly vision
By windy sea-shore
And flood-swept region.

We presage princes
In childhood ever—
But kingly stature
We ne'er discover.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question What is the Theosophical conception of heaven? Is there no place of reward and peace to be attained after the long strain and trials of this present life on earth, according to your philosophy?

Answer We must sleep after a day's work; we are not strong enough to go on either from day to day or from life to life, without rest. Systole and diastole is the method of the whole universe; and after the soul has fought and figured through a life and its activities in this world it must needs return to the light and beauty of its own world for awhile, or it could not digest the things it has learned and seen in this noisy tuition-place we call the world. This life or place of its own is what may be called heaven.

As to its nature we may learn much, since at times we have glimpses of it; at times the soul asserts itself in our minds and feelings and we catch some gleam and reflection of white glory foreign to material thought and incomprehensible to reason. Some times compassion will leap up unexpectedly and flood our being; sometimes the freedom and magnificence of a great deed of self-sacrifice is made known to us, and the consciousness runs out, so to say, to the ends of the earth, embracing all things. We are not really limited as we deem. Our potential knowledge and power are not confined to what, as we think, may be packed into one brain or acquired in one lifetime. In reality the human race is divine and of august origin, and the seed of our splendor is within; however far we have wandered, starting-place and goal are at hand; divinity is most intimate in every human being, "nearer to thee than thy jugular vein"; because in truth thyself.

A ray from that regal and gleaming potency, the human soul, shines down into an animal body (our bodies are animal, be it remembered), and there becomes involved and

entangled with animal forces, desire and passion and fear; and has before it the task of conquering this whole new world; of maintaining its self-realization as divine, and impregnating body and brain with the essence of its divine nature. So here we are, the sum and essence of this conflict and striving after victory; what we call conscience always protestant against evil, and the animal nature incessantly prone to rebellion against good.

We can reach out to our soul if we will; we can bring down a measure of its beauty and splendor into life; battling, according to the measure of our ability, against the domination of chaos and brutality. With the will set towards this end, we are perforce constantly bringing the soul into activity; one might almost say, though we do not know it, we are invoking it to shine through us. Think, on the whole, what an expanse of unknownness you yourself are; a little light in the midst of darkness unilluminated and unexplored; you do not know what gods nor what fiends may be concealed within that untraveled cavern of yourself. What is before you, at some time or other, is to discover all those regions; to have the sun shining through them; to cultivate them, and grow the produce of paradise for free export; to mine them, and send out untold gold and spiritual diamonds for the world. To discover, and then also conquer them; for fiends as well as gods do dwell in them; fiends and gods asleep now, but to be awakened by you as you grow fearless and go forth.

What can light up this region is the rising of the soul, as we know when any of the grand accessions of consciousness come upon us. A man can consciously give himself up to the soul, with a pledge to do his utmost for it, giving his days resolutely to its service. Such effort is an invocation, and causes the light to shine; though it should wane again almost instantly, renewed effort would always bring renewal of the splendor. At last the whole of your being would be lighted, and you would know your oneness with the source of the illumination; that is, you would know your oneness with the soul.

Of all our experiences and thoughts, how much is there that is permanent, or that we could reasonably wish should be so? Take away the "thoughts for the morrow, what ye shall eat and what ye shall drink, and wherewithal shall ye be clothed," and all kinds of animal desires, for these things pertain to the body; they have something of the nature of quicksand about them, we cannot build on them, we cannot rest upon them, they are insatiable and have no goal; take away the thought given to your own advance in business or society; take away, too, take utterly away, all thought you may have given to the salvation of your own soul, to the attainment of heaven for yourself, that is, take away most of so-called religious thought, for this is the worst selfishness of all, being the most interior selfishness; indeed, take away every kind of thought that has been directed in any way toward yourself: all these are material and do not in any way pertain to the soul. Then note whatever aspiration you may have had to serve humanity, for humanity's sake; whatever self-eliminating exaltation may have come to you in music, art, or poetry, or from the sun and the mountains and the sea; what-

ever of compassion you have felt, whatever perception of the divinity in man, or will-effort you have made towards self-sacrifice; all these things were they never so fleeting, are in reality more enduring than the granite, and shall not be worn away.

The soul needs these, and will not let them go; will weave them into its own being; will digest them and make them part of itself; they shall go to form new strength, new experience, new wisdom for it, to be used in future lives, in its ancient warfare upon chaos and disorder and ugliness and evil. Cherish these things, for they are in truth all of you that is real, all that will survive; the rest you shall come to hate some day, to wage war upon; you shall find them, though you nurse and treasure them now, to be bitter, persistent and treacherous opponents.

The heaven-world, called in Theosophical literature *Devachan*, the Land of the Gods, is a rest-period between life and life; wherein the soul takes into itself all these permanent and ennobling factors from the life which has ended; living them over, as H. P. Blavatsky taught, and drawing out from them every atom of their significance. It is not a place but a state of being; deeper than the deepest thought, all ecstasy and brightness; for our highest experiences alone enter there, all the dark things are forgotten and non-existent. Yet this earth alone in a sense is heaven, for this is the place where rewards are given us for our good deeds, as well as punishment for evil. For all rewards and punishment, as we call them, are, in the grand scheme of things, the method and instigation of our growth; we learn by degrees that selfish activity leads always to unpeace, bethwartment and the shrinkage of the boundaries of our consciousness; and that by means of every unselfish action we are annexing fertile kingdoms. And life on this earth is the sphere allotted to us for our experience and growth. K. M.

UNBROTHERLINESS menaces to no small degree the progress of our civilization.—*Katherine Tingley*

THIS war (between spirit and matter) will last till the inner and divine man adjusts his outer terrestrial self to his own spiritual nature. Till then the dark and fierce passions of the former will be at eternal feud with his master, the Divine Man. But the animal will be tamed one day, because its nature will be changed, and harmony will reign once more between the two as before the "Fall," when even mortal man was created by the Elements and was not born.—*The Secret Doctrine*, II, 268 (H. P. Blavatsky)

THE mere selfish desire of a person to escape the trials and discipline of life is not enough to set nature's laws aside, so the soul must be reborn until it has ceased to set in motion the cause of rebirth, after having developed character up to its possible limit as indicated by all the varieties of human nature, when every experience has been passed through and not until all of truth that can be known has been acquired. The vast disparity among men in respect to capacity compels us, if we wish to ascribe justice to Nature or to God, to admit Reincarnation and to trace the origin of the disparity back to the past lives of the Ego.—*William Q. Judge*

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

The World's Unrest

"THE World's Unrest" is the title of some notes in the *Referee* (London), in which a comprehensive view is taken of the numerous and practically universal symptoms of this disorder, and some reflections made thereon. Commenting on the general "insomnia," the writer attributes it to—

New brain energy and the awakening of soul hunger. . . . Mental repose is now denied to all nations East and West, even to the sleepest. . . . After long repose, the religious life of the far East is disturbed by decay of faith and by the outbreak of new and emotional fervor. . . . Islam, Buddhism, Shintoism, and Christianity alike seethe with unrest through 360 degrees of longitude.

In the West, this universal spirit of unrest, due to awakening activity in dormant reservoirs of force, has developed a vast mob of cranks and faddists, each one intent on his own particular panacea. Their efforts are mutually destructive in all results save that of noise and confusion; and they have succeeded in rendering the functions of governments almost impossible of discharge. Newspapers now not only interfere in diplomacy but positively work it themselves.

The writer says that the evolution of man is above all through the exercise of his individual will, and that will-power is forcible and effective only when regulated, intelligent and subtle, and that the secret of successful will-power is sympathy and self-control. The Bismarck of the Twentieth century will win assent, create friends, seek co-operation, and harmonize adverse conditions, and will seek to avoid friction, pain and upheaval. Then he adds:

Thirst for the water of life is unslaked. Our insomnia is a disease of the soul.

It has been maintained by the Founder and Leaders of the THEOSOPHICAL SOCIETY AND UNIVERSAL BROTHERHOOD, from the time it was founded in 1875 in New York City, that the world was arriving at a most important cyclic juncture, which would be marked by great and universal changes, particularly in the direction of a broadening of thought and a great acceleration of energy. That this prophecy is being fulfilled is obvious; and the records of Theosophy are at hand to prove that it is not a prophecy after the event. Who, 33 years ago, would have ventured to forecast, as H. P. Blavatsky did, the course of events

MEMBERSHIP

In the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

as they have since turned out? She was laughed at, as all true Seers are; but now events vindicate her. The most unlikely things have happened, and more happen every day; so that no one can dare to set limits to what is possible. And the writer quoted above assigns as the cause of the upheaval the very reason that H. P. Blavatsky then assigned—the welling up of a new tide of the evolutionary spiritual energy from within. This is making itself felt in the breast of every man born of woman, breaking out at a thousand points all at once and manifesting itself in as many different ways.

But there is one criticism which must be made on this article, in common with other articles of the same stamp. It asks questions, points out the symptoms, and then—leaves us with the usual anticlimax. "The cultivation of the will on co-operative principles and mutual forbearance," is the farthest this writer takes us. Hence it must be repeated, as so often, that Theosophy has the only answer to these questions, the only remedy for the symptoms described. It has the thing which people are everywhere looking for; it has the key by which the will can be cultivated on co-operative principles and mutual forbearance. The current religions fail to supply this key; they say so themselves. Science fails to supply it; everywhere is failure. But not so with Theosophy. Theosophy has the teachings, the philosophy, the science of being; whereas the religions and sciences of the day have nothing in this line that will tell the people what they want to know.

The efficacy, the fruitfulness of the Theosophical teachings has been demonstrated by the actual carrying of them into practice by Theosophists, and they have been found to solve those vexed human problems spoken of; especially in the bringing up and education of the young has this been demonstrated. With its teachings, with these demonstrated facts to show, and with its united army of earnest workers, Theosophy has only to await the time

when the growing needs of the world will urge men to turn to the only beacon in sight; when the pressure of necessity will sweep aside the prejudices that men cherish in times of complacency, who then will be too glad of the help to waste any time in carping about details.

"Tell us what to do?" they will cry; "Your teachings seem

to succeed where all else fails."

Theosophy has the same answer for the restless West and the awakening East. It points to the eternal WISDOM-RELIGION as the converging point of all faiths, as it has been their radiating point. This eternal Religion, founded on the recognition of man's common spiritual nature, appeals to a Higher Court which all can recognize. The teachings of this ancient Wisdom, as to man's nature, afford the only intellectual sanction for the gospel of Solidarity, which else is but a shapeless and ineffectual yearning, at variance with so-called "reason." Will the nations of the earth unite in a new recognition of the existence of the Secret Doctrine of the ages, that which lives throughout all the cycles, man's eternal inspiration and savior? STUDENT

An Interesting Experiment

AN experiment originally designed to illustrate the possible laws of corpuscular aggregation within the atom, may be dressed up to symbolize another law among human beings. Suppose we cut out in cork a number of little human figures with weighted shoes so that they will float upright, and pass stout, strongly magnetized needles down through them with the positive ends all uppermost. On setting them afloat in a basin of water the figures will of course be found to repel each other, just as human personalities do when unregulated by higher laws. Under the table have a powerful electro-magnet with its positive end also uppermost. Gradually turn on the current. The little figures will now be drawn together under the new influence overruling their unregenerate mutual antipathy, and will adopt beautiful geometric arrangements varying according to the number of figures afloat. If we imagine the forces engaged conscious, we shall readily perceive how each figure, touched by the unifying consciousness, would become aware of the beauty and harmony produced by its relation to the unifying center of being. OBSERVER

Future Life in the Stars

A PRESS paragraph describes the curious belief regarding a future life, alleged to be held by a certain man—a prominent politician—whom it names.

His faith in a future life is strong and ever-present, he says; but "we have no knowledge, and it is intended that we shall have no knowledge." Despite this pessimistic opinion, however, he proceeds to give us what (as it cannot be knowledge) must therefore be ignorance. We do not live as disembodied spirits, but go to the stars, where we inhabit new physical bodies having the same senses and perhaps new and more joyous ones. But we do not scatter to different planets—"this would be a terrible situation."

Suppose we are sent to Mars, and our dearest friends have gone to Sirius. The thought is very distressing.

Inevitably one adds that it would be equally distressing to have one's dearest enemies rolling on an orb several trillion miles off. Yet again, there are quite a number of classes of people who "never would be missed," and they might be sent to Sirius or even farther. We do not return to earth, continues our informant, nor has the soul had a previous existence.

This man must be congratulated for his imagination. Seriously, it is quite refreshing to find someone escaping from the dreary threadbare doctrines usually held, and giving rein to his fancy in what is really a fascinating theory. But how many more such theories

might be devised, all differing from each other! The only way of producing harmony of results is by resorting to the idea that each mortal will find himself in a paradise of his own creating—the pious Christian in his heaven, the spiritist in his summerland, the Indian in his happy hunting-grounds, Sir Oliver Lodge pickaxing at his tunnel to the earth, and so on. There is the Theosophical teaching that a part of man's make-up *does* go through some such phase of happy delusion just as we do in dreams. But the actual state of affairs as regards humanity generally cannot be determined by the fancies and loves

of one man—or of one boy dreaming of a paradise of pies and puddings. And it is evident that the general knowledge includes so very little information about the nature of man himself and about the universe and things in general, that these rough-and-ready theories are not worth much.

One thing is sure: the fate that awaits us after death is ordered by a wiser and more bountiful Intelligence than our own—the Intelligence that maintains the universe in its countless marvels. And possibly the Soul has in view objects and destinies even brighter and more glorious than that of meeting a select party of friends on a private planet. The idea that the Soul has a future existence but no past, is of course ridiculous from any point of view; for how can a thing be finite at one end and infinite at the other?

The teaching of the reincarnation of the *inner* man is the real clue to the problem.

Ex-President Tomás Estrado Palma of Cuba

EX-PRESIDENT Tomás Estrado Palma, Cuba's first president, died on November the fourth at Santiago de Cuba.

At the outbreak of the revolution in the year 1868, Tomás Estrado Palma was among the first to join the band under the leadership of Carlos Manuel de Céspedes. He threw his fortune and all the money he could raise into the empty treasury of the cause he loved. The following year his aged mother was killed by the Spanish soldiers, a deed that he never forgot. To his dying day he carried the

Lomaland Photo. and Engraving Dept.

THE RAJA YOGA MILITARY COMPANY IN LINE BEFORE THE CITY HALL OF SANTIAGO

blood-stained handkerchief that was found on her body. At the same time all his property was confiscated by the Spanish authorities. This, far from deterring him in his efforts for Cuban Independence, acted as a stimulant to his determination.

In 1877 he was elected President of the Revolutionary Republic. In the same year he was captured by the Spanish forces and incarcerated in Spain. At the suspension of hostilities in 1878, Estrado Palma was released but not allowed to return to Cuba. He took up his residence in Central Valley, N. Y., supporting himself and his impoverished family by teaching in a private school. It was here that he did great work for the cause of his country's Independence. When hostilities began again in 1895, he was appointed chairman of the Cuban Revolutionary Board in New York City. Expedition after expedition, carrying men, ammunition, medicines, etc., were outfitted by him and sent on their way successfully. Entertainments were given. Cuban emigrants and exiles living in New York and Atlantic points were enthused and encouraged to raise money for the cause he had at heart, a newspaper was started, subscription lists opened and a never-ending series of efforts was made to keep money flowing in to aid in the cause. All these enterprises were due to the initiative of Estrado Palma. He it was who conceived the idea of the Cuban dollars which were sold all over the United States in the year 1896, netting the Revolutionary Board a profit of fifty cents on every one sold.

A prominent Mason, he used his influence among members of that great Order, and large was the help it rendered. Little is known about this part of Cuban history, but the time will come when the part the Masonic Order played will be better known, and then due credit will be given to Estrado Palma.

Later on, when Cuba, with the aid of the United States, had gained her independence and the Cubans were looking for someone to elect as their first president, someone who would be agreeable to all political factions, which even in that early day threatened to destroy the new-found liberty, Tomás Estrado Palma was decided on by all concerned as being the only man acceptable to all parties. He did not want to accept the high position offered him; being of a retiring nature, he preferred a private life to one of great publicity. It was only when he saw that his country demanded it, that he alone could bring order out of the threatened chaos, that he was called to preserve that independence he had fought so well to gain, that he accepted and was unanimously elected president by the convention called for the purpose of electing an executive.

The onerous duties of his position, made doubly difficult by the many new problems the country was facing: a country without previous experience, just risen to the greatest liberty without the necessary training so needful for such a change; and by the lack of co-operation on the part of those who should

THE RĀJA YOGA COMPANY AND CHILDREN OF THE RĀJA YOGA ACADEMY, LEADING THE FUNERAL CORTÈGE

have done all in their power to aid him, soon made a noticeable effect on his naturally weak constitution. Of a simple, open, and gentle nature, he could not see how others might lack the intense patriotic love he felt for his coun-

Lomaland Photo. and Engraving Dept.

ON THE WAY TO THE CEMETERY

try, he could not see how his actions, which he knew were all in favor of the country, could be misconstrued by his countrymen. Refusing to believe that the time could come when Cubans would rise against Cubans, steadfast in his determination, he pursued his way in serenity. Every month saw a few more millions of dollars in the treasury, the natural richness of the country a little more developed, new business enterprises started, and greater than all he saw Cuba, his beloved Cuba, beginning to take its true position among the family of nations. He was deaf to the threats made against him, he was blind to those close to him; it is often so, those of the innocent, simple, and honest character of Estrado Palma never see the opposite characteristics in others.

Then came the crash, a civil war. Rather than be the one responsible for the impending bloodshed, and to do what he thought might avert rending the country in two, Estrado Palma resigned, retired to private life on a little farm in the depths of the Cuban Wilderness—retired a broken-hearted man, his ideal shattered, and his spirit crushed. After all he had suffered it is not strange that this last blow should have been too much. His death has followed as a natural result. The doctors say he died of a pulmonary affection. Those who know say that he died of a broken heart.

The funeral that was held in Santiago de Cuba on November 6th, was the most imposing ever held in the island. All

classes of people and members of all political factions honored him who had done so much for his country. The children of the Rāja Yoga Academy and the military company of the Rāja Yoga School were invited to attend the funeral.

They were all glad of the opportunity offered them to render a loving tribute to the memory of a true hero. The girls carried beautiful wreaths which were placed on the grave. The boys of the company, in full uniform, followed by the girls, were given the place of honor at the head of the procession proper, immediately behind the opening detachments of police and soldiers. There were six carriages filled with wreaths, each one bearing an inscription. The most striking of the latter was the simple English phrase "To an honest man."

H. S. T.

(Santiago, Nov. 1908)

WHEN Cyril, the Bishop of Alexandria, had openly embraced the cause of Isis, the Egyptian goddess, and had anthropomorphized her into Mary, the mother of God; and the trinitarian controversy had taken place; from that moment the Egyptian doctrine of the emanation of the creative God out of Emepht began to be tortured in a thousand ways, until the Councils had agreed upon the adoption of it as it now stands—the disfigured Ternary of the Kabalistic Solomon and Philo! But as its origin was yet too evident, the *Word* was no longer called the "Heavenly man," the *primal* Adam Kadmon, but became the Logos—Christ, and was made as old as the "Ancient of the Ancient," his father. The concealed WISDOM became identical with its emanation, the DIVINE THOUGHT, and made to be regarded co-equal and co-eternal with its first manifestation. —H. P. Blavatsky, in *Isis Unveiled*, Vol. II, p. 41

Art Music Literature and the Drama

The Royal Palace of Berlin

THE Royal Palace of Berlin is not an old castle as German castles go. It is barely two hundred years old, yet it possesses unique interest in that so much of recent history clusters around it. Frederick the Great was born within its walls, the man who made Prussia the ruling German state, and thus laid the foundation upon which the present German Empire is built. His work was begun for him by his father and grandfather, both of whom lived in the Royal Palace of Berlin. When the mantle of kingship fell upon Frederick I, it was almost an empty prerogative, but he felt the urgent need of sowing seed for the future. Through his protection of the persecuted philosopher Thomasius, a bold and aggressive reformer, who in order to arouse Germany from her century-long lethargy demanded that German scholars speak and write in pure German, he performed a great service for the future. He received Thomasius and his friend Franke into the University of Halle, which he had recently founded, and granted them his protection and patronage. These two began a new system of education for the youth of Germany. To the Latin and theology of the old order they added the despised and neglected German language, other modern languages, mathematics, philosophy, and history. Religious toleration and freedom of opinion on all subjects were fostered in the University of Halle, whence they gradually spread over Germany.

The son of Frederick I, Frederick William, was very different from his father. He was no patron of learning, nor encourager of liberal ideas; indeed he drew much censure upon himself by the way in which he treated *savants* during his reign. Yet he saw with clear eyes the immediate needs of the German people. He saw that the foreign influence with its extravagance and profligacy was sapping the very life of the state, and he set himself the task of breaking it, and disciplining his people into morality and thrift. He began his reform in his own Royal Palace of Berlin. He had inherited empty coffers, so he at once banished all the luxury that had been a feature of his father's court. Gold embroidered dresses, monstrous wigs, horses, and silver plate, vanished like magic, and absolute simplicity reigned instead. The king arose at dawn to pore over his account books!

Naturally such an unkingly king was the laughing stock of luxury-loving royalty all over Europe. Frederick William was unmoved. Dressed in a military uniform, with a close-fitting blonde wig, a corporal's stick in his hand, he set about reforming Berlin as he had done his own palace. He first turned his attention to the rich. He forced them to build new houses in the city, thus depriving them of the means of indulging in extravagance, and at the same time adding to the power and dignity of Berlin, which he destined for a great metropolis. Many humorous stor-

ies are related of this irascible despot who was so little understood in his own day and among his own people as to be regarded as a tyrant. A strenuous worker himself, he hated all idleness, and when walking through the streets of Berlin did not scorn to lay his own royal hands upon the persons of idle loungers on the street corners, caning them soundly, and sending them off to work. He entered the homes of the citizens of Berlin, inquired the cost of their living, praised the thrifty economical housewives, and scolded the careless ones. He had one gentleman executed who treated his serfs cruelly, although he had been defied with the words: "It is not the fashion to hang a nobleman!" An ardent German at heart, Frederick William mercilessly held up to ridicule the foreign affectations and vices

love for Germany, he disciplined his own son, too, most harshly; but despite the mistakes, the result on the whole was wholesome, and dying Frederick William had the satisfaction of knowing that the instrument he had forged would pass into hands that could wield it.

Frederick II, called by posterity the Great, raised Prussia to the overlordship of German states, thus completing the work begun by his father. He did more than this. Under his liberalizing influence, the work of enlightenment begun in his grandfather's reign grew and gained strength. He looked after the internal development of his country, also, reclaiming waste lands, building canals and roads, and establishing industries. He built the first opera house in Berlin, and encouraged grand opera. He was a musician himself,

THE ROYAL PALACE, BERLIN

Lomaland Photo. and Engraving Dept.

of his subjects. He dressed the meanest of his public officers, the jailers and the provosts, in the latest foreign monstrosities of fashion, and had plays performed that still further held up to ridicule and scorn the despised foreign influence.

Frederick William was a fearless, gallant soldier, and by his tireless efforts raised, maintained, and disciplined, an army, now made possible by the improved condition of his treasury. He always wore his military uniform, and the Berliners still have the martial bearing that was the fashion of his day. In a word, Frederick William was the stern old schoolmaster of Germany, rod in hand, who personally disciplined his lawless subjects into good soldiers, and moral, hardworking citizens—an inestimable service, the benefits of which not only Prussia, but all of Germany is today reaping. Naturally, out of the fulness of his

and German music developed wonderfully during his reign. Finally his reign witnessed the final triumph of the mother-tongue in the golden literature of Lessing, through whose works the influence of Greece and of England was drawn into German literature for its enrichment.

Frederick the Great left no heir to the throne, and although a sad time for Germany followed immediately upon his reign, the day came when through the stately Brandenburg portal, symbolic of the House of Brandenburg, a King of Prussia, a true German at heart, re-entered Berlin, already crowned Emperor of Germany, and surrounded by children and grandchildren, took his place upon the throne, under the golden canopy in the beautiful Throne Room of the Royal Palace of Berlin. And so an enlightened and united Germany was assured for the future. GERMANIA

The Two Threads

IN order to classify a number of somewhat rare specimens of Pacific Coast shells recently it became advisable to consult a few standard books on the *Mollusca* and a "Zoology" or two. Better illustrations than were these books of the two threads, the two and opposite tendencies, in human life, could not be desired. In one book the author insists that only shells taken when the animal is living are of any value, and various ways by which the little inhabitant might be killed are described, the whole emphasis being laid upon what would be convenient for the collector or of advantage in preserving the beauty of the shell. In another book, and for the purpose one more available and scientific (*West Coast Shells*, by Josiah Keep, A. M.) the delight in reading grows with every page. Here is its keynote—following upon a most charming and even tender account of the fascinating possibilities of a sunrise walk on the beach at low tide:

The dripping of mossy rocks, the rustle of little crustaceans . . . the bright little fish of the rock-pools, star-fishes, brilliant patches of living sponge, colonies of lace-like protozoans, pretty sea-snails, sea-anemones . . . our liveliest hosts, the little crabs etc.

The author says:

One thing I beg of you: never be cruel to my friends. . . . I will vouch for it that not one of them carries a bag of poison, or will harm you in the least; and if you only approach them in a friendly spirit, they will stand ready to give you the best of their possessions, and make your life sweeter and happier for having known them.

There is the keynote of compassion, and this not in a child's story book or a good-natured but slovenly and inaccurate "nature tale," but in a thoroughly up-to-date scientific work, with a minutely worked out scientific classification in Latin names, some of them larger than the shells they describe!

The differences in ideal between writers of

Zoologies is as plainly marked if one knows what to look for. A number examined recently were all, as it happened, school and college text-books, the influence of which upon the minds of the young must be almost incalculable. Only one particularly emphasized the life of the creatures studied, dwelling upon their ways of work, their habits of life, their building of homes, care of little ones, etc.; that is, only one emphasized this to the overshadowing of directions as to how to kill and

STUDENT. Tell me some ways by which intuition is to be developed.

SAGE. First of all by giving it exercise, and second, by not using it for purely personal ends. Exercise means that it must be followed through mistakes and bruises until from sincere attempts at use it comes to its own strength. This does not mean that we can do wrong and leave the results, but that after establishing conscience on a right basis by following the golden rule, we give play to the intuition and add to its strength. Inevitably in this at first we will make errors, but soon if we are sincere it will grow brighter and make no mistake.

—William Q. Judge in *Conversations on Occultism*.

mount "specimens" for collections. Another, written by a University President of international fame, in collaboration with one of his Professors, devotes pages of directions as to how to kill insects, birds, and small animals, so as least to injure the appearance of coat or plumage and least to waste valuable apparatus or poisons. On one page we read, following directions for the preparation of a "cyanide bottle" for killing butterflies etc.:

In case the insect or butterfly should revive after being mounted it is advisable, on putting it back into the cyanide bottle, to remove from its body the pin, as the fumes of the cyanide will rust it.

Nothing was said about the suffering of the insect.

Some books on birds fell in the writer's way

at about the same time. Two singled themselves out pre-eminently as standing sponsors for "the two threads," although the authors of these were probably unconscious of it. In one, long and minute directions were given as to how to shoot or trap birds so as not to injure the plumage; how to remove the skin, dissect where desired, stuff and mount them for collections. One part of the book was devoted to birds' eggs, with special instructions as to the best way of collecting them—not a hint about the wickedness of stealing these little treasures of some father and mother bird, treasures as precious in a way as human babies are to their parents. Not a word was said about nature's great laws being broken by such wanton and utterly useless sacrifice. The illustrations, in which the book abounded, were almost all from photographs of dead birds; that is, birds just as taken from the hunter's pouch, unmounted and laid out flat, pitiful, mute witnesses of man's inhumanity to his "little brothers of the air." There may have been other harrowing details in the book, and probably were. But as a matter of fact no one who had been touched by Theosophy could read it with any thoroughness or equanimity and in this case a cursory glance sufficed to sadden the morning.

Another (written by a woman, Mrs. Irene Grosvenor Wheelock, and dedicated to her husband) was so tender and beautiful in tone that to read it was almost like a bath in some elixir of life. It was just as scientific as the other, more so if science means something besides tow and arsenic, pins, scalpels, and meandering Latin names; but no hint was there in it of taking life. The author for years had made field notes, her weapons not a gun and pouch but trusty binoculars or field glasses, love, and almost (to the reader it would seem) unlimited patience, and the loving care bestowed on her descriptions of the brooding of eggs and the care of their babies

by little bird parents showed that she actually touched the secret of nature's great compassionate heart.

These are but a few scattered examples which chanced to fall in the writer's way, apparently without purpose. Yet they are enough to show to the unprejudiced mind the two threads that are weaving and interweaving themselves throughout all of life's great web. Those who select books for children — i. e., our parents, our guardians, and our teachers — would do well to note these and learn to discriminate. One thread weaves to the fashioning of a golden life for all that lives; the other, to the undoing of love and all of love's aims. One thread is of compassion, the other of cruelty and lust for power. Do not ask the authors of the books to tell you which is which. In nearly all cases they follow, unconscious of what they are doing, merely some inner impulse of their own natures, which, too, they do not understand. And the children — alas! they must accept what is offered to them, as a babe accepts, not knowing milk from poison, and suffer or be rightly helped. Children and young students cannot choose — excepting such as have heard the keynote of Theosophy, and of these even the babe knows the thread of compassion from that of cruelty and fear — and the responsibility of parents and teachers in such a matter cannot be too much accentuated. One longs to cry these truths from the housetops.

STUDENT

The Outlook

LOST to all sense of the dignity and possibilities of womanhood must be that woman whose heart does not thrill at the daily record of events that concern the welfare and the awakening of her sex. It is not confined to any one country or hemisphere. During the Russo-Japanese war we became familiar with the splendid patriotism and thoroughly systematic and efficient means used by the Japanese women to lessen the horrors of war. This was of special interest to us because so many of them had studied side by side with American women in American educational institutions and because they showed in their work a delicacy and tenderness and unity that proved the great possibilities of the Oriental woman. We were even less prepared for the action of the most powerful woman in the most conservative

monarchy on earth, which has helped to open China to the influence of the West, and which has already had its effect in so many innovations and in reforms of customs and institutions, time-honored, but also time-worn.

After these indications of the upheaval of old conditions in China, it is less surprising to hear of the conditions in Persia; where women, still living in the strictest seclusion, wearing the veil which is the badge of their

from her countrymen, who accepted the inevitable, being assured by her bearing and capabilities that in her case this action was no menace to society.

Events in Turkey justify a hope for Turkish women that few of us in the West have ever felt before. The enthusiastic patriotism expressed in letters from Turkish women, written after the Constitution was declared, speak of undercurrents of influence that have been at work preparing the women even in Turkey to rise and realize a nobler aspect of womanhood.

We are all familiar with the conditions in our country and in Europe. We read of efforts on the part of women who for the first time seem to be able to act in large bodies, efforts which are the outlet of a force pent up for ages, but now finding expression in protests, in demands, in work which is intended to be intelligently constructive, but, alas! some of which is undeniably destructive and can only react upon women with a force that will crush many of the weaker. The daily papers are full of items recording new vocations of women, full of the reports of their efficiency, their industry, their versatility. Truly, a something has been let loose in human life, which, if properly directed, should be strong enough to lift up every woman in the world out of any state of degradation into which she may have fallen.

And why should this not be? Everything indicates that a time is at hand the like of which history does not record. Everything indicates that it is a time when whole bodies of people, whole nations and races, are being affected, are being moved onward, or else are showing such signs of retrogression that their position is clearly marked. Why should not all the women in this Woman's Age we are entering upon, be so touched, so inspired, so ensouled with

noble purpose, that with one mighty effort the whole mass might once for all rise to higher possibilities? I do not mean that an untrained, unthinking woman could possibly all at once find herself what some other soul has labored long to attain, but that every woman, whatever her standing or condition, should find some doors closed behind her forever, and some open before her that until now seemed to be barred. Every hour is laden with golden possibilities; the present holds a promise of mightier import than we know. STUDENT

LUXEMBOURG MUSEUM, PARIS

retired life, are reported to be well informed about the affairs of the day and the development in their own country — to be, in fact, the congenial friends of their husbands, thoroughly in sympathy with the improvements on foot in Persia, and so responsive to the needs of their country that they recently offered their jewels to finance a government institution that seemed to them desirable. The one woman in Persia who took the bold step of casting aside the veil, being educated and refined, met with no disrespectful treatment

OUR YOUNG FOLK

A DREAM

William Blake

ONCE a dream did wave a shade
O'er my angel-guarded bed,
That an emmet lost its way
When on grass methought I lay.

Troubled, 'wildered, and forlorn,
Dark, benighted, travel-worn,
Over many a tangled spray,
All heart-broke, I heard her say:

"Oh, my children! do they cry?
Do they hear their father sigh?
Now they look abroad to see,
Now return and weep for me."

Pitying, I dropped a tear;
But I saw a glow-worm near,
Who replied, "What wailing wight
Calls the watchman of the night?"

"I am sent to light the ground
While the beetle goes his round.
Follow now the beetle's hum—
Little wanderer, hie thee home!"

A Chinese Ceremony

THE following account is from the pen of a young American woman to whom was granted, a few years since, the privilege of entrance to the royal Chinese household. The annual ceremony of plowing well expresses the attitude of the Chinese toward industry.

One of these beautiful spring mornings as we were softly gliding across the lake, propelled by the graceful Palace boatmen, I lay back on my cushions reveling in the scene of quiet loveliness before me and drinking in the ineffable perfume of the spring, when my glance, roaming lazily around in perfect content, caught sight of a group of gentlemen on the bank of the lake beyond. The rays of the morning sun, glinting upon the gold of their embroidered costumes and touching, with iridescent rays, the peacock's feathers upon their hats, revealed their rank and official standing.

As it was a most unusual thing to see gentlemen in the Palace inclosure, I was at once all attention, knowing there must be some important event on hand, especially as, on looking closer, I saw one small figure in their midst more plainly dressed than the others, whom I at once recognized as His Majesty the Emperor. As we slowly approached I saw the Emperor go over to a plow to which was hitched an ox, and which stood at a little distance off in the field. Fortune favored me! I was to see the Emperor plow the first furrow of the year! For it was only on the morrow that the official public ceremony was to take place at the Temple of Agriculture, near the great triple altar of Heaven. I was to see the private plowing, done in the palace grounds and viewed only by the Princes of the Imperial family and the highest Manchu nobles.

When all was ready the Emperor took the handles of the plow and guided it down a furrow marked off the ground, and when the furrow was upturned, the seed was dropped in. The ox for this ceremony, which I had heard was white, was (at the Palace function) of a soft doe color. He seemed to have been trained for the purpose and performed his part with a dignity in harmony with the attitude of all the assistants and in keeping with the solemnity of the occasion.

I was rejoiced to have an opportunity of seeing this interesting ceremony and to learn that even this great rite, which I had thought, like the sacrifice to the Invisible Deity on the triple altar, was only performed in the grounds of the Temple to

Lomaland Photo. and Engraving Dept.

RAJA YOGA BOYS—AN AFTERNOON OUTING

Heaven, as well as every other custom dear to the people, or incorporated in the national life, is observed in the palace by the Emperor and Empress—that His Majesty really plants the first furrow of the year and gathers the first sheaves of ripened wheat, and that the Ladies of the Palace really spin the first silk and pull the first fruits.

The slow movement of the Palace boats was never so appreciated by me as on this morning, for I was thus enabled to see well this curious national ceremony, which I would never have seen but for the accident of the hour of my crossing the lake and the time it took to do so; for, as at all ceremonies where men are present, there were, of course, no members of Her Majesty's entourage, and none of the Ladies or Princesses had ever seen this ceremony.

STUDENT

A Thought of a Cloud

THIS is a thought that a Poet has given us of a cloud—a bright cloud lingering over a sunset sea.

There was a hushing spell over sea and land as the Day was softly withdrawing into the Sun. The spirits of men sank into rest and peace, for Night was nearing, and the mystery of meeting and parting was upon them, and all creatures felt it. Those things that had been born during the day, unseen until this hour, now appeared, and men saw what they had wrought. Even so it is at that other meeting and parting of Life and Death.

The Poet called "Bright Ariel-Cloud" and summoned it to be his messenger, for in his heart was that which he had wrought—anger against a brother who, he felt, had wronged him.

The spell was working in the hearts of men the magic alchemy of the hour, and its subtle power came from the struggles of the day, from man's labor during the long, hot hours. Slowly it worked, the anger melting, purify-

ing, fusing with other elements in his heart, until on the wings of the cloud the Poet sent it forth as grace and pardon.

STUDENT

A Youthful Linguist

A TEN year old girl who landed with her mother at Ellis Island, New York, last year was found to be able to speak fluently in six languages. Born in Russia, she learned Russian first, then Italian and Spanish from her governesses before she was six. When the family moved successively to Germany, France, and Poland, she learned the language of each of these countries; and her remarkable progress in English since she came has excited the interest of her teachers and companions.

Besides being able to speak, this little girl can read books in these various languages. She always tried, wherever she happened to be, to speak to the children in *their* language. On the steamer coming to America she began to pick up English words to use with the playmates she expected to find in New York.

A magic time is childhood for the learning of languages, and happy indeed are the Râja Yoga children who learn so early to know the speech of other nations than their own. G.

"AFFECTION for children is an Indian characteristic," says Dr. Charles S. Moody of Idaho. "I have never seen an Indian mother or father punish a child, nor have I ever seen an Indian child cry. An Indian child never sobs when hurt. Just an extra snap of the bright black eyes and a slight frown is all to indicate to the observer that the little fellow is suffering. I have never heard even an Indian baby cry."—*Selected*

THE CHILDREN'S HOUR

How the Coyote Became a Coward

ONCE upon a time when the world was very new, a man came to live upon it. Now in those days, all the animals could talk and many of them were very wise. The Coyote was particularly wise because he had traveled a great deal; so he became friends with the man and taught him many things. This man's name was Ka-that-a-kana-ve, which means that he had the Coyote for a teacher.

The Coyote and the man lived together for a long time very happily, until one day Kathatakanave said to Coyote: "Coyote, I am lonesome." The Coyote said, "Why, haven't you me to talk to?" and the man said, "Yes, but I want a human being like myself for a companion."

It made the Coyote feel sad to think that Kathatakanave was not contented with him, but he was a good coyote and loved his friend, so he said: "Why don't you consult Those Above?"

So Kathatakanave took the Coyote's advice, and the Coyote went a little way off so that Kathatakanave could talk to Those Above without being heard, and Those Above said it would be an easy matter for him to have human companions if he would follow their directions. Then they directed him to build a stone house, and after that was built to cut many sticks of different sizes, long and short, thick and thin, and put them in the stone house, in perfect order, the thick ones together, the thin ones together in another pile, and so on; and in the night Those Above would work the magic; but they cautioned him that if the work were not done in absolute silence, their magic would not work.

Kathatakanave worked all day, and by night everything was ready in the stone house; but he was so tired that he decided he would go to sleep and let Coyote watch during the night. So he called Coyote and said, "Now, Coyote, I want you to watch the house tonight because I must sleep, but you must not speak a word or utter a sound, or the charm will be broken."

The Coyote promised he would not speak, yelp, or growl, or make a sound, not for anything in the world. Then Kathatakanave lay down on the ground and went to sleep, and it became very dark, and Coyote heard the owls hooting in the distance.

All of a sudden there was a rustle in the house; Coyote pricked up his ears to hear, for it was too dark to see into the house, but presently men, women and children began to come out of the house, hundreds of them, and the Coyote was so excited that he shivered to the tip of his tail; but he did not make a sound, only watched. As it grew lighter he saw they were splendid men and women. As they kept pouring out of the house, looking about them and beginning to talk of the new earth to which they had come, Coyote was so delighted and so full of happiness that he could contain himself no longer, so he began to talk, yelp, bark, jump, skip, and howl

for joy. He forgot all about his promise.

Then everything was still! No more people came out of the house and the poor Coyote knew that it was because he had broken the silence and the power of Those Above would work no more; and he was very frightened.

When Kathatakanave awoke the next morn-

ing was stopped; and he was very angry with Coyote.

So he called Coyote and gave him a scolding, and then becoming still more angry, he pushed him away roughly, and Coyote, knowing he *had* broken his promise, ran away with his tail between his legs; and that is the reason why the coyote is such a coward. E.

Coral

THERE is a tiny little animal who lives in the sea, who is quite as busy and useful a worker as the bee and ant of the land. This is the little coral polyp. It is a tiny, round, soft little animal, something like a sea-anemone. It has a round little mouth that opens upward. This is supplied with hook-like little feelers, or tentacles. Like the sea-anemone, the coral polyp is almost a plant. It increases its numbers in different ways. Sometimes they split themselves in two, and become two animals instead of one. Sometimes they send out a bud or bunch from their sides just as plants do, and so they grow into a tree or bush of polyps. Sometimes they hatch their eggs in their mouths, and throw out the live baby polyps into the water. These are supplied with tiny hairs by which they anchor themselves to the rocks or sand.

The polyps drink in sea water. Sea water, besides having salt dissolved in it, has other substances. One of these is carbonate of lime. From this carbonate of lime, grain by grain, the tiny polyp builds his pretty wheel shaped coral house. Each one of the tiny rings with the delicate spokes radiating from the center, that you see on a branch of white coral, has once been the home of a coral polyp.

The polyps plant their coral trees in great circles, and sometimes in straight lines. There are so many millions and millions of them that they build up great thick walls in time. These walls are so strong that the waves of the ocean hurl themselves against them in vain. Each soft little polyp has built his tiny coral house so carefully and well, that all the force of the mighty ocean cannot break their coral walls.

Sometimes these coral walls project from the water, or lie just under the surface. These are known as coral reefs. They are very dangerous to ships. The great round walls are gradually filled in with sand and soil by the waves. In time islands appear built upon the coral foundations. Cocoanuts drift to the shores, and cocoa palms begin to fringe the islands. This is perhaps the first vegetation that appears. There are many coral islands in southern seas; the coral polyp prefers a warm climate.

TWO LOVING LITTLE COMRADES

THE HILLS OF SLEEP

Pall Mall Gazette

IN the drear-hearted winter at dusk when shadows fall,

Among the drowsy heather-hills the birds begin to call,

"Farewell!" amid the fir boughs the tawny goldcrests sigh!

The redbreasts sing "God bless thee,"

And the linnets laugh "Good-by."

Up the white winding roadway that climbs the heather stairs,

I laid aside my burdens all; the short day's wants and cares

Fled by me like the birds' wings, a-stirring soft and shy,

When the redbreasts sang "God keep thee!"

And the linnets laughed "Good-by!"

Through this drear-hearted winter, no shadow falls of mine

Among the drifted chestnut leaves, the mosses of the pine,

Yet hear I still the goldcrests a-whisp'ring out of sight,

The redbreast sings "God bless thee!"

And the linnets laugh "Good-night!"

ing he was delighted with the people he found on the earth; but when he looked into the stone house and discovered hundreds of the sticks still unchanged, he knew that Coyote had made a noise and broken the charm, and that the power to turn the sticks into people

Missionary Change of Front

A GREAT laymen's (Protestant) missionary campaign has been held in Boston, with plans to evangelize the world in this generation. Appeals were made for unity of the churches in order to bring the proposed missionary problem to a successful end. There are 13,000 missionaries abroad, it was stated, able to carry the gospel to 325,000,000 people; this would leave 675,000,000 unprovided for; hence the call for support.

"Do you think that the world can be evangelized in our generation?" one speaker was asked, and replied: "If the whole of the country responds to the call, as those already have, and live up to their pledges, we shall certainly see it, and in our generation too."

Commenting on this demonstration, a paper says that it is not an old-fashioned revival, with the personal element most conspicuous, but a concerted action of churches for the advancement of the cause of Jesus at home and abroad through the promulgation of the doctrine of good will to all men. As one of the speakers said:

New Beliefs to Order

We cannot express the Christian power in the old terms of divine sovereignty, we cannot proclaim the Christian salvation in the old terms of Christian atonement.

We cannot awaken men's horror and pity with the old term of eternal punishment. And if our conception of religion has changed, how much more has our view of the world? We don't see its needs as the elders saw it, we do not believe that the race fell at its birth and is getting worse near its close, but that from the beginning it has been an aspiring and ascending race.

What a remarkable change of front!—in obedience, be it noted, to the dictates of the Time-Spirit, for the churches are not *leaders* but *followers*, and have been so since the beginning of the Christian era. With regard to the old doctrines they have said: "These are our beliefs, necessary to salvation; whoso believeth them shall be saved, but whoso believeth them not shall be damned; yet, if you do not like them they can be changed." There seems but little inconvenience experienced over this remarkable change of attitude, but little nausea over this total eating up of their own words. For the new attitude, as quoted above, is tantamount to acknowledging that all previous missionary teachings and tactics

A House Built on the Sands

have been wrong! Poor "heathen"! How are they to know that our views of everything in the universe and outside of it have suddenly changed? They are left to find it out for themselves and to keep up with our changes of front as best they may. But if I were the

heathen, I should certainly "hedge," in view of another possible cataclysm in the missionary faith. What reason is there for thinking that "our views," having just undergone this transformation, will now stay as they are and undergo no further metamorphoses?

Japan and China are among the mission fields mentioned. As has often been remarked, with Orientals religion is a much more serious thing than with us; they observe it *every day*, not once a week only, and concentrate their whole being on it. What will happen to Christianity if they adopt that religion? Will they not make it their own, and, revivifying it with their own ardor and wealth of imagination, use it as a means of reconverting their teachers? But they never will adopt it. Three hundred years of missionary work, backed by endless millions (and fleets of modern gunboats)—have made no impress.

These Protestant churches, with their missions, are undoubtedly forging an important link in the chain of destiny, but without knowing what they are doing. Stirred up, as everybody is nowadays, by the kindling beams of a cyclic sunrise, they are instinctively taking a share in the great work of change and liberation now going on all over the world. From habit and profession they use the old terms and forms, but they are a little more conscious than their predecessors of the real nature of the work they are doing. STUDENT

Is Heat Substance?

A PRESS clipping states that a man of science believes he has discovered the true origin of heat. The current theory, that heat is a mode of motion, he declares to be fallacious. Heat is imponderable ether, accumulated in excess; this ether *per se* is neutral; but when it accumulates in excess, its equilibrium being thus disturbed, it produces the effect we call heat. The motion accompanying the manifestation of heat is an effect or agent—not the cause.

There is nothing new about this, however. In *The Secret Doctrine*, Vol. I, page 524, is the following quotation from an article by Dr. B. W. Richardson, F. R. S., in the *Popular Science Review*, Vol. V.:

At this moment, when the theory of mere motion as the origin of all varieties of force is again becoming the prevailing thought, it were almost heresy to re-open a debate which, for a period, appears, by general consent, to be virtually closed; but I accept the risk, and shall state, therefore, what were the precise views of the immortal heretic, whose name I have whispered to the readers (Samuel Metcalfe), respecting Sun Force. . . . Metcalfe maintains that the imponderable and active agency which he calls "*caloric*" is *not a mere form of motion*, not a vibration amongst the particles of ponderable matter, but *itself a material substance*

flowing from the Sun through Space, filling the voids between the particles of solid bodies, and conveying by sensation the property called heat. The nature of caloric, or Sun-Force, is contended for by him on the following grounds:

(i) That it may be added to, and abstracted from other bodies and measured with mathematical precision.

(ii) That it augments the volume of bodies, which are again reduced in size by its abstraction. . . .

For its own particles, he holds, it has repulsion; for the particles of all ponderable matter it has affinity.

Metcalf further held that everything in Nature is composed of two descriptions of matter, the one essentially active and ethereal, the other passive and motionless; to which H. P. Blavatsky adds:

And how can it be otherwise? Gross ponderable matter is the body, the Shell of matter or Substance, the female passive principle; and this *Fohatic* force is the second principle, *prâna*—the male and the active. On our globe this Substance is the second principle of the septenary *Element*—Earth; in the atmosphere, it is that of *air*, which is the cosmic gross body; in the Sun it becomes the *Solar body* and that of the Seven rays; in sidereal space it corresponds with another principle, and so on. (Vol. I, page 525)

Metcalf continues that solid bodies have attracted caloric in excess over fluid bodies, hence their cohesion. Hardness and softness, solidity and liquidity, are not essential conditions of bodies, but depend on the relative proportions of ethereal and ponderable matter of which they are composed.

Thus other thinkers have found difficulties in the way of current theories, and have been bold enough to declare them. It need scarcely be pointed out that to define heat as a mere mode of motion is to abandon all attempt to state its cause, and amounts to considering it as a mere mathematical quantity. So there cannot be said to be a real issue between the two theories, since the latter is no theory at all so far as the origin or real nature of heat is concerned; it considers the effects of heat quantitatively, but offers no explanation of their origin. The other theory postulates a cause for these effects; in its case, heat is the cause of the molecular motion; in the other case the molecular motion itself is called heat. So we have two definitions for each of the various qualities of Nature, thus:—

Sound is a vibration which produces auditory impressions; or sound is that cause which produces these vibrations. Light is a vibration in the ether; or light is the cause which produces this vibration. And so on. The unorthodox theorists simply go a step further than the orthodox; they are not content to ignore causes or to confuse them with their effects. And they see that even if heat, light, etc., are merely effects produced by the motion of material particles, we must still postulate a cause for that motion, so that we are left in the same difficulty as before.

Allusion is made, in the above quotation from H. P. Blavatsky, to the conception of the manifested universe as being the result or progeny of a dual parentage. And indeed all through the ancient teachings which she outlines, the eternal duality is considered. The One manifests itself in dual form, this duality being described as active and passive, male and female, mind and matter, etc. Gross matter is the passive principle of our earth; the active principle is this ethereal force which has been speculated on so much. It is in this

latter that reside the active forces that become manifest through matter, their vehicle or agent. Science errs in trying to make matter itself the origin of the forces that play through it. The same mistake has been made in other departments; as, for instance, in the attempt to define the organism of man and animals as at once the cause and the instrument of mind, or to define life as originating in the organic matter which is its vehicle.

With regard to heat, then, science has achieved a very clever and useful interpretation of the manifested effects of an unknown force; but offers us no explanation of the essential nature or origin thereof—no explanation, that is, which is not tautological. Two fundamental postulates, matter and motion, are assumed once for all and then left without further inquiry. Oblivious of the vast extent of the assumption, scientists sometimes assume an attitude altogether too dictatorial. They do not always realize that it is possible to endorse all the ordinary results of modern physics and still have a vast field left open for speculation; for have we not still matter and motion, the two postulates, unexplained?

What, then, is heat? To modern science it is, as said, a generic name for a certain class of physical phenomena. Nevertheless heat in itself, the cause of these phenomena, must be something more; and it is heat in this sense that science does not understand. The heat which the earth receives from the sun does not come across planetary space as heat; it comes in the form of what we call an invisible radiation. But our conceptions do not allow us to suppose that what streams from the sun can be matter; so, as we cannot do without matter altogether, we adopt the very curious subterfuge of filling space with a hypothetical matter which we call ether. Now this ethereal matter is set in vibration by some cause in the sun; this cause, again, is either chemical action or gravitational stress, or perhaps something else; but in any case we get an endless chain of causes and effects. Heat cannot be defined either as a form of motion or a form of matter; both motion and matter, as conceived by modern physics, being abstractions. In its *essence* it must be, like all forces, a form of the universal Life; its effects, considered alone, are abstractions. The physical manifestation is the outermost; beyond this is the ethereal manifestation; and so on.

STUDENT

The 'Aryan' Aboriginal Chinese

EUROPEAN research may fancy itself very daring, but it is really very timid.

It is so anxious to construct neat and easily comprehensible schemes of history that it often does violence to facts in its efforts to make them adapt themselves to requirements.

We are always discovering things which do not fit into the scheme; hence to the theory-bound they are a puzzle. But they do fit into the scheme outlined by the Theosophical Teachers; for this scheme is really based on knowledge and therefore fears no facts, since facts can but bear out the truth.

The *LOLOS* are a mysterious race in China. Quoting from the *Pathfinder*, we read:

China is ever the land of mystery. Behind its great wall, beyond its deserts, out in its provinces, back in its almost impenetrable mountains are strange

peoples, customs, traditions that open the eyes of the Occidental world in amazement every time some explorer makes his way in there and returns; for he never returns without being able to relate adventures and discoveries that almost rival the fabrications of Sindbad the Sailor. . . . Tibet does not possess all the mystery. Down between that country and the northern part of India is a bit of territory occupied by the *Lolos*, an independent people who through all the centuries have resisted and driven back the armed attacks of the Chinese and have maintained their racial individuality in spite of all peaceable attempts at assimilation on the part of the Mongolians. . . . The remarkable part about the *Lolos* is that they do not belong to the same race that the other inhabitants of China do. They are not Mongolians; they are distinctly Aryan in their racial characteristics. How is it, then, that these, our kinsmen, a branch of our family tree, are beyond the mysterious *Himâlayas*, lost from all contact with other Aryans, buried amidst the great mass of the yellow race? Go ask the sphinx, for it is a question unanswerable. Possibly in some prehistoric time they wandered from India. . . .

Through the past ages, like some of the oracles from the Pythian temple, vague inklings came to the outer world of the existence of the *Lolos*. All the explorers who have passed through the neighboring regions have spoken of this mysterious country, but not until a year or two ago did any of them actually penetrate into the land. This was a journey that was destined to be made by Capt. d'Ollsone, a Frenchman, and his party. They made their way in among the *Lolos*, found them a proud and independent people, paying tribute to no Chinese prince or Tibetan lama, preserving their own manners and customs, and wearing a costume peculiarly their own. . . .

They don't look like Mongolians; they show their Aryan origin. Their features are regular; they dress in long mantles with many folds in them. The men are proud and tall, having an imposing carriage.

This race would seem to be a remnant of the original Chinese; for a Theosophical Teacher says that the true Chinaman—not the hybrid mixture between the Fourth and Fifth Races now occupying the throne, but the aborigines who belong in their unallied nationality wholly to the last and highest branch of the Fourth Race—reached their highest civilization had hardly appeared in Asia. And H. P. Blavatsky commenting on this, says that this handful of the inland Chinese are all of very high stature; and that if we could get at and translate correctly the most ancient MSS. in the *Lolo* language ("that of the aborigines of China"), many a priceless piece of evidence would be brought to light.

Our term "Aryan" stands for a certain cast of features and is not to be confused with the same term as used by H. P. Blavatsky, who by it implies the Fifth Root-Race (which has been on earth as a distinct race about 1,000,000 years). The use of this term for the *Lolos* in the above quotation is an acknowledgment of their refined type.

Let it never be forgotten that archaeology affords no evidence whatever in support of the view that civilization is only a recent growth and that it has been preceded by nothing but successive grades of barbarism. On the contrary, wherever we look for the supposed barbarous ancestors, we always run up against these evidences of superior culture, which knock our theories to pieces. This is most important, because it is by these theories that pessimistic, materialistic, animalistic, and dogmatic views of human life are buttressed; and by demolishing them we are undermining the last refuge of bigotry and intolerance and preparing the way for true progress. STUDENT

✻ Some Views on XXth Century Problems ✻

The Real Medicine

THE first writer in an English popular weekly, read by thousands of the middle and working classes, deals with "The World's Unrest," East and West. So far as the West is concerned he certainly puts his finger on the right point.

Westerns think about religion in one mental compartment, and they keep their everyday common-sense for use in business in another compartment, with the result that many of us are once more secretly seeking for a peace denied to our world.

Seeking in what direction? What sapiently devised prescription are we proposing to take to give our souls peace?

The best minds seek the unknown through closer research into the meaning of the will. True will power is not brute force, bluster, or bluff. We are all magnets, and the strongest man is he who exercises the greatest magnetic force over the widest field. . . . Better understanding of will-power is the explanation of the growing resort to Christian Science and the cultivation of the Law of Mental Medicine. But when all is said, there is nothing good about it that is not to be found elsewhere. . . . In spite of irrational enthusiasts, it may be accepted as a fact that the cultivation of the sub-conscious mind and will-power is of the greatest importance in tranquilizing humanity. I take it that the evolution of religion in allaying unrest is shaping everywhere towards a process of will-culture: . . .

Will-culture and the subconscious mind. Science has broken through her accustomed field at a certain point in the hedge. It turns out that there is another field beyond, that of the subconscious mind. Misinterpreted knowledge of the existence of this field has crept out among the people at large, who, finding the field mysterious, have concluded it to be spiritual. Other persons, leaders of sects in "New Thought," including Christian Science, have made a gap in another hedge, the hedge around normal mentality. The public has got knowledge of this gap also, and, deceived by the statements of those who, themselves deceived, have gone through, feels comforted thereby, again confusing merely abnormal mental states with spiritual and noëtic ones. As it awakes to the meaning of its unrest it is likely to try these gaps, creeping through into the field beyond.

But there is nothing there that it wants, nothing that will satisfy spiritual aspiration. Meddling with the "subconscious," which in its negative function is a vast and minute recording-plate, and in its positive the producer of all the desires and the cause of all the frailties of human nature, will never yield knowledge of the "supra-conscious," the spiritual, the field of true will and true self-consciousness. The assertions and the denials of "New Thought" of whatever school have nothing to do with the cultivation of will. They are but the more or less complete hypnotic reduction of the mind to a state of ecstatic inertia, a lotus-eating paradise of self-complacency, the inertia enduring long after the ecstasy has burned itself out. True growth comes from the selection of the highest among the elements normally present in consciousness, the holding on to these in the

silence of the moments of inspiration, and in daily action, till their growth excludes all others.

The blame and confusion lies at the door of the churches. They never taught of the indwelling divine soul of man, the real source of will; and substituted an externalized savior. They forced it upon man's mind that of himself he could do nothing. They never taught that the spiritual life, the only life that ensures evolution of every fine and noble and creative quality of mind and heart, brings wisdom and power and understanding as well as goodness. Yet their Founder promised all the knowledge that he himself possessed and access to more than the power that he had used.

What wonder then that men turned from a religion that promised them nothing either of power or knowledge here on earth in comprehensible shape, deferring all to some vague hereafter; that made them indeed as worms, incapable even of self-purification? The inspiration of the artist and musician, the intuition of the scientific searcher, the self-forgetfulness of the hero — these and much more are locked up in the divine soul within each man. The churches never taught of the hidden reservoir and so the man of our day has never found it. The droplets from it which we call sparks of genius were called gifts of God, coming at his will and almost caprice, to most men never to come at all. We were to be humble, content with what we had and were; and the soul, instead of being our Genius, was itself said to require salvation.

So men turned from it all and found themselves in the really productive field of science. And now that that has proved too small, too inadequate for their fuller longings, they are in danger of forcing their way from it through openings that lead only to mazes and confusion. For men can only obtain true and well related knowledge of the subconscious by pressing upward day by day to the supra-conscious, the soul, which is already the knower of all the fields of being. Day by day, as he nears the goal, will each aspirant find that his eyes see further into the depths of his own being.

STUDENT

Sane Mental Healing

A CORRESPONDENT of *The Nation* (New York) calls attention to a book published seventy years ago in Germany, whose title he translates as "The Hygiene of the Soul." It has never appeared in an English dress but is being continually reprinted to this day in Germany. Judging from the quotations, the book appears to be the sane original, counterpart, or nucleus, of those morbid systems of "mental healing" which are sterilizing and distorting so many minds today. The author, says *The Nation's* correspondent,

goes further than Kant, who, in his well-known treatise on the emotions, speaks of the ability to conquer morbid feelings by sheer will power. He would not only master such feelings, but, wherever possible, prevent sickness itself, and in so doing he insists that the mind or soul must aid the body.

But this aid is to be given by looking away from the body, in trusting the body to do its own mending when the mind is kept healthy, luminous, and tense. Says the author of the book:

Man's happiness and his misery are forever determined by the impressions and images predominating in his soul. Why, then, should it be impossible to control their awakening as well as their disappearance? Why can we not train our eyes to brightness as we so often, alas! painfully train them to dwell in darkness? The raging of the storm upon the heath which penetrates the companions of Lear to the skin, leaves untouched the unhappy king in whom the storm of indignation that tears his breast drowns the fury of the elements without. Incredible as it seems, the most convincing proof of the power of the mind lies in its very weakness. Who does not know that those unfortunate beings whose souls are roaming in the night of insanity remain, in their gloomy prison, free from many of the bodily ailments which attack the normal persons around them? The soul held captive by delusion renders the body insensible to external influences by turning the attention away from the body. Ought not then the trained will, directed toward the serious aims of the intellect, to be as potent as raging indignation or the horrible power of insanity?

Has not every practising physician found in his own case that at certain critical moments only the most self-sacrificing devotion to his duty could dispel the clouds that threatened his own moral and physical stamina? Such devotion to duty is in itself a preventative of the dangers otherwise inseparable from the activity of a physician, as, indeed, we often find that whatever harm we may sustain in the discharge of our duty carries its own healing balm with it.

The man whose thoughts are occupied either with disease by way of denial or with health by way of affirmation is tying his mind into a close relationship with his body which he will sometime bitterly regret; is, as it were, dissolving it in his body. He is, first, effecting a mental sterilization of himself, which, since he is half self-hypnotized he cannot even suspect. In addition, he finally makes detachment impossible; and when at last by force of time the body begins to fail and its consciousness to cloud, he has no possible hope of escaping or warding off an exactly equivalent mental clouding. *Soul* is the bearer of mind's immortality, its bridge across death: but the link is cut; the mind is wholly in and of the body; carefully induced emotionalism, the subjective side of an artificially induced condition of the nerves of organic life, has been mistaken for spirituality. As the nerves at length perforce wear out, the mistake comes into view. The mind is senile and calcified to its inmost fiber.

The other process is to hold the mind constantly up in the light, to cultivate content, peace and joy, to keep the heart constantly radiant with compassion and geniality, and to make the soul the companion of morning and evening. Such few maladies as will not yield to this, to observance of the laws of hygiene, and to legitimate medical treatment, had better be lived through; if necessary, died through; for they belong to the individual's Karmic bill and contain some needed lesson. Since the bill must be paid sometime, pay it now and get *done with it*. Would that the pulpits taught of that Karmic ledger. STUDENT

Archaeology Palaeontology Ethnology

The Pre-Incans

IN the *National Geographical Magazine* for October there is an article on Cuzco by a traveler, with some photographs of the ancient pre-Incan architecture, massive beyond anything known, except perhaps in Egypt.

Cuzco is the Mecca of the Andean mountaineers in Peru. The old town lies in a valley bordered by treeless mountains, the central vale in a group of fertile basins 11,000 feet above the sea. The buildings are Moorish in style, with slanting roofs of reddish-brown tiles, paved courts, and carved wooden balconies overhanging the streets. It looks old, with its burros and llamas, fruit market, Spanish churches, and inhabitants, Spanish, Indian, and mixed.

But the most interesting thing is the remains of the pre-Incan architecture. In one narrow street rise on each side mighty walls twenty feet high, composed of massive stones, a dark slate in color, irregular in size, accurately cut and fitting perfectly without mortar. In length they are from one to eight feet, in thickness from six inches to two feet. The Spanish edifices which crown them look crude, fragile, and insignificant by these Titanic structures which have defied the centuries past as they will those to come. The quarries whence they came are many miles from Cuzco. If, out of deference to our established theories of history, we deny their architects iron and steel and machinery, we must all the more for that stultify ourselves by conceding that they did it all without these aids.

In the fortress of Sacsahuaman, which stands on one of the surrounding peaks, there are walls 18 feet high, and one of the rocks in them is 16 feet high and weighs many tons.

In no part of the world is there an ancient building or fortification to equal Sacsahuaman in solidity and beauty of execution.

On the plain facing the fortress is a mass of rock called the Rodadero and on the summit a series of seats rise one above the other. These are cut out of the hard rock and the place is called "The Seat of the Inca." According to tradition, the Inca and his nobles came here to watch the building of the fort, but legends and opinions of archaeologists do not agree. It is a question whether Sacsahuaman was built by Inca rulers following Manco Capac or by a pre-Incasic people between the Tiahuanaco and Inca periods.

The Inca relics found in the tombs and preserved in the museum speak of the culture of the Incas. Of the designs in weaving and pottery the writer says: "No modern work can excel many specimens left by the Peruvians."

The ancient worship that is gone, but lovingly looked back to, was that of the "Sun." Now a cross surmounts the heights; and the concluding remark is:

What blessing has European civilization brought to them which they did not already enjoy? What have they not suffered in the name of the cross which surmounts the hill??

The sad aborigines sigh in vain after the glorious past they dimly remember. They are largely stupefied by coca, which they take

to remove fatigue and hunger on the long marches they undertake as carriers. Yet often, on looking at portraits of the natives of Western America's sunlit, but now dessicated, plateaus, one is struck by a light in the eyes and a nobility of contour that speak of a great lineage; and the heart yearns back to times when life was joy and sunlight bathed the hearts of men. These reminiscences of the Soul carry us back beyond all religious and historical tradition, beyond the regions of modern complacency and calculated piety. We begin to realize that there may have been a

CONSTANTINOPLE

Looking down over the Castle at Hissar. The river is the Bosphorus; and beyond, the shore is studded with palaces and villas.

people on earth who were as energetic and mighty in their spirit as their architecture suggests; and that they were our own ancestors. It is bracing to get away from the ordinary ruts of thought and to imagine for once that perhaps the traditions in which we have been brought up do not represent the last word of knowledge. No one in his senses can doubt that the people who built these walls and developed these arts were no ordinary people but a mighty race. And we should ponder more on what such a fact implies; for it inverts all the conventional theories of humanity upon which our ideas of life have been founded. What tremendous gaps are represented by those ages of American history when civilizations were rising and falling all

unknown to us on the Eastern side! Can all that history be irrevocably lost? It is not lost, and as time goes on more and more of it will come to light.

STUDENT

The Sabre-Toothed Tiger in California

PROFESSOR JOHN C. MERRIAM of the University of California writes a deeply interesting article in the *Sunset* magazine as to the find of large numbers of bones of extinct monsters in the vicinity of Los Angeles. Caught in the treacherous surface of an asphalt lake there are remains of the sabre-tooth tiger, the camel, an extinct giant wolf, the ground-sloth, and mammoth, besides other more recent fauna. The bones are well preserved, in some cases enabling complete skeletons to be built up. The deposit has long been known as refuse asphalt on account of the large numbers of bones, but only of late has it been realized that they are of such immense antiquity. The editorial note introducing the article modestly claims that the record reaches back some tens of thousands of years. This is an improvement on the theological six thousand years of the world, but might be extended without any great harm.

It was stated long ago in Theosophical writings that the civilization of this New World is older than that of Europe, and the pyramid builders of Cholula were probably contemporaneous with the pyramid builders of Egypt. They were doubtless akin. And it is interesting to note that H. P. Blavatsky, in *The Secret Doctrine*, first published twenty years ago, spoke of "a large strip of California" as belonging to the immense antiquity of Lemuria, that giant extinct continent that with its high civilizations preceded Atlantis and perished by vast cataclysms 700,000 years before the early Eocene.

So the story is being verified, link by link. Statements twenty years ago regarded as preposterous, are coming slowly within the range of scientific possibility and the probability, whatever they may be, and piecemeal are being accepted in the face of facts which come one by one to verify them.

When the antiquity of America is better understood; when we realize that there is no necessity to go to Europe to find scenery unexcelled the world over; when the ruins of the great South-West, of Mexico, of Yucatan, of Peru—of the whole continent—are allowed to take their place as of venerable age and interest; when Americans understand that America is not a mere estate to be exploited by the present generation regardless of posterity, but begin to understand the meaning of patriotism in the light of the vast perspectives of the Past and the Future, then one of the lessons bequeathed to us by our ancestors of past aeons will have been learned, and we may say that out of the valley of dry bones have come living men. Archaeology truly has a mighty mission to fulfil, else it had not taken so high a place in the inestimable teachings of those who have the welfare of humanity as the sole object of their heart. A.

The Trend of Twentieth Century Science

The Other Dimensions

THE "Fourth Dimension" will not lie quiet. It is continually starting discussions concerning itself. A gentleman has just offered, through the *Scientific American* a prize of \$500 for the best popular exposition of it.

No one will ever perceive more objective dimensions than the three, for our present objective. But there may be other planes, depending upon other functioning of perceptible consciousness.

The bodies of men are objective to us; they are a yard, a mile, ten thousand miles apart. Suppose we ceased to see the *bodies* and saw only *minds* as functioning subjectivities. The whole picture would alter. Like-minded men, and men whose minds were similarly occupied, would be seen close together, but not with a closeness to be measured by a yard-measure. We should be seeing in another kind of space. If we ceased to see minds and saw moral characters, there would be still another space to measure.

Let us come back to the physical world but look at it differently. Let us look at it not along yard-measure lines but along influence lines. So far as we know, one piece of wood has almost (but not quite) no influence on another. The "space" between them would be very great but — because of the "not quite" — not impassable. Standing on one we could just see the other very far off. But two magnets a hundred yards apart — by yard-measure — would be much nearer — by influence-measure — than two pieces of wood a foot apart.

Venus, by yard-measure, is much further away than the moon. From the point of view of some at present unknown but possible influence upon the earth, she may be extremely near, touching, and the moon almost at the other end of infinity.

Suppose we saw a magician transfer a wooden ball to the inside of a closed box without opening it, and that there was no doubt of the feat. Should we even then have to assume that he passed it along one direction of space that was not upward nor downward nor sideways? Should we have to assume that just as a flat square is a closed square box to a two-dimensional being but visibly open above to a three-dimensional one, so our three-dimensional closed box is open on the line of the fourth dimension? Not at all. Matter, in the ordinary conception of it by science, is infinitely more pervious than solid; has infinitely more space *between* the particles than is occupied by the particles. This is the present conception: Let an atom, say of hydrogen, be magnified to the size of a church; the contained particles or corpuscles will then be about the size of printed full-stops, a thousand of them whirling in the space. But the atom has no material wall; it is merely the sphere of space outside which those flying points do not go. It is obvious therefore, that there is no *material* reason why two atoms should not rush through each other and neither know anything about it. The chances of the inter-

ference of the flying points of one by those of the other would be almost infinitely small. The corpuscles of the wooden ball could therefore, from this point of view, pass undisturbed and undisturbing through the walls of the closed box. Why then is the supposed magical feat not at once performable by anybody? Why does the wall of the box obstruct the ball?

Because the spheres of space called atoms repel each other as the two similar poles of two magnets repel each other. If we could dissolve away all the iron or matter of the magnet and yet leave the force of the magnet in occupancy of that much space, we should have two portions of "empty" space repelling each other. Conversely, if we suppose the magician to have made some momentary alteration in the atoms of his ball so that for the moment they do not repel other atoms, we have explained the hypothetical feat. He knew how to demagnetize atoms. STUDENT

Living Foods

TO prove a negative is proverbially difficult. But then there is no need to undertake the difficulty; simply *assert* the negative. Most people will accept a confident assertion much more easily than a proof. Manuals of materialistic philosophizing nearly always contain examples of blank assertions doing duty as bricks and cement for the edifice. A sort of grammar of science issued the other day contained two of them among a set of seven "axioms." We learned that "the universe has no purpose or goal," as one; that "human life has no purpose, ultimate meaning, or goal," for the other.

A well-known physician writes in a health paper upon diet. He gives various good reasons why uncooked food, fruit, green stuff, and so on, should form a regular part of our meals. For example:

There is reason also for believing that uncooked or living vegetable tissues are much more resistant to the attack of parasitic bacteria which abound in the intestine and which feed upon the undigested and unabsorbed residues of foodstuffs. The living cells of plants, as well as those of animal tissues, have the power to resist the attacks of invading organisms. This is why a cooked potato will sour in a few hours, while a raw potato will remain intact for a long time.

Presently he leaves fact for assertion:

The claim made by many raw food advocates, that raw food is better than cooked food because it contains a vital principle which the body needs and is able to appropriate, is wholly without foundation.

It has, on the contrary, a good deal of foundation. Living stuff is for one thing radio-active, a quality it loses as it dies. As experiments on sensitive plates show, it is constantly raising oxygen to ozone. In the case of such vegetable stuff as leaves, stems, and pieces of root, it is often capable, when properly circumstanced, of initiating the whole process of growth and elaborating itself into a complete flowering plant. If in this it *uses* the energy of the sun, it has itself the subtler energy of the *user* — that is, vital energy.

Even the writer himself remarks that the body may get a something from raw juices which cooking — that is, killing — destroys. Every physician knows or ought to know the difference value for rickety and scurvyed infants of raw and boiled milk. *Raw* vegetable and fruit juices have lately been found of the extreme value in the treatment of tuberculosis. And lastly we may recall some recent experiments — though only in the alphabet as it were — on the electric qualities of fruits and even some starches. The divisions of oranges and such fruits, separated by the fibrous septa, have been found alternately electro-positive and negative, the same being even true of the lamellae of some starch granules. Anyone whose work is occasionally very long and exhausting and who will try the respective restorative effects of half a tumblerful of raw as against boiled orange or grape-fruit juice, will presently come to his own opinion on the matter. STUDENT

Resolving the Crowds

THERE is doubtless a protyle, a primordial homogeneity of substance. But can we be near it while our ultimate consists of *individuals* the more unlike the better we know them? We have gotten back to the ultra-atom, the corpuscle, and are inclined to assume that one of them is exactly like every other. But may that not be because we cannot look close enough? To an outsider a flock of sheep seems to consist of individuals exactly alike and doing the very same things. But the shepherd, who knows them, knows that they have very marked individualities. So have the members of a cote of pigeons.

Are not men identical? We all go to bed, all eat, all have noses, all pursue money and pleasure. . . .? Given certain circumstances, say a motor coming down the road, and we all run away. At a flick from a whip we all cry out.

In the same way the atoms of hydrogen are identical. Given some atoms of oxygen and a *spark*, and they seize them. Given cold enough and pressure enough and they get together as liquid. So are the corpuscles identical. Given a pole of a magnet and they are bent in their career. (But it has lately been shown that they do not bend to the same degree.)

The closer we study "identical" units, from men down to fish and even trees, the less we find the identity, the more we come to individuals who, however identical on certain lines, as for example in all having noses, diverge in more and more marked peculiarities. In other words the "identity" of corpuscles and atoms of hydrogen merely arises from our necessary study of them in mass. If we could get closer we might presently find the individuality of behavior as marked as in men. So far we can only perceive that they in their way have noses and get out of the way of motors or are bent by magnets.

It may be the same at the other end of the scale. The stars may have as marked individualities as corpuscles or men. STUDENT

Studies

An Antarctic Deluge

IN an old book of clippings we find an account of the alarming theory that the world is threatened by a disruption of the great Antarctic Ice-Cap.

At the southern pole, we are told, the cold is excessive and the snowfall almost continuous; Captain Ross says it snowed 28 out of 30 days that he was cruising about the great ice-wall. The total snowfall has been estimated at 57 miles in 10,000 years. As there are no thaws, all this snow is converted into ice at great pressure, and the mass is increased by additions from the sea-water which is below freezing point, while the loss from detachment of icebergs is trifling in comparison. This huge mountain of ice is now as large as North America, says the account, and, including its loose ice, fills the whole space between Australia, Montevideo and the Cape of Good Hope. At Robertson Bay, Balleny Island, Borchgrevink in 1900 found the ice-wall 12,000 feet high. From a thickness of two or three miles at its edges, the continent ascends gradually to the pole, where it is estimated by Croll and others to be from 12 to 20 miles thick.

Since the last great flood, say 25,000 years, this ice-cap has therefore been collecting and storing up the waters of the globe, which is said to account for the fact that the southern hemisphere contains most of the water. Hence there is between us and destruction the cohesion of this ice-continent, which may at any moment fall short of the strain of its continually increasing bulk. Then the whole mass of water and ice will rush northwards, tearing up the floor of ocean, rounding off the corners of continents, and spreading inundation and destruction from pole to pole; and geologists are not wanting who claim to trace the furrows driven by past floods in the ocean floor, and who assign sundry deposits of drift found on the continents to successive occurrences of this cataclysm.

Without endorsing the above, it may be pointed out that the Law of Cycles is a salient feature of Theosophical teaching, and it merely extends to a larger scale what everyone knows to be true on the smaller scale. The great bulk of denudation is effected by periodic downpours and floods, the amount that takes place between whiles being comparatively small. In the same way, in geological history, we find the evidences both of continuous and gradual change and of periodic

Lomaland Photo. and Engraving Dept.

THE FALLS OF THE PLIVA, BOSNIA

A MOUNTAINOUS country in southern Europe on the eastern shore of the Adriatic, containing great wealth in forests and minerals, now being developed in some parts, but mostly wild and romantic, as in this scene, where the mountain torrent rushes in a thousand fantastic cascades over its rocky ledges and through its winding gorges.

and cataclysmic change. Many geologic changes have been effected by the age-long cumulative effect of imperceptible changes, but others have been accomplished by rare and sudden catastrophes.

But this principle, thus recognized in its physical aspect by Geology, is by Theosophical students studied also in its bearing upon human history. For the great physical cataclysms coincide with important epochs of change in the life of races. This sufficiently accounts for the inseparable connexion everywhere found between the various aspects of the Deluge stories; the cosmic, historic, allegoric, and other meanings being closely interwoven.

It must be borne in mind, however, that these cataclysms are not left to the mercy of "blind dynamic laws," but are regulated by causes that escape from the scientific ken. Science can refer the weather to the combined influences of solar heat and terrestrial movements; yet there are many other influences involved in it, some of which are being investigated, such as magnetic influences affected by sun-spots. Cosmic electricity plays the mechanic's role in cosmic phenomena, but it is itself a mere scene-shifter at the beck and call of agencies that ply in the realm of Cosmic Mind. It is the effect and not the cause.

The prouder man becomes of his smallness, the more insignificant becomes his pride; by knocking God off his throne he has left himself most terribly alone in God's big universe. For, physically considered, man is indeed small and helpless; what avails his wonderful science and philosophy—themselves mere swirls in the atomic ocean!—in face of the awful forces of the universe?

The physical body of man, with its little life, is not a very good place to which to fly for refuge. If that were all, it were surely hardly worth while philosophizing or troubling about ice-caps. Philosophy and speculation were made for men with Souls and Futures, not for ants of an hour; and in formulating materialistic theories, man at once affirms and denies his own immortality. Verily man is just so small as he makes himself; and if we can imagine a lunatic who by some insane delusion imagined that he was his own clothes, we might get an idea of the delusion of people who identify themselves with their own bodies. But, once master the idea that the real liver of the life is the Soul whose existence extends throughout the cycles, and to whom the incarnations are as days, and the disparity between cosmic and human affairs disappears. Man rises to a plane on which he is more truly a lord of creation.

Equalities and Inequalities in Human Life

(Notes from Addresses Given at the Young Men's Club, Theosophical Headquarters, Point Loma.)

I

TO our ears the words equality and inequality have a peculiar sound, and particularly *equality*; to one class it may carry something of terror, and call up pictures of horror such as those which became awful realities during the great Revolution of 1789; to another class the word may call up pictures of freedom, of hope, and happiness.

Of inequalities there are indeed many; in fact, it might be safe to say that inequality is one of nature's laws. We have but to look around to see that there are no two things which can be said to be equal; the stars in the heavens show evidence of inequality in magnitude and in other respects; at the other end of the scale no two blades of grass are equal, and throughout the vast range between these two extremes the same holds good — inequality everywhere.

From the present standpoint and for the purpose of comparison it may be agreed that there are a few fundamental divisions in nature which can be called equalities. For example, we may say that roughly speaking everything in the mineral kingdom is equal in so far that it belongs to that kingdom, between which and the next a practically impassable barrier is fixed for this period of evolution. The same may be said of the vegetable kingdom, the animal kingdom, and the human kingdom. Bearing on this, in relation to the human kingdom, there is a Theosophical axiom which runs: "Once a man always a man." In that sense, therefore, being separated by an impassable gulf from the other kingdoms, all men may be regarded as equal by reason of their common humanity.

This equality of humanity carries with it certain inalienable rights, privileges, and responsibilities. These cannot justly, and without injury to humanity as a whole, be taken away from any man; for the reason that humanity is a unity, an entity, of which no part can be unjustly treated without its resulting in general suffering. No man ought to be deprived of personal liberty, the right of independent thinking, equal justice.

There is little need to enumerate inequalities; these are in evidence on every hand; physical, mental, moral, and even spiritual inequalities are easily perceived, and the chief point for consideration is not so much their description as the explanation of them. One of the first questions of the newly awakened mind is, "Why do inequalities exist and to what are they due?" Unless a satisfactory answer can be given a feeling of resentment at the injustice of the greater number of these inequalities

is aroused; for it is plain that many, yea, the great majority, are handicapped from the start so far as this life is concerned. To the question — Why? there is no satisfactory answer outside the Theosophical teachings of Karma and Reincarnation. The next best alternative is belief in a capricious and unmerciful creator, and this to a thinking mind is untenable, and must be set aside as absolutely out of the question in an otherwise well ordered creation. With a belief in Karma and Reincarnation, for they must go together, any apparent injustice disappears. It is seen that when incarnating again the soul brings back with it Karmic heirlooms, as it were, in the shape of various abilities and disabilities which either help or hinder its progress through life. Karma is the great adjuster of effects to causes and Reincarnation is the means by which it operates.

This explains the inequalities in individuals; none have progressed equally, all are at different stages of development because each has for long been responsible for his own progress, and some have pushed onward with greater zeal than others. This must necessarily be so if we take into consideration the fact that each is ultimately responsible for his own advancement. Theosophy says *ultimately* because it recognizes that humanity is *one* and that the advance of individuals can be accelerated or hindered by others.

Theosophy does not teach that equality may be looked for; as far as can be seen there is no such thing in nature. The great hope for humanity that is behind the work of the Theosophical Movement is not to make men equal but to help so to raise the mass of mankind that at the end of this evolutionary period the least advanced shall have reached a point sufficiently high that all may pass on to the next stage on the journey of spiritual unfoldment.

G. E. G.

II

THE inequalities confront us at every turn in life. In the mineral, vegetable, animal, and human kingdoms they are strongly in evidence, and present themselves in so many varied forms that one might be inclined to exclaim, with a superficial glance, "equalities do not exist." The first equality, however, which suggests itself is, that they all share in life — that common ocean of life in which all live, move, and have their being. Again, all have a place in the universal plan, each adding its quota to the whole. They are unequal, in that all differ in intelligence, physical appearance, functions, and distribution.

Limiting our study to the human kingdom, here we find the inequalities displayed in the physical, mental, and moral qualities of man. Unequal physically; at one end of the gamut of being we have the man of unusual strength; at the opposite end, the weakly, with many gradations between these extremes. Unequal mentally; we find many grades of intellectuality from the well equipped to the dullard. Unequal morally; one being altruistic, another selfish. Equal, in that all experience life and death.

Why so much attention paid to the inequalities of life, thus having the cry "equality" raised for selfish purposes by those who profess to be able to remedy the inequalities, thereby, to an extent, dominating the minds of great numbers of men with a false ideal? The

inequalities receive this one-sided attention from a distorted view of life. We are continually looking at life from the circumference rather than from the center of the circle. This fact is not recognized by us, otherwise the panelled pictures presented to our mental vision would not be treated as if the whole panorama of life had passed in review.

Let us then try to look at life from a central standpoint, and so get a more balanced view of the inequalities. This central standpoint is the Divine, the standpoint of the Real Man. From this point of view the axiom "nothing is small and nothing is great in the divine economy" is forceful. Since we feel the force of this truth on the inner planes of being, must it not be equally true on the outer planes? But before it can be made manifest on the outer planes, man must act from his divine, his central nature. From this standpoint all would realize their equality in potentiality, their inequality in attainment, and thus obtain a realization of their true position in life. Man acting from this standpoint would surely perform his duty as a unit of the race, and for the race. *Equally important then would be the duty of all men, no matter how much, by comparison, the seeming differences of the duties might appear.*

It is surely a faint glimmering of this truth in the minds of men that the cry of equality has been so much given ear to. But what a danger presents itself from this faint glimmering of truth being thrown into selfish channels. We know what abuses and bloodshed in the past have been covered up by this forcing of equality. It may be equally true that it was levelled in the first place against a false autocracy, and to an extent succeeded in its mission. But a psychological atmosphere of a pernicious kind surrounds the idea now, and we have born from this atmosphere a false democracy in which tyranny is as rampant as ever, and which menaces the progress of our civilization.

In this democracy the inequalities are strongly in evidence, men attempting to fill positions of responsibility in their nation for which they have neither experience or intelligence; humanity thus suffers. Viewing the inequalities thus strutting in the garb of equalities, with all that has arisen in the fields they are operating in, Shakespeare's words are very applicable:

They laugh and riot till the feast is o'er;
Then comes the reckoning and they laugh no more.

Yes! the reckoning of this false equality will have to be faced in the near future.

Let us for a moment think how this false equality would work out in a large business concern. Sweep all the experience and responsibility of the master aside, and make "Jack as good as his master." I think you can imagine to yourselves how Jack would pose in the counting-house instead of sweeping the floor, the position under ordinary circumstances he would be capable of filling.

No! No! It won't do. Jack is only equal in importance to his master in the business when he carefully attends to the duties which lie within his particular sphere. There is danger in another's duty. We cannot drive this too firmly home, and in a successful business house great attention is given to this point. And what is found necessary there, is equally necessary in the affairs of a nation. W. F.

TIME'S CIRCLING PATH

K. V. M.

ALL loveliness out-blooming from the earth
Is but the echo of ancestral mirth
Which rings from God's arcane and shadowless home
To where, half-slumbering, we, his clansmen, roam;
Forgetful of our high and peerless line,
And what o'erclouded stars within us shine;
Which yet so potent are, all overcast,
We may not by these fleeting things hold fast,
Nor any peace nor satisfaction know
Save our own Godhood's immemorial glow.
Our eyes, which knew all Beauty, ere we trod
Time's circling path, and when we dwelt with God,
Can not be stayed by any earthly dream
For all grows weariness this side the gleam
Of that which thrilled these magnitudes before
We Gods awoke, and strewed the empyrean floor
With jewel dust of stars and nebulae,
And set awhirl the glimmering galaxy,
And flung ourselves, each on his fire-maned star
To launch him forth and swing through space afar,
And set the imprint of high beauty on
Chaotic continents where never shone
Beauty, nor any light nor dream of light
Through the unmeasured, deep antiquity of night.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

✽

Question What from the standpoint of Theosophy is the opinion of the Theosophical Forum in regard to the following, from Goethe's "God and the World":

And so, once more, 'tis as the planets would;
Conditions, limits, laws, our fates decide;
We will the right, because we see we should;
And thus by our own hands our wills are tied.
The heart drives out its hopes, a much-loved brood;
At the stern *must* wishes and whims subside,
So, after many years in seeming free,
More closely fettered than at first are we.

Is it true that as one ascends higher and attains more knowledge, he is more bound by the inflexible laws of the Universe; in other words, that he has less freedom of will?

Answer The question is a most interesting one. The verse on some minds would doubtless have a psychological effect from the way in which the statement is made; but a little reflection will show that it is written from an entirely pessimistic standpoint, from the standpoint of the lower, personal man, and not at all from that of the higher nature—the divinity that is in each of us and that each of us is in his inmost being.

The personal man is ever fighting against the higher nature, for it knows that once the higher, divine nature takes control, its dominion is over. If we watch ourselves we may notice the specious arguments that the lower nature makes, and the subtle reasons it brings forward against giving the full control to the divine part of us. Our desires seem to be our very self; to give them up, so the lower mind argues, would be to give up all that is of any worth in life, to give up life itself.

We are part God, part animal; part divine, part demon. And for long the animal, the demon in our natures has ruled. The great mass of the people in the western world today live only for self, for the gratification of desire—not necessarily gross sensual desires, for there is a subtler form of desire which has its seat in the mind—the desire for culture as an end, the ambition for power in one form

or another, the love of fame; all these are manifestations of the lower self; all of them, if we would speak plainly, evidences of the rule of the demon.

For the personality, ungoverned by the higher nature, it is no doubt true that "conditions, limits, laws," do its fate decide. In fact it is ultimately the creature of circumstances, and though the desires, or the personal mind may be so strong as apparently to override circumstances for a time, even the strongest personality must succumb at last, for it has no elements of permanency. One day it must break, for the very powers by which it seeks to restrain and control itself are from itself and unstable, evanescent. In this case we have the picture of the lower self trying to control itself by means of its own self-loving powers.

Truly in such case the right is willed only because there is no other alternative, and solely for selfish gain; true also is it that thus by our own hands our wills are tied, for by persisting in the gratification of self the will becomes more and more bound by the fetters of self, and true free will becomes impossible. True also is it that only "at the stern *must*," not of any desire for the right, but the imperative demand of the wills of others, or for fear of detection, or to conform to the conventions of society and thus escape ostracism by one's fellows—only for such and similar reasons do those who live in and for the lower self put aside their "wishes and whims."

"Let us be open as the day," he cries, "that he may deeper hide himself," as is said in the old song. And the end of the effort of the personal self to live out its desires, no matter how refined they may be, is that "after many years of seeming free" it is more closely fettered than at first.

Such is the picture from the standpoint of the lower self, the personal nature, the "I" that demands recognition from others. But happily for poor humanity there is another picture; and man has another nature which is divine. To say that we tie our hands by willing the right, not perforce through stress of circumstances, but for love of the right, is a most pernicious and false statement. Were it true, the world were indeed a chaos. Let anyone study his own nature, and watch the conflict that goes on between the higher and the lower in himself; let him persistently strive to follow the right, that which is highest and best, that which is for the good of others, and then from his own experience say whether he is more bound or more free.

It is true that with increase in knowledge we come to realize more the inflexibility of law, and that the Universe is governed by law; but if the knowledge has been gained from higher motives and not for personal ones, then also comes the realization that the law of the Universe is the expression of that same divinity that each of us ultimately is; and therefore that by working with the law as will then be our might and delight, we are fulfilling our own nature and thus attaining an ever higher and more perfect freedom. For how can freedom be defined except it be to act in accordance with our true natures, and to fulfil the behests of our true selves which ever tend towards the welfare of all? We cannot escape the Law, shall we act with it or against it?

STUDENT

Answer II. We have such idiotic ideas of freedom; that is the trouble. When we are children, we may run off and make mud pies if we like, and are not to suffer greatly in consequence. The thing will not hang like a shadow over our after-lives; we shall not be clapped into asylums for it. But being grown up, society expects different things from us. Go on in the old way, and it will be liable to shake its head when we pass. By and by we shall suffer.

Yet we do not make serious complaint that we are not permitted to make mud pies. We get on very well without. We do not sense any very severe restriction on our liberty in the matter.

The professional burglar no doubt finds the laws against house-breaking irksome and unnecessary. They are founded, he thinks, on stupid and vulgar prejudice; and their object is merely to hem in his activities within quite unsupportable limits. But we others, whose failings take different directions, sleep rather the better of nights for these same laws; they do not gall us in any way. You cannot pretend to say that the house-breaker, *qua* house-breaker, is freer than the man who earns his living in some more generally recognized way. *A* wants to steal, and does steal. *B* has no such wish, having never developed that side of his lower nature, or perhaps having conquered it long ago. Which is the freer man?

You conquer some temptation that has been a thorn in your flesh and do not do the thing any more, nor want to do it. Other men do it without pangs of conscience perhaps; but are they therefore freer than you? Not a bit; it is you who have acquired that much more freedom. When some people say freedom, we ought to understand chains.

We may as well forego all ideas of *personal* quietness and complacency. "There is no complacency for the personality," says the Upanishad. If you are a human being, the condition of your present existence is warfare; you are, willy-nilly, two opponent camps, and one of you is destined to carry every day; and one of you is finally to triumph. Are you going over to dwell there in the tents of matter and passion? Beware, for hosts and hosts, and the Law's self, are against you. Your miserable allies are to be hunted up and down the earth; if it were to be permitted you to have peace among those companions, the stability of the universe would be undone. You will not find freedom there, but perpetual unrest and disconsolation. Man is divine, and the most forbidden of all things is, that he should station himself in a lower place than befits his dignity. Let no one say that it is easier to take this lower side; let no one enter upon such an alliance for the sake of laziness or the avoidance of pains. Milton's words apply to our human selves,

Let such bethink
That in our proper motion we ascend;
Up to our native sphere: descent and fall
To us is adverse. K.

BUT the wise man also seeketh for that which is homogeneous with his own nature. . . . It is better to do one's own duty, even though it be devoid of excellence, than to perform another's duty well.—*Bhagavad Gītā*

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

Christian Truth

THE publication of a work by the scholarly author of *Studies of the Soul* is always a noteworthy event in the religious annals of England. The most recent emanation from this pen is entitled *Sidelights on Religion*, and its appearance is opportune, as it deals with questions which are agitating all serious minds in the present transitional stage of theological thought. Mr. Brierley, B. A., frankly says that the existing religious system is "up for trial." He goes further, and levels a serious charge against many of our popular preachers. He says they are keeping their congregations in ignorance of the results of Biblical criticism, and allowing them to believe to be true what can very easily be proved to be untrue. His words in this connexion are worth quoting:

We have today popular preachers—one must say it—trading on this ignorance and covering with the awful sanctions of religion propositions which it only needs the simplest inquiry to demonstrate as false.

The allegation is a grave one, and it is one which such a thinker would not lightly make. If true—and who shall say that it is not?—it only shows what a pretty pass things theological have come to for want of a system of religion founded on the impregnable rock of ascertained fact respecting man and the universe. Despairing of finding such vantage ground, many "popular preachers" are devoting their attention to economics. At a Connexional Conference recently held at the City Temple, London, one of the principal speakers, a prominent man in the Nonconformist world, remarked:

I do not trouble about the authorship of the *Pentateuch*, but I am concerned about the laws under which we live today.

Important as this matter is, one surely expects something more from Spiritual pastors.

The Church Congress at Manchester afforded a proof of the plight in which the old religious system finds itself after the onslaughts of the critics. A daring Cambridge Professor said they could no longer hold the views they formerly held about the origin of man and the introduction of sin into the world; the story of Adam and Eve in the Garden of Eden belonged to Asiatic folk-lore. There were some cries of dissent which perhaps came from those who have not kept themselves abreast of the times, but is it not true, what the Professor said?

The Dean of Canterbury, at the same gathering, feared that some of the critical conclusions came into conflict with "the settled principles of Christian truth." With due deference to the Dean, is not this begging the question? The Church has no settled principles of Christian truth, yet; the speech of the professor is a proof of that statement. The Dean mentioned one of the "indispensable foundations of the Christian faith," and it was—the super-

MEMBERSHIP

In the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

natural birth! It requires only the simplest inquiry, to use Mr. Brierley's words, to demonstrate that this is not a feature unique and special to the Christian religious system, but is to be found in religions of the world ages before Christianity came to be.

Many ideas of "truth" will have to go, but TRUTH will remain. That does not change, and no religious system will endure that is not founded upon ascertained fact regarding man, his nature, his origin, and his destiny. H. P. Blavatsky pointed out to Western people in what direction they must look for that knowledge, and until they do, Truth can wait. "Asiatic folk-lore" assumes a different aspect when viewed in the light which H. P. Blavatsky affords.

Tibetan Lamas of Diverse Kinds

THE triumph of the Doctrine of Wisdom, as originally represented by the "Yellow-Caps," over the older school of "Red-Cap" Lamas in Tibet, is narrated, in the vivid oriental style of imagery, by M. Huc in his *Travels*, as follows. It is of interest because some writers and travelers ignore the important distinction between the Yellow and the Red.

At length Tsong-Kaba resolutely put himself forward as a reformer, and began to make war upon the ancient worship. His partizans increased from day to day, and became known as the Yellow Cap Lamas, in contradistinction to the Red Cap Lamas, who supported the old system. The king of the country of Oui, and the Chakdja, the Living Buddha, and chief of the local Lamanesque hierarchy, became alarmed at this new sect that was introducing confusion into religious ceremonies. The Chakdja sent for Tsong-Kaba, in order to ascertain whether his knowledge was so profound, so marvelous, as his partizans pretended; but the former refused to accept the invitation. Representing a religious system which was to supersede the old system, it was not his business, he considered, to perform an act of submission.

Meantime the Yellow Caps became, by degrees, the predominant sect, and the homage of the multitude was turned towards Tsong-Kaba. The Buddha Chakdja, finding his authority repudiated, made up his mind to go and visit the little Lama of the province of Amdo, as he contemptuously designated the reformer. At this interview, he proposed to have a discussion with his adversary, which he flattered himself would result in the triumph of the old doctrine. He repaired to the meeting with great pomp, surrounded

with all the attributes of his religious supremacy. As he entered the modest cell of Tsong-Kaba, his high red cap struck against the beam of the door and fell to the ground, an accident which everybody regarded as a presage of triumph for the Yellow Cap. The reformer was seated on a cushion, his legs crossed, and apparently took no heed to the entrance of the Chakdja. He did not rise to receive him, but continued gravely to tell his beads. The Chakdja, without permitting himself to be disconcerted either by the fall of his cap, or by the cold reception that was given him, entered abruptly upon the discussion, by a pompous eulogium of the old rites, and an enumeration of the privileges which he claimed under them. Tsong-Kaba, without raising his eyes, interrupted him in these terms: "Let go, cruel man that thou art, let go the louse thou art crushing between thy fingers. I hear its cries from where I sit, and my heart is torn with commiserating grief." . . . Unprovided with a reply to the severe words of Tsong-Kaba, the Chakdja prostrated himself at his feet, and acknowledged his supremacy.

Even among the Yellow-Cap sect of Tsong-Kaba (Tsong-ka-pa), however, there are many inferior and uninitiated lamas; for, as H. P. Blavatsky says in *A Theosophical Glossary*:

LAMA. . . The title, if correctly applied, belongs only to the priests of superior grades, those who can hold office as gurus in the monasteries. Unfortunately every common member of the *gedun* (clergy) calls himself or allows himself to be called "Lama." A real Lama is an ordained and *thrice* ordained Gelong. Since the reform produced by Tsong-ka-pa, many abuses have again crept into the *theocracy* of the land. There are "Lama-astrologers," the *Chakhan*, or common *Tsikhan* (from *tsigan*, "gypsy"), and Lama-soothsayers, even such as are allowed to marry and do not belong to the clergy at all. They are very scarce, however, in Eastern Tibet, belonging principally to Western Tibet and to sects which have nought to do with the *Gelukpas* (yellow caps). Unfortunately, Orientalists knowing next to nothing of the true state of affairs in Tibet, confuse the Choichong, of the Gormakhyā Lamasery (Lhāssa)—the Initiated Esotericists, with the Charlatans and *Dugpas* (sorcerers).

But, if readers will consult H. P. Blavatsky's work, *The Voice of the Silence*, translated from the precepts of the real Central Asian School of Occultism, they will readily understand the difference between true Occultism and the various ascetic sects which often pass under that name. The former teaches the disciple the archaic Wisdom, and to become a helper of humanity; the latter inculcates seclusion or mortification for the purpose of attaining holiness or spiritual salvation for self alone. With this distinction in mind, we are enabled to judge of the teacher by his teachings and not by any name or claim he may assume. STUDENT

THE THEOSOPHICAL ADDRESS AT ISIS THEATER

THE meeting at Isis Theater last Sunday evening was of great interest due to the fact that it was conducted entirely by the boys of the Râja Yoga Academy, Point Loma.

The paper, "Recent Events in Cuba," by Antonio Castillo, one of the Cuban pupils at the Râja Yoga Academy, showed how deep-seated and ardent is the patriotism of the Cubans, and the high ideals that are held for the future by many of the Cuban people. Speaking of the late war, he said: "San Juan Hill was the battle-ground on which Freedom

Cuban is grateful, he is grateful with all his heart, and today not only a few, but all Cubans are grateful. They have recognized in Katherine Tingley an earnest love for all mankind. They see in her the most unselfish of all the benefactors of Cuba.

The other speaker, Montague Machell, opened his subject with a definition of civilization, saying that under the term "civilization" must be understood national culture and refinement, as well as material progress. In fact, in true civilization must be included all that makes for the real welfare of the individual and the nation.

"It must be clear to all," he said, "that civilization is born and developed in the

day better than the preceding one, and this should apply to our civilization. We must raise our ideals and open our eyes to the ever widening prospect before us." OBSERVER

Hypnotizing a Husband to Be Good

WOULD you rather have your children hypnotized to be good, or have them good of their own accord? If you prefer the hypnotized variety, it will save you a lot of trouble (at the start), because, instead of teaching them to be good, which is a tiresome task, all you need do is to wait until they are asleep, then crawl to their bedside and "suggest" them. Fancy a world full of these suggested children!

Lomaland Photo. and Engraving Dept.

STATUE OF FERDINAND DE LESSEPS: SUEZ CANAL

unfurled her flag. It was not physical superiority which won that victory. It was the spirit of Freedom and brotherly love. Not only the combatants, but the whole American nation won it, because its heart beat in accord with the Higher Law."

Referring to the recent unveiling of the Memorial Archway erected by Katherine Tingley on behalf of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY as a tribute to the Cuban and American soldiers who fell in the war of 1898, and to the laying of the Corner Stone of the Râja Yoga Academy and the Cuban Headquarters of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY on San Juan Hill, the young speaker said: "The recent Theosophical triumph on San Juan Hill has been a victory for Truth and Brotherhood. It is a field won against ignorance, hate, and unbrotherliness. It is not alone of great significance to Cuba, but to the whole world, as the future will show." He said that when a

character of the individual. It must grow from within outwards. The tendency in this age of materialism is, however, to see if we cannot do without the spiritual life. Men in the great cities of the world find little time for spiritual thought or consideration of the deeper matters of life. Throughout the world are Empire Builders in a material sense, who have more than they can attend to in building up the material prosperity of their nation, making it richer, more powerful, and all too often, more unscrupulous; who have neither time or inclination for matters that relate to the soul-life. Yet these matters are vital and of importance in true civilization. All the facts of history go to show that a truly great civilization depends on something more than commercial wealth, strength of armies and navies, foreign and home politics.

"The path of human evolution is upwards, and humanity is progressing. Theosophy teaches that we should strive to make each

Yet this is the method that is being suggested in some quarters; and an account is given by a woman of how she "suggested" her sleeping husband not to go to the club and drink. He might remain good for quite a time, but he would be a machine-made husband at best.

The writer once saw a European naturalist and traveler who had once been a member of some sect of "Red-Cap" lamas in Tibet; and he said these lamas had got the whole community hypnotized so that there was perfect order. Should we like our community to become like that? For, if everybody is to hypnotize everybody, it means a hypnotic hierarchy at the top, with intermediate stages below, down to the weakest at the bottom; a system of oppression infinitely worse than any founded on brute force.

Hypnotism is thus radically opposed to freedom, for what can be more tyrannous than to assume control over another by taking

advantage of him while he is off his guard? It may suit some people to think they can hypnotize others; but they do not look far enough, for by the same rule others can hypnotize them.

STUDENT

A Veteran

THE question of the age to which a man may attain is one of perennial interest, since it involves so many issues vital to human welfare. A case comes before the public now and then of unusual length of life and we have thoughtless newspaper headlines announcing "The Oldest Man in the World," and similar assumptions, as though they were incontrovertible. The latest of such is in Russia. A few weeks ago there arrived at Riga on his way to Warsaw for the jubilee banquet of the King of Württemberg's 1st Dragoons, an old soldier named Andrei Nikolaievitch Schmidt and on the day of his arrival he celebrated his 136th birthday. He was able to produce to the police his army papers authenticating his age. He was born at Schaulen in the Kovno province on the 5th of September 1772; enlisted in the Reval Battalion in 1796; and was pensioned for weakness as sergeant-major in 1857. He has twelve medals and orders for distinguished conduct in the field and has been a widower 62 years. He resides at Tiflis in the Trans-Caucasus.

Russia is a noted country for such old men but it is not always possible to be so positive as to their exact age. But this old man is at 136 able to make a journey from the Caucasus to Warsaw to be present at a regimental banquet and is credited with a wonderful memory, so he cannot be out of the race, even at his age; and the advocates of chloroforming everyone at 60 as past their usefulness, might put the limit up to 120 at least without feeling that they were exceeding the bounds of possibility.

But there is more behind such instances than the refutation of crank theories and complacent authorities. Now that the patriarchs of the Old Testament are shown to be race-symbols and myths, even though in some cases founded on realities, these instances in our midst are of actual scientific value, as showing that there must exist some circumstances in nature under which the term of a man's usefulness here and now may be normally extended to a point far beyond any that we are accustomed to regard as the limit.

Questions arise: "Why cannot science show us how to attain such lengthened periods of usefulness to the race?" "Why cannot the faculties of the mind and soul be preserved in full vigor until the body finally succumbs in the eternal struggle with the overpowering life-force of the universe?" "Are we fully awake in our daily lives, or by analogy, are we at all times subject to an unnecessary lack of vigor of the higher faculties?" "Is the absurdly short period of man's life really normal?"

Religion and science and European philosophy have their complacent or evasive answers to these questions. But meanwhile there is one of those popular intuitions which will persist long after science has shown them to be "impossible," that fills the earth with traditions, records, and stories of men who have found out the secret of longevity plus the

retention of all faculties in full vigor, even the physical. Many declare that they have met such people—and have been laughed at for their pains. On the other hand it is obvious that if such exist they have proved their possession of full commonsense by keeping very much to themselves, just as an old man will remain silent before the assurance of inexperienced youth which is ever ready to know better. And being conscious of their purpose in attaining age and experience, there seems to be no reason why they should not far exceed the ages of those who have lived long in spite of the unfavorable conditions of ordinary life and the ignorance of the laws of life. If an Old Parr can live heartily until

TO HOPE

Keats

WHEN by my solitary hearth I sit,
And hateful thoughts enwrap my soul in gloom;

When no fair dreams before my "mind's eye" flit,
And the bare heath of life presents no bloom;
Sweet Hope! ethereal balm upon me shed,
And wave thy silver pinions o'er my head.

Whene'er I wander, at the fall of night,
Where woven boughs shut out the moon's bright ray,

Should sad Despondency my musings fright,
And frown, to drive fair Cheerfulness away,
Peep with the moonbeams through the leafy roof,
And keep that fiend Despondence far aloof.

Should Disappointment, parent of Despair,
Strive for her don to seize my careless heart
When, like a cloud, he sits upon the air,
Preparing on his spell-bound prey to dart.
Chase him away, sweet Hope, with visage bright
And fright him, as the morning frightens night!

Whene'er the fate of those I hold most dear
Tells to my fearful breast a tale of sorrow,
O bright-eyed Hope, my morbid fancy cheer;
Let me awhile thy sweetest comforts borrow;
Thy heaven-born radiance around me shed,
And wave thy silver pinions o'er my head!

And as, in sparkling majesty, a star
Gilds the bright summit of some gloomy cloud;
Brightening the half-veiled face of heaven afar:
So, when dark thoughts my boding spirit shroud,
Sweet Hope! celestial influence round me shed,
Waving thy silver pinions o'er my head.

the age of 152, and this man to 136, under ordinary conditions, it is not at all improbable that those who know the laws of life have lived and do live to more than two and three hundred years, if they so wish, systematically and consciously regulating the human machine where others neglect it.

This Russian soldier was alive before the American Independence. A man of his present age at the time of his birth might have joined hands with Old Parr, who could have remembered the time when America was undiscovered, and have told something of the times of Columbus and Isabella and the rise of the Spanish Inquisition. We know how history has been edited—almost as much as the long-suffering Bible of the Christian churches. And yet, if all the records in the world had disappeared, or been destroyed, or tampered with, we have here the possibility of ordinary men living who with but one transmitter might tell us of the times of Columbus by tradition. What a glorious work for the extraordinary men spoken of above,

if among their other duties they have made it their business to preserve the ancient landmarks until such as are worthy and well qualified may be ready to bring them to light and restore history to its own proper sphere and purity! Perhaps by that time the editors of history will have so compromised themselves that their whole fabric will fall by its own weight.

P. A. M.

The Production of Lithium from Copper

THE grounds on which Mme. Curie and another woman chemist dispute some of Sir William Ramsay's conclusions with regard to the production of lithium by transmutation from copper are that the lithium was present as an impurity and that the experiment does not succeed when performed under conditions that will exclude that impurity. It may be thought strange that so experienced and careful a chemist as Ramsay should have incurred such a liability; but when we consider the extreme delicacy of the tests used for determining the presence of the lithium, we shall better understand the difficulty of excluding the minute quantities to which that test responds. It seems that all water from glass vessels contains it; and Mme. Curie found that even water freshly distilled in a platinum retort gave the spectroscopic test for lithium after standing for twenty-four hours in a glass flask. In fact nearly all reagents contain it as well as the distilled water ordinarily used. Repeating Ramsay's experiments with platinum vessels and all due precautions, the investigators were unable to confirm his conclusions.

T.

God and Financial Success

THE value of Christian Science as an aid in the promotion of legitimate business interests was a theme upon which many dwelt at the mid-week service of the Second Church of Christ, Scientist. . . . The reader read from the first epistle of St. James:

"If any man of you lack wisdom, let him ask of God, who giveth to all men liberally and upbraideth not; and it shall be given him. But let him ask in faith, nothing wavering, for he that wavereth is like a wave of the sea, driven with the wind and tossed."

Many men declared that they had proved God's willingness to give them wisdom for the asking. One told of having been cured through Christian Science of a throat trouble pronounced incurable, and continued:

"That was not the best part of the matter, however. I found that Christian Science is a law which works for harmony in all departments of life, and my business, which had never prospered, began to succeed far beyond all my expectations. I talked with business men all over the country, both here and in Europe, and I found that many of those who were doing best financially, were studying Divine Science."

A large majority of those who testified were men, and each had realized not only physical healing, but successful results in business transactions.—Clipped from the Press

This is surely profanation! "Wisdom"; what did the Biblical writer mean by the word? Surely there must be many Bible readers who venerate that word as standing for something infinitely more precious than business 'cuteness; and these must be pained by such travesties. The whole thing shows that we have among us a class of minds that seem inherently oblivious of some of the wiser qualities of the normal human being, and whose only idea in life seems to be to use every faculty in the service of personality.

H. E.

Art Music Literature and the Drama

The Music of the American Indian

A CONSIDERABLE amount of study of the music surviving among the Indians of our country has now been done, mainly from phonographic records. Miss Fletcher, under whose supervision the work has been accomplished, recently furnished a general report of results in *Musical America*.

Most people will find these results "curious," "interesting," and then pass on. A few may do some thinking. For this music is not elemental or elementary, not "made up of meaningless chants, devoid of sweetness, power, and expression." It is, on the contrary, highly elaborate and ultra-modern, involving the use of

the major chords of the over third and under third . . . one of the most notable characteristics of our modern romantic composers. . . . It seems a bold statement to make, but it is one amply justified, that all melodic and harmonic resources to be found in our music, especially the most modern and advanced, are also to be found in this primitive music among a people who have no musical notation, no musical theories, no systematized scientific knowledge of it. Nor is it in harmony alone that this Indian music reminds us of the present-day ultra-romanticists as well as older masters. The Indian rhythms are frequently as complicated and difficult as any to be found in the works of Chopin and Schumann. . . . What may be called the opening of the Wa-wan or Pipe of Peace choral reminds one strongly of numerous passages in Wagner. Yet it is perhaps more daring than any of that master's compositions, for it is a twelve-measure song, beginning in B-flat and ending in C.

The Indian does not claim that his music, like our own, is an evolution of recent centuries culminating today. On the contrary, it is his pride to have received and kept it unchanged from his remotest ancestry. Surely here is an archaeological remain pointing to an otherwise vanished civilization, at least as valid as any in stone! But a remain which happens to be alive will no more be touched by your archaeologist than a common cold would be treated by your pure surgeon.

Our modern harmonies are the result of centuries of experiment, and the era of strictly modern harmony did not begin till orchestras began to provide the almost necessary basis of the experiment. But the Indian had the same harmonic complexities with no instruments whatever. Either then he had or has a finer musical imagination than we, or he got his harmonies from ancestors who were

at least our equals in musical attainment and therefore in feeling. We might ask ourselves "what is civilization?" Is it automobiles or is it complexity of feeling and imagination?

Indian music seems to throw the most modern theory of the evolution of the scale utterly out of court. When a note sounds as fundamental from a stretched string, a series of overtones are faintly heard. By translating the first three octaves of these down to the

ed agreeably or otherwise with it. From those which sounded agreeably he gradually evolved the regular scale.

But this makes the invention of the scale depend upon enclosed dwellings with walls capable of affording echoes. He gives figures regarding the relative absorption of sound by various wall materials, adding:

We have explained for us by these figures why the musical scale has but slowly developed in the greater part of Asia and of Africa. Almost no traveler has reported a musical scale, even of the most primitive sort, among any of the previously unvisited tribes of Africa. . . . Turning to Europe, we find the musical scale most rapidly developing among the stone-dwelling people along the shores of the Mediterranean. The development of the scale and its increased use kept pace with the increased size of the dwellings and temples. It showed above all in their religious worship as their temples and churches reached cathedral size. The reverberation which accompanied the lofty and magnificent architecture increased until even the spoken service became intoned in the Gregorian chant.

Well, what we have reached by means of "lofty and magnificent architecture," the Indian has gained in the open woods and in leaf-thatched huts! Or else his music is the far echo of what *was* developed in temples which have utterly disappeared — perhaps with Atlantis under the ocean floors. The archaeologists and musicians would better hold a conference about it, and on the President's desk there might usefully be a copy of H. P. Blavatsky's work, *The Secret Doctrine*.

STUDENT

Spanish Music

THE history of music in Spain may be said to begin with Isidore of Seville. His chapters on the art, nine in number, are to be found in the third book of his *Etymologies*, where he treats not only of the theory and scientific attributes of music, but mentions certain instruments

by name, as being those in use at the time he wrote: *organum*, organ; *tuba*, straight trumpet; *tibia*, flute or pipe; *fistula*, shepherd's pipe; *sambuca*, a triangular stringed instrument of a high pitch; *pandura*, a three-stringed instrument, supposed to have been invented by Pan; *cithara*, a stringed instrument played with a plectrum; *psalterius*, a psaltery or lute; *lyra*, a lyre; *tympanum*, or drum; *cymbala*, or cymbal; *sistrum*, a metallic rattle; *tintinnabulum*, bell; *symphonia*, a species of hurdy-gurdy or *organistrum*, such perhaps as is figured on the carved portico of the Cathedral of Santiago.

St. Isidore is usually considered to be the author of the ancient tunes adapted to the Ritual or Service Book in Spanish churches, which were afterwards modified by St. Eugenius who succeeded Isidore . . . as Metropolitan Bishop of Toledo (646-657).—Burke

"SO THOU ART SIEGFRIED AND BRYNHILD"

(R. W. MACHELL)

octave commenced by the fundamental, the scale results. Helmholtz thought that the primitive musician, faintly hearing these overtones during the continuance of the primary, gradually learned to produce them lower down, and in force equal to the primary, thus arriving at the scale and melody. Professor Sabine's new theory is that harmony preceded melody. A note sung in a closed space is prolonged more or less according to the material of the walls. The primitive experimenter found that successive notes sung quickly after the first, and while the first was still echoing from the walls of his cave, sound-

The first duty taught in Theosophy is to do one's duty unflinchingly by every duty.—*Gems From the East*

Rewards and Punishments

THE theological network of thought which has spread itself over the continents of Europe and America, has for centuries held the mind of collective humanity as in a vise. No greater evidence of this, and no greater evidence of the power of thought itself, can be found than in the confusion which has existed in regard to rewards and punishments. As the power of the church is now being weakened by the moving of a greater power, and as men's minds are gradually shaking off the hypnotic influence which has for so many centuries held them in bondage, this wonderful lesson is open for anyone to read and learn. It cannot, of course, be seen by those who are still hypnotized, nor by those just shaking off the hypnotic spell. But there are enough awakening to continue the good work of demolishing this network, and helping men to see the truth.

The story of eternal burning in a hell, or enjoying an inactive and eternal bliss in heaven as the finale of one short life on earth, we will pass over as too childish to consider, simply commenting on it as an example of the hypnotic power just alluded to. Nothing else could explain the acceptance of such a belief. But aside from this, the aroma which has been left in the atmosphere is such as to produce a curious confusion as to rewards. People look with wonder as riches sometimes heap themselves upon the heads of the wicked and as misfortune, sickness, and poverty sometimes lie in the path of the good. Seeing this, some declare that there is no justice; others, feeling that justice must be, somewhere, conclude it is to be in the next world, since not in this. Some congratulate themselves on seeing they are born to fortune, that they possess some inherent merit not shared by others apparently less favored, and complacently enjoy their gifts. While some of the non-favored class regard with envy and criticism the present arrangement, and

would like to legislate a redistribution of worldly goods.

Mixed in with skepticism regarding an overruling power, there is the opposite belief that all power is overruling; that is, that man himself has no part to play in the shaping of his own destiny; that he does not create his own life and is therefore not responsible for the situation in which he finds himself.

All this has been explained in the New Testament. "As a man sows so shall he reap" is very plain. And "Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled," is also very plain. But the power which has been hypnotizing the race for so long has thrown an obscuring film over these thoughts, and has chosen that they should not have a vital influence. The Theosophical Movement, however, in this day of the destruction of the old network, has vitalized these thoughts, and made them a living power in the lives of thousands. And it has brought to light old literature which amplifies and unfolds these ideas, and clears up the whole subject of rewards and punishments so that no one need longer ask in vain for an explanation of life's inequalities. Listen to an ancient book of devotion:

In whatever way men approach me, in that way do I assist them; but whatever the path taken by mankind, that path is mine. Those who wish for success to their works in this life, sacrifice to the gods; and in this world success from their actions soon cometh to pass.

And again:

Those who through diversity of desires are deprived of spiritual wisdom, adopt particular rites subordinated to their own natures, and worship other gods. In whatever form a devotee desires with faith to worship, it is I alone who inspire him with constancy therein, and depending on that faith he seeks the propitiation of that god, obtaining the object of his wishes as is ordained by me alone. But the reward of such short-sighted men is temporary.

If one is rich he has fulfilled the conditions either in this life or in some other, which would bring about this result. And there is no need of confusing with this his goodness or his badness. If one is learned, it is because he has studied and worked long enough in this direction to attain this result. Whatsoever one may determine upon, if he persists in his determination sufficiently long and fulfills the conditions, he will reach the object of his desires. But as is quoted, the reward of such short-sighted men is temporary. There is no personal Deity who arbitrarily and regardless of this law sits on high and dispenses, according to his pleasure, worldly goods for spiritual merit. Yet such a theory is implied in the mental confusion existent regarding rewards.

It is all a logical result of wrong conceptions as to man's position in the universe, and as to his nature. In short it is the effect of the hypnotic power alluded to, which has by degrees caused to fade out of men's minds the knowledge of the true philosophy of life.

And the wrong conceptions as to the nature of reward are the logical result of estimating life from the standpoint of the body and not from the standpoint of the soul. Is it necessarily such good fortune to be rich and prosperous in a worldly sense? The answer to this can be found in another question—Has wealth always, or even as a rule, brought happiness? And those who possessing worldly fortune are happy to the end of life, do they owe it to this fact?

In a deep sense what is good fortune? We know intuitively that there must be a purpose in life, which can be discovered by searching, and that this purpose must be the purpose of the soul. Whatever then furthers this purpose is good fortune. In one case this might be forwarded by worldly riches. For another they might bring incalculable harm. One might be aided by artistic gifts; another might be simply poisoned. The truth is, only

one great enough to read the history of the soul is able to say what is, to that soul, good fortune. One thing alone is certain: each is reaping what he has sown, be it in the form of reward or punishment, and in this harvest lies the lesson most needed for him to learn. By accepting, in this spirit, each event as it presents itself, it becomes most assuredly good fortune; for it becomes the stepping-stone to something higher. There is indicated in the New Testament one point in evolution when the possession of every good and every advantage does not imply that the owner has striven after these things. For it is stated: "Seek ye first the kingdom of God . . . and all these things shall be added unto you." When one has really and in truth given up all for the service of the race, when all personal desires are transformed into the one great desire, then all nature places her gifts at his command. G. V. P.

The Women of Hopi Land

HOPi land comes very close to being a woman-governed country, for the status of woman in this little republic has as much freedom and dignity as it possessed ages ago, writes Frederick Monsen in the *Craftsman*, in an article on the tribal customs of the Hopis, those neglected and little known Indians of our great Arizona "painted desert."

Hopi society is based upon the *gens*; that is, upon the tie of blood-relationship. It is a society of equals where help is extended and received in the true spirit. How long this will last now that the touch of civilization threatens to fall upon them can be easily guessed.

Among the Hopi the women are excellent specimens of primitive humanity. The young women are well-formed and strong and of irreproachable character. They own the houses as well as build them, and all family property belongs to the woman, who is acknowledged as the head of the household. Inheritance, therefore, is always through the mother, and descent is reckoned through the female line. In spite of the liberty and importance enjoyed by the Hopi women, their reserve and modesty is surprising. They are as quiet and shy as if their lives had been passed in the utmost seclusion. . . . Their whole lives are devoted to the care of their children, and the matrimonial customs of the Hopi are of a grade which if generally understood, might make civilized law-makers and writers of civilized customs stop and think. It is marriage from the view-point of the woman, not of the man. It is a striking example of the principal effect of woman rule and it must be admitted that it is dominated by the highest order of purity as well as of common sense.

The building of the Hopi house is most interesting, [writes Mr. Monsen, further] and is carried out according to certain prescribed rules, from the selection of the site to the feast that opens the house as a dwelling. After the site of the house has been determined and its dimensions roughly marked on the ground by placing stones where the corners are to be, the next step is the gathering of the building material. In this the idea of the Hopi with regard to work is strongly in evidence, as the prospective builder calls to his assistance all the friends who belong to his own clan. These helpers receive no compensation except their food, and . . . the work is carried to its completion with a good will and spirit that has no parallel in civilization.

After the gathering of the building material has been accomplished the builder goes to the chief of the pueblo, who gives him four small eagle feathers

to which are tied short cotton strings. These feathers are sprinkled with sacred meal, and are placed one at each of the four corners of the house where they are covered with the corner stones. The Hopi call these feathers *Nakwa Kwoci*, meaning "breath prayer," and the ceremony is addressed to *Masawwu*, the sun.

The next step is the location of the door which is marked by the placing of food on either side of where it is to be. Also, particles of food mixed with salt, are sprinkled along the lines upon which the walls are to stand. Then the building itself is begun.

Among the pueblo people the man is generally the mason and the woman the plasterer, but from my own observation I have found that the women often do the entire work of house construction, the material only being brought by the men, who some-

as the hand strokes show all over the walls and the corners have no sharp angles, only soft, irregular curves where the plaster has been stroked down and patted with the fingers. . . .

The mothers are devoted to their children and the older children in turn assume their share of responsibility in caring for the smaller ones. As among all the higher orders of primitive people, the women have a position of freedom and dignity that is in some respects superior to that which women occupy in the most advanced stage of civilization. As stated, the woman owns and rules the home.

There is food for reflection here—a womanhood so superior on certain finer lines, existing side by side with, yet practically unknown to, American women. STUDENT

Contemporary English Women Poets

ONE of our women writers calls attention to recent works of contemporary English women poets. The article is timely, for latter-day women poets have been well-nigh obscured by the fame of Elizabeth Barrett Browning, with whom, of course, none can yet claim rank, although what the future may bring forth there is no prophesying. Miss Clarke, in her article, particularly notes the poems of Ethel Clifford, poems which have a certain impersonal response to the awakenings of life, and which are noticeable in that they are so little marked by pessimism, and contain so little yearning over the life that once was, or the joy that used to be. There is an even startling note sounded in *Cain's Song*:

Outcast am I, but the earth fertile and kindly
Stretches beneath me. The sun sets in the west
Golden and red, and I see it while Abel sleeps blindly
Deaf to the rain, and I hear it! Lord, which is best?
Branded am I, but the deer, russet and sable
Still are for quarry. And I hunt not in vain.
Mine is the triumph of storm and the gladness of rain, but Abel,
Nothing he knows though his face is upturned to the rain.

Lady Alfred Douglas is another poet whose touch is refreshing, as:

O Sunshine Spirit, I have seen
Your gold wings spread aslant the green;
Have watched their splendors trail along
The woodland ways where wild flowers throng,
And seen your slim feet slip between.
In gardens where tired feet can wade
Through flowers set thick in slumb'rous shade
Your fleeting fairy form has crept
Between the shadows unafraid.

The daughter of the painter, and also her father's namesake, Miss Laurence Alma-Tadema, has written some beautiful verse, but too retrospective, and in parts too melancholy, to be wholly in place at the present day.

Perhaps the most interesting of all the poets quoted by Miss Clarke are the mother and sister of Rudyard Kipling, who some years ago published a little book called *Hand in Hand*, by a Mother and Daughter. No names were given; but it was an open secret that Mother and Daughter were the mother and sister of the great English poet. STUDENT

A PATRICIAN TYPE

times assist in the heavy work of lifting the long beams for the roof. While the men are preparing the stones the women bring water from the springs at the foot of the mesa, also clay and earth, and mix a mud plaster which is used very sparingly between the layers of stones. After the walls are raised to their full height, the rafters are carefully laid over them, about two feet apart, and above these are placed smaller poles running at right angles and about a foot apart. Across these again are laid willows or reeds as closely as they can be placed, and then comes a layer of reeds or grass, over which mud plaster is spread. . . . All of this work is done by the women, also the plastering of the inside walls and the making of the plaster floors. When the house is completed thus far, the owner prepares four more eagle feathers and ties them to a little stick of willow, the end of which is inserted in one of the central roof beams. No Hopi home is complete without this, as it is the soul of the house and the sign of its dedication. These feathers are renewed every year at the feast of *Soyalyina*, celebrated in December, when the sun begins to return northward. These ceremonies completed, the interior of the house is plastered by the women who spread on the plaster smoothly with their hands. The surface thus given is exceedingly interesting,

OUR YOUNG FOLK

Yule-Tide in the North

YULE-TIDE in the North! a time of expectancy, deep peace, and joy. Just at the very moment when the warm flood of nature's life seems to have ebbed away with the declining sun; when the earth once so warm and throbbing with life and verdure, flowers and fruit, lies still and cold under a glistening pall of snow and ice; when not even the tiniest, most venturesome green thing dares to lift a valiant head, comes the mystic moment of the turning of the tide. Light conquers Darkness. Again the golden life of the sun will come slowly flooding back to our radiant earth, marching on resistlessly like a victorious king. And who may know what new gift, gushing from the Fountain of the One Great Life, it will bear upon its glowing tide?

A glorious time in truth, and one celebrated in all ages, over the earth. In far off days, among the peoples gathered around the North Sea, when they were still children of the forest, living close to Nature, a joyous midnight festival was held to celebrate the return of the sun after the winter solstice. Just at the magic moment when darkness yields to day, those assembled took a solemn vow to perform some deed of worth during the coming year. Valiant hearts beat high with hope and courage as their thoughts turned anew to Odin, the Father of the Gods, to whose service they thus pledged themselves. For was it not Odin who, in the beginning of time, led the Gods to victory against the Giants who would have destroyed them? Would that such valor might flow into their hearts that they should be able to fulfil the glorious promise he made to them in days of old. For their fathers still told how Odin was wont to come upon earth and walk with men and teach and counsel them, in days of yore.

"Once as they all clustered around him," so the elders said, "hanging in breathless silence on his golden words, as he related how he had won the great victory over the Giants, Odin arose, and calling upon the youths, led them down to the village smithy. There all night long he forged for them weapons and armor, and instructed them in its use.

"The Giants are not yet all slain. Even now I am on my way to Jötunheim, their abode. Seated upon our throne in Asgard, I looked forth over the world, and in the kingdom of the Giants I saw the tail of a new monster, and even as I looked it grew longer and longer. If he be not overcome, he will bring dire evil to gods and men. Thither fare

I now. To you I say, Be brave and true. Fight valiantly always, and ye shall become on earth even as Gods.'

"So saying, All-Father went on his way. Over rough mountains, through pathless forests, and across lonely wastes he pressed till at last he came to the mystic meeting-place of sea and sky. There he found the Fountain of Wit and Wisdom that waters one of the three great roots of the World Ash, Yggdrasil, that upholds the universe. It was the one that grows down under Jötunheim, the home of the giants. So Odin knew he had reached his journey's end. But before going to meet the monster he knew he must have a draught of the Waters of Wisdom. Mimer, the guardian of the Fountain brooded over it like a cold gray mist. All-Father approached him boldly.

"Give me a drink, Mimer, I thirst.'

"What wilt thou pay me?' was the answering query.

"I will give my right hand gladly for a draught,' declared Odin.

"It is not thy right hand, but thy right eye that I demand,' replied Mimer relentlessly.

"Even that is not too much!' and with these words All-Father plucked out his right eye and cast it into the Fountain.

"Then Mimer gave him the longed-for

draught, and as he passed back the empty drinking-horn, Odin knew that he had not paid too dearly, for a Fountain of Light welled up in his heart. Henceforth he possessed the wisdom and inner sight needed to help both Gods and men.

"Then Odin passed into Jötunheim. There he threw open the door that hid the growing monster. Grasping it firmly by the tail he cast it forth into the sea. It soon grew so long that it encompassed the earth, but having nothing else to devour, it swallowed its own tail."

Such heroic myths as this, and many many more, the people told at each recurring Yule, as the midwinter festival was called, to honor Odin, one of whose names was Yule. Fragrant memories from far-off days linger with us, preserved in the amber of time-honored festivities. Whenever we rear in our homes the beauteous Christmas Tree, or drag in the Yule Log, we are again performing the ancient nature rites. And as we gather around the gift-giving Tree, the dim and faded memory of Yggdrasil the World-Ash, let us recall the ancient hero-spirit and dedicate our lives anew to the great Teachers who have come among us, and to the service of all that lives. Thus can we bring ever nearer the day of the fulfilment of the ancient promise, that men shall be as Gods.

LOTUS BUDS AND THEIR MOTHER AT FALUN, SWEDEN

THE CHILDREN'S HOUR

The Cave Man's Christmas

Cave Man, Cave Man! time is long,
Old is your song—old your song.
Heavily, heavily rolls the tide
Day after day as the signs we bide,
Year by year in cavern and mound
Guarding the treasures under the ground.
Cave Man, Cave Man! time is long,
Sing us a song—a new song!

LONGINGLY, moaningly, the tones reached the Cave Man's ear. He sat silent and his harp was silent. Then he rose, took his harp on his arm and went out from the cave. "My song is old," he murmured, "yes, my song is old."

He went along the shore where he knew the sound of every wave; he had stayed there so long; he knew what shores they had touched, and if the people living there were happy or unhappy, if they served Good or Evil.

As century after century passed, he learned to love the lands to which his waves went; they were a solace in his long vigil at the Loma caves. He played joytones on his harp when a nation was noble and true—the waves moaned back his lament when evil and selfishness brought a land's ruin. The Cave Man was a servant of the Good.

"My song is old," he sighed again, but then his face lightened. "Yuletide is coming soon," he said, "the sunrise of the year is near. I may then be free to see and know. I will go to find a new song."

He left the shore; his feet followed the path which the children had trodden, and he mused over the great mystery of those children. "The sunrise of the year is at hand," he said, "and I shall learn."

Up Loma hillside he went, the old Cave Man; he went to find a new song.

No one but the Wise Ones who put him there know how long it is since he began his faithful guard. What happened then is not written even in the oldest book. The only thing which remains for the world today is some of the things which the parents have told their children generation after generation; people now call it legend, because they do not know when it began and they do not know that it is true. The Cave Man could have told, but he was not permitted to speak to humans—not yet. Tears rolled down his silver beard when, unseen by men, he heard the legend of Point Loma told. This is what it said:

"Here the Wise Ones of Lemuria—now ocean-covered—reared a stately building, a temple dedicated to the Gods of Light, wherein they taught her worthy youth the simple laws of life eternal.

"Here the gods touched hands with men and gave to them rich stores of knowledge

and wisdom; men were living for the soul of things, and made earth a heaven.

"From the temple-dome-crowned point shone to all the world a quenchless, pure, white flame, to light the way for sailors on ocean paths and on the sea of thought, that all might see and live.

"Once, when darkness and sorrow filled the earth in other parts, the great Teacher from the temple, filled with pity and compassion, went forth to help those people. The temple and its sacred light she left in care of trusted ones, charging them on their lives to keep and hold its precincts inviolate till her return. Their teacher and inspiration gone, they grew careless and faithless to their sacred trust—the light went out and they in darkness perished. The temple—refuge for the good and wise—was sacked and leveled to the earth from sight of men.

"But cavered underneath stand guarding genii, giants grim, fairies, gnomes, and sprites, to hold the portals closed by pitfalls, ocean tides, dire calamities and death, against the rashly venturesome and the faithless guardians lingering near the whispering, moaning caverns by the sea—until their Queen returns.

"In some coming age, when men, grown weary, heartsick, hopeless, wandering in the trackless waste, shall again search for ancient Wisdom and the Truth, then the great Teacher will again appear in human guise among her own, to rear upon the ruins of the old a new and grander Temple, dedicated to all that lives."

Such is the legend of Point Loma—but oh, how much the Cave Man would have told, could he have spoken! Now he wandered in the path the children had trodden, up Loma hillside—to find a new song.

Many times as the centuries had grown to thousands, had he gone up there at Christmas time, and from the topmost point watched for someone coming, and sadly turned back. He knew the hill well; bare and desolate had it lain, dark and still.

Now, how changed! A light was gleaming from the highest point. He saw beautiful buildings, gardens with fragrant flowers, and men, women, and children with serene, happy faces. Then he saw in the glow from the sunrise of the year, that from the heart of each one went out a flame of light, sprung from good thoughts and right actions.

"This is the Christmas fire to warm the winter world," whispered a little fairy at his side.

Then he saw that in their midst they had a Teacher, whose words they all heeded because they loved her and because what she said was

the wisest.

In the sunrise of the year he saw that she gathered the flames from all the hearts and carried them around the earth. There were many places where, in ancient times, sacred temples and great schools had been, where things true and noble had been taught—now they lay buried under the ground, barren and lonely as Point Loma had been.

She went to one after another. She spread light over them with her flames and warmed the cold ground, till they also began to glow: the old beautiful life came back and spread light and warmth all around.

"She is lighting Christmas fires on the hearths of the nations," said the fairy.

The old Cave Man's heart was overfilled with a great joy. "I have found the new song," he said, "I shall sing it to all the world in the new day at hand." SKULD

The Scientific Change of Front Universe All Alive

AS an illustration of the remarkable change of front which science is assuming, we find a book written by a man, who, writing as a scientific man, reverses the former attitude of science completely. Instead of trying to resolve all life into inanimate matter, he regards all matter as a series of living universes or orders of life, each composed of living particles, and each particle endowed with life, spontaneity and will. Matter he defines as "the aggregate of living things belonging to universes inferior to our own"; and the laws of Nature are the social and moral laws of these inferior worlds. In every little group of cells composing our physical bodies there is one point of true life; and all these points are connected together into a framework which may be called a spiritual body. From this the writer proceeds to theories about immortality and other related subjects.

The Universe A Spiritual Body

The writer is led up to his theories by the consideration that mere size is of little consequence in the universe, being merely relative; and that the investigation of matter, so far as we can carry it, reveals in it a structure perfectly analogous to that of the planetary universe, and indeed to all other systems, large and small, of which we have any knowledge. He sees the universe as an infinite number of grades of life, each on a different scale of size. As the atoms of what we call matter are revolving worlds, so what we call revolving worlds are the atoms of a higher species of matter. Thus life is infinite, the large and the small are but limitations of our minds, and the universe is infinite multiplicity comprised in an unfathomable Unity.

That such a view should be maintained by a well-known scientist and accepted as a respectable opinion is certainly most noteworthy as a symptom. But into the wide and shoreless chaos of speculation that such venture-some flights open up there must be introduced some element of sureness and certainty, or the result will be not knowledge but more bewilderment. What to modern science is a new found field in which it is wandering like a child who has just found his legs, is to the ANCIENT WISDOM a familiar region; and now that we have so enlarged our views that we can find common ground on which the ideas of the ancients and our own may meet, we may be more willing to avail ourselves of their experience. In short, will not these new ideas of life pave the way to a recognition that

knowledge is not the exclusive possession of our civilization and that many of the things which we have heretofore derided as fables and superstitions are in reality worth serious study? The admission by men of science of the truth of this cardinal teaching of the ancient WISDOM-RELIGION — that the whole universe is sentient — must lead to a recognition of other tenets of that Philosophy; and in that case we shall not be left to the mercy of our own unguided speculations, but shall be willing to hear what Theosophy may have to say on the subject.

Immanent Consciousness the Key

It is not surprising that the unthinkable rudiments into which Nineteenth century science analysed the universe should have failed to satisfy the mind for long; and that the abstractions "matter" and "motion" should be giving place to something we can understand — namely, living Beings, endowed with volition and purpose of which natural phenomena are the visible effects.

In this connexion may be quoted words from a professor of physics (Prof. Gruner of Berne, as abridged in the *Scientific American Supplement*). He is speaking on the history of electrical theories, and shows that recent changes of view as to the nature of electricity have marked a retrograde movement; in short, that we have gone around a circle back to earlier theories. As to the electron theory, he says, uncertainty attaches to the question of its mass.

Materialism Always a Vicious Circle

Its effective mass is found to depend on its velocity — an apparent paradox, for invariability seems a necessary property of mass.

We infer that its kinetic energy has been found to be not proportional to the square of its velocity (or supposed velocity), and that therefore it is necessary to infer a variability in the other factor of the quantity $\frac{1}{2}mv^2$, that is, m . However:—

The electronic theory . . . leads inevitably to the conclusion that the mass of the electron consists entirely of energy. Hence the mass is fictitious, and the electron is an immaterial point attached by indestructible bonds to the electro-magnetic field. But the electro-magnetic field is an electrical phenomenon, hence we are explaining electricity by means of electricity. Again, if all the atoms of all matter are composed of electrons, and these are only centers of force, the entire universe is immaterial. Nothing is left except electricity, and to the question, "What is electricity?" we can give no answer.

This is simply a statement by a physicist of facts which have frequently been pointed out in these pages, as also at times by men of science themselves, and especially by some thinkers who have criticised science from a logical point of view. Let us consider the question

again, from a mathematical point of view.

When a body is moving with a certain velocity, it is said to be endowed with kinetic energy, which can be measured and which gives it the power to do a certain definite quantity of work. This kinetic energy is defined as being proportional to the mass of the body and also to the square of its velocity (as expressed in the familiar equation $E = \frac{1}{2}mv^2$). We can measure the mass of a body by weighing it, and we can also measure its velocity; and thus we can ascertain its kinetic energy. Or, knowing any two of the three values, we can deduce the third. This works very well in practice, where we are not called upon to formulate theories but may take things for granted. But when we are not simply measuring and calculating for practical purposes, but are trying to arrive at a definition of the terms *mass*, *velocity*, *energy*, we get into difficulties for this reason—that neither mass nor velocity have any definable meaning when abstracted from the energy of which they are said to be the factors.

What Are
Noumena?

What is mass? It is some mysterious property which all physical bodies possess. It makes them difficult to move, and difficult to stop when they are moving; it renders them heavy. When mass is multiplied by velocity we see it as momentum or as energy; joined to gravitation it produces weight; but what it is in itself and taken alone we cannot say. Now what has physics always done when it wanted to explain any of the qualities of matter? It has resolved them into functions of motion or force. Hence the same procedure has been attempted in regard to mass, and the attempt has been made to define it as a function of motion or force. But this of course is reasoning in a circle. Force itself is defined as a function of the mass; how then shall we define mass as a function of force? If $f = ma$ and $m =$ some unknown function of f , it is clear that we cannot determine either m or f . The universe consists of "nothing at all"—in very rapid motion. This dilemma the writer sees.

A "New World"
Opening
Within

And, added to this, comes the statement that in the case of electronic energy, the equation $E = \frac{1}{2}mv^2$ does not work, except we assume a variable value for m . And to account for this variability, the writer resorts to the above-mentioned kinetic theory of mass, which, as shown, leads to a vicious circle.

Finally he caps all by repeating what we have so often said, that if the universe is composed of matter, and matter is composed of something immaterial (as of course it must be), then of course the universe is composed of something "immaterial." (He says the universe is immaterial—an illogical conclusion which is perhaps the fault of the translator.) But there is nothing alarming in this, for it simply amounts to the statement that matter is not made of "matter"; and if anybody prefers to say that it is, he is welcome to his opinion.

Let us consider a little further this idea that the mass of a body may be a variable quantity. What speculations does it not lead to? Perhaps, applying it to the case of large bodies, we might infer that it would be possible to change their mass, and hence their

weight; which, although not necessarily altering the force of gravitation (whatever that may be), would amount to the same thing.

"Matter"
Becoming
Metaphysical

We come to the idea that even the inertia of bodies may be merely a temporary condition—a "mode of motion," as science would call it—and that this condition might be susceptible of alteration. Thus a heavy body could be made lighter, and *vice versa*. But, since motion is, when analysed, seen to be nothing but a manifestation of Mind, then the inertia of bodies becomes reduced to—a mood, a fit of the sulks, obstinacy or firmness, according as we choose to view it. And indeed language (cracked up to be such a reliable authority by archaeologists) supports this view; for we speak of "mental inertia," of a "leaden mood," an "airy disposition," etc.

Physical science aims to define the physical in terms of the ultra-physical; therefore it cannot expect to be able to define the ultra-physical in terms of the physical—unless indeed it is willing to rest content with a mere definition of the relations of the two without any knowledge of the real nature of either. If it will but study the effects and calculate them for practical purposes, admitting that the causes must necessarily pertain to the only universal science, Theosophy, all will be well. And indeed it is forced to do this; for, as we see, whenever it reaches its own confines it sees either its own reflection or the beginnings of a new territory.

STUDENT

A Novelist's Philosophy

GREAT systems of elaborate Occidental philosophy do not seem to be as popular as they were at one time. Perhaps there is a reaction from the gigantic efforts of Hegel, Kant, and the others. At any rate, the modern thinker who gets some glimpse into the springs of the world just tells us what he sees with few or no strained elaborations. "So it appears to me," he says; or, "On the whole I am inclined to believe that . . ." And the reader perhaps says, "Yes, that is certainly a promising idea," and adds it to his store. For men are not and never were *reasoned into* systems of philosophy and views of the universe. Our *feeling* is materialistic or spiritual, in some extreme or modification or mixture, and we accept as satisfactory a philosophy which corresponds with it. We may then give the brain its freedom to disport itself in the mazes of a lot of reasoning with whose conclusions and essence we came prepared before.

An example is the novelist H. G. Wells' recent book, *First and Last Things*, which he calls "a confession of faith." A man may confess to a philosophy but he cannot confess to a *system* of philosophy. Mr. Wells does not *argue* for God in the universe or even reason about it; he will not even say that he believes that, or that the universe moves ensouled to a purpose. Still, he says:

If I am confessing, I do not see why I should not confess up to the hilt. . . . At times in the silence of the night and in rare lonely moments, I come upon a sort of communion of myself, and something great that is not myself. It is perhaps poverty of mind and language obliges me to say that this universal scheme takes on the effect of a sympathetic person—and my communion a quality of fearless worship. These moments happen, and they are the supreme fact of my religious life to

me, they are the crown of my religious experiences.

At the same time he will not have God a personality. He will not have even himself as a *permanent* personality.

I cannot respect, I cannot believe in a God who is always going about with me. . . . I believe in the great and growing Being of the Species from which I rise, to which I return, and which, it may be, will ultimately transcend the limitation of the Species and grow into the Conscious Being, the eternally conscious Being of all things. Believing that, I cannot also believe that my peculiar little thread will not undergo synthesis and vanish as a separate thing.

But the thread might clean its fibers from every trace of soiling matter; then thrill with pure light, and reflect pure light, and become part of the pattern, yet still not cease to be itself, a thread. Men like this writer, who have reached some consciousness of the poverty and stains of human personality, and also of an ideal far beyond, are often so impressed by the contrast as to fail to see the golden nucleus of spiritual individuality buried in the mud and rubbish. They forget that the golden center is the cause of their seeing the mud as mud, is the standing ground from which they obtain the sense of contrast. Man can only see himself as sinner, or soiled, or imperfect, in so far as he has reached a condition in which he is relatively not sinner, not soiled, not imperfect. He can only imagine his dissolution by standing where he is indissoluble.

Mr. Wells' God is not very clear. He has first an evolving God, the slowly harmonized pattern from the weaving and woven threads of human life.

I see myself in life as part of a great physical being that strains, and I believe grows towards Beauty, and of a great mental being that strains and I believe grows towards knowledge and power. In this persuasion that I am a gatherer of experience, a mere tentacle that arranged thought beside thought for this Being of the Species, this Being that grows beautiful and powerful, in this persuasion I find the ruling idea of which I stand in need . . .

But besides this evolving Being of humanity, whose life-principle is Solidarity, which, he would say, began to be as soon as ever two men reached unselfish sympathy for each other and will be complete and ready for real life as soon as all men have reached that, he speaks of a scheme, a Project, pre-existent. The consciousness in which that arose, utterly beyond human mental conception or definition, yet intimately present to each of us as the inspirer of our highest aspirations, is surely the real God. How could men aspire if that to which they aspired only came to being by the aspiration and the union of aspirations?

What is chiefly lacking in the thought is the idea of Reincarnation.

I do not believe I have any personal immortality. I am part of an immortality, perhaps; but that is different. I am not the continuing thing. I personally am experimental, incidental. I feel I have to do something, a number of things no one else could do, and then I am finished and finished altogether. Then my substance returns to the common lot.

But why may it not return from "common lot" again and again, to do each time a little better what it did so imperfectly before? Why should not the gathered experience continue to inhere in the same self that gathered it, to be added to and ever better learned from?

Reincarnation is indeed the missing keystone in the arch of modern thought. STUDENT

Some Views on XXth Century Problems

A Hypnotized Generation

THE culture of character was once thought to be a matter for moral effort, for the use of will. It was thought that the moral nature, like the physical and mental, could only grow by exercise. That is out of date. Hypnotism has provided a much shorter path, as it were through the air. If you find that you cannot concentrate your mind, that you have any moral failing not easy to surmount for the mere pious wish, that some habit stands in the way of your realization of your ambitions, hypnotism will immediately remove your difficulty. You need not go to a doctor for it; his ways may perhaps be a little hard and unsympathetic. A bland friend in a church parlor will now do all you wish, talk to you, be-father you, lull you, and finally hypnotize you. After the proper number of sittings you will be or have all you want.

But why should we wait till we are grown up? Why not have all the common human failings extirpated in childhood so as to make the later church parlor unnecessary?

The idea is already in working order. "Hypnotism, or mental suggestion," says *The Tribune*, Minneapolis, "as a cure for bad boys is the latest wrinkle to be tried by a juvenile court." The special truant officer of Minneapolis is said to be

a strong advocate for its use, believing it may produce reformation where other methods fail. The Des Moines juvenile court has taken it up, but Des Moines is not ahead of Minneapolis. Mr. — says he has used mental suggestion on truant boys in a number of cases.

He, it appears, "has diplomas from the Chicago and St. Louis schools which teach the science of mental suggestion."

How does it strike you, this idea of reducing a child to semi-consciousness, and then virtually putting your fingers into its moral nature and molding it to the pattern you want? Does it *feel* like a proper maneuver? Has not each man, each child, a higher nature which, properly evoked by education, can do with exquisite subtlety and perfection, from within, what hypnotism imitates from without? While you hypnotize, while you take a chisel and hammer for the delicate machinery for which it is divinely responsible, it has to stand back and can never again resume the same relation. A child can be hypnotized, that is, battered, into the semblance of the virtues, into the semblance of the absence of faults; but every step of the work is at the expense of the will, of the spontaneity, upon which its real growth depends. What will the child say when in after life, perhaps learning something real about hypnotism, it learns therewith that its will was emasculated before it was old enough to protest?

As for older people who invite another man's will to come into their citadel beside their own and help them, we would say that a fault is better lived with and died with, so long as it is struggled against, than that. For beneath the manifest fault the struggle is developing moral strength. And whether

they believe in Reincarnation, in the return to birth with all the gathered strength of the struggle, or in some other future, surely it is better to pass through death fighting than in an artificial peace produced by another man's will!

STUDENT

Natural Compensation

ONE or two recent writings of Miss Helen Keller's have aroused some discussion upon the deprivation of sight and its compensations. From the inside, blindness does not seem to be so crushing a calamity. Once that the shock is over, the compensations seem to set in. The other senses refine themselves with a corresponding addition to the pleasure of their use. The mind, thrown somewhat in upon itself, becomes subtler, more sensitive, more alert, more imaginative in its workings. "It seems," says one writer, "as if nature sympathized with the calamity and did what she could to compensate."

He has perhaps said a deeper thing than he knows. The statement is not only true for blindness but for every other calamity. As soon as the shock is over, if the victim will turn his attention inward, he will begin to find the meaning, the compensation, and the compassion. That so many miss that finding is because they think the calamity fortuitous, operated by blind causes; because they do not look for its lining; or because they submit to it as the inscrutable "will of God." Resignation in the sense of content is very well; but it should have its positive side, the confident expectation of compensation, of the development of something lacking in mind or character, the removal of something superfluous.

This is part of the doctrine of Karma, that there is transcendental compassion that may be felt and a purpose that may be known, underneath all calamity and deprivation.

STUDENT

The Place of the Axioms

IN a recent article arguing that Christianity can never suffer by any amount of free inquiry and examination, the (London) *Spectator* remarks:

On the other hand, it is only an optimistic form of obscurantism to deny that many men who inquire devoutly and with their whole minds, and follow the light of conscience in every particular of life, do not always obtain the religious assurance for which they long. Neither is it a certainty that the most sincere student of spiritual matters, starting from the materialist position, may not return to it.

How can a man study spiritual matters and finally decide that there are no such matters as he has been studying? Could he be a sincere student of geometry and finally decide that there was no such field? If the *Spectator* will say that he could not, it must see a radical difference between spiritual and geometrical matters. A considerable cloud of words might be obscuratively thrown up in explaining this difference. In the midst of the words, when they had done their worst, would be

this nuclear contention: Geometry rests on axioms and processes immediately and unescapably known to consciousness as valid; religion does not. The contention would be put carefully, but it would amount to this.

Suppose a man, having heard of geometry and being desirous to study it, should begin to consider the possibility of its existence. After reasoning a great deal and looking carefully at maps of Europe and test-tubes and dynamos and mortality statistics, he decides that there is no evidence at all for the very existence of geometry. A friend would point out to him that he was looking in the wrong direction; that the things he had been looking at were the concerns of other sciences; that geometry was primarily an affair of immediate consciousness and of the working of the mind upon data so gotten; that in fine he must look within and not without. He would add that when geometry was once found, it would be henceforth a matter of immovable certainty.

So with spiritual matters. First must be found the axiom or axioms as immediately known certainties. The thing must be looked for where it is, not where it is not. The spiritual axiom is in the heart and it becomes known in the silence of mind, in aspiration and in purified self-consciousness. The enunciation to the man of his own central divineness goes on to perfect clearness. The second axiom is immortality as against bodily mortality. And perhaps the third, that beyond any state he has attained and so rendered conceivable, there is always a higher to infinity. To that in which the ascending scales of all men lose themselves in unity he may or may not give a name.

He has found the certainty of a spiritual science because he has looked to the place where that science is.

STUDENT

Seeing One's Personality

A FRENCH writer, contributing an article to *Cosmos* on electrocution, unconsciously wanders into a profound philosophical field. Referring to Leduc's experiments on the production of anaesthesia by means of intermittent electric currents, he says:

The patient, however, without feeling actual pain, has reported a somewhat disagreeable sensation. All his functions of relation (motility, language, special senses) were inhibited before consciousness disappeared, so that he observed, as it were, the progressive diminution of his own personality.

One might underline the words *he* and *his own personality*. Who is *he* as apart from the *personality* he watches? During normal life we are, most of us, absorbed in the personality that acts, thinks, feels, desires, senses, as an actor might be absorbed in his part. As the curtain begins to fall he begins to come to himself, to perceive that he has been playing something unreal. By the time it is down he is wholly in his real life.

May not death be something like that? As the curtain of life begins to fall, *he* begins to come to himself, now as spectator and rememberer of all that in which he was just now so utterly engrossed as actor.

Archaeology Palaeontology Ethnology

The Illustration

THIS represents a scene in Herzegovina, one of the small provinces on the eastern shore of the Adriatic which have recently been a center of interest in the East European situation, owing to their political situation between the Empires of Austria and Turkey. This country has been called the Turkish Switzerland, from its surface being divided into a number of plateaux by the parallel ranges of the Dinaric Alps. Thus the land consists largely of inhabited and cultivated mountain plains and of the barren mountains surrounding them.

Herzegovina belongs ethnologically to the Serbo-Croatian nationality and the population is chiefly Slavonic, but includes also wandering bands of that mysterious and interesting survival of nomads amid house-dwellers—the Gypsies, of whom a picturesque group is represented in the illustration. T.

Indian and Grecian Art

SOME highly interesting remains of great archaeological value, says the *Scientific American Supplement*, "the results of which afford conclusive evidence of a connecting link between the Greek school and the art of the Far East," have been made on the northwest frontier of British India. The site is Sahribahlol. While the discoverer was engaged in preliminary explorations, a native offered to guide him to some antiquities. Here in a mound he found some forty fragments of ancient Buddhist sculpture, and laid bare the foundation of a religious building still retaining traces of stucco decoration of "Buddha-figures" seated between Corinthian pilasters. Further digging disclosed a wall of Gandhara masonry about 69 feet in length, 4 wide, and 3 high; it was a basement, and traces of the superstructure were found about. Later a small stupa was discovered decorated with friezes of elephants and Atlases alternating. During one night this decoration was chipped off by somebody on three sides; but on the remaining side, which had been left covered, was a far more interesting frieze, consisting also of Buddhas and Corinthian pilasters, but of a far higher order of workmanship.

Many interesting finds were made, including a seated Bodhisattva figure nearly 4 feet high, the feature of which is the delicacy of its treatment and its preservation; a large standing Bodhisattva figure; and a sculpture representing Kubera and Hariti seated side by side. The discoverer is of opinion that the

individuality and masculine strength of Kubera, and the feminine grace and beauty of Hariti, are without equal in the Gandhara school; and that their execution places them in the best period of Gandhara art, approximately the First and Second centuries of the Christian era. The school, he says, not only represents the highest artistic achievement of the Indians, but constitutes a connecting link between the Greek school and eastern art.

It is well known that many archaeologists in the past have been so hypnotized by the traditions of Western classical culture that

limits, favorable to the setting up of our Hebraic religious traditions on a pinnacle of pre-eminence over all past religion and culture.

But whatever may be said of these particular examples of Asiatic art, there still remain very many ancient buildings and art works that need explanation; such as the Nagkon Wat of Cambodia, the gigantic statues of Bamian, and many others; while we have still ancient Egypt, and finally Central and South America which can scarcely be supposed to have borrowed from Greece or have been influenced by Christianity. In spite of

such devices as discrediting Asiatic chronicles while at the same time swallowing much less reliable Western ones, changing years into lunar months or even into days, the truth is becoming apparent that culture is much older than many have cared to think or admit. STUDENT

Legendary City of Vineta Discovered

THE problem of the legendary city of Vineta has been solved in a new and remarkable way by Professor Deeke in Greifswald who gives an account of it in the records of the Geographical Society of Greifswald.

About a mile north from the shore of the Island of Usedom lies a shallow and a reef, which on the map bears the name Vineta Reef after the ancient legendary city Vineta, which is said to have sunk in the depths as a punishment for its sins.

In the middle of the 16th century the historian Thomas Kautzow visited Vineta, and at a depth of six feet he found a large number of large and small stone blocks, running east and west. He was even able to draw a plan of the situation of the stones, which plan is now reproduced by Professor Deeke. Another plan, made independently of the former by Johannes Lubbechius, agrees fully with it.

According to Deeke the large stones are blocks covering gigantic graves, and the smaller ones the stone-rings always found around such barrows on the mainland. Thus we seem to have here a dwelling-place of prehistoric times, which must have sunk suddenly and symmetrically beneath the water, as otherwise the order of the stones would evidently have been disturbed. This sinking was part of the last greater change of the German coast along the Baltic, the littoral sinking which gave the German coast its present shape. Thus . . . we shall have means of identifying prehistoric culture with the youngest geological age.—Translated from a Swedish paper.

HERZEGOVINIAN GYPSIES

they have imagined that Greece was the originator of all art, and have done the utmost violence to dates and history in order to try to vindicate this theory. A writer in one of the early numbers of *The Theosophist* (see *Five Years of Theosophy* pp. 263, et seq.) who is referred to by H. P. Blavatsky as an Initiate, expresses much indignation over this, and not unnaturally champions his own country and those still more ancient and illustrious civilizations which preceded its own. He points out that Central Asia, now under desert, was the home of a very great civilization which radiated out its knowledge and culture to many lands that survived its passing, among them Hindustan as now geographically defined. The Greeks themselves inherited their culture and art from Asia, as is now freely admitted by archaeologists, who are every day unearthing fresh proofs of this fact. Consequently it must be borne in mind that any similarity discovered between the art of Asia and that of Greece does not necessarily imply that Greece gave to Asia, but more likely the reverse. Just what our present authority implies in the matter is not defined, but these remarks will at all events fit other cases; for the desire to discredit the prowess of ancient races is part of a general scheme to contract human history into certain desired narrow

✻ The Trend of Twentieth Century Science ✻

Real and Unreal Heredity

AN editorial in *American Medicine* draws a useful and valid line around the word heredity, excluding phenomena that have strictly nothing to do with it.

The effect of a poison is the greater, the nearer the beginning of life. If an infant is poisoned by a long course of mercury, or, because badly fed, by a long course of lactic acid, we do not ascribe the resulting condition to heredity. But if toxic influences happen to play upon it before its birth, *that* resulting condition we do call heredity.

This way of stating the matter brings the wrong use of the word into clear light. Putting the anatomy pictorially, the body may be said to consist of a hidden root and a visible plant. The hidden root is the germ-plasm; from this grows the visible body as a whole. Prenatal poisoning, which results in disease or deformity visible at or after birth (called congenital disease and ascribed to heredity) is damage done to the young body cells just sprung from the root. Truly hereditary disease would be disease primarily arising in the germ plasm; and the writer maintains that we know of no such thing.

Heredity never originates abnormalities. Degenerate families have normal ancestors, to whom something has happened before or after conception to injure the offspring. It is the opposite of heredity. This is illustrated by some investigations of the gynecologist Pinard of twenty-three families in each of which there was one degenerate, infirm, or idiot child, though sound and vigorous children had been born before and after in each case. In twenty-two of the instances, the cause was found in some disease of one or both parents at or a short time before conception: typhoid, influenza, icterus, gout, or rheumatism. That is . . . heredity was interfered with.

If one thinks out its properties, it becomes evident that the real germ-plasm is no more on this plane, no more material, than is the pattern according to which the molecules of water will arrange themselves in freezing to make the ice-crystal. It is truly the *hidden* root and can no more be diseased than can the ice-ideal be diseased by puncturing and breaking the centers of the nascent crystals with a needle. There will be deformed crystals, but if they are melted and re-frozen they will be re-formed in perfection.

Whether the contention is *absolutely* true or not, it is true enough to make us sure that if humanity lived rightly for even one generation, the next would seem to us like a new race; and the next again would *be* a new race. We do not give the germ plasm a chance.

STUDENT

Planetary Growth

IT has been shown by Strutt that if the amount of radium, of its parent ionium, and of its grandparent uranium, existed in the depths of the earth to the same proportion as it exists in the crust, the general temperature—since all these elements generate heat continuously—would be much greater than it actually is. To account for the earth's temperature it is necessary to assume their presence in the crust only.

Then why are they only in the crust? Why

not in the depths? They are the heaviest elements and should naturally be nearest the center, sinking to the "bottom" of the primordially fluid planet.

Professor Joly thinks that they may have risen to the surface from various depths during the times of plasticity or fluidity. If so they must have been in masses scattered here and there; which requires, but does not get, explanation. For if they were uniformly diffused and rose to the surface they would have formed a continuous film; and there is no such film. Granted the scattered masses and remembering that these would be continually rising in temperature and therefore expanding, we can see that they would be presently floating to the surface of the viscid earth. Hence the collections of uranium ore, rich in radium, here and there through the crust and on the top.

Professor Joly thinks:—

The other view, that the addition of uranium to the earth was mainly an event subsequent to its formation in bulk, so that radio-active substances were added from without and, possibly, from a solar and cosmic source, has not the same *a priori* probability in its favor.

Yet if there be anything in Chamberlin's planetesimal hypothesis—that the planets were built up on nuclei by the constant addition of small masses from without—the second view may be true.

The origin of planetary and solar bodies may never become very clear to us until we assume that the nuclei upon which they are built have a positively attractive integrating force *sui generis* in addition to the general gravitation; and that this has in it the same selective purposiveness as has a living cell which selects just what it wants from the blood stream and builds up its special tissue from what it has selected. The earth's crust may be as it were but the rust or secretion of the living nucleus, the nucleus itself growing from within, from absorption from elements in the all-penetrating ether. Every element in the crust is radio-active—that is, disintegrating into ultimate "dust" to be washed away in space. May not the loss be continuously supplied from beneath? Thus there would be a constant circulation, from space to the center, from the center to the surface, and then out to space again.

STUDENT

Comparative Palmistry

CHIROMANCY now comes comfortably to our aid, assuring us that we did not have a monkey-like ancestor. Comparing the lines on the hand of the orang with those of our own hand, if we can get some neighboring orang to submit to the inspection, we find a considerable difference in the lines. Three main ones take origin from around the base of the index finger. One of them curves upward to the root of the thumb. Another, also curving upward, but less so, lands somewhere on the pad of the little finger's edge of the hand. These lines are caused by the flexure of the fingers upon the palm, and they curve—that is, are not direct-

ly transverse—because we not only close our fingers directly into the palm in line with the arm, but also laterally towards the thumb in order to get its aid in grasping small things.

Says a writer in *Cosmos*:—

On the palmar face of the orang's hand we find a corresponding series of lines. . . . But it is noteworthy that their direction is transverse rather than oblique. . . . To what does this difference point? Professor Goodsir of Edinburgh has marked it by showing that a man's hand can grasp a sphere, while a monkey's hand can only grasp a cylinder.

The anatomist Turner says:—

These lines exist on the infant's hands at the moment of birth, and I have seen them in an embryo not more than 90 millimeters (three and one-half inches) long. They appear on the palm months before the child can make any use of its hands. . . . They must be regarded as hereditary characteristics transmitted from generation to generation, to all human beings.

The *Cosmos* writer says therefore:—

Adam [whatever he may mean by Adam] was a man like us, not the hypothetical man-monkey ancestor . . . who, since he did not transmit us the lines of his palm, never existed.

The omitted step of the argument is, that acquired variations are not transmitted. A hypothetical monkey who had developed for himself a hand that could grasp a sphere as we do would not transmit to his descendants the muscles he had trained nor the lines which their action had produced.

"Adam" may however neither have been "a man like us" nor an evolution from a monkey-like ancestor. He may have been the point in the human line *from which the ape line diverged*. But that was a humanity of which no fossil traces remain. The evolutionary history which is as yet accessible to science opens far later, when the simian stream had been running for ages and humanity had become very nearly what it is now. According to Theosophy, the ape is the product of an abnormal union of very early humanity with certain animal types not now extant, and whose fossil remains, if they still exist at all, are deep hidden beyond likelihood of recovery.

Two positions are maintainable: The human hand might be an evolved ape hand; or the ape hand, a retrogressed human hand. But the *Cosmos* writer, whilst insisting on the small difference, leaves the great resemblance unexplained. For him there are two unconnected streams.

STUDENT

The Advance of Plants

ALL acquired characteristics tend to be inherited: None of them do. The pendulum of opinion appears inclined to settle somewhere between, but nearer the latter. A recent monograph of Professor Henslow's, dealing with this point, attempts to make the gradual inheritance of acquired characteristics a cause of the evolution of plants. They experiment, find out the best way of adjusting themselves to the conditions about them, and then transmit to their descendants the practical lore they have acquired. These can then take another step, and so on, the ability to experiment also increasing. C.

Studies

Durum Wheat

THE Department of Agriculture brought durum wheat to this country from Russia and Africa during 1899 to 1902, and the seed then sown formed practically the entire foundation of the present crop. At a cost of \$10,000 in the beginning, a crop worth \$30,000,000 now grows in regions of low rainfall, where the steer formerly roamed over 20 acres to find his living. It has spread through a wide range of country, from northern North Dakota, to southeastern New Mexico and northwestern Texas. It is a common crop in Montana, Idaho, and parts of Washington, Oregon and Utah.

Thus the cities of the east, both at home and abroad, are fed by the desert, for this wheat is mixed with other wheat in making flour for bread, in the manufacture of macaroni and kindred paste products, and in breakfast food. It has also become prominent as an export crop, chiefly to Mediterranean countries and even to its old homes Russia and northern Africa.

E.

Meerschaum in New Mexico

DEPOSITS of meerschaum have been discovered in New Mexico and are welcomed because the previous supply is said to be getting low. Two deposits have been located in the upper Gila River valley, northeast and northwest of Silver City. The latter lies in the bottom and walls of the cañon of Bear Creek, occurring in veins, lenses, seams, and balls, in limestone. The nodular meerschaum so far found contains iron stains and particles of grit, but the more massive material may perhaps be purer.

The word meerschaum, meaning in German "sea-foam," has been translated by the French into *écume de mer*; and English-speaking people, so famous for spelling and spelling reform, have, in accordance with usual custom, adopted the German spelling but not the German (correct) pronunciation. Mineralogically it is sepiolite or hydrated silicate of magnesium. It is white, smooth, easily carved with a knife, and takes a fine polish. The wax used in polishing the tobacco pipes made out of it becomes stained with tobacco oil (known to smokers, but not to chemists, as "nicotine"), and the mixture is absorbed by the clay and "colors" the

Sponge Fishing by Submarine

IT is always pleasing to find scientific and mechanical progress directed into economical even if not into constructive channels.

The sponge fishery has always been regarded as one of the dangerous occupations and the fishers have unusually short lives. A Frenchman of Carthage has applied the submarine idea to the gathering of sponges and for some months the boats constructed have been in practical operation. Upon the smaller model which originally proved itself efficient a larger boat was made at

Toulon. It is not so large as the naval submarine and its equipment is quite simple. The boat is described as being cylindrical with rounded ends. There is one opening only, a manhole at the top. The boat is sunk by filling three tanks with seawater, but a safety weight of 1500 lbs. is attached, so that in case of emergency it can quickly be cut loose from the inside and allow the boat to rise to the surface without delay. The oars and arms for cutting and gathering the sponges are all worked from the interior. Electric light reflectors and bull's-eye windows provide the necessary means of seeing when below the surface. Two men only are required to man the boat.

This is an immense improvement upon the old method of the naked diver going down with stones tied to his feet, a method which still obtains in some parts of the world.

The next thing will be to devise flying machines with some other purpose than that of the owner being in possession of a weapon calculated to destroy as many of the human species as possible with the minimum probability of effective retaliation. Even if used merely as scouts this "ideal" still remains true in essence. Will our mankind ever cease devoting its glorious constructive faculties to destructive ends? Is it so very impossible that the great storehouse of nature has unthought-of discoveries in waiting for us until we have proved our trustworthiness? Is it impossible that our greed and over-anxiety blunts our faculties so that we miss the greater bounties of Nature? And may not Nature's great cataclysms on the other hand be but reminders that when any destruction is needed, she is capable of attending to the matter? M.

Students'

Path

From TENEBRAE

By Algernon Charles Swinburne

"THERE is the fire that was man,
The light that was love, and the breath
That was hope ere deliverance began,
And the wind that was life for a span,
And the birth of new things, which is death.

"There, whosoever had light,
And, having, for men's sake gave;
All that warred against night;
All that were found in the fight
Swift to be slain and to save;

"Undisbranched of the storms that disroot us,
Of the lures that enthrall unenticed;
The names that exalt and transmute us;
The blood-bright splendor of Brutus,
The snow-white splendor of Christ.

"There all chains are undone;
Day there seems but as night;
Spirit and sense are as one
In the light not of star nor of sun;
Liberty there is the light."—Selected

The Larger Hope for Humanity

FOR many centuries the festival of Christmas has served as a yearly reminder of some of the cardinal truths of human development and progress. It has suggested, by means of the appeal it makes to the human heart, such essential and urgent truths as the joy of giving, the happiness and welfare of little children who are the hope of the race. And, most important, many will hold, it has by its association with the coming of a Teacher of the age-old Truths, kept before the human family a faint gleam of the blessed knowledge concerning those perfected beings who stand ready to hold out a compassionate hand to all aspiring souls who press forward along the path of true human progress toward the divine. In so far as Christmas has symbolized these truths has it been a star shining with the larger hope for Humanity.

It must be confessed that these great truths symbolized by the Christmas festival, have been miserably befogged by the interpretations that the brain-minds of churchmen have attached to them. The common conception, for instance, of the coming of Jesus has come to be the advent of one particular Helper of Humanity. The universal aspect of the teaching, its saving power, has been almost entirely lost, and the people have to learn anew from Theosophy of the Christos—the Christ-principle—which is the divine in each, and also of the larger hope that is contained in the Theosophical teaching of the coming of successive Helpers of Humanity in whom the Christ-principle has become the one dominant note, and who can quicken in all hearts the fires of the spiritual life. Lost too for the many, in the mazes of a material civilization, has been the pure joy of giving, the simple act of offer-

ing that has sanctified the religious life of many peoples who made use of different forms of offering. And a pitiful comment on the plentiful adoration of the Christ child that has gone on for ages, is the fact that many little ones still die for want of care; and in spite of many unselfish efforts to share, there are still many children who know naught of Christmas joy, and naught of the Christos within.

There is that about the festival of Christmas however that *can not die*. It is founded in Nature and in the Soul and the universe. It has been a sweet glimpse, sent to the race by Those who know, the great workers of humanity who for the most of people are behind the scenes. And the festival has gone on doing its work just as buildings of wondrous beauty bear in their architecture a message of truth and light—a silent message, while loud voices within their walls proclaim that which is entirely dissonant with the truths of life.

Think then of the significance to humanity when the principles underlying the joy that Christmas brings are fully comprehended; when the Wisdom teaching that illuminates these fragments of truth has endowed human beings with the possibility of making of this as of other festivals, a time when the whole nature is attuned with the life of Nature, the life of the Spiritual Soul, and the Great Law. Think of a time when the joy of giving means not only Christmas cheer, but the joyful surrender of all that bars the way on the upward path, and leaves open the heart for the forces of the universe to enter and radiate help and cheer with every beat! Picture a time when humanity no longer wanders from cult to cult ignorant of the laws of life, no longer follows false leaders, but, because the blessed truth is known that Sages walk among us who can lead us to the Light, the heart is satisfied, doubt dispelled, confidence restored, divinity recognized—the strength and will to help and cheer growing as lengthens the sunlight of each day that follows the winter solstice.

Christmas has been a great wizard—whose power has lasted over the multitude for a day. The happiness of making others happy is able to disarm many people of the coat of mail that separates them from their fellows during much of the rest of the year. There is a temporary cessation of hostilities, the hostilities that are carried on by weapons, so subtle in their mental garb that they pierce everywhere. The cruelest and most effective injury that we can do to ourselves and our fellows is to regard ourselves and our interests as entirely separate from them and theirs. In doing this we are violating the foundation principles of human life; and it is one of the sweetest influences of the true Christmas that the heart reigns for a day, and the desires, "the slayer of the real," are set aside because we are at one in wishing everyone to be happy. There is of course a pitiful side to this in life at present—it is not the heart enlightened by wisdom that rules; but there is no doubt that the kindling of an emotion that radiates a feeling of good-will to all for even one day, is a gleam in the darkness, and humanity needs but wise teaching to keep that fire kindled and learn the joy of united life. It needs wise teaching and—the Teacher.

The face of the Teacher whose name has so long been associated with Christmas has looked wistfully down upon centuries of un-

brotherliness, much of which has been committed in his name. Sad were it if he had been the last of the Helpers to live among men to teach them the way to true living. Sad were it if none of his compassionate co-workers should follow to teach Humanity to find the Christos within—for this few have learned, though the leaven of Jesus the Christ's teaching did enter life as far as it might in a dark age, among peoples unquickened as yet to highest possibilities. Though Humanity was long seemingly an orphan, unguided, it was moving towards a moment in its history and development, when should come Those who could quicken in the hearts of mankind a deeper realization of the Christos within. The Great Law, the dawning of a New Age, the existence of the Lodge of Helpers always ready to give all the help the Law permits, have made at the present time the glorious possibility for a more general recognition and a more intelligent and whole-hearted following of the Teachers sent from the Home of Compassion.

As if to prove conclusively the truth of this teaching concerning perfected human beings, as if to win all men back to the childlike recognition of its great Leaders, recent times have seen three of their envoys at work openly in the world. The work that they have done—the promulgation of Theosophy, the formation of a nucleus of a universal brotherhood, the founding of the Râja Yoga Schools, proves to all who look, what work can be done with such leaders. These stand as an object lesson to the world, and, as the world reads, it finds itself once more alive with the hope that fires those who know their divinity, know the common divinity of humanity, and the opportunity to lift suffering brothers out of the slough into which they have fallen through ignorance and self-will.

This larger hope—that all may be lifted through what those enlightened by the knowledge of their divinity find in their hearts the strength to give, is the Star in the East to human hearts. The joy of renunciation of the base is the higher aspect symbolized in Christmas giving. The Christ-child of the future is the little one in every land who has grown in the light of the Wisdom-Religion and knows the Christos within. Christmas cheer will one day mean that so near to the hearts of humanity are the pain and sorrows of each, that compassion must have healed them all ere any can rejoice! M. M. T.

THINK of it, if you who now read this could as little children have had impressed upon your minds the simple knowledge that you were souls, that there was in your hearts a divine inexhaustible power, that you were something more than bodies, something more than thinking machines, and had the power of divinity and all that is beautiful and true within yourselves; think of it, that if you had had pointed out to you the two paths, the one of the God-child, the other of the little animal-child, and if your parents and teachers had known the meaning and the beauty and the power of life—think of it and then say if the men and women of today had had these things taught them, would we not have had happiness and joy where now we have sorrow and pain, would not the world have been brighter and better?—Katherine Tingley

THEOSOPHICAL FORUM

Conducted by J. H. Russell

Question What a pity it is that Theosophists should claim to *know* the details of universal truth. It is notorious that men's convictions about many things are often diametrically opposite, and yet are held with equal honesty and equal force. Why then, should Theosophists pretend that *their* convictions are proof of their theories?

Answer But you do not find that Theosophists, or let us say, honest students of Theosophy, claim to *know* the details of universal truth. Be answered at once on this point with these aphorisms from H. P. Blavatsky's translation of an ancient eastern work, *The Voice of the Silence*:

The Doctrine of the Eye is for the crowd; the Doctrine of the Heart is for the Elect. The first repeat in pride, Behold I know: the second, they who in humbleness have garnered, low confess, "Thus have I heard."

Be humble, if thou wouldst attain to wisdom. Be humbler still, when wisdom thou hast mastered.

The advance of Theosophy is because of its sweet reasonableness, because of its power to explain intelligibly the mysteries, and to solve the problems of life; because, too, of the thousand evidences of its universality. And it makes no claim as a special religion or revelation; it never said, *Before me there was no truth in the world*. Your difficulty would be to show that there was ever a time when Theosophy was not in the world. All down through history men of shining lives have arisen from time to time, and put forward such teachings as the times may have needed. Examine all these earnestly for yourself, and see whether or not they dovetail together and make one grand explanatory system.

We should do well to consider a little all the different opinions you speak of, which are supported with so much certainty and force. When a man sets out to find for himself the truth about the universe, we casual onlookers will not be able to foretell where he will arrive; but if we thoroughly knew the man, in and out; all the forces that impinge upon his consciousness, and how great or how little may be the power of resistance to circumstance within his own soul; we should be able to make predictions accurate enough. What great results a little tendency to fear will bring about; what hamperment will be found in narrowness or conventionality of mind! A man of no experience will be dogmatic, a man of insufficient experience or insufficient earnestness will be vague. The first will vociferate that he alone, and those that think with him, know; that beyond them there is no knowledge. The second will protest that he neither knows or cares, and is positive only that there is no knowing.

You may safely divide men into two classes for this purpose; there are the men who want to know for their own sakes, and the men whose quest is in the name of compassion. Let us reject the testimony of the first class, for they cannot make their voyage of discovery beyond the limits of their own personal selfhood; and we must admit that truth is universal, its fountain not to be confined within one brain. The selfish man will understand nothing couched in terms outside of himself; he is personal and his god will be personal too; he is subject to passion, jealousy, anger,

changes of mind (which things he devoutly believes to be himself, he not being aware of any wider self), and the god he creates will be in his own image. According to the ideal he has set himself for the rule of his own family or business, will he conceive the universe to be ruled. He tyrannizes, or he walks in awe of some tyrant here on earth. It would be unimaginable to him that there were not some tyrant in the heavens also, who would punish, reward, and be avenged, as he would, and who was to be propitiated by such means as would propitiate himself.

Of course his convictions are honest and forceful; of course his knowledge is perfectly real. He dug it all out of himself, saw it at first hand, and is satisfied; we may say has a right to be satisfied. It is only proof of that Theosophical teaching that it is within that one must look for truth; an instinct which humanity does not readily lose. The mischief is, that he has not looked nearly deep enough, has not started out with any adequate self-knowledge. You do not need Theosophy to tell you the following; get a handful of your friends together, and read it off for yourself from what you know of them. There is a realm within ourselves which is impersonal and unselfish, and some men have made their way into this hardly at all, some a little, and some stand in it altogether. You have met with an honest man in public life, at some time or other? You have all the evidence of history at your disposal at any rate, that there have been patriots whose self was their country; who had no thought nor interest at any time save for their country. Set such a one as Joan of Arc or Garibaldi beside any narrow mediocrity of your acquaintance, whose convictions of the truth of his narrow little creed are, as you say, perfectly honest and forceful; and say whether they do not compare, in the girth of their inward being, as this globe we inhabit, with a walnut?

And say, where is the deepest and widest and truest truth to be found; in that planet, in that immense beaming sun, or in the little self as large as a schoolboy's marble?

Now then, you are going to say that the student of Theosophy thinks himself as large as the sun, and calls other people walnuts and marbles—but this is not so. The thing of all things that Theosophy insists on is that every man is a flaming sun, say rather, is divine in his essence, and capable of having knowledge and character befitting divinity. We believe in that divine center within man; which is as much as to say that man is not cut off from the universe, is not a kind of foreign body, unakin with the forces that govern universal life; but that he can come at the very heart of things by traveling into the innermost of his own being. Nothing would be cut off from him, were it not for his own selfishness; he has confused himself with the body and mind which he inhabits, and which were given him for his use and experience, and remains forgetful of his larger self. Good heavens, is there no man wiser than the run of us? Was there never a Jesus, or a Buddha upon earth? And what should *their* living have been for, unless to remind us what a grand thing it is to be a human being, and what limitless possibilities of majesty and compassion this very fact implies.

I know of the truth and the universe just

what I can find within myself; my outlook is hedged about and limited by my failings. That is what every man may say. Wherever selfishness breaks down in a man's nature, there is a loophole through which he may look out (or in) to the Divine. The sentimentalist who hankers after heaven will have a gushy and mawkish religion such as—well, such as any one of that description among your acquaintance has. Students of Theosophy have cause to be profoundly thankful to Madame Blavatsky and her successors, William Q. Judge and Katherine Tingley, that they have not allowed them to believe that there is any method of coming at truth, except through the extension of consciousness which is to be brought about *only* by unselfish working for the good of humanity. M.

INQUIRER. But Theosophy, you say, is not a religion.

THEOSOPHIST. Most assuredly it is not, since it is the essence of all religion and of absolute truth, a drop of which only underlies every creed. To resort once more to metaphor, Theosophy on earth is like the white ray of the spectrum, and every religion only one of the seven prismatic colors. Ignoring all the others, and cursing them as false, every special colored ray claims not only priority, but to be *that white ray* itself, and anathematizes even its own tints from light to dark as heresies. Yet as the sun of truth rises higher and higher on the horizon of man's perception, and each colored ray gradually fades out until it is finally reabsorbed in its turn, humanity will at last be cursed no longer with artificial polarizations, but will find itself bathing in the pure, colorless sunlight of eternal truth. And this will be *Theosophia*.

INQ. Your claim is, then, that all the great religions are derived from Theosophy, and that it is by assimilating it that the world will be finally saved from the curse of its great illusions and errors?

THEO. Precisely so. And we add that our Theosophical Society is the humble seed which, if watered and let live, will finally produce the Tree of Knowledge of Good and Evil which is grafted on the Tree of Life Eternal. For it is only by studying the various great religions and philosophies of humanity, by comparing them dispassionately and with an unbiased mind, that men can hope to arrive at the truth. It is especially by finding out and noting their various points of agreement that we may achieve this result. For no sooner do we arrive—either by study or by being taught by someone who knows—at their inner meaning than we find, almost in every case, that it expresses some great truth in Nature.

INQ. We have heard of a Golden Age that was, and what you describe would be one to be realized at some future day. When shall it be?

THEO. Not before humanity as a whole feels the need of it. A maxim in the Persian *Javidan Khirad* says: "Truth is of two kinds—one manifest and self-evident, the other demanding incessantly new demonstrations and proofs." It is only when this latter kind of truth becomes as universally obvious as it is now dim and therefore liable to be distorted by sophistry and casuistry—it is only when the two kinds will have become once more one, that all people will be brought to see alike.—H. P. Blavatsky

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

"Inaction in a Deed of Mercy is a Deadly Sin"

SINS of omission are as numerous and culpable as sins of commission; and because of the passivity of the "good," the evil triumph. From time to time the Theosophist still reads attacks and calumnies upon the name of H. P. Blavatsky, the great Founder of the THEOSOPHICAL SOCIETY; but he seldom or never finds a word said in recognition or defense of her, though there must be many people who, while not Theosophists, know very well that she was not a charlatan but honest and true. The slanderous voices of the enemy are hard to bear; perhaps it is still harder to bear the silence of friends. Friends! Should we reckon among their number those who prefer their own convenience to our honor?

Where are all those who know that H. P. Blavatsky was a true Teacher, who know that she was devoted, who have profited by the study of her teachings? Are they voiceless? Not such, luckily for them, luckily for us all, was the great Teacher. Not such was even the beloved Jesus or the revered Lincoln. Perhaps they belong to that complacent class of individuals who believe that the truth must win and who sit down and wait for it to do so. But small enough will be their share when the rewards of victory are distributed and the Law will tell them, "Depart from me; I know you not!" E.

Theosophy Pervading Modern Thought

THE mirrors of current thought daily reflect the immense changes that are coming over current opinion and bringing it in many respects closer into line with Theosophical teachings. This result has been brought about chiefly by the enormous dynamic power of Theosophical thought emanating from the minds and hearts of Theosophical workers years after year; for such thought is much more dynamic than ordinary thought, by reason of the conviction that is behind it and because of its inherent truth. And partly the result has been brought about by more visible means, namely, the Theosophical literature, which has been read until it has soaked into people's minds and made a dominant factor of the thought of the times. In not a few cases, too, one familiar with that literature can discern the traces of an even closer connexion between the words of H. P. Blavatsky

MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

or some other Theosophical writer, and those of the enunciator of some new presentation; and in these cases, the earnest Theosophist has to contend with the bitter thoughts that arise within him when he thinks how H. P. Blavatsky, whose teachings, sometimes almost in her very words, he sometimes finds quoted without acknowledgment, was contemned and derided, and is even now contemned and derided by the very class of minds which are thus indebted to her. It must be left to future generations to do the tardy justice that contemporary generations usually deny.

Following are a few quotations from an article in a contemporary; the quotations are partly from that article and partly from the writers which it quotes. Readers of the CENTURY PATH will recognize many of the familiar Theosophical teachings, given, however, without the qualifications and cautions that are so necessary.

The past century has been one of scientific discovery regarding material forces; but what if there is another and *spiritual* world transcending the material and environing us in a much more intimate sense? This ancient thought is at the root of much of the religious thinking of today. Thus, one man is quoted as saying:

If you stand on Holborn Viaduct and take a snapshot of the things that are occurring, you have an exact superficial record; but you know nothing of Holborn Viaduct in any spiritual or truthful sense. If, on the other hand, another man, instead of saying, "There are men and women walking up and down the street," says, "I see a ladder stretched from earth to heaven, with angels ascending and descending," you would not only find that man much more interesting than the other, but I suggest that there would be genuine truth at the bottom of what he said, that there was something to be got out of it, that possibly he was a man able to make a revelation to you.

What a change of front is this? Verily the Twentieth century is not the Nineteenth. A few years ago this would have been called insanity, but now it is tolerated or even admired.

Another says:

All the realest things in the universe are spiritual, "occult," unseen. There is never an act of the body that is not first an act of the mind, of a hidden, occult power. . . . The outward action bears the same relation to the real motor that the moving street-car does to the dynamo; it expresses or externalizes its power.

What does Nineteenth century science think of this? The realest things are the things it does not and cannot investigate.

But this last writer, rushing to rapid generalization, seeks the source of the hidden power in a single fount—"divine energy"—

A beneficent, all-wise, tender energy, that not only gives us our life and saturates and surrounds us, but also, responding to our needs and expressed wishes, gives the necessary gift, brings about the wished-for results, or, in other words, gives to each the necessary power from which he can send out the accomplishing current.

But we have no prepared and adjusted instrument to manifest this divine energy, and so it is meaningless for us; and therefore the vital problem of the hour (as we are told) is "to learn how to connect with the divine energy."

The feeling is widespread that laws as exact as those of science govern the individual's relation to the Deity, and that we are on the verge of discoveries in this domain that will revolutionize all previous thought on the subject.

Here we rush into danger; as also in the cases where "Christian Science" and other fads are brought into the question. For here there is not the least attempt at discrimination. The reaction from materialism is as extreme and unbalanced as was the reaction into materialism last century. Then all was matter; now it seems all is—something else, called "spirit," "divine energy," etc. And the moral aspect of the question is ignored, or confused, as usual. The all-wise beneficent energy is jumbled up with the energy that brings answer to personal desires, physical vitality is confused with spiritual grace. We quote "*omne ignotum pro magnifico*," and yet sneer at ancient and primitive people for attributing divinity to every natural power which they did not understand. Yet here are we attributing divinity to our nerve currents, to the magnetic ties between people, to everything, in short, which does not come with in very limited domain of Nineteenth century science.

(CONTINUED ON PAGE 11)

THE THEOSOPHICAL ADDRESS AT ISIS THEATER

LAST Sunday evening the Isis Theater was crowded. A fine music program was rendered by the Point Loma Orchestra, which consists of over thirty instruments. The following selections were played:

Selection from <i>Lohengrin</i>	Wagner
"Sanctus" from <i>St. Cecilia</i>	Gounod
"Prelude and Siciliana" from <i>Cavalleria Rusticana</i>	Mascagni
<i>Imperial March</i>	Sir E. Elgar

Professor H. T. Edge gave an address on "Spiritual Gifts." He began with a quotation from *Galatians*, v. 22, "The fruit of the Spirit is love, joy, peace, long-suffering gentleness, goodness, faith, meekness, temperance: against such there is no law." He used the word spiritual in the same sense as the word Spirit is used in this text, in which it is perfectly clear that the writer meant the Holy Spirit, the divine breath. Quoting further from the same chapter, "The flesh lusteth against the Spirit, and the Spirit against the flesh," additional emphasis is given to the meaning of the word Spirit. The words "spirit" and "spiritual" are much abused today. There is the same confusion as there seems to have been in the days when Paul wrote his letter, and if he were here now he would find it advisable to emphasize the same point. What some people mean by the phrase "Spiritual Gifts" it is easy to see by reading what they write on the subject under the heads of "psychism," "concentration," "soul culture," "magnetism," "new thought," and so on. They are not all as bad as some, but the worst are pretty bad. Sometimes these alleged powers are invoked for the purpose of gaining an increase in one's business, more wealth, more bodily comfort, advantage over one's neighbors, or some other such personal desire. Everywhere we see advertisements and prospectuses offering to teach people how to satisfy their personal aims by invoking some mysterious power out of their nature. Can this be what Paul meant by the gifts of the Spirit? It seems rather to fit what he says about the works of the flesh. And there are some even who actually pretend to invoke the Divine Presence itself in furtherance of their petty wishes, and think, like some naked savage praying to his wooden fetish, that Almighty God will gratify their desires.

The gifts of the Spirit are nothing showy, but consist of everything that is humble, unpretentious, and serviceable. The first thing which the seeker of true spiritual knowledge sets before himself is to kill out the giant serpent of self. The path of spiritual knowledge is the path of joy and peace, for it liberates man from the slavery of his passions, which are the source of woe. OBSERVER

Theosophy Pervading Modern Thought (CONCLUDED FROM PAGE 10)

In the Theosophical manuals one will find mention made of a principle in the human make-up known as *kâma*, "desire." It is among other things, the energy which drives the selfish animal instincts. It is usually confused with "will," so that a person with much *Kâma* is called a strong-willed person; or with "magnetism," so that a person abounding in *Kâma* is called a magnetic personality. This is the God which many are ignorantly worshipping. It is not a beneficent nor an all-

wise God. It is selfish and headlong, destructive like a fire. The cultivation of this power would not make for the harmony of society or the wisdom and welfare of the community; it would terribly enhance the power of greed, selfishness and passion. Each person would have a God of his own, repugnant to the Gods of the others.

We cannot take the Theosophical teachings and select from them little bits to suit ourselves. They are entire, and must be taken together. It is essential to know that there are seven principles in man and that the physical vitality and the *Kâma* are two of the lowest. It is a long while before we reach to the spiritual or divine principle in man. Besides his physical body, his vital principle, and his desires, there is the lower mind, and beyond this the higher mind, and then the Spiritual Soul. How ever will these dabblers steer their unguided way to the truth amid the countless bypaths? The idea is put forth

those of science govern the relations of the individual to deity. But it seems a truism, for how otherwise could these relations be governed? Clearly only by caprice—the caprice of a personal deity endowed with human attributes—the medieval, false, theological idea. But it is to err to make a contrast between Will and Law, for, as applied to divinity, they are one. Hence, as we say that Law rules in the spiritual world, so we may say that divine Will rules in the physical world. For modern science does not pretend to say what does rule in the physical world; it merely states the facts and correlates them; and it uses the word "law" to denote a statement of the facts. But a statement of the facts cannot rule anything, and so of the Law in its other sense they know nothing. The only conceivable causative energy is Will; all forces are the expressions of Will; and that which has a Will is a Being, albeit not necessarily qualified by the limitation which we call

Lomaland Photo. and Engraving Dept.

LLANTRISSANT, NEAR CARDIFF, WALES

by one of the writers that mankind has, since its start, been slowly puzzling its way towards the truth which it is now supposed to be on the verge of discovering. The fact is that humanity in the past has known far more about these matters than we know now or are likely to find out by present methods of research. And unless we avail ourselves of the experience and wisdom of pre-Christian ages, we shall spend long centuries wandering in the deserts of error.

Theosophy was introduced with the very purpose of dealing with the state of opinion reflected by these utterances. It was foreseen that people would be in need of guidance; and if the indiscriminate worship of the lower potencies in human nature becomes common, they will be still more in need of guidance and rescue from the terrible obstacles these will set up. All inquirers are earnestly advised to see for themselves what Theosophy has to say on these questions, before trusting themselves to the guidance of all and sundry who write in the papers on the strength of reputations gained in other fields of work—or in some cases perhaps, without any previous reputation at all.

One of the writers above quoted says that the opinion is growing that laws as exact as

"personality." We have to study the laws of Spiritual nature, both within and without us, and obey them.

Needless to say, the first requisite for him who aspires to such knowledge is, as ever, *Divine Discipline*. For all the lower forces of Nature, which we propose to transcend, come to a head in our personality, our lower self, and the self is conquered by the SELF. That is, we can only transcend the lower nature by evoking the Higher, its master. Otherwise we shall only evoke demons which we cannot lay, and intensify those rebellious forces with which our better nature is constantly struggling. Therefore the Higher Science is a science of self-discipline and self-mastery, and he who would profit by the wisdom of those able to teach must first undertake to set before himself ambitions nobler and wider than those of personal power and pleasure. For individual wills count for little in the ordering of the universe, and all-wise beneficent powers are not concerned with catering for personal wants. Whoever is bold enough to expect coming revelations must be humble enough to merit them; for the universe does not lie helpless at the mercy of experimenters, but is replete with Laws that impose obligations, on pain of salutary suffering. STUDENT

Unemployment

THE question of unemployment, daily becoming more acute, is one of the problems of the times. The practical problem resolves itself into the two questions of how to relieve immediate necessities and how to deal with the chronic complaint. As regards the former, all authorities recognize the imperative necessity of special steps to relieve actual want; but their efforts are always very much hampered by the presence among the genuine sufferers of a large admixture of "unemployables" such as constitute the camp-followers of every agitation.

But in reality there is enough work to go round, and enough food for all. To balance the number of people unemployed, there are everywhere vast fields of labor unmanned. The trouble is that industry is not regulated by a wise impartial overseeing intelligence, but by what is called a "law" of supply and demand. But this so-called law is nothing more than a summation of the effects of a multitude of narrow personal interests, tempered, perhaps, by a certain admixture of less sordid motives, but nevertheless having a resultant which is the reverse of beneficial. How this works out can easily be seen by considering cases. When an industrial enterprise is to be undertaken, the first and last question considered is, Will it bring in quick returns to me or to the company which I have formed? If it will, it is undertaken, even if wisdom shows that it will not be to the good of the people in the long run. If it will not bring profits, it is not undertaken, even though it may promise great advantage to future generations. Thus capital expends its resources on beer and spirits, cheap books and newspapers, amusements, skimming the cream off new lands, and other things which bring immediate profit to the promoters; while the innumerable things that need to be done are left untouched, because it is not the immediate interest of promoters to undertake them.

Think of the things that need to be done in America! We have forests crying out for development and protection, and needing armies of workers; we have agricultural opportunities innumerable. But workers cannot work at these things unless they are paid to do so, and who is to pay them?

Another cause of unemployment is the inefficiency of so many workers, who can only do one thing and cannot adapt themselves. This has its root in the same defect—namely the desire to reap immediate profit, for people are educated to succeed in the conditions which exist, educated according to a "law of demand."

There is no need to enter into the intricacies of the question of unemployment, since it all works out to the same conclusion. What objects have people in life? Often it is merely a more or less aimless and blind drifting in the stream; often it is self-interest. To illustrate this point, take the following extract from a letter (to the *London Spectator*):

In many recent books and letters the question of the idleness of the women of the richer classes has been discussed and deplored. Many true and telling things have been said on this subject. The only thing which has never been really said or thought out is precisely what they are to do. . . . It is the enormously large class of women just below the very rich of whom I should like to speak. They are not rich enough to have large responsibilities,

and yet they have enough money for ease and comfort. They have efficient servants who do all that is necessary in their house, and capable nurses and governesses for their children. A woman of this class can, if she gets up fairly early in the morning, be an excellent housekeeper and see a good deal of her children, and still leave many hours of her day unemployed. Her husband is probably away all day at his work, and she is faced with the problem every morning of "What shall I do today?" If she tries to do any work that brings in money, she is told, and quite truly, that she is taking the bread out of the mouths of those who are trying to earn their living. Should she wish to work for a charity, she is probably given the hack work and drudgery for which the society, whatever it may be, is too poor to pay a clerk—work which no man would voluntarily think of doing. Further, philanthropic and social work of real interest demands very special talents to which every woman cannot lay claim. A genius for philanthropy is almost as rare as a genius for art and literature. If she attempts to cultivate her mind, she finds, without the incentives or facilities of a man at school or college, a certain uselessness in reading and learning which is to have no other result than to pass a few hours of the day. . . . If some of the writers who are so busy pointing out the idleness of women to the world's disapprobation would employ their time and talents instead in telling women of work involving interest and responsibility, I feel sure that they would find their suggestions responded to with enthusiasm.

Here is an instance of aimlessness in life. And to think of the urgent need there is everywhere for work of the kind that women could do and would rejoice to do! Everywhere are people burning to do unselfish work and unable to see how to find it. Thus our resources are being wasted. Another writer says:

After all, the rural and agricultural problem is as much a problem of the man as it is a problem of the land. . . . Until the problem of the man is solved, Acts of Parliament and philanthropic efforts are like trying to fill up the social Chat Moss.

The lack of ideals in life is at the root of the whole question. And no wonder the effects are what they are. Does not all history and experience tell us that *high ideals* are the vital force of humanity, and that without them civilization perishes? And look around at our ideals. The churches are in the most hopeless confusion, and science and philosophy are chaos. How can such a state of affairs within fail to be reflected without? T.

The Knudsen Wireless Typewriter

THIS apparatus will transmit typewriting by any form of etheric communication and can be adapted to any form of typewriter. The transmitting typewriter has, at the ends of its key-levers, pins which make electric contacts when the keys are depressed. The currents thus allowed to pass go through an induction coil and to the transmitting antennae, as usual in wireless telegraphy; and thence they are wafted through the ether to the receiving instrument, where they actuate magnets attached to the types of the receiving typewriter. The essence of the invention consists in the device by which each particular key is made to print its own corresponding letter only. It is as follows. The transmitter and receiver are fitted with traveling carriages which move continuously and regularly, each across its own table. These carriages are synchronized with each other; and by means of an automatic electric communication, the receiving one stops whenever the transmitting one stops. Whenever the operator strikes a particular key, the pin on that key makes contact with the traveling carriage and also stops it at a particular point. The carriage at the other end is instantly stopped at the same point

—that is, at the moment when it is passing over the contact piece connected with the magnet that prints that letter. Thus, suppose the operator strikes the key H. The other end of his key-lever will shoot up its metal pin through a hole, and the pin will stay there until the traveling carriage comes around and touches it. The carriage is checked, and the carriage at the other end is also simultaneously checked at the corresponding point of its cycle—that is, just as it is passing over the H mechanism. This carriage carries a metal brush which contacts metal plates in a board; and each plate is connected with the electromagnet belonging to its letter.

What looks at first sight a drawback is that the letters composing a word cannot be transmitted the order in which they occur; for, though printed in that same order chronologically, they would appear on the record in their alphabetical order, which is the order in which they are arranged on the machine. Therefore the operator has to transmit the letters in a transposed order, according to a certain system, which is, however, easily grasped in practice. T.

The American to Be

PROFESSOR RIPLEY of Harvard, recently lecturing before the Royal Anthropological Institute of Great Britain and Ireland, pointed out that the American proper has not yet come. He has so thoroughly not yet come that we cannot conceive what he will be like. To his blood, nearly every country in the world will have made contribution.

Whereas until about twenty years ago the immigrants to the United States were drawn from the Anglo-Saxon or Teutonic populations of North-Western Europe, since that time they have swarmed in rapidly growing proportions from Mediterranean, Slavic and Oriental sources. America . . . is now drawing large numbers of Greeks, Armenians and Syrians.

The foreign-born and their immediate children now constitute one-third of the American population; excluding negroes, nearly one-half or 46%. Seventy per cent. of the immigrants are male.

It is evident that the real American will only become visible after a thorough fusion of all these elements.

An increasing population crowds the cities; especially do the new-comers there congregate. Cities, as we have them, are slowly productive of physical degeneracy. Since it looks possible that in no very great length of time half the population may be city-dwelling, it looks as though the future American, in sober truth the hope of time, will arrive physically degenerate, short-lived, and with a marked tendency to suicide and insanity.

With a paternal eye to the future American, should we not look into this matter, and keep looking, and keep doing things, until we have made city life statistically as healthy as the best country life? It only means building cities in the right way, spaciouly, and without sky-scrapers. For sky-scrapers mean dens and lanes of foul air.

Turning that eye, filled with the image of the American we intend that time shall produce, upon our own lives, let us see to it that they are lived for twenty-four hours a day in such a manner as to furnish him with the unstained plasm he will need for his long waited incarnation in a purer environment. Art Music Literature and the Drama

An American Architect's Opinion of Japanese Art

MR. RALPH ADAMS CRAM in his *Impressions of Japanese Architecture and Allied Arts* gives us some valuable expressions of the Japanese conception of art, along with some excellent appreciations of his own on the subject. He speaks of the wide gulf that separates the East and the West in the expression of art and also of the dual nature of art itself; and for an explanation he says:

The philosophy of the East gives a hint: absolute beauty is dual in its nature, mystical manifestation, through unconscious but inevitable selection from myriad lives (forgotten yet operative), of the failures that were partial only. . . . The best, not of one life, but of millions. . . . Also is it, in another aspect, mystical foreknowledge of the final Absolute, to which we all are tending through incarnation and reincarnation; not only the subliminal composite of the good of all the past, but a leaping on by force of achievement to heights yet unachieved: Karma and the Beatific Vision in one.

He quotes from an 18th century Japanese essay on painting:

It is necessary to exercise the understanding in painting, or as it were, to carry the mind at the point of the brush. To introduce too much is commonplace, and the artist must exercise his judgment in omitting everything superfluous or detrimental to the attainment of his object. It is the fault of foreign pictures that they preserve too many details that were better suppressed. Such works are but as groups of words. The Japanese picture should aspire to be a poem of form and color.

And further from Shuzan, 1777, he quotes:

Amongst pictures is a kind called naturalistic, in which it is considered proper that flowers, grasses, fishes, insects, etc., should bear exact resemblance to nature. This is a special style and must not be depreciated, but as its object is merely to show forms, neglecting the rules of art, it is commonplace and without taste. In ancient pictures the study of the art of outline and of the laws of taste were respected without attention to close imitation of form.

Then there follows, as a moral, the story of the Chinese painter, Wu-tao-tsze:

"Lord," said Wu-tao-tsze, prostrating himself, "my labor is at an end."

The king regarded him with scant favor. "Behold," he said, "how the curtain that has hung before the wall of my palace, hiding all sign of your work, still insults my vision. Will you deign to remove it?"

"Even so, Lord," and at a touch the curtain sank to the ground.

The king started, then stood silent gazing on the

wonder before him. It seemed that the wall of the palace had melted away, and in its place was a wide window giving on a land such as no man in earthly life had ever seen before. A wall of pale jade, intricately wrought, lay in front, pierced by a gleaming doorway of coral lacquer and closed by gates of chiseled gold. And above, reaching off into limitless distance, lay a radiant country of trees and

before, but only as you have seen the single dew-drops, which, gathered together, become the immeasurable sea. This is but the veil of what shall be, a poor symbol of the smile of the Ineffable One Beyond—" He knelt prostrating himself now before the gates. Then in a breath they swung open. Wall, gates, portal dissolved and faded away and for one instant of time lay revealed a land of such wonder and majesty that the vision Wu-tao-tsze had wrought seemed but a mean and sordid desolation. The king fell to the ground covering his face with his sleeve, but before his eyeballs were seared by the glory of the Utterly Forbidden, he saw Wu-tao-tsze rise and pass into the Vision of the Absolute, saw him melt into the unspeakable radiance of the Blessed One.

When, after long abasement, he ventured to raise his eyes, the gates were closed, nor when he touched them were they other than painted silk. And Wu-tao-tsze no man saw ever again on earth.

R. MACHELL

Bach—le Musicien-Poète

M. SCHWEITZER, in his recent book entitled *J. S. Bach, le Musicien-Poète*, sums up one aspect of Bach's mind in these words:

What holds the chief place in his work is pictorial poetry. Before everything, he seeks the image; in this he is different from Wagner, who is rather a lyric dramatist. Bach is more akin to Berlioz, and nearer still to Michael Angelo. . . . But his painter's soul remained unrevealed to his contemporaries. His pupils and his sons took no notice of his pictorial instincts, no more than they suspected that his true greatness was that he was a poet in music. So with Forkel, Mossevius, von Winterfeld, Bitter, and Spitta. The latter [the last], whose profound acquaintance with Bach's work gave him a chance of seeing the real facts, feels a kind of fear in pushing his researches too far in this direction. When he cannot do otherwise, he admits that this or that page contains descriptive music, but always adds that it is a pure accident to which no importance need be attached. These examples are, for him, merely curiosities. He always affirms that the music of Bach is above "puerilities" of this kind, that it is pure music, the only classical music. This apprehension leads him astray. . . . Look at Bach at work. However bad the text may be, provided it contains an image he is satisfied. If he happens to detect a pictorial idea, it takes in his mind the place of the whole

text; he fastens on to it at the risk of running counter to the dominant idea of the piece.

Exclusively preoccupied as he is with the pictorial element, he does not perceive the weakness and the defects of the libretto. . . . The poetry of nature in his work is not lyric, as in Wagner; it is seen rather than felt—eddies of wind, clouds coming up on the horizon, leaves falling, waves in movement. His symbolism is as visual as that of a painter.

The study of Bach forms an important part of the music tuition at Point Loma, and his music is loved by all.

RELIEF WORK ON THE DUCAL PALACE: VENICE

flowers, with cascades of silver water, mountains of marvelous shapes, and clouds like visible dreams. Temples of ivory, amethyst, and gold, flamed in the amber air, and for a moment the king believed he could hear faint chanting and mystical music, scent the perfumes of unknown incense mingling with the odor of rose gardens and jasmine. Finally he spoke.

"You have done well, Wu-tao-tsze, for you have painted, not this earth, but the very heaven of heavens. That is the emanation of the Lord Buddha."

"Not so, Lord," and the painter prostrated himself once more. "This that you see, you have seen

Attracting Public Attention

TIME was and not so long ago when fashion dictated a general type of costume with but few deviations. Today the accepted styles are so many that one can read between the lines of even the fashion magazines the more varied opportunities offered for individual expression. It is easy to dress suitably and stylishly without suggesting an animated fashion-plate.

Though the matter of dress already receives over-much attention, there is still need of more careful and dignified study of the subject. The impractical and over-trimmed street garments of a decade or more ago have largely disappeared as the advent of the business woman has made the tailored gown *apropos* and necessary. Not that laces and frills are discarded, but the prevailing specialization of things relegates them to the proper department of dress occasions. It is now, fortunately, bad form to display finery on the street where the best types of dressing are unobtrusive.

Not less out of place on the street than displays of jewelry and laces is a fussy conscious manner, or garments which too closely outline the figure, or designs striking in cut or color which catch and hold the passing eye. Quiet good taste selects a type of costume which escapes notice by a happy medium between rigid conventionality and carelessness. Like other evidences of good breeding, this one rests upon a psychological basis. There are sound reasons for wishing to escape miscellaneous public attention. The indorsement or disapproval of one's costume by a friend often makes a lasting impression upon the wearer quite beyond the few words which are spoken. There is a recurring gratification or disturbance felt whenever the opinion is recalled.

The increased sensitiveness of developing human nature makes the average modern individual more susceptible than formerly to the mental states of others. Examples are plentiful which show clearly that it is the

thought which vitalizes the expressed opinions. Furthermore, not only may one at times read the private opinion in the eyes of a fellow passenger in a car or elsewhere, but there may be a distinct sense of discomfort from some unknown source of influence.

The thoughtless vanity which prompts girls or women to attract attention by their cos-

From A CHANT OF DARKNESS

Helen Keller in *Century*

ONCE in regions void of light I wandered;
In blank darkness I stumbled,

And fear led me by the hand;
My feet pressed earthward,
Afraid of pitfalls.
By many shapeless terrors of the night affrighted,
To the wakeful day
I held out beseeching arms.

Then came Love, bearing in her hand
The torch that is the light unto my feet,
And softly spoke Love: "Hast thou
Entered into the treasures of darkness?
Hast thou entered into the treasures of the night?
Search out thy blindness. It holdeth
Riches past computing."

The words of Love set my spirit aflame.
My eager fingers searched out the mysteries,
The splendors, the inmost sacredness, of things,
And in the vacancies discerned
With spiritual sense the fullness of life,
And the gates of Day stood wide.

tures, makes them blind to the real course of their conduct. It is often said that a person gets from a scene or a book only what he brings to it. So, too, the striking costume does not attract admiration only. The individuals in the average public place are emanating a quality of thought and feeling which is not always either helpful or wholesome. The power of thought may no longer be questioned; yet the shallow extremists and the showily dressed faddists often draw upon themselves the lawless mental comment of

persons whom they would blush to recognize.

The beholder often overlooks the special novelty of cut or the unique color or the richness of fabric which prompted its selection. His eyes are caught and held by the costume while his mind analyses the wearer according to the quality of his own mental make-up. Now to make oneself a target for the public mind with its present selfish materialism is to attract a thought-atmosphere as disturbing and depressing as bad weather. The exhaustion which many susceptible natures suffer from the contact of crowded places illustrates the unwholesome quality of magnetism which the average crowd emanates, and from which one may well pray to be delivered. A deep philosophy indeed is this underlying question of what to wear and how to wear it.

LYDIA ROSS, M. D.

Unrecognized Memory

TO a monthly contemporary Miss Helen Keller contributes a remarkable article on dreams, her own dreams. The dreams are not so remarkable in themselves as in their implications and in the way she comments on dreams in general.

Whoever has read anything of her former writings will be prepared for one more evidence of her triumph over the tremendous obstacles of congenital blindness and deafness. From the article itself as a literary production it would be almost impossible to suspect that the two chief avenues to the mind were totally impervious. For it shows that she possesses an *inner* hearing and an *inner* sight that have never functioned outwardly in this her present life, functions *that are memories*. These we all bring with us at birth, place at once in touch with the outer senses and thus get from the latter an understanding of what they bring, which would otherwise require not months but ages. We come prepared for what we shall meet.

And so did the writer of the article, but her unfunctioning eyes and ears have never

let her meet what she was prepared for. Awake, she relies on touch; yet even then she has inner hearing; and in sleep she has sight.

She does not know that she has hearing; yet the evidence is in what she writes. Some of it has the vocal and consonantal melody that could not possibly be otherwise there. Speaking of the loss we should experience if the dream world were shut for us, she says — so rhythmically that one may mark the pulse:

The splendor of art and the soaring might of imagination are lessened because no phantom of fadeless sunsets and flowers urges onward to the goal. Gone is the mute permission or connivance which emboldens the soul to mock the limits of time and space, forecast and gather in harvest of achievement for ages yet unborn. Blot out dreams and the blind lose one of their chief comforts; for in their sleep they behold their belief in the seeing mind and their expectation of light beyond the blank narrow night justified.

Mark the alliteration of the three *f*-sounds in the first sentence; the long vowels in the second; and the insistence of *ee* in the third — dreams, chief, sleep, belief, seeing — as well as the general melody of the whole; and then consider whether anyone who did not hear could have written it.

As to sight, take this:

I am (in dream) moved to pleasure by *visions* of ineffable beauty which I have never beheld in the physical world. Once in a dream I held in my hand a pearl. I have no memory-vision of a real pearl. The one I saw in my dream must therefore have been a creation of my imagination. . . . My pearl was dew and fire, the velvety *green* of moss, the soft whiteness of lilies and the distilled hues and sweetness of a thousand roses.

She knows all the colors! Truly it seems as if she might have incarnated to give us the proof of *Reincarnation*, to show us what the soul can do against apparently impassable obstacles, and to be a light of encouragement to all those whom fate *seems* to have irrevocably cursed.

STUDENT

One of Nature's Lessons

THE long summer months with the gorgeous succession of leafage and bloom — now past until the cycle is again complete — suggest a great store of energy of which these are the product. They suggest long months of quiet work, performed unseen, by many agents all making the best of the conditions afforded them, all linked in the one purpose that is now unfolded in beauty and plenitude. What takes place in the silent ground and in the trunks of the trees in the preceding months is absolutely necessary for the putting forth of branch and blossom later — though in the meantime there is no outward show, no demanding of results before the appointed time, nothing but steady, tranquil work. What Nature is content to do, with such beneficent results, can not human beings learn to accomplish consciously, and in accord with the great universal rhythm?

The cycles of human development are many, they are not the simple fourfold divisions of the year, though these also have their bearing on the possibilities of building character; but thinking people can readily discern that there are times when the opportunity for quiet work — such as nature does so much of — is theirs. These are periods when they may sound the deeper channels in their natures, finding new strength, gaining poise and steadiness by the performance of a variety of tasks which attract no special notice but

which by being performed at the right time and with an increasing sense of responsibility and precision bring the doer into accord with the action of the Law. They furnish a simple primary rhythm upon which, when it is once firmly established, the great achievements of human life, like a noble musical theme, may be based. The harmony, the tenderness and sympathy, the refined and distinctive touch felt in such work are like a soothing strain heard in a world where "living for others" is a phrase very often on the lips rather than held as an ideal or practised daily as a code.

We can all call to mind the lives of those who are making use of these periods of quiet work to store the heart-energy that may in another life be expended in some deed, some protest, some career that will be recognized as a light by the world. We see it in the unselfish lives of many women — maiden aunts, elder sisters, unmarried daughters who have

duty evidently performed with most gracious renunciation.

Theosophy reinforces the lessons afforded by Nature with the teaching that only work for others actually builds character and nourishes the heart. Sorrow, remorse, mistakes, instruction may open the eyes, but it is compassionate work alone that builds the structure of the purified and perfected human nature which is a fit temple for the Divinity within. There is no other way. Those who have stout hearts now have fortified them by loving service in other lives; those who have sympathy and power to help their fellows in ways that reach many and win a response of awakened effort, have called on *themselves* during lives of patient work and won the response first from their own hearts. "Knowing the light but keeping the shade" they have grown so firm and strong of will that the assaults offered to those in active and

Lomaland Photo. and Engraving Dept.

BRETON CUSTOMS AND COSTUMES A FAMILY OF PLOUGASTEL SELLING STRAWBERRIES

never striven for any career that is an expression of special talents they may possess but who quietly and lovingly take up the duties left for them by those whose lesson in life is a different one for the present. The care of the old, of the sick, and of the very young often falls upon these unselfish workers. Where this service is performed without any yielding to the desire for petty domination, and without regarding those duties as ends in themselves, which would of course fetter the heart, there is frequently a tenderness, a compassion, an understanding of the needs of the young and the aged and the weak that busier, more ambitious people never acquire. Very truly are these tender workers participants in the real mysteries of life, though, for want of a Teacher, they may be unaware of it until another life offers different opportunities.

A tribute to one such worker recently appeared in a will that was offered for probate. A father in providing for his devoted daughter inserted this clause in his will:

My greatest sense of duty is toward our grateful daughter, Elizabeth, who has so devotedly cared for us and spent a life of self-denial for our comfort, and because of her single life the entire estate that I have is too little for her.

This was an unwonted recognition of a

prominent service in the world are diverted by their moral power of resisting evil. Others who have never sought or accepted opportunities for quiet work and growth find themselves affrighted at every turn, not knowing that by living for self they have failed to open up a channel to the source of heart-energy, and that merely superficial attainments do not stand them in good stead in time of need. Lao-Tse well described a worker who, on the contrary, has heeded Nature's lesson, in these words: "Being the whole world's valley, eternal virtue will fill him."

STUDENT

QUEEN Elizabeth, it is said, would select no young woman as maid of honor who could not sing and also play upon some one of the (to us) simple musical instruments of the day. All are familiar with the words put by Shakespeare into the mouth of her father's first beautiful queen — for "burly King Hal" had six in all —

Take thy lute, wench; my soul grows sad with troubles.

Sing, and disperse them, if thou canst.

Elizabeth herself was an excellent performer upon the virginal and more proud of this accomplishment, so historians say, than of many of her more statesmanlike qualities.

OUR YOUNG FOLK

A NEW YEAR'S GREETING

By a Lotus Blossom

THE sun from heaven's azure height,
On earth so kindly sheds his light.
Be like the sun! Spread joyance bright!

The sapling rears its crest apace,
It strives for greater heights of space.
Grow like the tree in sunlit grace.

Merrily runs the brook along,
From place to place with happy song.
Be like the brook so swift and strong!

The birdlings sing so cheerily,
Enjoy the sun, the brook, the tree.
Ah, be like these, so glad and free!

A New Year's Motto

IN ancient times people knew much better than the majority of people know today that the purpose of life is to learn to recognize the Soul as master and guide and to make daily acts express the nature of the Soul. In the stories that have come down to us from the early days there still lingers a little of the old Wisdom teaching; in some of them there is recorded much of it. This is the reason why we love to read and hear them; they tell in various ways of the mystic journey on which all earnest young folk set out sooner or later—the quest of the Soul, with all the labors to be performed and all the difficulties to be overcome, which, in all ages, in some form or other, beset those who seek for wisdom and vow themselves to noble service. Many an inspiring word and picture we can find in these old stories, to make us stronger-hearted.

Never did bolder youth, or one better prepared, start on this quest, than Kilhwch, about whom we read in the old Celtic tale. When he rode up to King Arthur's palace, where, in those days, all noble youths went seeking the opportunity of being tested and trained, his bearing was such that the guard at the gate hastened in to tell the king that there stood waiting without a young man of greater dignity than he had ever beheld in another, though he had traveled far and wide. King Arthur sent the guard back to the gate on a run to usher in the noble guest. As Kilhwch, clad in a purple mantle with an apple of gold at each corner of it, rode into the hall, he greeted the king first and then all others present, in such a way that each one felt himself challenged to some greater effort than he had ever before made. Kilhwch had the bearing of the true warrior, which always arouses the heart forces in others.

All his boldness, however, and all the wonderful gifts of the companions who set forth with him on his quest could never have carried him safely through the terrible dangers he encountered, had he not had the superb simplicity and trust to accept and obey the first command of the Soul given to him, without a shadow of wavering or brain-mind questioning. He did not know, any more than

Lomaland Photo. and Engraving Dept.

A WINTER OUTING IN THE NORTH: THE GEFLE LOTUS GROUP ON A SLEDGING TRIP

other young folk know, that a supreme test was being given to him and that his whole future depended upon his loyalty and trust and obedience during those moments, when Yspaddaden Penkawr was endeavoring to set him some task that he would acknowledge himself unwilling to undertake. For the first command given to him was that he must not quail before any request put upon him by Yspaddaden Penkawr; he must be willing to dare all, to brave all, in order to force Yspaddaden Penkawr to relax his evil hold upon the compassionate power of the Soul.

And Kilhwch did not quail. In other stories you can read about youths who forgot the first command laid upon them by the Soul, or did not faithfully follow it; but Kilhwch did not forget, and to every one of the thirty-eight demands made to him that he perform what to any mere brainmind must have seemed utterly impossible feats, he gave the same dauntless answer: "It will be easy for me to compass this, though thou mayest not think that it will be easy."

In the eyes of the fearless, loyal youth, the monster read his doom. And this great test over, Kilhwch rode forth joyously to perform the labors that should free the Soul. He had trusted in his own Higher Self; he had been ready to dare all, to brave all, to renounce every weakness, in order to win his quest; and then he could make all the magical gifts of his companions serve his great purpose; he had the support of the great king himself, the Helper of the race, in his efforts. Boys and girls, can we do better than take as our motto for the New Year the words of Kilhwch's dauntless reply? "It will be easy for me to

compass this, though thou mayest not think that it will be easy." MONA

Quotations from the Writings of H. P. Blavatsky

THE Mind is the great Slayer of the Real.
LET the disciple slay the Slayer.

THE Wise Ones tarry not in pleasure grounds of senses.

STRIVE with thy thoughts unclean before they overpower thee.

FEAR, O Disciple kills the will and stays all action.

THE Path that leadeth on is lighted by one fire—the light of daring burning in the heart. The more one dares, the more he shall obtain. The more he fears, the more that light shall pale, and that alone can guide.

Quotations from the Writings of William Q. Judge

WE are making causes every moment.

STRENGTH comes only through trial and exercise.

EVERY noble thought, idea, or aspiration is immortal.

GOD-LIKE perfection is the great goal for a human soul to strive after.

WE have all lived and taken part in civilization after civilization on earth.

NOTHING is left to chance or favor, but all is under the governance of law.

PERSEVERE, and little by little new ideals will drive out of you the old ones.

LET us all be as silent as we may be and work, work. Let that be our watchword!

THE CHILDREN'S HOUR

A Happy New Year to All Children!

IN Lomaland there is strange little town built on a hill; it overlooks the sunrise from the mountains and the sunset on the sea. Above this little town is shining a beautiful New Year's star—a harbinger of the Golden Age. Its rays are Hope.

The little houses there are not like other houses. Some of them are square and some are round, and you wonder when entering, if you are not in a fairy-story place. There are tiny little chairs, tiny little tables, and tiny beds in the bedrooms. Everything is small, even the violins hanging in a row, the cupboard filled with playthings, the tiny brooms, the rakes and hoes in the garden outside.

Some houses are bigger, with bigger things in them. Instead of the cupboard with playthings, there are bookcases filled with books; there are pianos, violins, flutes—all kinds of musical instruments. There are tools, workbenches, and things used in sports.

We pass along the walks: they are swept clean as a floor and bordered with beautiful flowers. Some houses are almost covered by climbing roses; others have beautiful flowering vines growing around the verandas, and there little birds like to build their nests.

We wonder about the birds—building their nests with the people, when there is free country all around.

"We feel safer here than in brushwood or field," twitter the birds, "none of our enemies dare to follow."

"Who are the inhabitants of this strange miniature town?" we wonder, and the answer to our question floats into our minds with the sunshine.

They are the boys who are to be the champions of Brotherhood and Truth.

Wonderful little town! Only boys are living there. What are they all doing?

They are taking care of their houses; the big are helping the small: the strong, the weaker ones. They are learning many, many things, but their greatest achievement is to make, each for himself, a golden armor.

This is to protect them when they go out to fight the giant Selfishness and his tribe of sly, ugly dwarfs, black Hate, cross-eyed Envy, dull, fat Laziness, and all their brothers and cousins.

The golden armor is inside so that it cannot be seen, but one can always feel it. It is

Lomaland Photo. and Engraving Dept.

RAJA YOGA BOYS AT THE LOTUS HOME POINT LOMA, CALIFORNIA

made link by link in this way. Whenever a temptation to do wrong enters the mind, the soldier should stand erect with head high, then say in a voice of command, "Turn to the Light!" then instantly turn about and think of something great and noble. This makes a golden link in the armor, and it is made up from thousands of such. Every time he defeats one of the dwarfs, a link is made.

Do Selfishness and the dwarfs ever come to the boy's town?

They do, and are always on the watch to get ahead, spying everything with their cold, cruel eyes. They know that their lives will be short when those warriors have won their shining weapons and go to battle; therefore they do all they can to hinder them. But the boys' teachers are always on guard; they are

Lomaland Photo. and Engraving Dept.

A GUARD OF HONOR

wise enough to know the enemies under any disguise; and the boys, even the smallest, have learned to know them, and soon will be strong and wise and vigilant, able to guard their town all themselves.

These boys have many teachers. Because they are making the golden armor, Mother Nature bids everything in her kingdoms teach them lessons. Listen! The great ocean is chanting a song in his deep bass voice:

Purest thoughts make clearest eye:
Mine can mirror sea and sky
And the evening star at night—
Make your eye a mirror bright.
Greatest depths are always still,
There grow Wisdom, Strength, and Will;

When the storm-wings shake the air,
Let your heart be calm and fair.

Free am I, by nothing bound,
Flow the shining earth around;
All the lands are fair and good,
Bind them all in Brotherhood.

We turn from the ocean to the silent hills; they have only a few flowers now at New Year's time, but deep down they are humming:

Stedfast and true when sky is blue,
As stedfast the day when sky is gray,
We guard the roots for the flowers of spring;
A trustful duty to guard the beauty
And life of every living thing.

The boys hear and understand. It means to them that they should guard in pure minds all the beautiful flowers of the Soul, so that they can grow up and bloom for the happiness of all living things. They see the golden sun rise from behind the mountains and set in the sea, and feel that their golden armor must be made from his beams. They love the sun, and with bowed heads and hand on heart the little soldiers of Brotherhood listen to his song:

Sun-heart, gold-heart, wake to my rays!
Give light! give light! all through the days.
Sun-heart, gold-heart, lend me your eye;
God-life, joy-life for earth through the sky.

YLVA

THE knowledge that we are divine gives the power to overcome all obstacles and to dare to do right.—*Katherine Tingley*

THERE is a happy land—not far, far away—but right here around us. There is a Heaven, not beyond the skies, but right here within us. The Sacred Way is the way of the heart, from all hearts to the great Universal Heart—that constant throb of love which unites every atom of life.—*Mysteries of the Heart Doctrine*

THE MYSTERIES OF THE HEART DOCTRINE

Prepared by
KATHERINE TINGLEY
AND HER PUPILS

The Theosophical book of the Twentieth century

Tells the story and the history of the Theosophical Movement.

The prices are \$2 in cloth and \$1.25 in paper, which barely cover the cost, for it is printed and bound, not gaudily, but with such carefulness and thoroughness of art and craft as to make it unique among modern edition books.

Order now from

SOME OF THE ERRORS OF CHRISTIAN SCIENCE CRITICISM

by **H. P. Blavatsky and William Q. Judge**

CONTENTS:

"The Empty Vessel Makes the Greatest Sound"
A Note of Warning

—by **H. P. Blavatsky**

Of "Metaphysical Healing"

Affirmations and Denials

The Cure of Diseases

Replanting Diseases for Future Use

—by **William Q. Judge**

A MOST VALUABLE PAMPHLET. Outside of Theosophy there is given no adequate explanation of the healing that is at times accomplished, nor of its rationale, nor of the ultimate price that must be paid and the dangers connected with such practices.

This pamphlet is invaluable to all students.

Is the Brain

a Terminus?

Is the brain a terminus?

Are the nerves conductors and the brain a final part, or is the brain simply another link in the chain, going up to something else which we cannot detect?

Can we take another step and suppose that actual feeling arises in some fourth-dimension organ which is outside the brain?

He pointed out that an old man might recall the events of sixty years ago, although in consequence of the changing of bodily substance, his present brain was not the same brain as he had then; and asked where his storage of memory had been made. It may be, he said, that those parts of the brain which have been found to be associated with particular functions are in reality merely the organs by which a transmission is made from the "fourth-dimensional" brain to the physical body. It may be that our "mind, or soul,

The Brain But an Instrument

or ego, or whatever you like to call it," exists in that "dimension." Such ideas, which, barring some of the speculations about a "fourth dimension," are based on common sense, have always been held; but it is only recently that they have ventured to express themselves on the platforms of orthodox science. Obviously it is unreasonable to say that the nerves are merely conductors while the brain is an ultimate terminus and interpreter. For what is there in the structure of the brain that entitles it to be accorded such a special function? In common with the nerves it is a part of the physical body, and, like every other part of the physical body, undergoes a continual destruction and reconstruction. And the argument about the memory is unanswerable from the old standpoint, as indeed is the larger question as to how the bodily particles are able to build themselves into the same shape; a mole, for instance persisting throughout life exactly the same in spite of continual and rapid change of the skin, and every part of the body preserving its characteristic features intact. Common sense and logic show that there must be a model on which the visible body is built. The brain is but an organ for the transmission of currents, psycho-mental and otherwise from the invisible to the visible. But not the brain alone; it is by no means the only organ of impress. The entire body performs similar functions with regard

An Inner, More Lasting Form, a Necessity

to the inner man, different kinds of influences being transmitted by different parts. This the ancients knew when they used those names which we still continue to use—heart, spleen, bowels of compassion, kidney, backbone, etc., which are more than mere metaphors.

One observes that this speaker, in considering the nature of the inner body, resorts to a certain now familiar formula—that of the "fourth dimension." This formula is very useful as enabling people to form some kind of conception of the possibility of an order of matter different from that which we know, whereby they are saved from falling into the vagaries denoted by such terms as "spirit" or "force."

There exists some confusion in the use of the terms *force* and *matter*; often they are used as correlatives or complements of each other, and often the word *matter* is used to denote a combination of the two. Thus we get two ideas of matter: one the more passive basis of force, the other endowed with force. The matter which we know and experiment with is of course the latter kind; we cannot eliminate force from it or get down to any kind of matter which is not made up, so far as we can see, of moving units. Matter, as an object of perception, is made up of two inalienable constituents, which we denote by the words *force* (or motion) and *substance* (perhaps mass); but neither of these is to us more than an abstraction.

Hence the lecturer, in asking what was beyond the brain, inferred a higher order of matter. This higher order of matter must, like our matter, be alive with force and motion, yet it cannot be pure force or motion—for that is nonsense. It escapes the observation of our physical senses, for it is not connected with them; yet it may most surely be said that we perceive it and are conscious of it as it plays throughout our body.

There is no need to give it a fourth dimension; why should it have any dimensions at all? Dimensions are a limitation; the more dimensions a thing has, the clumsier it is. Thought cannot be said to have any dimensions, yet it is surely roomy enough and flexible enough.

But then this higher order of matter, composing the inner or model body, the Linga-sarira, must itself again be composed of a still higher order of matter, and so on. We must not make our ideas too limited. In short, there is a vast field of research before us. The lecturer speaks in the vaguest way about the soul or ego or whatever you call it,

Consciousness the One Persistent Reality

to the inner man, different kinds of influences being transmitted by different parts. This the ancients knew when they used those names which we still continue to use—heart, spleen, bowels of compassion, kidney, backbone, etc., which are more than mere metaphors.

Who is it Uses the Brain and other Organs?

to the inner man, different kinds of influences being transmitted by different parts. This the ancients knew when they used those names which we still continue to use—heart, spleen, bowels of compassion, kidney, backbone, etc., which are more than mere metaphors.

THE THEOSOPHICAL DEDICATION CEREMONIES IN CUBA

Katherine Tingley and a Brilliant Gathering Join in a Memorable Event

(From an observer's Notebook)

THERE is a very interesting little story connected with Katherine Tingley's purchase of San Juan Battlefield where she has recently erected a beautiful memorial Archway in honor of the American and Cuban Soldiers who lost their lives in the war of 1898, and where she has also laid the corner-stone of the Cuban Theosophical Headquarters and the Râja Yoga Academy. Shortly before the close of the war, under the auspices of the International Brotherhood League (the department for practical humanitarian work of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY) founded by herself in New York, 1897, and of which she is President for life, Katherine Tingley organized a War Relief Expedition, and was about to start for the island of Cuba with a staff of physicians and nurses and a great quantity of supplies, of food, medicine and clothing, when peace was declared.

Then came the establishment of the Camp at Mon-

tion, food and clothing, assistance was rendered to many thousands of the destitute and suffering Cubans as well as to the United States soldiers still in the island. One of the largest buildings in Santiago de Cuba, on the Plaza de Dolores, was secured as a headquarters, and all day long vast crowds waited outside its doors for help, of which not the least were the comfort and the encouraging words—balm for their very souls—that Mrs. Tingley gave to all, as with her own hands she relieved them in their great distress with medicine, food and clothing.

Before leaving Santiago, Mrs. Tingley paid a visit to San Juan Hill, where the decisive battle of the late war was fought. This was the first time she had visited the place, and looking across the battle ground, she said to those who were with her, "Some day I shall have a school there."

This was in 1899. Since then both the Cuban and

help Cuba on their return home, but through their love for their native land to help the world.

As soon as the purchase of the San Juan Hill property was completed, Mrs. Tingley made plans for a suitable memorial in honor of those who had fought in that memorable battle. The United States Government, through Col. Webb C. Hayes, Secretary of the Cuban Battlefield Memorial Commission, asked and obtained permission from Katherine Tingley to erect a monument to the American Soldiers on Kettle Hill, a part of her property. This has not yet been erected.

The memorial designed by Mrs. Tingley is in the form of a beautiful Archway of Egyptian design, and has been erected at the entrance to the property just opposite the Peace Tree where Generals Shafter and Linares respectively signed the treaty of peace. The Archway bears three bronze plates—that on the frieze bearing the inscription:

Lomaland Photo. and Engraving Dept.

THE MILITARY COMPANY OF THE RÂJA YOGA SCHOOL
AT THE START OF THE PARADE

Lomaland Photo. and Engraving Dept.

CAVALCADE OF THE FLAGS OF ALL NATIONS
A BRILLIANT PART OF THE PARADE

tauk, Long Island, with the sick and wounded returning soldiers, and inadequate means of caring for them. Knowing this and having physicians and nurses and medical supplies all ready, Mrs. Tingley went to Montauk, and established an Emergency Hospital just within the military lines. The hospital was soon full and temporary aid was also given to many hundreds who on the long march from the steamship wharves or railroad depot would sometimes drop by scores, from utter exhaustion on the hot sandy road.

The assistance thus rendered by Mrs. Tingley and her staff of helpers, was brought to the attention of the late President McKinley, and Mrs. Tingley desiring to extend her relief work in aid of the soldiers still in Cuba and those Cubans left homeless and destitute, President McKinley through the United States War Department gave to her, her workers and supplies, free transportation to Cuba or to any of the new possessions of the United States where there was suffering from the just closed war.

In pursuance of this, Mrs. Tingley with her relief party sailed from New York for Santiago de Cuba on the U. S. Transport *Berlin*. With medical atten-

tion, food and clothing, assistance was rendered to many thousands of the destitute and suffering Cubans as well as to the United States soldiers still in the island. One of the largest buildings in Santiago de Cuba, on the Plaza de Dolores, was secured as a headquarters, and all day long vast crowds waited outside its doors for help, of which not the least were the comfort and the encouraging words—balm for their very souls—that Mrs. Tingley gave to all, as with her own hands she relieved them in their great distress with medicine, food and clothing.

In the meantime a Râja Yoga Academy and a free school had been established at Santiago and also an Academy at Pinar del Rio.

On returning from Cuba, Katherine Tingley brought back with her several Cuban children, and at other times many others have been brought to Point Loma where they are receiving free education and support in the Râja Yoga School and Academy.

The great feature of the Râja Yoga system of education is to develop a balance of the whole nature, to bring out the finer qualities of the soul as well as to train hand and eye and brain. One of the characteristics of the Cuban nature is an intense love of country, and under the Râja Yoga teaching of the higher patriotism it is the ambition of the Cuban children at Point Loma not only to

"TRIBUTE OF KATHERINE TINGLEY
ON BEHALF OF THE
UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY
TO THE
MEMORY OF THE CUBAN AND AMERICAN HEROES OF
THE WAR OF 1898."

This is surmounted by a laurel wreath artistically wrought in bronze. The two other tablets bear quotations from the writings of H. P. Blavatsky and W. Q. Judge, the predecessors of Katherine Tingley as Head of the Theosophical Movement.

A granite shaft with an appropriate inscription has also been erected on the line of trenches assailed by the American troops.

During her recent visit to the island of Cuba the ceremonies of the unveiling of the Archway and the granite shaft and also the laying of the corner-stone of the Cuban International Theosophical Headquarters and the Râja Yoga Academy on San Juan Hill took place. The following extracts giving reports of the unveiling ceremonies on Nov. 22, are translated from the Cuban papers:

Lomaland Photo. and Engraving Dept.

THE ARRIVAL OF THE SOLDIERS AND PART OF THE INVITED GUESTS, AT THE BASE OF THE FLAG-POLE, SAN JUAN HILL, BEFORE THE CEREMONY

(From *El Cubano Libre*, Nov. 23, 1908.)

The radiant morning, the intense blue of the sky, the golden light of the sun, the fresh and balmy atmosphere, all formed a propitious setting to the majesty of the inspiring thought of yesterday's festival.

The civil and military procession started at half past nine from the Alameda de Michaelson, following the order published by us on Saturday: United States troops, Rural Guards, Artillery, and Municipal Police; a division of horsemen bearing the flags of all the nations; the Râja Yoga military company; pupils of the same school, in carriages decorated with flowers; two military bands, and over a hundred carriages, gaily decorated. In an automobile rode Mrs. Tingley, president of the International Brotherhood League, and with her was Miss Herbert, directress of the Râja Yoga Academy of Santiago; the principal authorities of the province and the city, foreign consuls, etc., followed.

In the carriages were to be seen all the representative people of Santiago society.

The parade from the Alameda de Michaelson to the San Juan Battlefield was orderly and brilliant, and the whole city looked on, reverent and sympathetic; while the multi-colored banners, waving in the morning light, meant for them the onward march of all peoples of the earth toward the same idea of peace, love, and justice.

The procession halted before the portal-arch of San Juan, a beautiful structure in the Egyptian style; and there a pupil of the Râja Yoga Academy, Mercedes Serrano, chosen for that purpose, unloosed the veil that hid the memorial. The bands played their respective national hymns, American and Cuban. In the center of the arch swung a large laurel wreath in which floated a white dove, with an olive branch in its beak.

The enormous crowds then entered the historic fields, and the specially invited guests occupied seats reserved for them. In front of the tall flag-staff, erected on San Juan Heights, and on which were raised, first the

American and then the Cuban Flag (the latter to stay there), were seated the following: Faustino Manduley, acting provincial governor; Dr. Grillo, mayor of the city; Mr. Rosell, secretary of the provincial government; Emilio Bacardí; the consuls of the United States, France, Sweden, Germany, Italy, Venezuela, etc; the Judiciary, Masons, American and Cuban army officers, etc.

The eminent thinker and altruist, Mrs. Katherine Tingley, made a moving address to the Cuban people, urging them to be always worthy of their liberty and progress.

The celebration, in its high inspiration and its beautiful and appropriate symbols, took the form of

an apotheosis, a fitting homage to all who on that terrible first day of July, in 1898, fell heroically on the tragic field; now a field of peace on which are reconciled these peoples who were once at war, and who in that reconciliation serve to a noble purpose the highest ideals of civilized humanity.

The solemn and never-to-be-forgotten festival organized by Mrs. Tingley was over at one o'clock in the afternoon.

The laying of the corner-stone of the Râja Yoga School, at San Juan, has been postponed until next Sunday, because the ground, on account of the recent rains, was very wet and soft, and also because the delegates of the International Brotherhood League from Sweden and England to this ceremonial act had not yet arrived.

The grounds are artistically laid out in gardens, walks and roads, etc.

The granite shaft situated on the first line of Spanish trenches was dedicated by four Râja Yoga children; one carried the Cuban flag, another the American, another the Spanish and the last a Cuban flag with a laurel wreath in memory of Estrada Palma.

(Translated from *La Independencia*, Santiago de Cuba, Nov. 23, 1908)

As usual, the celebrations organized in this city by the International Brotherhood League took place yesterday morning with the greatest of success and brilliancy. The weather was glorious.

The parade, first, and then the program carried out on the historical field of San Juan Hill, rivalled each other in brilliancy. The starting point of the former was the Alameda de Michaelson. A squad of mounted police led the procession, followed by companies A and C, 17th U. S. Infantry, with their band; the 4th company, Cuban Artillery; the 3rd regiment, Rural Guards, with its band; these constituted the military division of the Parade.

The Râja Yoga Military Company, composed of boys, uniformed all in white and admirably disciplined,

SEÑOR MANDULEY, GOVERNOR OF ORIENTE PROVINCE, ADDRESSING THE GUESTS

whose marching called forth well deserved applause all along the route, closed this division. They made an extremely pleasing and striking effect.

Flags of all nations, borne by a double file of horsemen, flaunted their gorgeous colors to the breeze.

In a flower-bedecked automobile rode the President of the International Brotherhood League, Mrs. Katherine Tingley, followed by the Acting Provincial Governor, the Secretary of the Provincial Government, the Mayor and the U. S. Consul, in another decorated automobile.

Then came the following:

A decorated carriage bearing representatives of the International Brotherhood League.

Flower-adorned carriages with pupils of the Râja Yoga Academy.

Carriages of the foreign consuls.

Members of the Judiciary in carriages.

Carriages containing the higher officers of the Masonic Lodge "Prudence," in full regalia.

After these followed, in a large number of carriages, the most distinguished and representative men and women of Santiago.

Enormous crowds gathered to see the procession. When this arrived at the historic and memorable hill of San Juan, the paraders were stationed at one side of the magnificent gateway that was about to be unveiled. The Rural Guard and Artillery forces formed on one side, with their band; on the other, the American soldiers and band were stationed.

With fitting solemnity the two bands played the national hymns of their respective countries, and amidst profound silence and intense expectation which succeeded these patriotic strains, the smallest child of the Râja Yoga Academy parted the veil that covered the arch.

This done, the parade and the crowd continued up to the crest of the hill to where a tall flag-pole rises from the exact spot where the Americans captured the Spanish trenches during the late Spanish-American War. A magnificent Cuban flag of large dimensions was raised. Then Mayor Grillo addressed the assembly, introducing the following speakers:—Acting Governor Faustino Manduley; Lieut. Wilson, U. S. A., reading in English; Major Matias Betancourt of the Rural Guard, who spoke for the first time of his life in public; Emilio Bacardí; Mr. Holladay, U. S. Consul, in Spanish; Capt. Stull, chaplain of the American troops stationed at Morro Castle, in English; and Mrs. Katherine Tingley, the organizer of the celebration and foundress of the Râja Yoga Schools in this city, who also spoke in English.

We take pleasure in according the organizers of the brilliant event of yesterday—an

event in every respect most successful, and one of pleasing and imperishable memory—our hearty congratulations.

Address by E. R. Wilson, First-Lieut. U. S. Infantry, Upon the Occasion of the

Unveiling of the Memorial Gateway at San Juan Hill Under the Auspices of Mrs. Katherine Tingley

Upon the ashes of empire, new civilizations rise. From the dust of decay springs life, in all its varied forms. In seeking parallel with nature's reproducing processes, we see here today, upon the sacred earth of this battle-field, sprinkled with the blood of those devoted soldiers of two nations, who side by side

fought in the name of liberty—an edifice, and institution dedicated to the cause of liberty—liberty in its highest sense, freedom through education, from the thralldom of those worst of tyrants ignorance and superstition.

Fighting here in these hills ten years ago, those men, those soldiers, who in the flower of vigorous manhood were cut down—paid the extreme price, made the supreme sacrifice in the holy cause; and please God their work, their lives, their sacrifices were not in vain. The impulse that prompted our countrywoman to select these grounds, to conserve them in remembrance of our slain, to erect here an imperishable monument to the valor and worth of

our heroic dead, and upon the ground made sacred by the blood of those martyred heroes, to establish a great institution of learning, to fight on these grounds the bloodless yet decisive battles in the name of liberty through education—the impulse, I say, was nothing short of inspiration.

As the representative of the United States forces here today, having had that honor conferred upon me by my Colonel, I speak for my companions-in-arms. To our noble countrywoman, who is devoting her wealth, her talents, her life to the diffusion of knowledge, of enlightenment, of liberty—all honor! For this loving remembrance to our departed brethren, we one and all tender to Mrs. Katherine Tingley our deepest gratitude.

Laying of the Corner-Stone of the Râja Yoga Academy

THE ceremony of the laying of the Corner-stone of the Râja Yoga Academy on San Juan Hill took place November 29th. It was a most brilliant and successful occasion. In a cavity within the stone was placed a metal box containing many articles of historic interest. Among these was a parchment which is here reproduced, on which was inscribed the following (translated):

Grand Lodge of the Island of Cuba Lodge "Prudence" No. 2

GREETING: Altruism, unselfishness, is the scattering broadcast of good; to educate and instruct is to make men useful to their country and to humanity, and this is the purpose of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY of Point Loma.

We the officers of the Worshipful Lodge "Prudence" No. 2, of Santiago de Cuba, constituted under the Most Worshipful Grand Lodge of Cuba, identified with the wholesome doctrines of that worthy and universal institution, wish to leave this record at this solemn ceremony of the inauguration of the gigantic work which is being erected at San Juan, consecrated to the welfare of the People of Cuba, and which is destined to last through the centuries as

Lomaland Photo. and Engraving Dept.

HON. EMILIO BACARDÍ

will also last the memory of our grateful people.

Santiago de Cuba, 22nd November, 1908.
(Sgd.) Prisciliano Espinosa, (Sgd.) F. E. Antúnez,
Worshipful Master. Senior Warden
(Sgd.) Miguel J. Rodríguez, (Sgd.) S. Pujals,
Junior Warden. Secretary.

There were also present at the ceremony, Mrs. Fanny J. Bushby, special representative from England, and Mr. Torsten Hedlund of Göteborg, special representative from Sweden, proprietor and director of one of the largest and most influential Swedish papers, *Handels- och Sjöfartstidning* (The Commercial and Marine Gazette). Mention should also be made of Mrs. Richmond Green, of Easthampton, Massachusetts, who went with Mrs. Tingley when she first visited the Island. And no record of Mrs. Tingley's work in Cuba would be complete did we omit to mention the distinguished Cuban, Emilio Bacardí, who has been twice Mayor of Santiago de Cuba and later Senator to the National Congress, and one of the first whom Mrs. Tingley met in Santiago. From that day he has been a staunch friend and supporter of her work. Another of Mrs. Tingley's firm friends is ex-Governor Pérez of the Province del Oriente, who was also present at the Corner-stone ceremony.

The following brief account is taken from the San Diego Union of Dec. 1, 1908.

CORNERSTONE OF NEW BRANCH LAID

Katherine Tingley Officiates at Ceremonies at Cuban Headquarters

MANY ATTEND EXERCISES

Other Sections of Island Seek Extension of Rāja Yoga System

A cable received last night at Point Loma gives detailed report of the laying of the corner stone by Katherine Tingley of the Cuban Headquarters of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY and the Rāja Yoga Academy at San Juan Hill, Sunday, November 29. A great concourse of Cubans, Americans and Spaniards from Santiago, and including prominent people from other parts of the island, attended the ceremonies, which, it was said, were the most impressive and dignified ever witnessed in Cuba, everyone present expressing the greatest enthusiasm for the educational work thus inaugurated, and the hope that it gave for the future of the island.

Among those present taking part in the ceremony were ex-Governor Carbo Pérez of the Province del Oriente, who for years has been a great admirer of Mrs. Tingley's work; the mayor of Santiago; the Worshipful Master and other officers and members of the Masonic Lodge "Prudence," in full regalia; Senator Emilio Bacardí and many other prominent officials, all of whom expressed themselves as being fully in accord with the Rāja Yoga system of education established by Mrs. Tingley.

The reception accorded Mrs. Tingley on her present visit has been an enormous victory for her work which has attracted the attention of the whole island. Among other appeals for Rāja Yoga schools in other parts the governor of Santa Clara province, representing fifty most prominent citizens of the city of Santa Clara, has written to Mrs. Tingley, placing himself officially and personally at her service, begging her to visit Santa Clara for the establishment of Rāja Yoga schools there. The mayor has also telegraphed that at a special session of the city council it was unanimously voted to invite Mrs. Tingley to speak publicly in the city under the auspices of the council.

The establishment of headquarters at San Juan Hill is the first of several other important centers similar to that of Point Loma to be established in different countries. The next to be opened will probably be that in the New For-

est, England, and also the one on the island of Visingsö, Sweden. Mrs. Tingley has also recently acquired property near her old home at Newburyport, Mass., for the furtherance of her work.

We also quote from Cuban papers as follows:

Lomaland Photo. and Engraving Dept.

SHEEPSKIN, FROM THE MASONIC LODGE "PRUDENCE" OF SANTIAGO DE CUBA, PLACED IN THE CORNER-STONE OF THE INTERNATIONAL EDUCATIONAL CENTER, LAID BY KATHERINE TINGLEY

(From *La Lucha*, Havana)

Pinar de Rio, 5th December.—The approaching arrival of the Foundress and Directress of the Rāja Yoga Schools, Mrs. Katherine Tingley, continues to awaken great interest in this town. In the Rāja Yoga Academy of this city they told us that the illustrious lady ought to arrive at Pinar del Rio from Santa Clara, about Monday or Tuesday, having gone to that point at the instance of the governor of that province, Señor Robau, who has asked for the establishment of a Rāja Yoga School in the capital of his province. In a session extraordinary lately held, the Council of Santa Clara unanimously agreed to

Lomaland Photo. and Engraving Dept.

AT THE LAYING OF THE CORNER-STONE

invite Mrs. Tingley to honor them with a visit from her, and to hold a public conference.

The illustrious leader is accompanied by Mr. Torsten Hedlund, director of one of the oldest and most powerful newspapers of Sweden, the *Göteborg Handels- och Sjöfartstidning*, the "Commercial and Marine Gazette," of Göteborg. He is also manager of several other important publications of that country.

Mr. Hedlund was an intimate friend of the well-beloved King Oscar and at the present time he occupies a high post in the directorship of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY in Sweden. He was one of those who helped most in the success of Mrs. Tingley in obtaining the grounds destined for the Swedish center of the Rāja Yoga Schools, situated on the famous island of Visingsö, on Lake Vettern, and surrounded by the Royal Forest.

This distinguished gentleman comes to Cuba for the purpose of making a study of the island, and communicating it to his countrymen in Europe through his papers.

In Mrs. Tingley's suite is also Mrs. K. Richmond Green, a distinguished Boston lady, a strong and unselfish supporter of Mrs. Tingley in the labors performed by her in 1898, when food, medicine and clothing were given to thousands of the inhabitants of Santiago de Cuba, sufferers from the blockade. Mrs. Green is an enthusiastic friend and admirer of this country, which she is now visiting for the third time.

They gave us an interesting description of the laying of the corner stone of the building which is going to be put up on the San Juan Battlefield for the Rāja Yoga Academy of that capital, and as the center of the activities of the beneficent institution presided over by Mrs. Tingley in the whole of Cuba.

It is probable that in a short time she will proceed to the laying of the corner stone at Visingsö for Sweden, and then of another in the Royal Forest of England, where Mrs. Tingley possesses an extensive and beautiful estate.—*The Correspondent*

(From *La Discusión*, Havana)

Santa Clara, 6th December, 3.30 p.m.—Owing to the initiative of numerous patresfamilias of this city, among whom are the distinguished gentlemen señores Silva and García Conde, lic. Berenguer y Campa, and Doctors Gómez and Martínez and others, it is proposed to found one of those model educational centers of the "Rāja Yoga School," like those which exist in Santiago de Cuba and Pinar del Rio.

The said institution will be built on grounds donated by the city for this beneficent purpose.

Invited by the gentlemen named and by the city corporation, Mrs. Katherine Tingley, the illustrious educator, directress of the "Rāja Yoga School," arrived yesterday evening in this city, and there took place at 9.00 a.m. today a splendid entertainment in the grand hall of the city council at which were present the whole council, the Mayor, señor Silva, numerous families and many children of both sexes, these latter bearing fine bouquets which they presented to Mrs. Tingley.

This ceremony was accompanied by the Children's Orchestra, and also the children who have already been enrolled as pupils of the proposed school were presented to Mrs. Tingley.

Today at 1.00 p.m., and before a select audience present at the "Caridad" theater, and among whom were distinguished and elegant ladies, Mrs. Tingley gave a remarkable conference on the subject of education.

The work undertaken by the gentlemen who are planning the construction of a "Rāja Yoga School" in Santa Clara is very commendable, as is also the moral and material support which the City is giving to the project which is soon to be converted into a beautiful reality.—*Torrens*

thus showing his great ignorance on all questions of the nature of man. By studying the Theosophical teachings one will find that these topics have been studied before by minds fully as competent as those of modern scientists, and that there is a vast wealth of information in store for those who care to enter upon that study. If, on the other hand, we are to be left to the speculations of all and sundry, we shall have to wait long enough for the emergence of a single grain of truth from whole stacks of error. STUDENT

Solid Liquids and Liquid Crystals

IN connexion with those three states of matter known as the solid, the liquid, and the gaseous, the gases have usually been considered to have the simplest structure and the solids the most complicated. Avogadro's hypothesis provides us with a simple conception of the relation between the volumes of gases and the number of molecules comprised within those volumes; and there are simple laws regulating the relations between volume and pressure and between volume and temperature. With liquids and solids, however, we know of no such simple laws. There is no obvious relation between their volume and the number of molecules, nor any constant function defining the interrelations between volume, pressure, and temperature. But it has been argued that the reason why the structure of gases seems so comparatively simple is that we know least about gases; the little we do know admits of easy formulation; but if we knew more, complications would set in. And the advance of discovery seems to confirm this argument.

And what is the moral of the above? It is that no matter how complete a formulation may seem, it is none the less liable to addition or revision at any moment. All that we can see is not necessarily all that there is. Though the facts we possess may fill our minds, there may yet be room for more facts. However compact and complete a system may be, there may yet be elements left out. In short, our knowledge concerning any given subject may be as well-groomed and clean and neat as a map of inner Tibet or the middle of South America, and yet be as poor a guide to the traveler as that map is.

Reverting to the subject of solids, liquids, and gases, we may see how it affords an illustration of the above remarks. For we are told now that recent progress in science has confronted us with *liquid crystals* and *solid solutions*, upon which there is an article in the *Scientific American Supplement* by Professor O. N. Witt, translated from *Prometheus*. The word "crystal" has hitherto suggested sharp edges and fixed form, but crystals have other characteristic features. Chief among these are the optical properties, such as double refraction, polarization, and polychromism, which are regarded as indicating characteristic groupings of the molecules. Lehmann discovered that many substances, on cooling after fusion, do not pass directly from the ordinary liquid to the solid crystalline condition, but go through an intermediate stage, in which they retain the external character of liquids, such as the power of forming drops and the power of taking the shape of the containing vessel, but exhibit the internal optical properties of crystals.

The more the process of crystallization is studied, the more evident it becomes that the transition from the liquid to the solid state is not so simple as it appears a first glance.

Which bears out our present point. Ordinary glass, we are further told, is a solid liquid. When molten it is a fluid liquid. When it solidifies, it does not really solidify but only pretends to—at least this is what it amounts to in plain language. It becomes viscous, then more viscous, until at last it becomes so viscous that it behaves like a *bonafide* solid. Real solid glass is crystalline—but then it is not glass. Sometimes, in fact, it does crystallize and has to be *melted up again*. So there is no such thing as solid glass; it is either solid and not glass, or glass and not solid. But yet more; ordinary glass is not even a true solid liquid. Rupert's drops and Leyden flasks, which are explosive varieties of glass made by pouring molten glass into water, are the true solid liquids. Ordinary glass has had time, during annealing, to crystallize—that is, solidify—partially.

Paradoxes are piled up in the case of artificial rubies, for they are defined by this writer as *solid liquid crystals*. If quartz be merely fused, colored red with chromium, and then solidified, it will not form rubies; so methods are used in which the fused quartz passes into the condition of a liquid crystal, and this liquid crystal becomes very hard without solidifying in the true sense. These rubies are spherical and have a surface tension like liquids, but optically they have the properties of crystals, and as regards hardness and fixity of form they resemble solids.

Thus Nature refuses to be defined by set formulas, and the method of using provisional hypotheses as a basis for new discoveries is often supplanted by the method of unbiased experiment. T.

Sinners in Heaven?

THE passing away of the artificial fear of death is described by a religious contemporary as one of the beneficent results of the present demand for facts which is making for the happiness of mankind. The fear of death, it says, is simply a bugbear created by bigoted believers in the hell-fire doctrine to fit their teachings. They invented stories of the death-bed horrors of the sinner, who was dragged by demons shrieking down to hell. But as a matter of observed fact, no such horrors exist.

The rain falls alike upon the just and the unjust; and, when the sleep of death approaches by the steady progress of disease, the physical powers are benumbed, the imagination ceases from its activity, and even the love of life, which is so strong in health, is slowly dissolved, and saint and sinner alike sink to their last sleep. . . .

This amelioration . . . has been accompanied by a brightening of all good hopes and honorable expectations, and all the incentives to good living in the life everlasting, of which our earthly existence is the beginning.

With most of this Theosophy is in cordial agreement. Normal death is a natural process, as much as sleep; and, like sleep, it comes quietly, and to the right liver as a welcome repose. Nature, unaided, takes care of us in this respect; our artificial beliefs interfere. If we only had beliefs that were in harmony with the facts of Nature we should be even fortified in the hour of death. We should know

that the Soul is passing from its physical tenement to its spiritual abode of rest until the hour strikes for it to reassume the duties and privileges of earth-life once more; that there is no state of existence worse than that of embodied life; and that death means liberation. Further, we should always have in anticipation that time when we shall have progressed so far along the path of our evolution as to become conscious of our Soul-Life, when death will no longer be more than a periodic episode, just as sleep is now.

But as regards the religious writer who has made the above remarks, the things he has left unwritten are more noteworthy still. What can be his belief in regard to the after-life? Does he think sinners will not be tortured, or does he merely believe that God grants them a period of oblivion just before entering into their punishment? If he abandons the old belief about the future life, what means his concluding remark about the life everlasting, and how does this remark apply to the sinners? Since good and bad alike sink peacefully to the grave, it should seem that the remarks about *good living* in the life everlasting, must apply to good and bad alike. STUDENT

A Lay Congress

If, in 1903, New Orleans had been swept off the map by some calamity—

If, in 1904, Los Angeles had been destroyed by the same cause—

If, in 1905, Kansas City had also been blotted out—

If, in 1906, a similar fate had overtaken Indianapolis—

And if, last year, St. Paul or Minneapolis had been totally destroyed—

It would have been in effect just what tuberculosis is doing each year in the United States.

What is to be done about it?

THIS is cut from a contemporary, and it is certainly very tellingly put. As to "what is to be done about it" we would suggest a congress. Not, however, a learned one. Learned ones are to be held anyhow. They will do all necessary debating on serums, toxins, statistics, overcrowding, and the like. What the congress of plain men should debate is this: What am I as a plain man doing in my own life, and letting my children do in their lives, calculated to waste or weaken vitality? Just by way of instance: Do I throw away a handful of it in a fit of anger or irritation three or four times a day, say a thousand times a year? Do I let my children throw away a handful of it two or three times a day by eating candy between meals? And so on. The underlying axiom being, of course, that wasted vitality and tuberculosis are names for two sides of one process. Knock down the dike and the ocean comes in. The ocean is very well in its place. So is the tubercle germ; it is a transformed nature-scavenger doing its duty according to its lights in destroying under-vitalized tissue. Nature wants that sort of tissue out of the way, and she will get it out of the way even if we do manage to build a fence that this particular scavenger cannot crawl through. Some other will. C.

The Suez Canal

PRIOR to 1884 the maximum draft for ships permitted in the Suez Canal was 24 feet 6 inches; in 1901, 25 feet 7 inches; in 1906, 27 feet; it is now 28 feet, and probably next year the limits will be increased to 30 feet. J.

Some Views on XXth Century Problems

The Great God Chance

A WELL-KNOWN literary contributor to the *New York Nation* says:

It is the teaching of a certain school of so-called Scientific History that the changes of civilization are produced by large impersonal laws under whose sway individual men are as pawns in the game of fate.

That theory, he thinks, is waning in favor of one which insists upon the directing influence of dominant minds. "Certainly, if any great event can be attributed to the character of a few men, it was the crime of the seventeenth century in England,"—presumably the execution of Charles I—"with all its attendant evils." But then he goes on to assert that it is *chance* alone which produces men of directing power and gives them their place, or which places the wrong men in positions that give them power.

Two great forces of national character were coming to a clash. One, in its triumphant manifestation, became Puritanism. The other would have finally handed the nation over to Rome.

The crash came, with all the evils of civil war. Puritanism rose to the top, set into its most forbidding forms, and led to a reaction of license.

Supremely wise guidance could, thinks the critic, have harmonized what was good in both tendencies, carried the nation over the danger point into smooth waters, and raised her to a level which, because there was no such guidance, she has never since been able to reach. The time for that guidance was the time of the reign of Charles. Instead of a wise adjuster there was an unwise precipitator.

But these things lay in the lap of Chance, and Chance set over the land the man of all others fit to confound confusion. Yes, if there is any one truth to be guessed from the vicissitudes of that age it is the incalculable power of that Fortune whose whim, according to Julius Caesar, and he should have known, governs mankind. . . . [The critic recognizes moral law; he recognizes, of course, physical law;] but where the two realms overlapped was an incommensurable disproportion, a strip of blind chaos, unknown and untraveled by reason, out of which came and went the busy emissaries of Chance.

History depends on *ifs*, and they are rooted in Chance. Is history really no more than that?

There was the force of license, manifested later in the Court and literature of the Restoration; there was the conserving force which in unrestrained manifestation became rigid Puritanism.

It was no Chance that placed a man like Charles as the Precipitator. No synthesis, no harmonization, was possible. The nation had not come to complete self-consciousness; the hidden things had to come to the top and become visible; there had to be action and reaction in the open that the nation might see itself and understand its two possible futures. It had to taste all the worsts that were in it. It is with nations as with individuals; an inner will, deeper than the common consciousness of daily life, brings about the circumstances that

compel the secret demons and angels of character to come forth and display themselves. Only then can the outer man choose and, after many actions and reactions, ally himself with one or the other. Nations that finally choose the wrong, become extinct—as do personalities. What the critic calls Chance is the operation of the inner will. STUDENT

Our New Organ

A FRENCH popular journal elaborates for the benefit of its readers an argument recently laid before the biologists by Mr. Balfour.

An eye, it says, evolves for the reason that there is light. The eye begins vaguely and finally becomes perfect and definite. Can we conceive that having perfected itself it should surprisingly find that there was no light to respond to? Again, can we conceive that the stomach, evolved for the solitary purpose of digestion, should at last groan at the monotony of its work and develop aspirations for some higher employment? Only on one condition—that there was higher work waiting for it to do and stimulating it to change its texture.

The human individual, according to science, is a higher animal. Like the other animals, it is a piece of apparatus designed to respond to the forces about it and in that response conserving its own life and that of the species. For the first it reacts in various ways, chiefly in respect of food and shelter. For the propagative purpose, regarding the life of the species, it reacts towards a mate. These constitute its work and functions as a piece of apparatus. In man these are, while simple at root, in manifestation exceedingly elaborate, and in their elaboration constitute civilization. Nature, full of objects, on one side; man, full of wants for them, on the other; action and reaction precisely comparable to the other pair of opposites, the foods on one side and the stomach on the other, wanting them and prepared to digest them.

But like the nascent eye, craving—and growing in response to—the stimulus of light, man finds himself *craving a set of spiritual states of consciousness*. There is nothing in his senses, in the organs made to correspond with nature, even to suggest to him what he finds himself wanting. He wants he knows not what, yet wants it.

Must we not assume, says the writer, here going considerably beyond Mr. Balfour, that there is a something exciting the want and causing the development of an "organ" to correspond with it? Here is a case, he says, in which man can as the animals cannot, accelerate his own growth by trying to find out what causes this unrest in modern life. What is that sort of "light" which is trying to awaken a new "eye"? What is the "eye" that shall correspond to it? Civilization, considered as a unit-man, is now immensely wealthy; nature, as it were mockingly, responds to every demand so that there shall be no cause for complaint. "You want new means of transit? New means of communication? To make gold and diamonds? New

foods, fruits? Multiplied productivity of the soil? By all means! Anything else? Only name it!" All along the line the supply is at once, or immediately will be, corresponding with the demand.

But the new demand, unwarranted in the physical construction of the great animal, man, she cannot supply. He wants spiritual states of consciousness, spiritual light, the gnosis, the supreme vision. He wants an eye and an Aeolian harp and will surely get them. His *want* is the *warrant of the existence* of the light he wants, "the wind for which his cheek is hot." STUDENT

The Forsaken World

A "SPECIAL ADVENT SERVICE" was held on December 1st in the great St. Paul's Cathedral of London under the highest auspices. An explanatory leaflet was distributed to the audience which called their attention to three "Facts." The leaflet began with the warning that "The object of this Musical Service is not to gratify the ear or the taste." And then came the "Facts."

The first was that "There will be a Day of Judgment. . . . This judgment will assign to each man his place in heaven or hell."

The second was in part a real fact: "Every man will die"; but it went on: "and the eternal condition of each man will practically be settled at the hour of his death."

"Fact" three was this: "Every man's chief work in this life is to prepare for death and judgment. . . . Many (occupations) are lawful and important; but less important far than the great work of getting ready for death. This is the wisest, noblest, most useful employment for every human being."

We have heard of another teaching; that the chief work and duty of men and women is to forget themselves in work for others and leave their own welfare in hands that will look after it very well, in the hands of the Divine Compassion that breathes throughout the universe.

Why are we on earth? Surely to develop all those greater qualities of thought, creative imagination, and action, which lie so utterly dormant in the great majority; to develop that sense of unity with each other, that compassion, in whose light alone can the great powers of mind and soul come into action; to make earth itself the heaven. What becomes of poor earth if the awakening thinkers spread in the air the thought that it is a mere desert at whose further margin waits a terrific cosmic Avenger to apportion hell to the great majority of those whom he has compelled to cross it? It is this teaching that has made human life what it is; that has fostered spiritual selfishness; that has made the great masses feel neglected and uncared for; that has prevented the ripening of qualities and powers of mind and soul of which we can hardly dream; and that has led to the reaction of a materialism from which mankind in the West is only now recovering. Is it not time that this teaching was swept into the medieval dustbin? Perhaps the audience consisted of archaeologists. C.

Archaeology Palaeontology Ethnology

The African Races

AFRICA is the primitive home of the negro race, says a writer in the *American Museum Journal* (May, 1907). This must mean that ethnologists consider the negro race originated there; probably with the idea in the back of their minds that that race was evolved there from the supposititious ancestor of Man. But the writer continues that representatives of the negro race have played a part in the civilized world all through history. Their well-known figures are found in the sculptures and mural paintings of Karnak, Luxor, and Thebes; and this shows that their characteristics have been unchanged for thousands of years.

"The permanence of these characteristics is surprising to those who believe man to have come into existence within the last eight or ten thousand years of the earth's history."

For centuries, while the Europeans are supposed to have been hacking each other to pieces with stone axes, the natives of the north of Africa were smelting iron; they had an "iron age." In spite of this permanence of type, however, the races of Africa present a great variety of anatomical, linguistic and tribal differences, just as is the case with the numerous nations of Red men on the continents of North and South America.

All the interior of Africa has been for centuries the home of a large division of the "Bantu" peoples, the dominant negro race, supposed to have descended from the head-waters of the Nile. They are chiefly known under the name of Bechuana. Of these Bechuana intruders the best known divisions are the Zulu, Mashona, Barotse, and Basuto. They are skilled in the manufacture of pottery and wooden vessels. The wooden vessels are carved from tree trunks, hollowed out with the adze, finished with a peculiar hooked knife, burned with iron and smeared with hot beeswax. Wood-carving is rather highly developed, favorite objects being stools in which the top is supported, Atlas-like, by a human figure. In the basketry the pattern of the weave presents designs heretofore considered peculiar to the Pomo Indians of California. The Barotse in south and central Africa also work in iron, from which they turn out excellent knives, daggers, axes, spears and swords.

Thus in all parts of the world we find evidence which, taken severally, might not perhaps amount to so much, but, considered as a whole, must go to prove that the teachings of *The Secret Doctrine* as to human origins are correct, and that the present "aboriginal" races of the earth are the remote descendants of what was once one large Race. Otherwise it is impossible to account for many remarkable resemblances in their arts, customs and beliefs, such as could not have been due to mere coincidence.

Whenever we find a large race that throughout ages has preserved inviolate certain marked fea-

Antiquities of Jemez Plateau

THE antiquities of the Jemez Plateau, New Mexico, are mostly situated on the national forest reserves, on the Indian reservations, and on the unappropriated public lands. For this reason they come under the jurisdiction of the Departments of Agriculture and of the Interior, which have issued stringent orders against the excavation of ruins and the carrying away of relics without permission, and have restricted the permits for research to competent archaeologists.

The leading features of this area are mountains with massive rounded contours, the highest peak reaching 11,200 feet; flat mesa lands of an altitude of 7000 to 8000 feet, cut up by cañons 100 to 1500 feet deep, and sloping gently to the valleys, where they terminate in escarpments; and narrow sandy valleys at an altitude of 6000 to 7000 feet.

The ruins, occurring in vast numbers, are divided into cliff-dwellings and pueblos. The former vary from natural caves to complete houses built out from the excavated cliff on to the talus. The latter are those of the many-chambered community houses on the mesa tops and in valleys, independent of support from cliffs. They are from one to four stories high. Rock-pictures are numerous.

The inhabitants of the cliff dwellings and pueblo houses have been thought to have been the ances-

tors of the present pueblo Indians; but closer examination shows that this is not so. The pottery shows different designs and tastes. But, especially, the ancient inhabitants were practically all long-headed, while the modern pueblo dwellers are almost entirely wide-headed. There are among the moderns a few broad-headed types, and also certain clans who claim descent from the ancient inhabitants. So it is evident that the ancient inhabitants for the most part scattered themselves, leaving to the modern inhabitants of the locality only a slight transfusion of blood. The desertion of the dwellings seems to have occurred six to eight hundred years ago as a result of the dessication of the climate and consequent lack of water, though there have been sporadic re-occupations since then by people who improved the irrigation system. Thus have ended other great civilizations of the past. T.

Mausoleum, Near Udaipur

UDAIPUR is one of the most beautiful and picturesque spots in British India. It is the capital of the native state of Mewar in Rājputāna and the residence of the Mahārānā. It may be described as the center of the Lake District of India. The beautiful Pola Lake lies to the west of the city.

Some idea of the marvelous beauty of the white marble palaces with their groves of palms, lit by the early morning sun and reflected in the water, may be felt from the light shown in the above picture-photograph of one of a group of *chattris* or cenotaphs containing the ashes of the Mahārānis, situated in a lofty walled enclosure adorned by fine trees, called the Mahāsati or royal place of cremation. This place lies about three miles to the eastward of Lake Udaipur. B.

The Trend of Twentieth Century Science

Another Elixir

A FRENCH physician thinks he has discovered something like the elixir of life. The report suggests that it is rather another whip with which to stimulate the white corpuscles. Acute disease is a conflict between them and the invading germs. They open the battle by shelling the germs, before coming to close quarters with them, with certain substances known as opsonins. When the germs have been sufficiently dispirited by this process they are easily eaten. If the corpuscles are undervitalized, the opsonins they produce are either defective in quantity or quality, and the cells may get beaten when the time comes for the close quarters attack.

Most of the anti-toxins now in medical use stimulate the production of opsonins and the like. Dr. Doyen's elixir appears to stimulate the spleen to the production of more white cells. Thus, indirectly, there are more opsonins. The elixir consists of certain ferments whose derivation is not given, but is doubtless animal.

It is curious that the medical profession is as a whole farther from the right track than the speculative and experimental layman. The latter has divined that since the real cause of disease is bad habits, the real cure must lie in good ones. His speculations have not included as yet all the bad habits, nor even the worst of them. But so far as he has gone he tends to reach the right track. He has found that we eat the wrong things, and eat them faultily. So he prescribes to us what are, in his opinion, the right things and how to eat them. His first step in opinion is unquestionably wise; the second may or may not be. He has found that we eat too much, and prescribes reductions, even down to nothing. He has found that we take too little exercise, and devises many systems of gymnastics. He has found that our mental attitude and color are profoundly affective of our health. This is wise enough, though he often becomes measurelessly foolish in his instructions as to what kind of mental attitude and color to take up. In a word, even the craziest of the lay crazes of today is wise in that it looks, for the causes of disease, in our habits, objective and subjective; and in that it looks, for the cure, firstly and secondly and lastly, to the correction of the habits.

The medical experimenter of the usual type may get to the habits, but he gets there as the last and least considered of his steps. His prescription is more in the direction of a ferment, an antitoxin, a spleen-stimulant. If a city man whose mind is never off his business, who takes no exercise, and who lunches in seven minutes while talking between mouthfuls into a telephone, finally develops an incompetent spleen and a feeble brood of white cells, the remedy is now to be an animal extractive stimulant to the gland and progeny. The income of tomorrow is drawn upon to finance today; and more of the misconduct which depleted today is rendered possible. All the sérums and anti-toxins are drafts on

tomorrow. They cannot affect the average deathrate, whatever they do to that of particular diseases; for they leave the sum of vitality what it was; may even lessen it.

It might perhaps be contended that all medicines are always mischievous except when their curative work enables the patient to reform the habits which led to the malady; when his circumstances inhibit him from making reforms which he would otherwise undertake; and when the causes are unknown or lie in social or individual heredity.

STUDENT

Factors of Safety

A PHYSIOLOGIST, writing in a contemporary, sketches out an argument which if carried to a logical extreme, would give us a warrant for eating from four to fifteen times as much food as we need. In spite of certain appearances, we do not, however, suspect him of having carried on a wide and secret propaganda in many civilized countries.

He is writing on factors of safety in the human body; that is, the quantity of power and apparatus which our bodies possess beyond what they are ever likely to be called upon to use.

Such factors are found in nearly every direction. The bones and cartilages will stand a crushing stress far greater than is ordinarily possible for them to be subjected to. Not only one kidney, but nearly two-thirds of both, may be removed without grave disturbance of health. The normal process of respiration can be carried on with one half of the lung tissue missing or inactive, and probably with a good deal less. One fifth of the thyroid, para-thyroid, and adrenal glands appears to be competent to do all the work necessary. One pneumogastric nerve is enough; but there are two. Large parts of the pancreas and liver may be removed without harm; so may the stomach and three-fourths of the intestines. "From the present attitude of bacteriologists and physiological chemists towards the colon one is led to believe that the body might do best without any part of that organ."

These are but a few instances of what the writer calls a luxuriousness of provision. At the beginning of his article he refers to the experiments of Professors Chittenden, Irving Fisher, and others, which show that the body can not only maintain its health but increase it, on a supply of food much below that to which the ordinary man is accustomed. The weight of the implication is that we should imitate nature and provide a margin of safety, one comparable to hers; that is, that we should eat from four times this quantity upward.

But the parallel is not good. Supposing that four-fifths of a given gland is inactive, waiting to be called upon; then the parallel would be that it should have alongside of it whatever amount of nourishment would be necessary in the case of the call. But once that reserve had been laid in and stored, which might take four or five meals, has not enough been done?

No; the parallel is gained by having in reserve, but by no means for use, *on a side-board*, a quantity of food four times that which is proposed to be eaten from the dining-table!

But is the extra nerve, are the extra four-fifths of gland, inactive? They may be inactive physically; but may they not have some other, much subtler work in connexion with the total physiological consciousness of the body? Knowing how much certain organs, for example the liver and spleen, derange our physiological consciousness when they are out of order, each deranging it in its own way, may we not suspect that when they are in order, even when not physically functioning, they are playing some part in the total mass of physical feeling? But probably that would hardly involve much, if any, physical waste.

STUDENT

Our Camel

THE camel, it would seem, was an American before ever he became an Arabian, an Egyptian, an Indian, a Spaniard, or a Turk. So at any rate says Professor Loomis who has dug him up in Wyoming. He has dug him up—or rather dug up his skeleton—in great numbers and sizes so as to suit all tastes. He varied in size from that of a rabbit up to that of an antelope and the larger he became the more he resembled the beloved of the Arabian. (There is indeed some Arabian poetry in which the camel's motion is referred to as the type of grace.)

About 3,000,000 years ago is Professor Loomis' estimate of the date of his birth. After a considerable sojourn here, and after acquiring some, but not all, of his present qualifications, he found the climate, which was beginning to be glacial, too cold for him. As many of him as could survive the journey and what cold there already was, wandered across what is now Behring Straits and was then dry land, into northern Asia and then downward. Man has also used the same path into Asia, as well as another which once stretched in a broken sort of way across the Pacific where Lemuria had been.

The camel had acquired his hump, which is a reserve of fat against times when food is scarce, before he left here. In the deserts he acquired some other peculiarities. His nostrils are slits capable of being closed at will against blasts of sand. His delicate sense of smell, evolved for detecting water and foliage at a distance of miles, is thus protected. His feet are covered with broad pads convenient for walking on powder. His breast and knees are thickly horny so as not to be hurt by the burning sand when he sits down. And he can carry a supply of water in his first stomach. The walls of this are set with a number of little openings leading into sacs which when distended will each contain about a teacupful. When he drinks, he not only supplies his immediate needs but fills all these cups and shuts their mouths tightly with a ring muscle. All full they will last him for three and even five days.

"Personality of Plants"

A RUSSIAN writer in the *Nouvelle Revue* (Paris) writes on the "Personality of Plants." He has "invented a new system of cultivation" which gives surprising results. He believes that plants, like animals, have a natural life and have desires and a conscience. We must treat them as we treat animals—take account of their will, if we wish them to yield to our desires.

Of course there is nothing new in this. The sentence of all Nature (in varying degrees) may be described as the normal and natural view; and the belief that some organisms can be "inanimate" or devoid of anything like mind, is a perverseness that has grown up with certain phases of materialism and "scientific" opinion.

Considering the question *a priori*, we can arrive at no intelligible conception of the workings of Nature, as to their cause and purpose, by a philosophy which excludes mind and intelligence therefrom. To account for the observed facts without presupposing conscious will and design, it becomes necessary to postulate in place of these agents something that is in reality their exact equivalent though we may designate it by some other name. For it is impossible to give any other meaning to the "scientific" terms, "force," "affinity," and the like.

And considering the matter *a posteriori*, many scientific observers are arriving at the same conclusions from the result of their observations of plants and minerals. Botanists discover a kind of nervous system in plants and describe marvelous instances of instinct and purpose in their behavior. Chemists describe the life-like character of crystallizing solutions.

Apart from the opinions of accredited science, there is the practical wisdom of those who gain their bread by cultivating Nature, often better founded and more reliable than the former, and yet not necessarily less true because less precisely stated. And this declares that plants have humors and should be humored.

But it is necessary to guard against an opposite extreme into which accredited science, once liberated from the view that Nature is unintelligent, will tend to rush. We must not assume that, because Nature is ruled by mind, this mind

WHERE lies the truth? has Man, in wisdom's creed,

A pitiable doom; for respite brief

A care more anxious, or a heavier grief?

Is he ungrateful, and doth little heed

God's bounty, soon forgotten; or indeed,

Must Man, with labor born, awake to sorrow

When Flowers rejoice and Larks with rival speed

Spring from their nests to bid the Sun good morrow?

They mount for rapture as their songs proclaim

Warbled in hearing both of earth and sky;

But o'er the contrast wherefore heave a sigh?

Like those aspirants let us soar—our aim,

Through life's worst trials, whether shocks or snares,

A happier, brighter, purer Heaven than theirs.

Lomaland Photo. and Engraving Dept.

LONG LAKE, FROM ANOTHER POINT OF VIEW

is of exactly the same kind as the mind in animals or the mind in men. Some rather absurd things have been written about the intelligence of animals; the writers, in their praiseworthy desire to confute those who depreciate the intelligence of animals, attributing to the animals an intelligence which rivals that shown by man.

It will be well for the student of these questions to consider the Theosophical teachings thereon. In these teachings the question of consciousness and intelligence is treated philosophically and systematically, and not in the speculative and hap-hazard way in which so many current experimenters in psychology are treating it. There it is explained that man's

consciousness is endowed with a special quality by reason of his spiritual descent; and that, though he has the animal mind, this is very much modified by the presence of the higher mind. Animals have not this higher mind. Hence their intelligence is not the same as ours, though they *are* intelligent and may even have some of the faculties of the lower mind more highly developed than we have.

In a similar way plants also have their appropriate order of intelligence, lower than that of the animals, but still a mind and such as suffices for their needs.

It is a by no means unimportant feature of Theosophical belief and practice that Nature must be regarded and treated as an intelligent being. And to the true intuition and homely usages of the husbandman on this subject, Theosophy adds illuminating teachings drawn from the wisdom of the ages—teachings which, unlike so many "scientific" ones, do not belie but confirm and explain the results of experience and the glimpses of intuition. The sympathetic treatment of both animals and plants is in accord with true wisdom, for Theosophy teaches the Heart-Doctrine. The teachings of the Heart-Doctrine never conflict with the promptings of the heart or demand that we should stifle feelings of compassion in a ruthless devotion to "knowledge." The sympathetic treatment of Nature is equally justified by its results. For there is a response, both in the results attained and in the greater knowledge that is opened up to all who do not wilfully shut the door in their own faces. T.

Students'

Path

From A MARCHING SONG

Algernon Charles Swinburne

WITH us the fields and rivers,
The grass that summer thrills,
The haze where morning quivers,
The peace at heart of hills,
The sense that kindles nature, and the soul that fills.

With us all natural sights,
All notes of natural scale;
With us the starry lights;
With us the nightingale;
With us the heart and secret of the wordly tale.

The strife of things and beauty,
The fire and light adored,
Truth, and life-lightening duty,
Love without crown or sword,
That by his might and godhead makes man god and lord.

These have we, these are ours,
That no priests give nor kings;
The honey of all these flowers,
The heart of all these springs;
Ours, for where freedom lives not, there live no good things.

Rise, ere the dawn be risen;
Come, and be all souls fed;
From field and street and prison
Come, for the feast is spread;
Live, for the truth is living; wake, for night is dead.

—Selected

New Year's Resolutions

AT the time when the cycle of the old year ends and that of a new year begins there is always more or less said about making good resolutions. Often it is merely thoughtless talk or jesting, while on the other hand, many are in earnest about making this the beginning of new and better habits. Even those who do not openly announce their good intentions often make them mentally and in numerous other minds the idea is entertained in a desultory sort of a way.

A custom which is thus perpetuated by humanity must have originally had good reason for its existence. A little thought will show anyone that the first of the new year is a good time to begin afresh. Nature's forces which are expressed by nourishing vegetation and in creating new forms have ebbed to the lowest point, while the receding sun makes the days grow shorter and shorter. As the material forces have reached the lowest point of their activity, the Christmas holiday comes with its wave of kindly thought and generous feeling. The better side of human nature warms into larger life under the Christmas cheer and even subconsciously we feel that the genial atmosphere of the holiday is more homelike and natural than the narrow thoughtless struggle of the many common days. The thoughtful gifts and the little loving remembrances touch the better nature into a new sense of its own richness and largeness and power to give and share the joy of others.

To the degree to which one's heart goes out to others in positive good will and kindness, to that extent does he become less of the human animal and more of the god, with the divine inner resources upon which to draw. In this positive outgo of generous, helpful thought and feeling the receiver of it is stimulated into a renewed sense of his own forgotten power and restfulness, while the giver has the joy of feeling a larger and more liberating sense of his own being. This kind of giver not only makes sunshine for others but he also becomes, as Emerson says, enlarged with his own shining. To be able to radiate genial warmth and strength and glorious light and color is a condition worth striving for even though there is but a dreary and thankless world upon which it shines.

The old-time idea of heaven as a bejeweled place of lazy delight is without the compelling force of logic. The higher nature, which is lost in the maze of matter, can have no joy in the kingdom which is to come on earth save in the positive action which serves to awaken it to a more conscious sense of its own power to win back its own divine birthright to greatness and freedom.

The medieval crime committed by the priesthood against humanity in substituting the theory of the vicarious atonement for the truth of Reincarnation, has perverted the natural feelings of men in regard to love and happiness and religion. The positive ideal of an aspiring, courageous god-man, who took up the cross of earth-life again and again that he might "work out his salvation," degenerated into a negative shrinking, goody-goody, do-nothing creature or an active sinner who counted upon the sufferings of another to expiate his faults. Even the power and heroic sweetness and majesty of the Nazarene has been obscured by the church for centuries, in picturing a "negatively good, undecided, effeminate Christ," as the Captain of a salvation from the determined, conscious forces of evil. No wonder it has been so hard to conceive such a Savior winning so desperate a fight that the majority gave up the problem, and those who accepted him took him on blind faith. That conception of Christ is weak both in logic and love, and satisfies neither the head or the heart.

The same negative taint of the false teachings of the atonement has marred men's ideal of love and happiness. What is usually called love is often a selfish, narrow, personal clinging to those who contribute to our comfort and conceit. They make us happy, we say: yes, that is what we are getting, but the real test of love is what we give, as it is the measure of lasting joy. The happiness we receive from without is a matter of feeling. That which we get from within is a state of being. One is what we feel; the other is what we are. Real love touches us with the magic of our divine birthright as we recognize other phases of the one self in the beloved friends who add new lines to the composite statue of our perfected nature. This kind of devotion takes hold on immortality—and something inside the unselfish and positive lover knows that death and separation are but words and nothing can disunite him from the other selves which he has made his own.

Now is the time to infuse the positive quality into New Year's Resolutions. Negatively

to leave off this poor habit or swear off that old vice will leave the individual simply open to other impulses of a like quality. Morality is nothing if not logical, and we must provide for the conservation of energy in planning out reforms. To resolve to put aside the limitations which are restricting us from a larger and finer sense of our own being, to determine to be larger and finer and freer, is the kind of resolution which takes the life and energy out of the old habits and conserves it into the daily activities which make the New Year worth while.

A great Teacher said there was but one sin—*Ignorance*. The bad habits and vices are evil because they substitute the passing sensations and gratifications for that inner consciousness and satisfaction of a growing sense of being—the cultivation of an atmosphere in which the soul itself feels "at home." It is wisely said that this new state is not so much a compensation for the things surrendered as a condition which blots them out of existence. The negatively good man who resolves merely to cut off the accustomed power of some familiar vice is not being led into temptation but is driving himself in at high speed. Having evoked a certain amount of force for his own use, he must provide for its expenditure. For a time it will be difficult not to turn into the accustomed paths; he will have to conquer the impulses of his body cells and the bent of his mind. But when he determinedly seeks out new avenues of expression, he will experience the miracle of making the strength of a false habit to work for the good of a new joy. L. R.

Hope

GOD-GIVEN hope dwells in each human heart, though at times we seem to do our best to kill it out. Yet a spark of it always remains, sufficient to kindle into flame the dying embers of our wish to rise, if we do ever so little to help.

Unfortunate is he who denies its existence, for without hope the road we travel seems both steep and dreary. Despair is heavy luggage; it drags us down, it finally strangles us and kills us. It makes life seem a terrible struggle instead of what it might be, a march through sunlit fields—or, if the shadows come, with ever the light beyond.

But hope for self alone creates desire, from which in fact it is descended. Such hope does us no good, for it will never satisfy. It causes us to think about the times to come, instead of living in the ever-present *now*. It makes us dislike that which is, desiring something else, to be in turn disliked just as much.

True hope is based in faith on Law; the Higher Law which rules the universe. True hope is more than a mere wish, it is a vision of what is to come, a promise that the world will see a brighter day. But this must come *through* us, not in spite of us. In feeling such a hope we realize our responsibilities, that we are one with all, united in a Universal Brotherhood.

True hope gives us the true joy of life, it gives strength and courage. It makes even the battle a source of joy, it shows us that whatever we do of good brings us just that much nearer to the goal. In fact, we think not at all of something to come, but live each moment in that moment. A seeming contradiction, yet this is the only true expression of that deeper hope of the soul. E. T. S.

A WELSH CAROL "Mae'r Flwyddyn yn Marw"

(Ton Carol)

THE year's dying glances
Fade out with the sun,
Of a thousand flown fancies
His dim shroud is spun.
In darkness condoling
Night weeps o'er his bier,
His death bell is knolling,
Farewell, good old year.

A new year comes stealing
To comfort the heart,
New blessings revealing,
New hopes to impart.
Light-footed to meet him
Flock aged and young,
While joy bells to greet him
Are blithesomely swung.

The foolish stand idle,
Old Time—no such thing!
He never draws bridle
Summer, Winter or Spring.
And toilers true-hearted
Shall find, never fear,
Happy ended as started
Each Old and New Year!

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

¶

Question What do you mean by saying that some people are soulless? Is it possible that one may lose his soul?

Answer H. P. Blavatsky taught that such a thing was possible, and indeed actually occurs. We elbow soulless men and women every day in the streets, she said: and can you wonder at this, seeing what we know of modern life, and especially of life in the big cities? The subject is one that cannot be well understood, without some knowledge of the dual nature of the human soul.

We are not, as a rule, incarnate human beings so far; there is only a little of the human element in most of us. If you met with a man whose soul had wholly entered into his body, and had the perception to recognize him for what he is; you would have good cause to marvel; he would seem to you, in comparison with other men, as the shepherd with the sheep. You see, men are twofold; there are, as you may say, two entities in everyone; an animal, with all the consciousness of the animal world; and the brain-mind which is no more than the outpost or delegate of the soul. This latter has entered into the animal body; it partakes of the soul nature, and is still linked with the soul; but is more intent on its present surroundings than on the divine place from which its being was drawn. We can get some knowledge of the life and character of the soul, from the story of the great Teachers and perfect men of old. Those stainless and beneficent lives, full of heroism and compassion, were such as we all might live; and are destined to live too; or for what purpose do we reincarnate life after life, and spend all this time learning and learning? Such men had won the battle all of us have to win some time, and are now concerned in winning.

This battle is that between the human and the animal natures; eventually "one of the twain must disappear, there is no room for

both." The mind may incline towards the animal and passional side, or it may bestir itself towards remembrance of the soul. Meanwhile the animal is living in close association with a superior being; is developing in the sunlight of a higher intelligence and becoming quickened to a more intense and dangerous activity. So dogs and horses, from their companionship with men, come to have a kind of reflection of human mind in them, enlightening their own. The human animal can come to be malicious and demoniacal, and worse than any of the brutes; it can absorb mentality from its companion in the body, and turn all it absorbs to obtaining the satisfaction of its desires and to the furtherance of its selfish aims.

The Mind has come into the new body, and finds itself in unfamiliar surroundings and confused with the surging of multitudinous life. Here we find the reason why such immeasurable care should be taken of the growing child, to guard it from evil influences, and train it to an understanding of self. There are the two natures growing up side by side; the mind half dazed on the inner side, and with myriads of interests to hold its attention; unarmed, in a sense, and unconscious of the presence of any foe: the animal wholly selfish and wholly eager towards the aim of its desires. If the mind were armed, trained, alert, able to recognize its enemy as an enemy, it would have nothing to fear; for it too, by reason of its origin, is divine, and heir of all dominance over the material world.

The animal cries out "I want"; the body receives a certain impress, a direction, from the cry; the unwarned and cautionless mind, receiving impressions from these, sets itself to stop them by procuring the thing desired. So it has come into contact with the animal; the latter has learned something from the contact, and is thenceforward all the more cunning. The mind, meanwhile, has lost some little of its divine consciousness.

Can you wonder? Look at the world around you; remember your own experience. All those mistakes that you made, all that you lost in consequence of them—you might never have made the one, you might still be in possession of the other. You were not warned; they were little matters; you had no idea of their cumulative peril. You had religion given you? Heavens, yes! We know what that, as a rule, means. You were to do the good that you did not understand to be good, to avert the anger of some all-dominating incomprehensibility; you were to refrain from an evil that you did not understand to be evil, to escape some huge discomfort ever threatening. The appeal was to fear and selfishness; of which the soul has never heard, for they inhere entirely in the animal. The animal heard the appeal, and was only the more awakened. So the mistakes, and often the worse than mistakes, accumulated; and the aroma of our divinity all drifted away from us and was forgotten.

Forgotten, but not lost: recallable by any steady effort; retired into the background of life, there to remain in the dimness, neither brought back into active potency, nor horror-driven by our actions into complete separation. The "mind" remains, but it is a smug and disloyal affair. It has effected a kind of compromise with the animal, and the two

hope to jog on together without great inconvenience, "until death us do part." This is the picture of the run of us, the complacent and mediocre run. You neither look for genius from them, nor for any dangerous infraction of the laws of the land. Truce was made long ago; so much is conceded to the animal, but respectability is strictly maintained. It is not so with all of us.

There are those who conquer, and more still whose victory is assured because of their faith in their own divinity and power to go on until the victory is attained. But there are others in whom the animal has conquered.

He made that first alliance with the unsuspecting mind, which entered more and more enthusiastically into his plans. By degrees the two became inseparably wedded. The animal provided the urge of desire, and the thrill and glow of satisfaction; the mind planned and schemed, refined and contrived. It does not follow that these desires were necessarily the more brutal and ordinary instincts; the pleasures sought after may have been far more subtle than bodily ones. It may be love of power, love of controlling others, ambition. All these things are the result of the union of brain and desire. When the interests of others are being steadfastly sacrificed to one's own *supposed* interests, then that force is being set in motion which drives away the divine nature from the human mind. This is the link between the mind and the soul. The link may become quite broken. STUDENT

¶

Answer II. This is also one of the teachings of Jesus though it is little understood today.

And what shall it profit a man if he gain the whole world and lose his own soul? And what shall a man give in exchange for his soul?

The teaching of Theosophy is that the complex nature of man may be classed in two broad divisions: the higher and the lower natures, one permanent and divine, the other transitory and ever changing, the angel and the demon. The demon is only demon when not held in subjection; its proper place is that of servant; it is that part of man's nature which has slowly climbed the stairway of evolution. The divine, the real man, the soul, is that which, when the outer habitation of flesh was prepared, came from other, higher spheres to meet and incarnate in it.

When this stupendous event takes place in evolution and the torch of mind is lighted in the heretofore only human-animal, there is a double responsibility, both on the side of the incarnating, divine entity, and on that of the lower and now humanized vehicle. The responsibility of the former is to dominate and control the latter; while that of the latter is to obey. If this mutual responsibility is not fulfilled; if the link between the two becomes weakened; if the lower nature gains the ascendancy and can no longer respond to the diviner influences of its better self; the soul may withdraw utterly its radiance from that man and he be left soulless.

There are such in the world and there are many tending towards that condition. Each moment is a moment of choice that finally destines us one way or the other. On which side of the scale do we throw our weight, to make life divine or soulless? STUDENT

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

On Explaining Away Heroes

"SHE had no business to possess faculties for which science could not account and which common sense could not accept."

In this way Mr. Andrew Lang explains why so many people have been at pains to belittle the genius of Joan of Arc, and we feel at once that he has succeeded. The life of any hero is a kind of reproach to the unheroic, and the first thing we have to do is to explain the whole marvel away. One of her captains swore to Joan's skill in artillery, so now a modern writer has declared that he knows the captain committed perjury in so swearing. Marvelous omniscience! Mr. Lang deals with this "authority" excellently, and makes clear in that delightful sentence the very common attitude taken by him.

Science declares that God shall not
Do miracles upon this spot.

Commonsense revolts against the supernatural. Genius is a kind of holy disease, for which the bulk of us, however, have no need of medicine. It is the way with humanity to crucify its saviors, and then to prove that they were not saviors after all. The shining purity of the hero's life is very irritating to conventional morality; his transcendent genius is abhorrent to smugdom. Why can't we be let alone to wander in the fat paths as we will? We are respectable people; why must these firebrands rob us of our sleep and appetite, with their attempts to set our minds whirling and to disturb our peace?

The reason of it is this—and here we come against the fact that a little Theosophy explains all marvels without having recourse to the far-fetched or the malicious—that you will never be let alone, since it is against the universal plan that you should. The fat paths were made for sheep and cattle to browse in; but you are a human being, or in the likeness of one, and have other affairs to attend to. You are co-extensive with the universe, and coeval with manifestation; beneath all that packing of convention is infinity, and all real and vital essence. You live a quiet life; attend your church, perhaps, of a Sunday, expecting no worse fate here or hereafter than your fellows; yet in that unfathomed abyss which is your unawakened nature, all hell is slumbering. Whatever evil has been done by humanity, such a possibility is also within you. Time and events and your own negativ-

MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

ity may bring you to it, in the long course of your lives.

You live a quiet life, having your petty selfishnesses like the rest; you have done nothing startling; your peccadillos were strictly conventional and reserved. Above all, you never committed the indiscretion of being discovered at the things of which society disapproves. Yet in the secrecy and deeper secrecy of your life you too are a god, capable of all flaming and royal thought, and all heroic action.

You desire to be left in quiet, and allowed a roadway eventless and undisturbed? But this Universe, and all its Laws and forces, the innumerable gods (if you care to use that term) and the spirit of humanity and your own soul are in alliance, and totally opposed to this your plan of action. Their scheme is quite different, and they propose to convert you to it in time. They have need that you shall be a god, taking a god's place imperially, and forcing forward the march of evolution. There are sheep enough in the animal kingdom for all natural purposes; in the human kingdom the requirement is all for men.

Man is a *Mind*; not what we usually falsely call a mind, which is a kind of sieve through which unoriginal thought trickles meaninglessly; but that one of our principles which can originate force, which can build, imagine, create; to stand up erect, so to say, and comprehend, of its own divinity, the Divine. The normal of humanity ought to be the perfect genius, the flawless hero; because genius and heroism are the marks of *Manas*, that which makes us *man* and not brute. Nor should we be without them, either, were it not that for ages we have loved better such pleasures as the senses can bring us.

So the Law sends these high Human Beings into the world from time to time, to reproach us by the splendor of their lives, and to hold back from us the ruin we have earned; for where should we have fallen to by now but for the labor of these? We know in our in-

most hearts that it is only they who can be called successful; that their sorrows and sacrifice, and the contempt with which we have paid them, have been triumphs ineffable; that their crucifixions have been more glorious than the setting of suns. We know, for we are also their kinsmen, and immortal, and cannot shut out altogether the seer-

ship of our race, that their way of living has been the only way with any profit in it. We make much of our own fool's-pursuit of selfish ends; we think it a great thing to make money or high position, and are roused to indignation by anything that reminds us that such things are but fool's-pursuits after all.

You will need no Bacon for author of your Shakespeare when you know that the soul is divine, and has all wisdom, reaped in myriads of births, in myriads of ages, wrapped up in it and within the reach of those who have earned the right. Joan of Arc will require no explanation, when you know that there are Souls who incarnate in their due time, to save those nations that are to be saved.

And above all, you will never balk at believing in the noble heights to which we human beings have risen, when you know that to be really human is to be divine, and that our destiny is to overcome the lower elements in our lives, and to embody completely all virtue, wisdom, courage, excellence, and peace.

STUDENT

Navies as International Police

SIR ROBERT PEEL's invention of a police force to aid communities in keeping the peace has been so successful that in accordance with the better spirit of the age we seem on the verge of a universal application of the principle to international affairs. There are no evils which can not be made to yield before an enlightened common sense regulated by good feeling and backed by the friendly cooperation of the chief world-civilizing powers. Following on the visit of the U. S. fleet to Japan a long step has already been taken in the friendly understanding reached between Japan and the United States to maintain peace in the Pacific, to defend Chinese independence and integrity by every peaceful means, and to give equal commercial opportunity in the Chinese Empire to all nations. This agreement is not embodied in a treaty, but in simultaneous and identical declarations of sentiments of the two governments.

STUDENT

THE THEOSOPHICAL ADDRESS AT ISIS THEATER

A SPECIAL program had been arranged for the meeting at Isis Theater last Sunday evening. The Râja Yoga Orchestra and many of the children took part. The theater was crowded, and the whole audience showed great appreciation of every number on the program. The two numbers that especially aroused interest were a vocal solo and a piano solo by two of the very small children. The other musical numbers were as follows :

Overture	"Le Caid"	A. Thomas
	<i>Râja Yoga Orchestra</i>	
Piano Solo	2nd Mazurka	B. Godard
Song (Solo)	"The Mission of a Rose"	Cowen
Violin Solo	"Allegro Maestoso"	C. de Bériot
Selections	"The Angelus"	C. Bohm
	"Anvil Chorus"	Verdi
	<i>Râja Yoga Orchestra</i>	

Addresses were given by two of the Râja Yoga students. The first of these was by Miss Hazel Oettl, on "Looking Ahead." Beginning, she spoke of the great possibilities there were if we could but forget ourselves long enough to look forward with a truly unselfish spirit, and that it would be difficult to say what we might discover. Certainly no ordinary future would meet our gaze, but one that would urge us to use our utmost strength in preparation for its reception. The future rests with us, and so much depends on what we make of the present, that we might easily say the way to look forward is to make each moment count for the best that we have to give. The mere desire or wish to lead a life on the highest lines will not insure our doing so. An idle wish is like a summer breeze. We must will to do what is right if we would succeed, and those who seek that life will be given strength to conquer all obstacles.

The other young speaker, Montague Machell, spoke extemporaneously. He first of all referred to the Christmas spirit, which is made so much of in the Râja Yoga system of training. He said that the true Christmas spirit was the Christos spirit in each, and that the touch of a higher and more unselfish life, which marked this season of the year, was one that Râja Yoga taught should govern every day of our lives. Speaking of the many criticisms that are made by certain people against Katherine Tingley's system of Râja Yoga, the young speaker gave it as his opinion that the reason for these was that at Point Loma and in the Râja Yoga Schools throughout the world, was being successfully carried out what some had failed to do, and what, in some cases, others did not wish to see done. All this gave rise to misconception and criticism. But on the other hand, more and more in the world were becoming interested in Râja Yoga and becoming acquainted with its results, who see in it the means for the regeneration of the world. They see the children under this system of training growing up with a greater love in their hearts towards their parents and towards one another. It is absolutely false that there is any separation of parents from children, or any lessening of the ties of affection, but there is instead a deeper and truer love. One of the teachings of Râja Yoga is that true liberty and true independence is that which recognizes one's right relation to his fellows, and that each has his place. Râja Yoga means the performance of one's whole duty as a citizen, as a member of the whole human family, and to one's self as a soul.

OBSERVER

Apparent Unreality of the Spiritual Life

"THE Seeming Unreality of the Spiritual Life" is the title of a book briefly noticed in a religious contemporary. The author, it appears, attributes that seeming unreality to a fundamental misconception of the nature of the spiritual life, by which we erroneously imagine it to be apart from ordinary life, or a condition of "strain," or a magical inheritance; and to our failure to fulfil the conditions of the spiritual life. But he adds:

The need of the modern man is met only in Christ. . . . For the fully modern man the way to communion with God must be ethical, Christian, social, biblical, practical, and in all these points alike, rational.

From the above many would demur, unless the idea intended by the word "Christ" be

ious forms of expression, is the idea that in ordinary life we do not fully realize ourselves and our possibilities, and that it may be possible for us to rise to some fuller realization of ourselves here on earth. This thought makes itself felt everywhere, in other ranks besides those of religion. It is one of the signs that the spiritual nature of man is being quickened at this epoch, and that it is compelling its own recognition. The inner life forces are stirring for a new stage of expansion and growth.

The earnest Christians will naturally call it the influence of Christ or the Holy Spirit, just as adherents of other religions will attribute it to their respective deities or prophets. But the movement will burst all bonds of dogma, as indeed it is already doing.

BLUE LAKE, KOSCIUSKO, N. S. WALES, AUSTRALIA

This beautiful Alpine lake, near Australia's highest mountain (Mt. Kosciusko), is becoming a favorite resort of tourists in the winter season, for snow-shoeing and other winter sports

extended far beyond its usual meaning; also, many would prefer to leave out the words "Christian" and "biblical" from the list in which they are included.

How the world is everywhere searching after the realities of life, the deeper meanings! The superficial existence which satisfied former generations no longer satisfies; we feel that superficial it is, and we thirst for the undercurrent. Yet how we cling to the old formulas! Trying to fly, and yet afraid to let loose! But this idea that the spiritual life is not something exotic, something superadded on the top of ordinary life, some artificial condition implying strain, some state of the after-life—is it not gaining ground everywhere? To isolate the spiritual life from ordinary life is to make ordinary life unspiritual; but the world is realizing more and more that spirit is everywhere and that there can be no life at all without it.

What people are driving at, under these var-

That point about the seeming unreality of the spiritual life being due to our failure to fulfil the conditions of its manifestation is a good one. This is exactly what a Theosophist would say—what Theosophists do say over and over again in these pages. He who would know the doctrine must do the duties; knowledge is the meed of action. The inference from the above negative proposition is the affirmative proposition that, if we did fulfil these conditions, the seeming unreality of the spiritual life would vanish and it would become real. The important point, therefore, for those who wish it to become real, is—What are the conditions?

The condition for obtaining clear water from a spring is that the pipe through which it flows shall be clean. The waters of spiritual life will be muddied if they run into an impure brain. Now our brain is full of selfish desires and our imagination is full of delusions; therefore it would seem to be necessary to remove

these things first. Otherwise a tide of new life would but quicken the desires and exaggerate the delusions, making the last state of that man worse than the first. Is not this what actually happens with fanatics? But there is no need to catalog the requirements for rendering oneself fit for receiving the higher life; they are to be found in every scripture. The trouble is that they have been suffered to become dead letters. If we could only take those eternal truths in our bibles and regard them as wise practical rules for daily life, leading to a reward here and now, they would gain new force. The reward they lead to is not a worldly reward, not the satisfaction of personal desires; but it is the fruits of the Spirit as defined by Paul. In short the reward is *illumination*. That idea seems to have vanished from the religious conception; are our pastors illumined? Do they show us how to become illumined? Yet the reward of the holy life is illumination, all scriptures say so. Selflessness is the basis for all knowledge, and hence is the keynote of Theosophy. H.

How Facts Often Belie Theories

SCIENTIFIC conclusions deduced by careful calculation from a large number of data may be erroneous by reason of the assumption that the data used are *all* the data there are. Then, when later on some fact comes up which contradicts the conclusion, a search is made for the missing data and they are discovered—after the event. Thus there was a dogma that water could not rise higher than the level of its source; and when it was found that it sometimes did, somebody remembered that it was possible there might be a *pressure* on that source. And scientific men declared that boats would drift down a stream at the same rate as logs, while lumbermen declared that the logs drifted the faster; and then it was found that the water flows at different rates according to its depth, as in fact it must do according to theory. But why was not this discovered before instead of after? The following is another case in point.

With regard to whether the terrestrial axis of rotation varies its position within the mass of the earth, that great mathematician Euler "showed" that, if there were any such variation at all, it must be a uniform one of ten months. But the results of many careful *observations* have demonstrated that there is a variation and that it is irregular, being compounded of two periods, one of about a year and the other of 427 days, and moving around a complex tangle of curves. The theoretical difficulty, we are informed, was partially removed by Newcomb, who pointed out that the fluidity of the ocean and the elasticity of the earth had been neglected in Euler's calculation. Why did not Euler take these into consideration? These instances show that it is a good deal easier to establish facts by observation and explain them afterwards than to try to calculate them beforehand—and may warn us against attaching too much importance to dogmatic assertions. STUDENT

A Lesson from China

WE have something to learn from China. She puts down her opium evil; what are we doing for our morphine evil? In six provinces in China the cultivation of the poppy is to stop; in others it is to be reduced one-tenth annually. All opium dens

have just six months' life allowed them from the time of the order. All users of the drug are to register themselves, the amount they use and the place where they get it. *The only areas unaffected by these orders are the towns under foreign rule, French, English, and German.*

That there should be towns thus untouched is deplorable. But *we* must not say a single word. For *all* our towns are wide open in respect to the similar morphine evil. Hundreds of people a year begin a career which passes on through untold suffering to death, often suicidal death. And some of these clouded minds would be of great worth to us if they were clear. The attraction of morphine is often great upon sensitive natures.

STUDENT

Noted Prelate Extols Noted "Infidel"

IT is a sufficiently familiar fact to students of history that Ecclesiasticism, after exhausting its resources in withstanding its opponents will invariably change its policy and endeavor with equal pertinacity to patronize them. This being so, it will not be a surprise to find that, as the papers report, a celebrated prelate of the most bigoted of the churches, has paid a very fulsome tribute to a man who is described as the most eminent unbeliever in the United States. The prelate most warmly commends this gentleman's beneficence and services to humanity and ends by praying God that those services may yet be spared to us for many years to come. Perhaps the unbeliever being immune against the claw, will now succumb to the velvet; but in any case it may be a comfort for other people to know that a man can be a blessing to his fellow creatures without being a "believer," and that God can be asked to reward his services by a continuance of his earthly existence. T.

Correspondence

[A correspondent sends in the following note on the "Poker Phenomenon" outlined in No. 3 of the current Volume of this Review. As both his explanation and the answer of "Student" are interesting, they are inserted here.]

Dec. 6, 1908

EDITOR CENTURY PATH:

Madam:

I notice in the CENTURY PATH for Nov. 22, 1908, page 3, column 3, the following:—"There is the superstition about leaning the poker over the fire to make the fire draw," etc. The reason why the poker when leaned over the fire makes the fire draw, is because the poker becomes heated, and the great heat along the poker causes the air close to the poker to rise and so creates a draft. I remember Herbert Spencer mocks at this practice because he does not understand its cause. He also mocks at the practice of cabmen who (when driving through a city where the streets are arranged in squares which together form one large square) does not drive down one side of the large square and then along one end of it (assuming the object to be to get from one corner of the large square to the corner diagonally opposite), but drives through the streets which lie nearest to the diagonal line. But the cabman is quite right, for at every corner he passes he drives close to the kerb-stone and so cuts off a part of each corner, and the more corners he passes the shorter is the distance he has to go.

The case of the poker is simple enough, but

a landlady with whom I once lodged in London had another "superstition" which I never could explain. The fire was in an open grate, long-shaped, and it sometimes happened that the fire in a lodger's room would light easily at one end but would not light at the other. The landlady observed that whenever that happened the lodger soon left. From this cause she divined and mentioned my intention of leaving before I had mentioned or indicated it. . . . H. W. B. M.

The writer in the CENTURY PATH had heard of the above explanation of the poker phenomenon; but did not think, and does not now think, that the very slight convection current presumed to be created by the poker would be adequate to cause the described effect. For one thing, the poker is *cold* when it is applied, and it is only *after* the fire has burned up that it becomes hot. For another thing, why does not the fire, which is much hotter and also larger than the poker, create a convection current and blow *itself* up? Hence it is to be feared that the explanation is inadequate. It seems indisputable that the phenomenon is true; and in that case of course there must be some explanation; but it does not follow that that explanation is in accordance with the extent of scientific knowledge at any given epoch. The phenomenon may depend on laws which science is going to discover tomorrow.

The same applies to the facts about the landlady. She had observed the connexion of cause and effect, like a true scientist. And if scientists were more open-minded and less anxious to restrict the sphere of their observations and ratiocinations within certain limits, they might readily accumulate a large collection of more or less similar phenomena and thus be on the high-road to formulating a "law." True, there are indeed some who overstepping the bounds of orthodoxy in research have dared to turn their piercing searchlight upon the confines of the "psychical"; but, as some of them seem to be characterized chiefly by a ponderous and humorless pedantry, it is no wonder that they have scored but little success. Hence the failure to arrive at accurate knowledge in the matter of the common ordinary events of daily life must be ascribed less to inability than to unwillingness to investigate. For such an investigation, seriously and candidly carried out, would lead to the conclusion that the events of daily life are mainly governed by powers of which our science knows little or nothing, and would force us to admit that the so-called "superstitious" ancients were right in many matters for which we have hitherto derided them.

Strangely enough, the importance of the household fire was quite an item in this ancient lore. It was carefully kept alight and tended, and carried from place to place when they moved. It was believed to be the *manifestation* of a "god" or "spirit," and the welfare of the family was connected with its proper maintenance. The landlady's fire, with its mysterious connexion with the intentions of the lodger, seems to be connected with this. And then we come to the question of the poker again; perhaps some people cannot draw the fire with a poker, while others can. Would not this be a good explanation of the divergent opinions? Perhaps some people can make a sleepy fire burn up without a poker. Of course, in modern philosophy, where the effects are put for the causes, and the incidentals for the essentials, a fire is nothing but so much red-hot carbon and incandescent fumes. But to a more penetrating philosophy these are merely the accompaniments or outward phenomena of the fire, the fire itself being something immaterial (in the ordinary sense of the word "immaterial") and the cause of the thermal and chemical phenomena. Between this inner Fire and the inner Fire of man's nature there may be some affinity, so that some people can influence fires to burn, while others exert a contrary effect. And the poker *may* be an instrument by which the fire-promoter conveys his influence to the fire.

Similarly one can imagine that a lodger who desired to leave, and had no intention of staying, would exert a damping influence on the "household gods" there and on the fire elementals. But we are dropping into poetry and must stop, so as to allow readers to fall back into the domains of common sense and exact science once more. STUDENT

Art Music Literature and the Drama

Recitative Art in Singing

IN the progress of music during the last two centuries the art of singing has been treated as a step-sister. The rigid confines of so-called classic forms, with their long-drawn phrases, incessant repetition of senseless bits of text and ungraceful coloratura flourishes, all too long compelled vocal art to remain within cold and stiff bounds. Then came a period of the cultivation of mere beauty of sound in the human voice. This specialized art finally deteriorated into elaborate forms of gymnastics, delighting the auditory sense but not the heart.

Thought and idea, which give inspiration and should underlie all vocal music, have heretofore received only secondary treatment. The sister-art, *poetry*, is the foundation of both. In it inhere the ideas that are to be made known, and vocal rendition is only the amplifier thereof, although in itself destined to create new avenues for musical understanding. The joining of true poetry and vocal art opens one of the gates for the realization of spiritual ideals and brings them home for ever after, by way of reminiscence, with treasure-laden rapture.

Considering the rapid development of symphonic and operatic music, as also the comparative perfection of interpretation by means of all kinds of solo instruments, it is strange that declamation and pronunciation in vocal art should have been so long neglected. It is true that the human voice by its sheer beauty of tone alone wakes very deep feelings, but it must be confessed that even these are mostly confined to mere emotions without anchorage in definite ideas; whereas, when this fascinating phenomenon is joined to the underlying picture, thought or idea by competent rendition of text, it evokes untold depths of feeling and touches a much vaster field of association of ideas—a field otherwise left dormant.

The *bel canto* manner of performance of vocal music, though it has held almost exclusive sway for centuries up to very recent times, has now to make place for a superior art, *i. e.*, the art of perfect recitation joined to the art of singing. A change is needed in the very nature of things. The auditor demands to be let into the secret, he wishes to know all about the meaning of a song, what underlies its wealth of feeling, what is its story, what its soul!

A new view is being advocated by the very best living artists. During the last decade some half dozen distinguished vocalists have stepped boldly forth in this new art, demonstrating the profound beauties of distinct declamation in song and thereby giving entirely new ideas to music itself. Critics and public were not long in recognizing the merits of the innovation, and the following are examples of the expression of public approbation:

This was a day of unforgettable impressions. This artist whose grand power of creation, deepest knowledge, absolute comprehension of the poetical

idea, whose eminent rich power of musical conception, added to great spiritual culture, lights up the very smallest values of the life of his songs. . . . His ideas take firm outlines and warm pulsing life from his renderings; perfect recitative art, extraordinary coloring of words, makes clear whatever depths they may have hidden, whatever gives them any singularity is brought to the surface by his interpretation. . . .

Such an evening is an event in human life, such an evening binds human souls more closely together; it is a feast of art, a religious service, a prayer and

Lomaland Photo. and Engraving Dept.

FRANZ LISZT

offering to the highest of ideals. Why waste many words? Our soul has lived—how can that be more closely explained? It is impossible! We are carried away unbeknown, fancy is so strongly excited and worked upon that we firmly believe ourselves, in the very moment of our artistic emotions, able to grasp in some tangible shape the impression received. But one single picture sinks deeply into the human soul which harmonizes with the feelings awakened in such hours as we experienced at this recital—a picture known to all according to each single individuality—the picture of holy, pure and godlike love. In all its manifold expression art can but awaken this in the human being. . . .

Vocal music is thus coming to its own at last.

Every word and combination of words in true poetry have an underlying idea of spiritual significance which, when set to music, should thereby receive accentuation and lucidity. Through artistic vocal rendering these should cause in the auditor's mind a much

deeper perception of the idea, just as when we see through the sudden opening of a door certain vistas which have heretofore been closed.

The soul of a word can be portrayed through the human voice, not merely the superficial meaning but the idea, the soul of it, that lies behind. Through the rise and fall of the voice in the perfect pronunciation of a word, together with the application through the magic of accentuation of certain brilliant or shaded dynamics, it can call forth wonderful associations of ideas in the mind of the auditor that cannot be produced by any other means. Similar experience may be had occasionally from the spoken word, but in vocal art the effect becomes accentuated, more readily perceptible, deeper, and much more diversified. A word when genuinely felt, perfectly pronounced and rendered lucid with a certain pure dynamic effect may be so intensely infused with spiritual tone-color by a vocal artist that it cannot fail to awaken a corresponding impression in the auditor. When so received it is instantly translated over as though it were his (the auditor's) own experience—which in truth it is, mystically. What is thus called forth can be but the revelation and making lucid of that which already has reality in our consciousness but which had heretofore been veiled. Perfect declamatory art in singing has the magic power of touching high spiritual consciousness.

The beauties as well as the multiformity of tone-color that the human voice is capable of producing are unfathomable and absolutely without end. When these are joined to word, phrase and sentence, and performed with perfect recitative art, a high state of consciousness is evoked which may have been often desired but rarely attained.

E. A. NERESHEIMER

The Conductor of an Orchestra

ALMOST the whole duty of a conductor is comprised in his ability always to indicate the right tempo. His choice of tempi will show whether he understands the piece or not. With good players again the true tempo induces correct phrasing and expression, and conversely, with a conductor, the idea of appropriate phrasing and expression will induce the conception of the true tempo. . . . The scales fell from my eyes [on the occasion of a rehearsal of a Beethoven Symphony by the Conservatoire Orchestra of Paris, under Habeneck], and I came to understand the value of correct execution and the secret of a good performance. The orchestra had learned to look for Beethoven's melody in every bar—and the orchestra sang that melody. This was the secret. . . . The French idea of playing an instrument well is to sing well upon it. And that superb orchestra sang the symphony. The possibility of its being well sung implies that the true tempo has been found. Old Habeneck was not the medium of any abstract aesthetical inspiration—he was devoid of genius; but he found the right tempo while persistently fixing the attention of his orchestra upon the *melos* [*μελος*, melody in its higher mystical aspects] of the symphony. The right comprehension of the *melos* is the sole guide to the true tempo.—Richard Wagner

PER BRAHE, the famous Count of Visingsö, was also for a long time Governor-General of Finland. He resided at Åbo, the ancient capital of the country, during 1637-1640, and 1648-1651, and continued to be Governor-General for two years longer after his return to Sweden. During his tenure of this high office, most important improvements were accomplished in regard to the cultivation of the land, the administration of the country, and the education of the people. He traveled several times over the whole country, which at that time was partially desolate, tried to learn the needs of the much neglected people, and offered help and education in many ways. He was the true friend of poor and isolated people who lived far from the centers of civilization, and he gained their full confidence, which is often no easy thing with the Finns. It is an undeniable fact that the name of Per Brahe is held in higher veneration in Finland than in Sweden, because he was the only really great man who ever ruled over that country, whereas there have been many great rulers in Sweden. One of the most striking examples of the way in which his memory is kept alive in Finland is the very common saying, "At the time of the Count," which is often used when something happens at just the right moment. With good reason he wrote in his book of records the following sentence, which is often quoted and is also engraved on the base of his statue in Åbo: "I was with the people, and the people with me, well content."

Per Brahe was a Light-Bringer to Finland at a time when there was much disorder and darkness. The most important episode in this work for the nation's enlightenment was the foundation of the University of Åbo in 1640—a most memorable event, which has been described by contemporary writers and has recently been depicted in a beautiful fresco painting by Albert Edelfelt, Finland's greatest artist, who died two years ago. The picture is in the hall of the University at Helsing-

Per Brahe in Finland

fors, for the University was transferred to the new capital in 1820.

The great foundation-day was the 15th of July, in the middle of summer. "God and all Nature," says a contemporary writer, "seemed to have united to enhance and adorn the festival of the day. The air was clear and mild and a delightful breeze was blowing, rocking the decorated ships and watercraft, and making a beautiful picture. Drums and

ENDEAVOR

BLINDLY Endeavor went,
He had no path,
Nor saw his way at all.
He went alone.
No other had been there.
The air hurled by in silence.
If he fell, who cared,
Save that the mocking face of his worst self
Seemed still before him.

Yet after-days unfurled a legend,—
He who entered first, they said,
By the mere shining of his eyes
Had driven the darkness out.—Selected

trumpets sounded from sea and land, and the houses and cliffs around echoed the sounds in a storm of acclamation." At seven in the morning all the foremost among the citizens, together with 1000 horsemen, met before the castle. The Count and Countess appeared at eight o'clock in the castle courtyard, walked to the shore, and with their guests embarked under salute on a richly decorated vessel. As this was rowed slowly up the river, the horsemen followed on the shore up to the town. (The town of Åbo is situated a little higher up on the Aura river than the castle.) On arrival at the town the Count and his suite walked in solemn procession between four companies of citizens with guns, to the Uni-

versity building. There the Governor-General made an eloquent speech on the necessity for a university and announced that the Government had decided that such an academic institution should now be opened. Then the foundation letter was read and the bishop, Isac Rothovius, was proclaimed "Protector." All the *regalia* of the academy: key, signet, register, warden's mantle, and silver scepters, were handed to him. The Governor-General spoke again, thanked all present, and invited them on behalf of the Government to a festival in the castle. Some music was rendered, and then the bishop made a Latin oration and created Dr. Eskil Petraeus "Rector Magnificus." He took his oath of office, admonishing the students to work diligently. When the Dean had thanked the Count and all those whose services to the academy merited it, one of the students came forward and made a speech of gratitude in Latin to Per Brahe. Finally the assembly walked in procession to the church, where a solemn service was celebrated, and the whole finished with music and a thundering salute from the guns and pistols.

Edelfelt's fresco represents the procession advancing to the church (which is seen at the left), the procession headed by students and beades in whose midst walks the Count followed by standard-bearer and spearsmen, then the University professors and lastly horsemen. Only the portraits of Per Brahe and the bishop are true historic likenesses, many of the others being portrait studies of present-day professors at the University of Helsingfors, who were friends of the artist. Edelfelt painted his own portrait in the spearsman who walks beside the standard-bearer, directly behind Count Per Brahe himself.

It is very interesting to note that the historic property recently acquired by Katherine Tingley in Sweden is the very site upon which Count Per Brahe, in the seventeenth century, established an educational institution modelled on Theosophic lines. OSVALD SIRÉN PH. D.

Theosophy for the Children

TO the question "What has Theosophy to offer the children?" it may be confidently said that it offers them a new world. Surely no one who knows the truth about our present materialistic and unhappy world can doubt that it needs renewal.

It is said that we have a "new world" every generation, and of course destined to take the place of the existing one. When we look into the faces of healthy, pure, sweet childhood and then turn to the grown-ups with so much that it is not even fit for them to know about each other, it is appalling to think that these represent the places which the children later are to fill. Every age has had its reforms; and yet all history shows that the possibilities of all this fresh material are so unwisely di-

rected that he finds at home or in the world. Character-building is not regarded as the primary business of all education, and the development of the intuition by pure and unselfish thought and work is not considered superior to mental forcing. And so, little by little, though the child is not brought directly to carry on established wrongs, he is *not* taught life's larger truths nor how much more satisfying life is through right living.

It is so much easier and more effective to form character upon right lines than to re-form character already set in faulty molds. The young body and plastic mind are readily and permanently affected; whereas even the sincere adult consumes much of his best energies in resisting the current habits of his life when trying to turn them into new channels.

Jottings and Doings

(From a Student's Note-Book)

IT is stated that the Mexicans who worship in the little church at Tlalnepantla, Mexico, protested so violently against the removal from the church of an image of the Toltec Goddess of Plenty that the federal government, which had purposed to place the image in the National Museum in Mexico City, will probably allow it to remain where it is.

This image is in the form of an enormous carven monolith and is said to be representative of the best work of the kind done by the Aztecs as a ruling nation. It is in the form of a gigantic woman, her garments richly sculptured with representations of corn and wheat, and presents a complete and whole-

Lomaland Photo. and Engraving Dept.

PER BRAHE ATTENDING THE INAUGURATION OF THE UNIVERSITY OF ÅBO
PAINTING BY ALBERT EDELFELT

rected that its purity is sacrificed to perpetuate the old, old errors. The fresh sweetness and joy of a wholesome little baby always brings an uplifting and regenerating touch to every normal parent. There is no way to estimate the power of these pure incoming souls to antidote the forces of evil which are found on every hand. And yet this incoming stream of pure life, instead of being turned into new fields of right endeavor, is polluted by being turned into the same old channels. Surely there is need of a wider understanding of truth with which to protect these children.

The only way to solve the vexed human problems of the world is to begin with the children. Educators are beginning to see this, and yet they have not gone deeply enough into the study of the seven-fold nature of man thoroughly to understand the child, — for only by regarding him as a reincarnating soul can the powers and wants of his complex nature be provided for. And even an ideal school system would fail if the home life were no more ideal than it is now. There is already a want of adjustment between the school life and the world outside. The pupil lives in a sort of ideal, intellectual atmosphere which is not the same kind of climate, so to speak,

A knowledge of Reincarnation would help the child. Without it any parent is at a loss to answer that inevitable question, "Where did I come from?" To be told that he was a soul which had come to live and learn in a body here would seem the reasonable thing to one who had too recently come from an ideal place to doubt its existence. The fresh, inspiring touch which the child brings with it is part of its native atmosphere. To grow up with the teaching that he was a reincarnating soul would cultivate his innate sense of "immortality." And however much we may claim to teach immortality in church and Sunday School it is everywhere apparent that few persons have any realizing working sense of it. The fear of death is like a pall in most mental atmospheres, and the unfamiliar heaven which it promises is at best but a foreign land to the ordinary consciousness. If the feeling of individuality — the "I am" sense — is from the first associated with the thought that it is a soul, the child will grow up with faith and courage to control the forces of his selfish nature. Oh that Theosophy were known to the mothers and fathers of the world! The Millennium would be distant but a few generations at most.

STUDENT

some contrast to the Aztec Goddess of Serpents now in the National Museum. The statue was discovered by M. Batres, the archaeologist who has made so many wonderful discoveries in Mexico, and it was at his suggestion that the government made its apparently futile attempt to remove it. It has stood in the little church for more than three centuries, a curious commentary on the relative virtues of Paganism (?) and Christianity. What link may it not be with the lost mysteries of Egypt, India, and still more ancient America, and what is it in the hearts of these people that has cherished love and veneration for it and for what it symbolized, all down the years?

A WOMAN contractor is superintending the construction of one of the largest government post-office and federal buildings in the West. She has entire charge of the work, passes on estimates, supervises freight shipments, inspects all materials and all work.

A DESPATCH from London states that the Dereira Medal, the blue ribbon prize given by the British Pharmaceutical Society, has this year been awarded to a woman, Miss Gertrude Wren, this being the first event of its kind so far recorded in the history of the Society.

OUR YOUNG FOLK

Ireland, the Island of Saints and Scholars

TWELVE hundred years ago a young prince named Aldfrid, or Alfred, crossed over from England to Ireland. He was heir to the throne of Northumbria, the northern kingdom in the England of that time, but he had to flee to save his life, as his brother had seized the throne. Aldfrid's mother was an Irish princess, Fina of Meath, so it was natural that he should think of going to her native country for safety. There was another reason, however, why Aldfrid wished to go to Ireland. He was a lover of learning, and knew that nowhere were there better schools and colleges than in Ireland, which in those days was known as the Island of Saints and Scholars.

Aldfrid was not disappointed. He found in Ireland devoted teachers and excellent schools where students from all over Europe were gathered. He learned the Irish language and, it is said, wrote the verses which are printed on this page. They were written in Irish and are to be found in several old manuscripts, with the name of the author given as Alfred Flann Finá—a name made up of the young prince's own name, his mother's, and the one by which he was known in Ireland. He was recalled to Northumbria on his brother's death, and for nineteen years ruled successfully, sharing with his people what he had learned in Ireland during long years of exile. All this happened two hundred years before Alfred the Great was king of England.

At that time what are now deserted ruins in the Emerald Isle were busy centers of learning. At each of the schools of Clonard and Bangor there were as many as three thousand students. All the schools were not in connexion with the monasteries, though many, of course, were. Students were trained for various professions—law, medicine, teaching, and no matter where they came from, what foreign country, they were supplied with their books and their meals and their tuition without having to pay anything. Teachers who had been trained in Ireland were in demand everywhere in Great Britain and on the Continent.

The name given to some of these educational institutions was *cenobium*. They were villages of huts, built in streets about a central, circular building. In the Eighth century one of them had seven streets of these huts, all occupied by foreigners. The students were learning history, grammar, poetry, Greek, Latin, Irish, and the sciences, as well as agriculture, wood and metal crafts, and making of clothes. Each student did his own housework.

"FEEDING THE PIGS" AN IRISH FARMHOUSE SCENE

PRINCE ALDFRID'S ACCOUNT OF IRELAND

I FOUND in Insifail the fair,
In Ireland, while in exile there,
Women of worth, both grave and gay men,
Many clerics and many laymen.

I travelled its fruitful provinces round,
And in every one of the five I found,
Alike in church and in palace hall,
Abundant apparel and food for all.

Gold and silver I found, and money,
Plenty of wheat and plenty of honey;
I found God's people rich in pity,
Found many a feast and many a city.

I found in Munster, unfettered of any,
Kings and queens and poets a many—
Poets well skilled in music and measure,
Prosperous doings, mirth and pleasure.

I found in Connaught the just, redundancy
Of riches, milk in lavish abundance;
Hospitality, vigour, fame,
In Cruachan's land of heroic name.

I found in Ulster, from hill to glen,
Hardy warriors, resolute men;
Beauty that bloomed when youth was gone
And strength transmitted from sire to son.

I found in Leinster the smooth and sleek,
From Dublin to Slewargy's peak,
Flourishing pastures, valor, health,
Long-living worthies, commerce, wealth.

I found in Meath's fair principality,
Virtue, vigor, and hospitality;
Candour, joyfulness, bravery, purity,
Ireland's bulwark and security.

I found strict morals in age and youth,
I found historians recording truth;
The things I sing of in verse unsmooth,
I found them all—I have written sooth.

A favorite occupation of the scholars of Ireland was the making of beautiful books. These scribes copied in their own exquisite handwriting all the learning they could find, besides much other matter that was original. They wrote on parchment or vellum, and ornamented the capital letters and margins with painted work. The most beautiful book in the world, of this kind, is one of these made by the Irish scribes—the Book of Kells, which is kept in the library of Trinity College, Dublin. The lovely interlaced work, done in colors still fresh, is a feast for the eyes to this day.

This is but a peep into the past of Ireland. There is another side that appeals to all who have not let the child-heart wither in them.

When the Milesians came to conquer Ireland, the old race that had long inhabited it, instead of falling before the invaders, hid themselves wherever they could among the hills and dells, and became the fairy occupants of the land. This, of course, is legend, but everyone who knows Ireland will tell you of the magic there is in the air there, and how near fairies seem in the glens and on the hills of the Green Isle. It may be that in other lands also there are fairy races, waiting for humanity to find again the child-heart it has lost, before beginning to help to make all the world happy and glad. MONA

EARTHLIFE is like an entrusted estate, however little is given us here, we must use it well, that we may prove worthy, when greater things are placed in our care. Earthlife is not a gift, which we, when discouraged and in pain, might cast away; we must endure, try, work and try again, before we are called onward and upward into eternity, so that, when there, we need not exclaim: Oh, Eternity! thou art too long!—*Hans Christian Andersen*

FRANKLIN was the greatest diplomatist of the eighteenth century. He never spoke a word too soon; he never spoke a word too late; he never spoke a word too much; he never failed to speak the right word in the right place.—*Bancroft*

THE unremitting retention of simple and high sentiments in obscure duties is hardening the character to that temper which will work with honor, if need be, in the tumult or on the scaffold.—*Ralph Waldo Emerson*

It is easier to suppress the first desire than to satisfy all that follow it.—*Franklin*

"DUCK POND."—A LOMALAND CORNER

A Walk to the Duck Pond

THE little boys were going for a walk. It is a long time since they first went for this particular walk, and now they know the way well. That day they went gaily along, past the basket-ball ground, the tennis-ground and the base-ball field, and were just turning in among the eucalyptus trees on the border of the cañon when they looked back.

Oh, what a beautiful sight! As they looked back from there it was dazzling. The sun shone on the great opal dome of the Academy, and on the amethyst dome of the Aryan Temple, and the globe on the top of Student's Home No. 1; and the latticed windows and spiral staircase, and balconies and pagodas and tiled roofs, with all the trees and flowers, made a wonderful picture.

Looking ahead the view was beautiful too. The cañons themselves are the most delightful playground for little boys and girls. There are so many little peaks and ridges to play on, so many hollows to hide in, and slopes to run down, so many places to jump, and so many queer little cubby-holes in the sides of them that tempt children to put away pebbles in them. Sometimes the cañons are alive with boys and girls doing all these things and laughing and shouting in glee.

The little boys were not going to play in the cañon this day. They went on to the gate that is opened by catching hold of a rope and running with it, and closed by catching another and running with that. Every eye was on the ropes, as the boys came to the gate.

On the other side they crossed the road and went along the path through the fragrant sage bushes. You would not know that anything but the cañon was ahead of you, with the ocean so big and blue away beyond, unless you happened to spy a green roof, and the first time you went you might not notice it. You might almost go to the edge of the cliff

THE ROSE'S SONG

Phillip Bourke Marston

SOFTLY sinking through the snow
To our winter rest we go,
Underneath the snow to house
Till the birds be in the boughs,
And the boughs with leaves be fair,
And the sunshine everywhere.

Softly through the snow we settle.
Little snow-drops press each petal,
Oh, the snow is kind and white—
Soft it is, and very light;
Soon we shall be where no light is,
But where sleep is, and where night is,
Sleep of every wind unshaken,
Till our summer bids us waken.

before you began to think you were coming to something you had not expected to see there. The boys, however, were listening as they went along, and they began to think that all birdland had been let loose in the cañon ahead. When they reached the top of the steep staircase that goes right down the face of the cliff there was a surprise! Spread out before them was a great yard with stable, duck pond, aviary, chicken house, etc. They were so eager to go on and see all these things that they had to remind themselves several times to go down the stairs carefully. The sounds they had heard were full of life, and they wanted to see all the living things that were making them. They peeped in at the doves and the golden pheasants, but the ducks and the geese were making such a quack and a cackle that they hastened on to see what it was all about. The ducks and geese were snowy white if they were not graceful, and the little ones enjoyed the sight. A beautiful gray horse was to be seen in the stable. The children looked around to count all the different living things. Then they climbed up the cañon stair again, marched past the sage

bushes and through the gate, and along the road to Lotus Home. But this was not the end of it, for they chatted among themselves about it for several days, and now one of the places they like best to visit is the duck pond.
J. M. G.

Another Dog Story

ONE day in September, in New York, a family went down on Long Island for a picnic. The newspaper does not tell how many children there were in the family, but there must have been a good many, for three-year-old Joseph was not missed until the time came to go home. Then they could not find him. The father and mother searched until midnight, the police helped them, but could not find the child; so the parents went sadly home, believing that their little son had been carried off.

Early the next morning a man living near where the picnic had been was awakened by his dog, who was pulling at the bed-clothes and whining. He would not stop until his master got up and followed him out of the house, along the road, over a fence and across a field to a lonely spot, where, lying fast asleep in the long grass, lay a three-year-old boy. Of course the man told the police, and very soon the anxious parents had their little son safe and sound at home.
M. G.

Wise Old Saws

No one gets into trouble without his own help.

To him that wills, ways are not wanting.

It is sure to be dark if you shut your eyes.

A fine cage will not feed the bird.

If winter comes, can spring be far behind?

Murmuring unfits the Soul for duty.

Little and often makes a heap in time.

Nirvâna Not Annihilation After All

It is not many years since Theosophists were fighting the idea that *Nirvâna* means absolute annihilation. But the dynamic and permeating power of Theosophic thought is so great, that a large part of the public mind has been educated up to the point of understanding the point contended for. In a review in *Current Literature* of a book on "Buddhism and Immortality," we find the following:

Man may be defined as a body or as a soul, or as a body and soul; but the Buddhist definition employs none of these terms. "Man," it says, "consists of states of consciousness."

The consciousness of man, directed by his will is co-extensive with the universe. In fact, it is larger than the universe, and indefinitely larger. It could take in a dozen universes or a million. It has no dimensions; it is continuous; and it is one. If our wills are not free, the limitations must be attributed to our separate, material personalities, and the first step in the direction of a larger selfhood is to realize, despite appearances to the contrary, that we are all one. "The difference in beings is how much they realize of this universal consciousness. The process of evolution is the process of increase of the amount realized. The only thing that prevents a man from realizing the whole of it is the accumulated habit of countless generations of thinking in terms of self, that is, of the material self."

Personality a Limitation of Consciousness

And the author says that the universal consciousness is that from which all came and to which it is returning, and that *Nirvâna* is infinite and eternal peace, the peace of limitless consciousness unified with limitless will.

It is a noteworthy sign of the times that these once derided ideas should be written about and reviewed so publicly. We are accustomed to be told that the Buddhist is a man who has vainly tried to reach the light and has given up the problem in despair and preached annihilation as the only resource. Now we are expected to regard him as a far older and wiser man than ourselves, who has found out the blessed truth which we are only just beginning to suspect. Fancy man being described as states of consciousness, and the mind being talked about as if it were a real Thing—the real thing! Where are we getting to? A Theosophist might not, perhaps, be ready to admit that our consciousness is larger than the universe!—is not this rather a fine example of a "bull"?—but the statement that our consciousness is limited by selfishness is pure

Selfishness The Great Stumbling Block

But, however much public thought may echo Theosophical ideas, it will still remain for THE

UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY to guide these ideas. The tendency in an age of superficial culture is to launch forth so far into the abstract that the ideas have no reference to daily life; and we all know that it is possible to be ever so (apparently) enlightened and learned on the subject of the most mystical and sublime philosophies, and yet to be quite an ordinary individual in one's daily life.

Hence, when we turn to practice, we find that *Nirvâna* and the universal consciousness are ahead as practical objectives, but that we have to confine our attention to the path immediately before us, taking care only that our face is turned the right way and that we are progressing. And we are to get rid of the personal idea, so we are told, since that is the one thing that confines our powers. Now

Ignorance of Self the Bar to Emancipation

there are some people who might try to do this by sitting down with a box of colored cubes of wood with odd Latin names on them, and trying to get rid of the conceptions of up and down, behind and before, with a view to getting on to the "fourth dimension." But casting out the self (if it is to be of any use) is a far more serious process than any such mental gymnastics. It means putting into practice the teachings of the Teachers, Jesus, Buddha, Confucius, Plato, Krishna—whoever it is. What those teachings are, everybody knows. But the Western world at any rate seems to have forgotten that these teachings were given as the road to *emancipation, knowledge, and power*. This is the idea that Theosophy brought back to the West, and that is now gaining ground everywhere and giving quite a new aspect to religious teachings. The idea that the grand old ethical maxims have for their goal the attainment of Divine Wisdom, that they lead to a reward surpassing all understanding, a reward here on earth—that is the idea.

Ethics are The Practical Philosophy

And we begin to suspect that the old Eastern religions are more practical than our own, instead of being dreamy and unpractical as we had thought; since they combine ethics and philosophy in a way that we have failed to do.

The ancient idea of the "Path" along which the aspirant to knowledge and freedom has to go in order to reach the Light, is coming back to the world. But that Path is not an easy one to tread, and there are many side-tracks and pitfalls for the unwary. It is through the efforts of the three successive Leaders of THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, that the Path has been opened to all earnest men. STUDENT

The Common Cold and How to Catch It

SOME people are much more sensible in their ordinary work-a-day selves than when they put on their thinking cap and assume a learned pose. The following instance, taken from the daily press, illustrates this point in quite a ludicrous degree.

In a medical journal, says the account, six pages are given over to the discussion of the "Common Cold." This is defined as "a local inflammation of any portion of the respiratory tract, from the mouth and external nasal meatus to the bifurcation of the bronchi, together with the sinuses annexed thereto." The doctor who wrote the article describes an experiment which he performed in order to investigate the phenomenon of cold-catching. He went without food all one day, got himself into a heavy sweat by hard exertion, stripped, and stood, hot and exhausted, by an open window for ten minutes until quite chilled. Result—no cold. A fortnight later, however, when well clad and well fed, he contracted a beauty!

What the doctor did to himself would be described by some people as an excellent means of removing excreta from the system and bracing it up; he practically went into training for a day. He rendered his body positive, and, what is even more important, his mind too; no common cold, passing that way, would dare to come near him, but would seek a host in some overfed person off his guard, or wait a fortnight until the doctor himself was in that condition. Many would say that the definition of a cold given above was merely a definition of some of the effects or symptoms of a cold. It would be more correct to define a cold as a stopping up of the normal excretory functions, chiefly those of the skin, whereby the excretory function has to be imperfectly discharged by the mucous membrane of the digestive tract and by the lungs and adjacent parts, and the accumulated poisons produce fever and other effects. But even then we should only be describing symptoms, for the real question is, What is the cause of this sudden blocking up of the excretory functions? Sometimes it is produced by exposure, sometimes exposure fails to produce it, sometimes it is produced without any exposure; it can be caught by one person from another. From this it is to be inferred that the exposure is a condition which renders the system liable to attack; but the system will not be attacked unless the enemy is there; and on the other hand the enemy may be strong enough to attack the system even when it has not been rendered susceptible by exposure. We must therefore distinguish between the conditions rendering one susceptible to a cold, and the real cause of the cold. Some have believed the latter to be a germ, and this comes nearest to an explanation, for what science calls a germ is about the same thing as what other people have called malefic influences or evil spirits. The essential point is that something malign goes about in the atmosphere or ether from person to person, gathering force with each fresh victim, attacking the susceptible, recoiling from the strong. It turns the vital currents out of their normal course and vampirizes them. Exposure and other weakening influences may give it an opportunity. The commonest conditions would seem to be overfeeding and the habit of living in unventilated

houses; people who camp out can get wet through and sleep in their wet clothes without getting anything.

The germ-theory perhaps comes as near the truth as any current theory; but even a germ must have a life behind it. Germs are the physical bodies of malign influences, for which modern language has no name, but which are mentioned in many old books of what is called "superstition." We try to thwart them, according to our lights, by proper means, such as disinfectants, or by attacking them with contrary germs, or by giving them a permanent hold on the system by inoculation—in short, by buying them off. Other people have attacked them on another plane, by ceremonies, incantations, etc. Then there are the sanitary methods, physical sanitation and moral and mental sanitation. The best prophylactic against a cold or any other disease is a pure strong system, healthy habits, and clean surroundings.

But as these disease germs have their origin in the impure side of man, so they will always exist so long as their cause continues, and be created anew as fast as they are used up or killed. Such diseases may, therefore, be looked on as safety valves—evil of course, but *lesser evils than what might happen if these outlets were dammed up*. This argument is not intended to justify any cessation of precautions against the diseases, but merely to palliate any unnecessary mental affliction arising from ignorance as to the origin or justice of such visitations. Epidemics of the *grippe* recur with great frequency all over civilized communities, carrying off the results of wrong living; their immediate cause is probably a wave of clean influence which precipitates evil accumulations. From this point of view the propriety of preventing the acute manifestations of disease by inoculating the system with a mild but chronic form of it is open to grave question, and sounds uncommonly like paying a toll to the devil.

Epidemics like the *grippe* are indiscriminating in their choice of victims, attacking the good and the healthy, the evil and the unhealthy with impartiality. But it must be remembered that a person's present circumstances are the result of his conduct for a long period of the past. Our body does not change instantly in response to our changes of character; it takes a long time; one life may not be long enough. Hence many go about with the weak bodies which they have created for themselves in past times (perhaps in another life) when they had health and abused it. The best they can do is to recognize the justice of affairs, to provide better conditions for the future, and to turn their present afflictions into a means of strength.

The connexion between colds and fevers is so intimate that it is practically impossible to separate the two. The balance of heat and cold, which in ordinary circumstances is justly maintained in the body, becomes upset and both extremes prevail in different parts of the body at the same time, or all over the body at different times. Health is, in one of its aspects, a balancing of heat and cold. Extending the meanings of the words heat and cold, we may similarly speak of a balance between impetuosity and restraint. (Here it may be noted that influenza is often preceded (?) by a spell of over-activity and boisterous health(?), this

condition being in reality the first stage of the disease.) And so we get any number of pairs of opposites, corresponding to heat and cold, by which generic names it is convenient to designate the whole. It is thus that ancient philosophies speak of the attainment of mastery over Heat and Cold, a condition to be attained by the candidate for wisdom and power. In its moral sense it means the mastery over egotistic ambition and indifference, the twin forces that enslave man and keep him from his heritage of freedom. But he who has thus mastered this power in its subtlest manifestation becomes thereby its master in the lower forms, even to the extent of accomplishing what would seem to be "miracles." For "miracles" merely arise from a knowledge of how to deal with Nature, natural laws and their co-ordination. STUDENT

A Significant Statue

FRANCE is about to defy the omniscient dissectors of antique tradition by erecting a statue to Homer. What next will she dare? Will she flaunt statues of William Tell, Quetzalcoatl, Shakespeare and other "solar myths" and "time-made conglomerates?" It is reported that a debate took place at a private meeting of one of her learned societies recently, the subject under discussion being the erection of an Egyptian colonnade. Each column was to represent a thousand years of Egypt's history. The proposal came to nothing because there was no agreement as to the number of columns, the suggestions running from six to eighty.

These things may not seem to hang together; but they do. Science consists, like some men and in degree all men, of a Jekyll and a Hyde. These differ according to the *prejudgment* of humanity which they make. Humanity is a mere product of blind automatic terrestrial chemistry, is soulless, and originated some few thousands of years ago as a sort of monkey. Its traditions of ancient greatness are rubbish; its great men were solar myths, savage chieftains, conglomerates and so on. Its golden age is now, the age of reinforced concrete and wireless telegraphy.

A pettifogger's case can be made out for this.

On the other side, man has a soul and is divine. When the soul shines forth there is a great man of some sort. The traditions concerning great men in all ages and among all peoples correspond with this view. The same traditions give humanity an enormous antiquity, speak of mighty bygone civilizations that were nobler than our own, and of a golden age of peace behind them. The other golden age is in front, when after our long wanderings we recover the grandeur of the past. We are nearer the bottom than the top of the arc.

There is no fact but will fit into this. Which will you have? This inspires and illuminates and gives hope. The other depresses, chills, and makes directly for suicide and crime and passion. Let us eat, drink and be merry, for tomorrow we are ptomaines and CO₂.

These two correspond to two deep currents in human consciousness, one of spiritual life, the other of spiritual death. The first, in France as a whole, is slowly coming to the surface. STUDENT

Some Views on XXth Century Problems

Self-Knowledge

HOW different might have been the history of Christianity had one single extra-canonical saying of Jesus been included among those which the Church permits him to have said! It is now a moderately well-known saying, one of those found at Oxyrhynchus in 1903:

The kingdom of heaven is within you, and whosoever shall know himself shall find it; for if ye truly know yourselves, ye are the sons and daughters of the Father Almighty, and ye shall know yourselves to be in the City of God, and ye are the City.

The recommendation to "know thyself" is scattered all over the philosophies and religions of antiquity. We have interpreted it with very characteristic lack of grasp; it was a feat at first too strenuous to be popular and at last too neglected to be even remembered. We consider a man to have achieved it when he recognizes that he has a lack of business faculty or a tendency to be disturbed at trifles or to lie abed of a morning. According to Jesus, then, the man who knows some few things like these about himself may expect to find the kingdom of heaven! Truly, the "violence" with which it is to be taken may be of a very gentle and self-harmless variety! But what is the real thing?

Suppose a man in the full current of a fit of anger were to pull himself up short, wrestle with himself for a few minutes, and finally become quite peaceful and sunny. Many do this without any recognition that they are taking steps to self-knowledge. For if the anger were actually his self he could not master it; a wild beast can be conquered because it is not identical with the conqueror. Who or what am *I* that did the expelling of the anger from *my mind*? Self-knowledge comes from habitual meditation into that question, or such questions in all their forms, following upon right action. Right action is expelling all the beasts, little and great, and developing in their place their opposites. Gradually the mirror-walls of mind become quite clear and bright, and true selfhood reflects itself in them and knows itself. "*I*" now takes another meaning. When *I* knows itself as complete dominator in its purified kingdom of consciousness, it knows itself as soul, as child of "the Father Almighty," and as the "City."

But look at the sequence. Highest, "the Father," the Supreme Light; then its "son," its ray, the human soul; lowest, the instrument of that. And we expect the highest of the three to be packable neatly and completely into definitions and dogmas made by the lowest! The mind is strained nearly to breaking point to comprehend a few of the inner workings of material nature; but it is supposed to be competent to comprehend more than a few of the inner workings of the supremest consciousness! Knowledge of God is of another nature than mental workings, at any rate of the mind *we have so far developed*. The mind of ordinary life is developed out of sensation-feelings. The infant sees a candle and gets the feeling *bright*; then it sees

the sun and registers the feeling *brighter*; that is a rudimentary act of mind. So it gradually develops a conscious cognition of external nature—through feelings and the comparison of them.

But a higher and other, spiritual order of feelings must be developed in order to develop a mind that shall belong to the soul. It develops very slowly. It can express almost nothing of its knowledge, as it acquires it, in words; for words mostly concern the objective world.

Theology has tried to define and theorize about the Supreme Light in terms of that mind which understands candlelight and tries to understand a molecule, and cannot deal even with a circle or a curved line of any kind except by considering it as a large number of little straight lines! It is a "science" made by men who had not developed the mind that was necessary for its simplest postulates, most of whom had not even a glimmering idea of what "self-knowledge" meant. And it is their futile definitions that have overlaid and buried the gold of Christ's teachings. In times when much more of that gold was accessible than now, when there were whole gospels of which but a few shining and precious sentences survive, *they* decided what should be canonical and some of them altered even that past recognition.

But there are some strange discoveries close at hand, and they will be understood by those who have achieved a little self-knowledge.

STUDENT

Child-Molding

SIR Ray Lankester appears to be somewhat scandalized by an idea he has discovered among the public, especially of the upper classes, that they can transmit to their offspring whatever qualities they have acquired for the nonce. A pair of young people who desire to have, for example, musical offspring, saturate themselves during the continuance of that fit of enthusiasm, with as much music as they can.

This, according to him, is absurd; for the germ plasm cannot be affected in any such way. It will flower into a new physical individual in accordance with—in manifestation of—what is already as potentially within it; and from that nothing can be taken away, to that nothing can be added.

But does anything need to be added? There were two parents; there were four grandparents; eight great-grandparents. Look back far enough and you see thousands of streams converging to lend something to the nucleus of the physical child of today or tomorrow. The physical basis for the manifestation of any sort of mental quality possible to present normal man must be present. What are the conditions for the efflorescence?

Some which Sir Ray Lankester does not take into account. Just as the quality of a man's own body is profoundly affected by the quality of feeling which he habitually generates around his mind, so is the quality of the developing but unborn infantile body by the

atmosphere of feeling maintained about it by the parents.

The other main influence is that of the soul which will incarnate there, with all its pre-formed characteristics and powers. The duty of the parents is not to mold in such or another special direction, but to give the soul the unimpeded opportunity to do its work and to select among the physical possibilities. They cannot compel the evolution of a musical genius by any assiduity of attendance at concerts or private piano-playing. But they might thereby aid themselves in maintaining a quiet and elevated atmosphere of feeling in which the soul could work at its best from *its* side—whether its special powers lay in music or mechanics. They can at one and the same time stand back, remembering that the soul is at work; and guard, protect, keeping everything pure and sweet.

STUDENT

A New Use for God

GOD, it appears, may now be employed as a useful hypnotic when the others fail. The rector of a little town in Massachusetts is the discoverer of this and seems to be ambitious to be added to the growing numbers of church-parlor hypnotists. His patients are those whom some calamity has deprived of the power of sleep; and his method, whatever he likes to call it, is hypnotism. The suggestions, the patient being seated in a warm, comfortable and curtained room, take the following form:

"You are now relaxed in body and quieted in mind. You are to let your thoughts languidly follow mine expressed in words. Do not offer any mental opposition. . . . Fix your thoughts on God. . . . Believe that in this larger, truer, higher sense, in Him we live and move and have our being."

Now supposing the suggested thoughts to be unexceptionable, why should not the patient read them to himself at home? Would that be effective upon the insomnia? If not, then the difference is hypnotism; something has been injected from the personality of the operator into the somnolent mind of the subject.

Furthermore, the idea of God has nothing to do with it. An utter materialist could operate just as well. He would say:

"Fix your thoughts on matter. Think of it as ever tending to rest, peace and equilibrium. Its disturbances are only temporary. In any case your brain will be at rest in a few years. It is ever tending, and is now tending, to rest, peace and equilibrium."

A Vedāntin could prescribe thoughts on Parabrahm in the same way.

So the essential is the idea of rest; and behind this is the second essential, that this idea must be hypnotically injected—along with whatever else may be consciously or unconsciously in the mind of the operator. The church-parlor movement stands or falls with the case for or against hypnotism. And this is the case for or against the invasion of one artificially and pathologically passive mind by a positive and alert one.

Archaeology Palaeontology Ethnology

Prehistoric Art

AT the Anthropological Institute in London an exhibition of Bushman painting and sculpture has been attracting much attention to the wonderful skill of the primitive cave-man and his powers of observation. This fallacy does not appear to be scientifically dead yet, nor even on the list of possibly disprovable theories. The tacit assumption that the cave-man is "primitive" is lost to sight among the deductions derived from this unwarranted premise. Had some scientific great light anticipated the primitive palaeolithic stone-age monkey-descended cave-man by an "ultimate" geologically constant heir-of-all-the-ages retrograding to racial extinction, no doubt the scientific flock would have followed the bell-wether without more than the usual amount of thought, unless some episcopal crook had asserted its little pull in another direction.

The tone of settled and patronizing conviction with which all writers on "primitive" man assume that all his works were aspiring efforts towards our state of civilization; that his mind must necessarily have been about on a par with that of the average kindergarten student whose sixth birthday is yet in the future; that no other purpose in life ever existed outside the arts and crafts of getting something more than the other man; that "we" have arrived at a stage of progress which in the view of the untutored savage in question must resemble our ideas of heaven — may raise a smile on the face of many such a contemporary "primitive stone-age" gipsy, and give some coloring to the lofty Chinese view of westerners generally as foreign barbarians.

Only it is unpleasant when the other man thinks we are what we think he is, as compared with what we think of ourselves and would like him to think of us.

Thus we find that the rock carvings of animals deal mainly with representations of animal life useful to the community, and are "interpreted as intended to secure by magic an abundant supply of game or other food." We learn that the "untutored South African had discovered for himself the true action and position of the horse's legs in motion, which had only been revealed to us by the help of instantaneous photography." And the rest of the story in its stereotyped details.

What a chaos of criticism would arise were the same system of assumption applied to our "iron" age by some future scientist. Mrs. Tweedledee's back yard would furnish materials for a learned paper on the wonderful glass-making skill of our age when the dump heap will contain about all that is not perishable of our family life. Long-forgotten graveyards will supply evidence of our wonderful skill in carving "primitive" figures of babies with wings growing out of the back of the neck — and the learned critic will be able to insert a wise remark about our artistic skill being evidently limited to the portrayal of heads and wings, our primitive education not having proceeded below that point in art. And

the wonderful written records of the tombstones!! Truly they speak of a golden age, for every one of them bears witness to the existence of a race devoid of all qualities but the highest personal character and virtues. Also quotations from some magical book may be collected whose "primitive" aphorisms and phrases may give rise to much scientific speculation on the belief in magical formulae protecting the dead. The bones of horses and men on our battlefields will prove that we were a race of hippophagi without enough sense to throw away the bones from our meals, living and dying in the open even less wisely than the earlier cave-dwellers, who at least knew how to get out of the rain.

Of our books, our newspapers, our machinery, houses, ships, agriculture, paintings, reli-

gious sects, sciences, habits and customs, there seems little reason to believe that as much will remain as remains to us securely preserved in the myths, fairy stories, folk-lore, zodiacs, dress, rock-carvings, monoliths, and all the relics that do perpetuate the knowledge of races whose "primitive" arts and sciences preserve the knowledge of great races and civilizations of which they are the degenerate descendants and not the primitive forbears. And grim old Time will have his revenge on our "primitive" civilization, while we, inhabiting more suitable race environments, may or may not, take any interest in our own "palaeoferric" age.

P. A. M.

H. P. Blavatsky and Tibet

IT must have happened to all readers, at one time or another, to read anecdotes of the absurd things that have been said by "authorities" about discoveries when the discoveries were first made; and how the dogmatic, sceptical, and scornful pronouncements of these authorities were afterwards belied when the discoveries became well known. One great authority scoffed at steamboats, at the very moment when one was actually plying; a ridiculous hullabaloo was raised on the subject of illuminating gas; the statement that the earth went around the sun gave the academic world fits; and so on.

Therefore we should never alarm ourselves unnecessarily about the things which such authorities may say now; unless, indeed, we prefer, with them, to be in the fashion of the moment and to regard knowledge as merely a convention in the interests of temporary expediency.

Tibet is one of the latest instances of things about which recent discoveries have belied the confident assertions of yesterday. And, as in other cases, it has not been without its discredited prophets. A quarter of a century ago, H. P. Blavatsky wrote and spoke much about Tibet and the lofty table-lands adjacent, as a land about which very much had still to be learned by the West, and as the scene of a mighty ancient center of learning. She was derided; but now Tibet seems destined to be the revealer of as many mysteries as it has heretofore concealed — at least so far as geographical and ethnological ones are concerned.

Theosophists may therefore claim a fulfilment of the contents of their faith in their Teacher, so far as Tibet is concerned; but they do not expect to see the world conceding them that triumph or acknowledging its mistake.

When Sven Hedin's complete travels are published we may learn more; but we know that he has discovered the sources of the Brahmaputra and the Indus and the genetic source of the Sutlej; explored Bongba, one of the greatest provinces of Tibet and hitherto unvisited by Europeans; and found a mountain-chain which is the most massive range on the earth. If such geographical facts could remain so well concealed, how about the other classes of facts alluded to by H. P. Blavatsky? STUDENT

Gigantic Bones in East Africa

AN item of scientific news states that the German Government is about to send an expedition to investigate the remains of antediluvian animals discovered in 1907 in the southern part of German East Africa. In the lime strata on the banks of the River Mbemkuru, near the border of the Portuguese colony, enormous bones were found, one piece of skeleton weighing ninety pounds. The measurements of one animal the *Gigantosaurus augustus Africanus*, showed the bones of the hind legs to be 11ft. 6in. long, the pelvis 3ft. 3in. in diameter, and the spine one-third longer than that of any animal yet found. ✧ The Trend of Twentieth Century Science ✧

The Mars Canals

THE Mars Canals seem to be establishing their right to exist, but not as canals — at any rate with all astronomers. They may now congratulate themselves as being on the whole no longer scouted out of any kind of other than imaginary existence. Some experiments on schoolboys show that the eye likes to see lines if it can get any excuse, and that once it has seen them it will keep on doing so. A well-known English headmaster got his boys to draw what they could see on a little disk at a distance of many feet, dotted to represent the telescopically seen face of Mars. The eyes of most of them declined to permit dots to stand alone, as it were without support or connexion. They connected them with lines, and the lines once seen persisted whatever the distance was increased to.

But there had to be the dots; the uniformity had to be adequately broken. If Professor Lowell's "canals" are not there, *something* is there in corresponding quantity.

Doubtless the mind will do in its way what the eye in its. As a rationally imaginative man Professor Lowell, consciously or not, wanted evidence of life on Mars. The eye perhaps built up the lines from other markings; and the mind built up canals from lines. Such is at any rate the possibility till we all agree that the photographs set the matter at rest.

Discussion of the inhabitability of the other planets is always more or less under way. The question can of course never be settled by any amount of knowledge to come respecting the physical constitution of our neighbors. If they harbor life it will be life whose basis is just that constitution. If one of them happened to be made of liquid helium, beings of the most splendid intelligence might be swimming about there. We shall never know until we can rub consciousnesses, and we are a good way from that. We are not even cultured-souled enough, evolved enough, to do it with the brother man next door; even take all the measures we know how, not to. The brother *planet*, Mars, is somewhere about 250 million miles away.

STUDENT

The Living Universe

THE conception of the universe as a structural organism is slowly growing among astronomers. If the proof is not conclusive as yet, *this* is: that the more knowledge accumulates, the more are the suggestions of structure.

In the first place the general shape appears to be that of a lozenge, the rim of the lozenge being the Milky Way. As we pass from the rim towards the middle or summit of the two convex surfaces the stars thin out, at the actual summits or poles becoming very thin indeed. The distribution of nebulae also suggests structure in the rim itself.

Secondly, according to the last results of calculation, the stars are in two main streams of movement, each stream making for a center in two opposite points of the heavens.

The answer to the peculiarly modern ques-

tion, Where do I come in? tends to be forthcoming, though it is of course as yet very tentative. So far as the inadequate data go — and we only know as yet the distances of about 100 stars — we appear to be not excessively remote from the center. According to Professor Kapteyn's conception, we are surrounded by a series of imaginary shells, each set with stars. The distance between the shells is such that if a star, say of the second magnitude — magnitude here refers to the brightness — were pushed on from the shell in which it is set to the next outer one, it would become a star of the third magnitude. The shells correspond with the magnitudes. At the same time there is a thinning in numbers as we pass out along the radius through the shells. Professor Kapteyn imagines us as traveling outward with the velocity of light. At first we should encounter a star every twelve or thirteen years. After we had traveled 200 years we should find our encounters getting fewer, and in 2000 the diminution would be very marked. When we should have the last encounter, where would be the limit, no one guesses — or hardly any one.

Our solar system can, without much violation of commonsense, be considered as an atom. The sun is the positive center; the planets are the electrons. For, beginning at the other end, an atom can be considered as a solar system. The ratios of time, space, and motion of electrons within an atom will do very well on the greater scale; it is a mere question of multiplication. The motion of electrons, as revealed by the spectroscope, even suggests that some of them present the phenomenon of precession of the equinoxes.

Returning to the other end, some number of neighboring solar systems would constitute a molecule; and the whole universe, as we know it, a cell, a living organism. — Which Plato anticipated by calling the universe "a great animal, a great ensouled Being." STUDENT

The New Heat

HEAT seems to have now definitely associated itself with the electron, following its brethren electricity, magnetism, and light. These three are regarded as disturbances in the ether set up by moving electrons. Heat has been treated differently. It has been regarded as to-and-fro motion of atoms and molecules, the within-the-atom electrons not being considered. But yet heat waves were spoken of as etheric, as rates and lengths of vibration continuous with, but slower than, those of light, and in their turn faster than those of electricity. So naturally, the electron once discovered and once found answerable for the waves called light and electricity, has been suspected as answerable for the similar waves called heat. All these waves shake into faster vibration the molecules and atoms on which they fall; thus the shaking is not the force itself but the effect of it; and the force is itself the effect of the motion of the electron. Electric waves, generated by the motion of one lot of electrons, will add to the motion of another lot, causing them to

generate more. So with heat waves. Engler has lately shown that those electronic changes in radium which lead to its emission of rays and new elemental products, among the rays being those of heat — are themselves accelerated by heat.

The next task is perhaps to find that the electron is also the real root of those aerial vibrations which we call sound. Then we shall be well on the way towards the unification of the physical forces.

But without a little care there will be the hen and the egg question. If the waves move the electron and the electron then generates the waves, which moved first?

There is no such thing as a still electron; a still electron would have no being for science, no mass, no manifestation. Motion is the principle of its manifested being. It is a life-unit, emerging from nature's life plane on to this one for the purposes of that life and guided by it. Its combinations and re- and re-re-combinations in increasing complexity, into atoms, and molecules, and crystals, and cells, are the rising embodiment of that life for the purposes of evolution. It exhibits motion as the manifestation of the life in it, and this life is the manifestation of purpose, and the purpose is that of the Cosmic Soul. The electron is the point where science and philosophy will have to meet, whether they want to or not.

STUDENT

Doing More than We Know

HOW much we may be doing to alter in various ways the climate of the earth by our electric lines, both for telegraphy and power-transportation, we hardly know. We are certainly not doing nothing.

The French Academy of Sciences is now considering a little fact which has presented itself in connexion with a high-tension line. A paper was recently read before this body citing the instance of a chain of mountains which appeared to attract hailstorms owing to the valleys between and alongside. A three-phase 45,000 volt line was built in this neighborhood and the storms at once altered their course. They now crossed the valleys instead of following them and took the new line as their guide.

No one knows exactly why. But this one instance suggests a good deal. Doubtless similar phenomena will become known and finally carry their own explanation.

One would have thought, however, that cities would have shown very marked climatic alterations, run and over-run as they are with electric installations.

Railway lines must also do something besides carry men and goods. Sometimes thousands of miles in length, they must equalize points of differing electrical tension. It may be that before we have had time to know fully about these things another set of phenomena may have replaced them. Wireless transmission must have a quite different set of effects; while aerial transit may conceivably throw the iron lines out of business. It is however certain that we are only at the beginning of the electric age.

Facts About the Minnesota Forest Fires

THE preliminary report of Assistant Editor Pullman, of the Forest Service, who was sent out to investigate, contains some interesting particulars. He visited the Hibbing and Chisholm district, one of the many sections in Northern Minnesota where forest fires raged during the whole of September. The people said it was the driest year they had ever known. The woods and brush are as dry as tinder and fires can be seen in half a dozen places at once, started no one knows how. The natives have various theories—sparks from engines, hunters and campers, careless brush burning by homesteaders, and incendiaries. In many sections the ground is of peat-bog and a spark may burn for weeks before flaming out. The losses are put at somewhere between five and ten million dollars; the lower figure is equivalent at 5 per cent to an annuity of \$250,000; and, for protection, the Forestry Service has an appropriation of only \$11,500!

It was the burning of the prosperous little town of Chisholm that most affected the people. They are so used to forest fires that they are said to be hardly happy unless there is a smell of smoke in the air. Their habitual indifference to these fires is illustrated by what took place when Chisholm was destroyed. The fire had been burning in the forests near by for more than a week. It was 5 o'clock on the afternoon of September 5th that the fire entered the city in the clutch of a gale from the northwest, and quickly laid it in ruins. Up to half an hour before this the people were so confident that there was no danger that they went about their business as usual. Had ordinary precautions been taken even as late as the forenoon, it is said the place could have been saved. The people were panic-stricken and fled with what property they could grab to the iron-mines near by. All that was saved was the two churches, the high school, the grammar school, and two blocks of dwellings on opposite sides of the town. There was no loss of life, a circumstance which is due to the fire having occurred in the daytime; what would have happened had it occurred in the darkness of night is horrible to think of. E.

A Repulsive Parasite

A STRIKING instance of a parasite of the most abhorrent kind is the gigantic fungus called *Rafflesia*, peculiar to Borneo and the Malay Islands. It is entirely destitute of chlorophyll and of a very degraded type of structure. It attaches itself to plants of the genus *Cissus* (one of the vines), appearing first in the form of knobs emerging from the host plant, which expand into flowers resembling an unopened cabbage. When

Lomaland Photo. and Engraving Dept.

SPRING IN THE BLUE MOUNTAINS, N. S. W., AUSTRALIA

With light
And quickened footsteps thitherward I tend,
Remembering thee, O green and silent dell!
And grateful, that by nature's quietness
And solitary musings, all my heart
Is softened, and made worthy to indulge
Love, and the thoughts that yearn for human kind.
—Coleridge

expanded these flowers reach as much as three feet across. They last only a few days, when putrefaction sets in and a smell of rotten flesh is emitted.

Everything in the plant world is typical of something in our own nature, and no one will find much difficulty in finding an analogy for this horrible fungus. What is it that fastens itself upon the vitality of man, if not diseases and habits? And how many of these are characterized by the hurried production of an overgrown bloom, pretentious, but destitute of real beauty, and ending a brief existence in an unsavory exhalation? Perhaps this is what the drink parasite looks like to the eye of a seer; perhaps people go about with such parasites produced by other habits. And then there are the *parasites of the mind*—which of course are the real origin of those of the vitality. And here we have the remedy in our own hands; for it is by our thoughts that we give them sustenance, and in the realm of thought we can be king! STUDENT

Devastation of New Zealand Forests

AND then there is the great area deliberately cut and burned to make way for grass. Here the defender of tree-life is faced with a more difficult problem. The men who are doing the melancholy work of destruction are doing also the work of colonization. As a class they are, perhaps, the most interesting and deserving in colonial life. They are acting lawfully and in good faith. Yet the result is a hewing down and sweeping away of beauty, compared with which the conquests of the Goths and Vandals were conservative processes. For those noted invaders did not level Rome or Carthage to the ground; they left classic architecture standing. To the lover of beautiful nature the work of our race in New Zealand seems more akin to that of the Seljuk Turks in Asia Minor, when they swept away population, buildings and agriculture, and Byzantine city and rural life together, in order to turn whole provinces into pasture for their sheep. Not that my countrymen are more blind to beauty than other colonists from Europe. It is mere accident which has laid upon them the burden of having ruined more natural beauty in the last half-century than have other pioneers. The result is none the less saddening. . . . Today we are told that the timber still standing cannot last our saw-mills more than two generations, and that a supply which was estimated at forty-three thousand million feet in 1905 had shrunk to thirty-six thousand million feet in 1907. The acreage of our forests must be nearer fifteen than twenty millions now. Some of this, covering, as it does, good alluvial soil, must go; but I am far from being alone in believing that four-fifths of it should be conserved, and that where timber is cut the same precautions should be insisted on as in Germany, France, India, and some intelligent portions of North America. —From *New Zealand*, by Hon. William Pember Reeves.

In connexion with the above it is rather sad to read a U. S. Forest Service bulletin which says that experts are seeking substitutes for the valuable American hardwoods used for furniture, cooperage, and implements—seeking them in New Zealand! Various woods have been tested and found satisfactory; but it is admitted that—

The United States will not be able to depend on imports to any great extent, for wood users realize that there is an approaching shortage of timber in other countries as well as this, and each nation must cultivate and protect its own forests.

In contrast to this, it is encouraging to hear that there are now 160,000 acres of planted trees in central Kansas, where at one time it was thought that trees could not be grown. The limit of forest planting and tree culture is widening always. The native timber is also on the increase; prairie fires no longer sweep unchecked across the plains, and the strips of forest along the rivers and in the ravines and gullies are becoming broader. In some countries, cottonwood was the only tree planted for many years. Then box-elder, honey-locust, catalpa, osage orange, Russian mulberry, black walnut, and red cedar were tried and found suitable over the greater part of the State. T.

Students'

Path

AND "to know"

Rather consists in opening out a way
Whence the imprisoned splendor may escape,
Than in effecting entry for a light
Supposed to be without.

—Robert Browning in *Paracelsus*

It is a Right Philosophy and Brotherliness that the World Needs.

THE attention of people nowadays is much attracted by many kinds of misdirected mysticism. New societies for its study are forming and old ones are being augmented by many people who are ignorantly allowing themselves to be governed by these fascinating ideas. "New Thought," which is really very old thought, mental science, mind-cures, faith-cures and what not are daily gaining ground. Their followers, thinking that at last they have found a cheap and easy way out of all the ills that flesh is heir to are unwittingly exposing themselves to a great danger.

From the standpoint of Theosophy and Universal Brotherhood they have made the mistake of "putting the cart before the horse," to use a homely expression, because they are attempting to interfere with mighty forces and powers without the knowledge and training which is absolutely essential to their right use. Wrongfully, that is, selfishly, used, they are certain to produce a far-reaching reaction which will have a disastrous effect, not only on the practitioner and the patient but also on the generations which will come after them.

We cannot safely control the subconscious mind, whether our own or another's, until we have, in some degree at least, become master of the possibilities of what we might call the ordinary mind-consciousness.

But this deluge of crude quasi-occultism is no new thing. History for ever repeats itself. These byways and hedges of psychology have existed in the civilizations of much older races than ours. They have been exploited in other ages of man; and at the same time there has always been the true path, with all the cross-roads and danger-points clearly indicated by which man might safely progress.

It is inevitable that those who are not in sympathy with THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY should consider that its members are biased and its views extreme on these questions. But the history of times more remote than any our present historians have any account of, together with a knowledge gained by experience through many cycles of life, have been entrusted to the guardianship of the Leaders of THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY.

Because of this knowledge, it, and it alone, is competent to deal intelligently and rightly with these things. We may define Theosophy as the science of existence, and brotherliness

as its right practice. Each is dependent upon the other. One supplements the other. There can be no *Theo-sophia* without the practice of brotherliness, no possibility of the understanding of a Brotherhood of the Universe, except through the teachings of Theosophy. The blending of these two makes a perfect whole.

It will be understood that the range of these teachings is universal, but let us consider them in relation to our own country and our own race. America is known among the nations as the land of individualism. This is the country where every man, theoretically, is as good as every other, and where equal opportunity is open to all. We have freedom of thought and liberty of action in greater degree than other countries, because we are not so bound to tradition and the obligations of caste.

But this freedom and these liberties, so broadening and ennobling in themselves, become vices if misdirected. We all know that the darker side of liberty is license, of freedom anarchy, but do we fully realize that the lower aspect of individuality is personality?

Do we fully *understand* why we admire the *individual* of wide sympathies and broad unselfish living, and avoid and dislike the *person* of over-bearing domineering character, who is brutal in instinct and selfish in expression? So before we allow ourselves to become unduly puffed up with national pride over our exceptional privileges would it not be well for us to consider which aspect of liberty we are representing?

Katherine Tingley has said:

America must rise to something more than commercial prosperity or intellectual advancement. I believe that this great country is the chosen spot for solving some of life's greatest problems. But we must become more united and recognize that Brotherhood is a fact in nature. We must live up to it in all the smallest duties and all the time. If we learn the necessity of right-living and justice to all, we shall not have to wait for the Kingdom of Heaven. (*Mysteries of the Heart Doctrine*, p. 331)

Someone has said, "No one is ever reformed by scolding." The attitude of THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY toward humanity is not that of a threatening monitor, but rather of a wise compassionate guide who seeks by ceaseless effort and continual self-sacrifice to enlighten the ignorance and temper the recklessness of an over-confident, self-willed child, and thus avert the disasters which its greater knowledge enables it to foresee.

Are not the evidences everywhere present that our national life is saturated with a grasping, greedy quality of feeling? And discontent, the sister of greed, is consequently everywhere prevalent. We all know this, every one of us is in some form or another affected by it. The remedies which sincere, earnest people of widely different minds are advocating are often tainted by this feeling, which so limits their view that their efforts are too superficial to have any permanent effect or to do more than reach a few.

In order to get to the very heart of things, those eternal laws of the universe, Reincarnation and Karma must be taken into consideration. Any reform which does not take these laws into account can only scratch the surface. A realization of what they are and the infinite scope of their operation would act as an effective check upon those who advocate a violent upheaval in social and economic conditions,

and who are ready to go to any length to enforce their ideas.

True, lasting reform, like charity "Begins at home," with the man himself. No one will be apt to deny that a man who directs his effort to a peaceful, steady progress toward a life of high thinking and right living is a greater factor toward the bettering of his city and nation than the one who occupies his energies in a continual war upon whatever seems to him to be wrong in others.

The *Bhagavad Gîtâ* tells us that "everyone is impelled to act according to his nature." So the philosopher, the mystic, the iconoclast, and the sincere religionist, *so far as they are actuated by a desire to help others, and not themselves*, must accomplish good in the end, no matter in what light their efforts may seem to others or how limited their sphere of action.

But THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY offers a system of reform, in which every one may unite, without distinction of race or creed. It has only one exaction. Each of its members must have "That large toleration for the beliefs of others which he desires them to exhibit towards his own." This is the principle of toleration upon which the Constitution of the United States was founded and surely ought to appeal to all ardent Americans.

Diversity is one of Nature's beneficent laws and our effectiveness in the world consists in our individuality, so long as we are in a place where the work must be done through individuals. But if anyone should say that Universal Brotherhood and harmony is a beautiful ideal *for the future*, he would take the unenviable attitude of a man who by postponing an event indefinitely piles up impediments in its way and holds back its realization.

H. P. Blavatsky, writing in 1889, said:

The natural selfishness of human nature . . . is daily strengthened and stimulated into a ferocious and irresistible feeling by the present religious education, which tends not only to encourage, but positively to justify it. People's ideas about right and wrong have been entirely perverted by the literal acceptance of the Jewish Bible. All the unselfishness of the altruistic teachings of Jesus has become merely a theoretical subject for pulpit oratory; while the precepts of practical selfishness taught in the Mosaic Bible, against which Christ so vainly preached, have become ingrained into the innermost life of the Western nations. "An eye for an eye, and a tooth for a tooth," has come to be the first maxim of your law. Now I state openly and fearlessly that the perversity of this doctrine and of so many others *Theosophy alone* can eradicate. (*The Key to Theosophy*, p. 42)

Since Madame Blavatsky wrote this, Theosophical teachings have made themselves felt in the thought of the day.

The ideal of harmony and brotherly love and tolerance is becoming more and more a thing to be desired. The trend of the public mind is toward enlightenment and truth. Men feel in their quickened hearts their interdependence on each other as their minds become more sensitive to the subtle unseen forces of nature. The revolt of so many people from the hard and fast dogmas of the churches and the emptiness of our everyday scrambling, hypocritical competitive life has a great significance. Has not the time come when man may change the sordid, soul-stupefying tendencies of the age into potencies for good to all the world? Personally insignificant, united with his fellows he may give a mighty impulse to human evolution.

THEOSOPHICAL FORUM

Conducted by J. H. Russell

JH

Question Why do people associate Theosophy and Occultism? What is Occultism, anyhow; and do you believe in magic?

Answer Let us say at once that Theosophists have little sympathy with what wrongly passes in the world today under the name of occultism. Hypnotism, mental science, faith-healing, breathing antics, and the rest of it—they are as far removed from Theosophy as it is possible for two things to be that are together in the same universe. Theosophy is opposed to them as it is opposed to vice, and for nearly the same reason. All these things are the mistaking or abuse of natural functions, and the end of them is death, destruction, and decay.

But the term Occultism was never intended to mean such things as these. The word means the Hidden Science; and heaven knows the greater part of science is still hidden from us, and above all that greatest of all sciences, the science of man. This too is the *great* science, or *Magic*; for that by derivation is the meaning of the word.

You go out to your doctoring, or to your engineering, or to the law, with some equipment or training; you have been prepared by years of study, by apprenticeship and actual practice of the thing; you do not begin without a fair chance of making some showing at it. We, as a civilization, have thought carefully how we shall prepare our youths for all the trades and occupations of life, and we have schools and classes galore in which any profession may be learned. But it seems not to have occurred to most of us that manhood and womanhood also need preparing for, and that such preparation ought to be held the most important of all. When we were children, we were, perhaps, of infinite promise. We came with memories of the heaven-world, native to superior and immortal spheres. You may remember nothing now that speaks to you of prenatal brightness or of transpersonal splendor; but that proves nothing, unless it be the magnitude of your forgetfulness. You cannot say what possibilities are slumbering in any little baby; since world-saviors have been born, and men of untold genius, no limits can be set upon the greatness that these cradled dreamers may attain.

We ourselves—who of us cannot remember the things that crept into our lives, and hedged the great light and hopefulness away? Truth to tell, there were evil tendencies enough born with us; but there were good ones too. There were plants that have never bloomed, whose blossoms would have filled the world with light and beauty. Supposing only the weeds had been weeded out, and these fair flowers so tended that they would have come to their proper glory. But where is the science of man; where are those who understand how to do this?

You came into this world with a great love and a great selfishness in you; and heard no teaching concerning original virtue, but much concerning original sin. Let us grant the truth of this last; let us say that it is the half of a true teaching, which, combined with the other half, is of infinite value, but that, standing alone, it is, like all half truths, a damnable

falsehood. We cannot go outside of ourselves. We cannot know any truth that is not to be found *within* us. All the facts of science, indeed whatever things our eyes and ears report to us, we must take as it were only on second hand; they come vouched for by our senses, which we are accustomed to trust; but we do not know them directly and immediately of ourselves.

As we do know the facts of our duality, for example. Know it so well, so intimately; have lived in the same body with it for so long that we have ceased to notice it. There are the two applicants for favors perpetually attending on us within; we heed not to look or question which is which, but give out our bounties as the mood takes us. Generally that one receives who is most importunate.

They are—what shall we call them? Selfishness and altruism; the will to take and the will to do good service, to give; greed and compassion. We never learned thoroughly how to distinguish the one from the other. We might have so learned, and then all our after-living would have been radiant and beneficial. We might have learned to know the demon of those two, in whatever guise he came before us, with however specious pleading. But the science of man is occult; it is forgotten in these generations, and of no good report.

This demon came to us, importunate enough, when we were children and we were not warned against him; we were only warned when his behests interfered with the ease of our elders. We were anxious mainly, to give him what he clamored for and have done with it; not knowing that his aim was to hold our future from any fruitage of good deeds and usefulness; not knowing that every gift that we gave him brought him a little nearer to his goal, and placed ourselves a little deeper in his power. Then, if the awakening to our bondage comes, immeasurable struggle and alertness are to precede freedom.

Oh but there is more to be known about the science of man than would go into all the books in the world! It was H. P. Blavatsky who awoke the West to knowledge that there is such a science: and she often did use the terms Occultism and Magic. And she was at infinite pains to leave no doubt as to the true meaning of these terms. Theosophy was the name given to the body of doctrine that she taught; occultism was the science of practical Theosophy, made a "living power in the life." Its end, she taught, *must* be only and absolutely altruistic, only and absolutely to help forward the general evolution of man. Every human being of us is a mine of wonders, a great *terra incognita* teeming with inhabitants gentle and fierce, divine and demoniacal. There was only one passport, as she taught, that would bring you safely through its exploration, and that was oblivion of self interest, and the will to help the world.

There have been those who have tried to saddle these other vagaries, which pass as Occultism with the uninquiring public, on the Theosophical Movement, but they have met with no success. They were members of the Movement too, at one time; even prominent members: their own ambitions have removed them always, and THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY stands today for that same uncontaminated message

of hope and right living which H. P. Blavatsky gave out to the world. We have to thank her, and her successor, William Q. Judge, and his successor Katherine Tingley for this. People are beginning to understand a little now, what is the meaning and import of Katherine Tingley's Râja Yoga system of education. The pupils in the Râja Yoga schools are *not* going into life unprepared and ignorant of what is to come. They will understand, above all things, that science of human nature for the lack of which humanity is plunged so deeply into sorrow.

Question Is there any good reason for the custom of making New Year's resolutions?

Answer There are two excellent reasons for making good resolutions at the beginning of the year: first, everyone is imperfect enough to need improvement; and second, this is a suitable time to begin the needed change.

Man can always take his cue from Mother Nature. She not only knows when and where and how to do things but moreover she does them. For months past she has been shortening the active days and lengthening the sleeping time, and has set the life-currents which animate her lower kingdoms into an outgoing tide. At the Christmas season the tide turns and a subtle stir runs through all life as it begins to ripple back again for the flood tide of new forms with a higher mark of attainment.

Age after age is spent in teaching the mineral elements chemistry and geometry and electricity, etc., so that the acid and the alkali, the positives and negatives, the crystals and cubes and prisms are unerring in their action. Nature takes infinite time and pains to perfect so small a type as a flower or a gem. She divides the animal world into many classes, wherein they are taught how to express speed or courage or strength or cunning or endurance or grace or music. Her results are so good and her creations are so typical that man uses her works as standards of comparison. We speak of persons being true as steel, or swift as a deer, or sly as a fox, or strong as a lion, or a snake in the grass, or beautiful as a flower, or with a voice like a bird's.

Whereas in the lower kingdoms nature marks out the right kind of experience for every thing and holds them to it, man, who has all the powers of nature latent within him, also has free will to choose his activity and therefore has to work out his own salvation. It is natural that man should strive to develop into the conscious powers of a perfected human being; imperfect, weak, stunted and degenerate types are even more unnatural, although more common in humanity than in the lower forms of life. It is pitiful to think that man, with potentially all the possibilities of the lower kingdoms, plus the light of reason, should make so weak, unhealthy, unlovely, unclean, and unnatural an expression of life as he does. Compare our modern world with a pure, strong, healthy, noble ideal of humanity: then ask whether it is not timely and reasonable for individuals to resolve that with the incoming tide of New Year's life they will work with nature in rising toward a more nearly human level.

R.

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

The Churches Avow Their Impotence

A NEW YORK paper says that recently two hundred of the most prominent Congregational ministers of the city met; and when one of them said that "Protestantism, as Protestantism, is a dying thing," they applauded him.—Here is a sign of the times; let not the CENTURY PATH be accused of unfavorable criticism of the churches, when it has such statements as this to fall back upon. Is it possible to find in a church any defect more serious than that of disbelief in itself? Surely this defect disqualifies it for achieving the end which a church professes to subserve; how can it inspire confidence in anyone else; how can it be a teacher?

But another minister said that —

The new psychology's religious movement is leading the Christian Church to get hold of the imminent [? immanent] near-by God and to discover the real soul.

And again they applauded. Another confession of weakness; the Christian Church being led! the Christian Church being led by the new psychology! What a position for a church; at best it can only claim to be an agent or middleman for the new psychology. "Situation wanted: general overseer out of work; would accept post as drummer for any small concern. Has worked for the Almighty, but is now superannuated." No irreverence is intended; we but interpret the minister's own statement; the irreverence is in the fact, not in the reporting of it.

The latter minister continued that his preaching and practice of the new psychology was bringing back many parishioners who had become indifferent. Here again is surely a most amazing statement; for what, will be asked, can be the object of such ministers? The only answer consistent with the facts as presented is that their object is to get a following. If the people will not come to hear religion (as such) preached, but will come to hear the new psychology preached, why then we must teach the new psychology. But then why not take off one's cassock and set up as a regular "new psychologist"? Because it is deemed necessary to keep up the fiction of a church, even if the fact be dead; and, since the people will not have Protestantism as Protestantism, they shall have the new psychology or perhaps something else as Protestantism.

MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

Continuing, he made the following confession (as reported):

The Emmanuel Movement in the Christian Church is the outgrowth of the Christian Science and New Psychology movements outside the Church, which for almost twenty years have caused a falling off in Christian congregations.

Theosophists please file the above for reference; the definition could hardly be clearer. The Emmanuel movement is not, then, a revival of the original gospel, but an outgrowth of two lay fads of the last twenty years. It is as well to be certain on this point.

Now for some particulars as to the parents of the Emmanuel movement.

Christian Science and the New Psychology do not contain full Christianity and are intensely irrational, but they are answering the day's most vital personal spiritual issue. They are filling their believers with the consciousness of the God of which the early Christian mystics were so vitally conscious. The New Thought movement has taken away 1,500,000 persons from the orthodox Christian Church. These people are no longer interested in Christian missions and Church organization. Charity means nothing to them. They have felt strongly the need of getting divine help in weak moments. They saw they were not getting it in Christianity, so they deserted it.

If we intend to attract them back, this work of healing sick personalities and bringing our parishioners into vital relations with the imminent [? immanent] Deity must be made a regularly recognized department of our church work.

What is the situation then? It is this: the Church had so weak a hold on its people that they deserted it in order to run after a movement which promised to give them personal help in place of requiring of them charity. Therefore the Church must give up its old teachings about charity and give the people what they ran after, namely personal comfort and help. The personal character of the aims of these new cults is admitted, albeit the minister would fain palliate these aims by coupling them with the early Christian mystics and the immanent Deity; and the Church must descend to the level thus provided for it.

Then followed a description of the minister's own achievements in healing, which are in every way the usual kind of curing by suggestion — but with orthodox religious phrases thrown in.

Another minister said that —

During the Church's first two centuries its clergy all practised healing. The fundamental weakness of Protestantism is that in it this healing power of the clergy seems to have entirely ebbed away. What we want in our clergy is not only power to reason but power to save. It is one thing to convince a man's reason that an act is bad. It is quite another to help him build up his personality so that he will gradually not want to do what is bad.

Another admission that the Church is no longer what it originally was. A minister should be a minister in fact, not merely in name; he should be able to administer Divine grace, for the feeding of the *Souls* of the people; his power should be manifest, that all might recognize it for what it claimed to be. But the remedy?

This is what the Emmanuel movement is doing by training morally ailing persons in subconscious habits of healthy auto-suggestion. If Protestantism is to hold its influence it must revive its original function of healing.

Here again is the same confusion of ideas between the ancient healing practices and the modern fads. Is the Church to revive its original function by adopting the methods of Christian Science and the New Psychology and playing second fiddle to them? The aims of these cults are for the most part personal and therefore selfish, and for the little good they may do or claim to do in a few cases of bad habits and nervous complaints, there is an infinity of psychic mischief done. The "subconscious" to which they appeal is the subconsciousness of the lower self, the animal instinctual nature. How can we compare these people, with their talk about business success and personal health and comfort, and their twaddling philosophy, with the self-sacrificing inspiration of the early Christian mystics? The Church is in a very bad way indeed, if it can find in itself so little of real grace and power that it must needs borrow from such cults. But its last refuge will prove a last refuge indeed and one that will not last long; for these cults will have a downward momentum even more rapid than that of the Churches.

Everyone knows and feels what is meant
(CONCLUDED ON PAGE 11)

THE THEOSOPHICAL ADDRESS AT ISIS THEATER

LAST Sunday evening at Isis Theater, before a most interested audience, Mrs. Marjorie M. Tyberg lectured on "The Leaven of New Ideals." A delightful music program was rendered by the Râja Yoga Quintet.

In her opening remarks, the speaker referred to the fact that the ideal precedes the actual, and that growth proceeds from within outward, and could one know the inner standards of truth, duty, and happiness, one could divide human beings into classes, for the outer life is inevitably built upon the inner. What a glorious thing it is for humanity, said the speaker, that there are Helpers who present to the world from time to time the true conceptions of life, and who seek to guide every pure aspiration toward the uplifting and true progress of all.

But the process is gradual. Changes in human nature can only be made by slow steps. At times there are certain words and pictures flashed upon the screen of time, so close to the eternal verities of life and being that they have a wonderful power. "Theosophy" and "Universal Brotherhood" are words of this kind, and anyone so choosing may study the modifications taking place in the world of thought and action arising from the accentuation of these magic words and the introduction of the principles implied in them.

We can all study the action of growth in ourselves, and the leavening power of the new ideals awakened by suddenly hearing certain words, or seeing some act or person, and recognizing a new and higher standard of truth or of beauty or of conduct.

Certain lessons have been learned from the failure of Christianity to permeate the world with the light of wisdom. Its dogmas have less power than they had to enslave human thought; but in breaking away from their former limited conceptions many have shown the same restless emotion, the same lack of real devotion to an ideal, the same failure to act from within and thus grow naturally in harmony with the law. Where is the teaching that shall awaken a sense of the danger that so many feel impending? How may the truth be presented that every lingering memory of past days when truth was not so obscured, shall stir in human hearts and help men once more to see the glorious picture of their real destiny?

Theosophy alone can do this. For Theosophy teaches man to know himself, to recognize himself as divine in his essential nature. And if we will stop for only a moment and move more closely in touch with our inner life, our aspirations, our hopes, we shall find the inexpressible inspiration of the soul that is constantly urging us towards a higher realization of all that is best in us. OBSERVER

Theosophical Meetings

PUBLIC Theosophical Meetings are conducted every Sunday night in San Diego at 8:15 at the Isis Theater, by students of Lomaland assisted by children of the Râja Yoga School. Theosophical subjects pertaining to all departments of thought and all conditions of life are presented. Excellent music is rendered by students of the Isis Conservatory of Music of Lomaland, and Theosophical literature may be purchased.

The Churches Avow Their Impotence

(CONCLUDED FROM PAGE 10)

by true *Religion*. It is that which can stand by us in every emergency, enable us to bear every trial, and look with a serene face on life and on death, on today and on tomorrow, on time and on eternity. It is that which can ennoble the lives of men and women and inspire them to live —

In pulses stirred to generosity,
In deeds of daring rectitude, in scorn

it is that there were Souls of noble generosity and daring rectitude, who scorned the miserable aims that end with self, that THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY might be founded and preserved for a real help to men in their hour of need; to teach them what the churches have failed to teach—that all diseases and troubles are caused by disharmony of life and can be healed only by the restoration of harmony through the benign and gentle ministrations of

THE MATTERHORN, AS SEEN FROM LA DENT BLANCHE
ELEVATION 14,771 FEET

Lomaland Photo. and Engraving Dept.

For miserable aims that end with self,
In thoughts sublime that pierce the night like stars,
And with their mild persistence urge men's search
To vaster issues. So to live is Heaven,
To make undying music in the world.

Can "Christian Science," the New Psychology, and the New Thought do this? It seems profanation to mention them in the same breath. And why are people rushing to these fads? What makes people scramble for scraps of food in the gutter? Is it not because they have been denied bread? And who is supposed to give the people the Bread of Life, without which they must either starve or poison themselves? Pity a poor world that has to choose between such alternatives. Oh well

the Divine Law of unity and by *cleanness and sanity of living*; to bring back to their recollection that there is "a great Cause called the Cause of Sublime Perfection and Human Brotherhood," which the Wise in all ages have followed, and which leads to Divine Wisdom; and that the religions once had Mysteries which they have lost, and could really show people the Path of Perfection leading out of the illusions and miseries of the selfish life into the golden daylight of Eternal Life.

It remains for Theosophy to uphold these "vaster issues" and to give life a meaning above the petty anxieties and desires of the lower self. H. T. EDGE, B. A. (*Cantab.*)

Luxuries and Imaginary Needs

I WILL speak plainly—I say that we are living in an age of luxury, and in an age which overrates the value and importance of material enjoyment, which must inspire with serious anxiety every one of us who has at heart the true civilization of the mind and spirit of the nation, which is its highest welfare.—*Prince von Bülow*, in a recent speech before the Reichstag.

This gives a useful definition of the word "civilization," in its better sense, and brings out the contrast with civilization in its worse sense. Civilization includes refinement both in material affairs and in character; but the latter is the stable element in it. The material refinements of life owe their inception to refinement of character; but when they become the chief end, and refinement of character sinks into the second place, then civilization is on the wane and the material refinements are on the way to become lost in the general ruin.

It is customary to speak of luxury as a desirable thing and to represent its abandonment as a self-denial. Could we try to regard it more as the affliction and weakness which it really is, it might be easier to get rid of it. A foreigner, coming to a strange country, finds the people habituated to many things which they consider luxuries and even necessities, but which to him are only nuisances. Can he be expected to see the advantage of these so-called luxuries? And must it not be so with other habits which he himself has acquired?

It is stated in the papers that there has been cut out of the legislative appropriation bill a sum of \$75,000 intended for the purchase of certain luxuries and necessities for the Senate. Among the luxuries and necessities mentioned are: Bromo-seltzer, pepsin tablets, quinine pills, red raven splits, hunyadi water, antikamnia tablets, abbey's salts, seidlitz powders, cephalgine, soda-mint tablets, olive oil, oil of roses, Copenhagen snuff, glycerine, oil of bergamot, salts of tartar and listerine; and these are only a few.

We have only to go the round of the stores to get an idea of the enormous complexity of our wants; for all these things are used, or they would not be stocked for sale. Think of the drug stores, the clothing stores, the furniture stores, the book stores, the hardware stores, and all the others, and try to form a faint conception of the multitude of our needs.

Do these appliances, then, really add to our comfort? This question can only be answered in the negative; they do not; it is perfectly obvious that discomfort, dissatisfaction, disquiet, distemper and disease are by no means on the wane. In addition it can as reasonably be argued that these ailments are on the increase, and that they are on the increase—not in spite of the appliances—but because of the appliances. Perfect comfort consists in a happy unconsciousness of one's corporeal conditions, such as we enjoyed in early youth. Anything more than this is not comfort but the indulgence of physical pleasure—which brings its counterpart of physical pain.

"Is not the whole world leather-covered for him who wears shoes?" says a wise Eastern proverb; meaning that we should find the principle of comfort within ourselves—not seek it outside. The seeking of comfort in all these drugs and external appliances means that we forgo the padding of comfort within ourselves, which would make all conditions

easy for us, and prefer to try to cover the whole world with padding—a hopeless task. The slavery to which we so condemn ourselves is awful to contemplate, and truly most foolish and most unnecessary.

The wise man, the economical man, the true lover of comfort and health and happiness, will seek to find how many things he can do without. This old saw has often been preached; but, though Theosophy can claim no originality in the maxim, it can, in this case, as in so many others, give it a new force and make it more real and practicable. For this item of old wisdom is in harmony with the true teachings as to man and nature. Ordinary science too often runs contrary to the promptings of intuition and the fruit of experience, but Theosophy goes hand in hand with them. It shows in this case that the rules of holiness are the same as the rules of hygiene, and that the attainment of interior powers means the attainment of exterior powers also. By strengthening the vitality, the endurance, the will, and all the internal resources of our nature, we become master of conditions and carry our comfort about with us.

We sneer at older races because they have not our material advantages; only recently is it beginning to dawn on us that perhaps the reason they do not have them is that they do not want them. They could have them if they chose, but they do not choose; perhaps they tried them before our nation was born, and got over the distemper. In no respect do we compare more unfavorably with some of these older races than in our pampered weakness and susceptibility as contrasted with their masterful independence of conditions.

It is true we cannot expect people in general to have or quickly to acquire those riches of character which have enabled rare natures to be content under all and any conditions; grinding poverty, the slavery of useless toil, are almost too much for ordinary human nature as it is, and men need a reasonable amount of the comforts of life before they can listen to messages addressed to their hearts and understandings. Yet there is no reason for making riches and luxuries an object in themselves and pursuing them with mad absorption. But the undying spirit of man yearns after the great; and, if denied its proper object, will make unworthy objects for itself. What is needed, therefore, is a better understanding of the real values in life, a knowledge of our real riches. STUDENT

Decay of a Cathedral

THE report of the official architect appointed to inquire into the safety of Cologne Cathedral describes the building as being safe as a whole, but afflicted in many parts with decay. The remarkable thing is that: (1) the signs of decay are not confined to the very old parts, but are seen on those of last century and even on parts which were repaired only twenty years ago: (2) the ravages are not confined to any particular kind of stone, but attack all the various kinds: (3) the disintegration seems to begin, not on the surface, but to work outwardly. The rapidity of the process is shown in the gallery on the north side, which is rapidly falling away, while five years ago it was intact.

What do these facts mean? They seem to indicate that the decay in question is not due

to old-age or wrong materials or faulty construction, nor yet to any external influence such as the atmosphere. The decay begins from within, and it has progressed rapidly within the last five years. It almost seems as if the cathedral were an organic structure, having a definite existence as a whole, apart from its existence as a mere assemblage of stones. We are reminded of Poe's "House of Usher," which remained perfect in outward form to the very last, and finally perished as a whole. It is as if the building had an inner ethereal form, and the disease were located in this, being thence communicated to the solid stones. And finally, the "superstitious" may perhaps see in this phenomenon a symbol of that disintegration which has latterly proceeded with such rapidity in the old faiths of which this edifice has been a shrine!

But it will perhaps be best to explain, lest we be accused of grotesque superstition, that the above remarks are jocular, and that they are inserted merely because jokes are so suggestive to some minds. T.

A Literature in the Philippines

THE little plant of Filipino literature, no longer blighted by the jealous ecclesiastical censorship, shows clearly that it means to grow and bloom. Books and journals are multiplying; 1898 is regarded as the year of a veritable renaissance, *El Renacimiento* being even the title of a daily paper printed in the Spanish, Tagalog, and English languages. A publishing house has undertaken the production of a whole series of books at popular prices, mainly translations of foreign classics. Many years ago José Rizal, then a student in Germany, translated Schiller's *William Tell* into Tagalog. It had then of course small chance of seeing the light. The very word liberty was much too large to get through the meshes of the censor's strainer. Now it is the first volume of the series and its price is 15 cents (of our money). The next volume will be Franklin's *Poor Richard's Sayings*. Native works, however, as fast as they are produced, will not be and are not being ignored in favor of foreign. There are already various Tagalog novels, a few dramas, and even a romantic poem.

To us the little plant may look very little indeed. But its appearance and growth is one more symptom of the stir everywhere. Kick away the stone anywhere and something straightway springs up into the light. And the various stones still lying around may as well accept notice that they are now about to be duly moved away—or forced away by the growth they have been trying to hinder. It was not so much Spain that constituted the stone upon the Filipino mind. C.

UNIVERSAL penny postage is advocated so that any inhabitant of our planet, white, black or yellow, may be enabled for the sum of one penny [two cents] to communicate with any other at the lowest possible rate and the highest attainable speed: Englishman with Frenchman, German, Italian or Russian; European with American; Asiatic with Australian or African; so that when one soul has something to say to another, neither colour, nor religion, nor creed, nor diplomacy, nor national antipathy, nor latitude, nor longitude, nor poverty, nor any other barrier shall stand between them. The hour has struck for this grand yet simple assertion of the brotherhood of nations, of a change which threatens to interest and benefit all mankind.—*J. Henniker Heaton*, House of Commons, 1908

Art Music Literature and the Drama

The Mission of Humor

ONE sometimes wishes that the dramatists of the present day could get into closer touch with the true spirit of humor. It is in essence very high, and in this connexion the mind reverts passing often to the presentation made at Point Loma, and also in Isis Theater, San Diego, of the Trial Scene from Dickens' *Pickwick Papers*, an original adaptation by Point Loma students of one of the most excruciatingly funny pictures ever painted by that king of humorists, Charles Dickens. In directing the presentation of this comedy, Katherine Tingley had in view the same object as in inaugurating her revival of the classic comedies of Shakespeare, for she holds that humor, true humor, the pure, innocent, gentle, inimitable and immortal kind, is a regenerative power in human life of actual and mighty import. She enjoins, however, careful discrimination between the two kinds of humor—for there are two kinds, the genuine and the counterfeit, the true and the false—and the majority of people are blind to the difference between them.

There is the kind with which we are unhappily familiar at the cheap theater and in the colored supplements of some of our newspapers, the kind that is neither innocent nor pure and that leads us to love our fellows less as we despise their weaknesses more; the kind which encourages selfishness, coarseness and heartlessness. Then there is the other kind which makes us love men more as we see and know them better, which teaches us to walk through life not blind and deaf but alive to its funny and happy aspects, able to see the humorous side of even our disappointments and feeling it a duty to help our fellows to a hearty laugh whenever we honestly can. Dick Swiveller, Micawber, always "waiting for something to turn up," Slasher, the surgeon—alas! how typical!—Silas Wegg, Durdles, and Mr. Sapsea, Mrs. Cluppins, Mr. Winkle, the innocent Widow Bardell, poor persecuted Pickwick, the inimitable Sergeant Buzfuz, Sam Weller, our immortal "Samivel," and all the rest. Have we not met many of them in actual life? Are we blind as life passes on—or do we need a new mental lens through which to look at our fellows? But let Sam Weller himself answer that, as he does with such irresistible naïveté when the Judge thunders out:

"Then you saw nothing of what was going forward? *Have you a pair of eyes, Mr. Weller?*"

"Yes, I have a pair of eyes," replied Sam, "and that's just it. If they was a pair o' pat-

ent double million magnifyin' gas microscopes o' hextra power, p'raps I might be able to see through a flight o' stairs and a deal door; but bein' only eyes, as you see, *my wision's limited.*"

That's just it, you see, our "wision's limited." So let us break down the limitations and laugh and laugh and laugh, with Shakespeare and Dickens, and all the great humorists past and to come, growing wiser and

Lomaland Photo. and Engraving Dept.
JULIUS CAESAR (A MARBLE, ATTRIBUTED TO DONATELLO)
MUSEÉ DU LOUVRE, PARIS

SEE the power of national emblems. Some stars, lilies, leopards, a crescent, a lion, an eagle, or other figure, which came into credit God knows how, on an old rag of bunting, blowing in the wind, on a fort, at the ends of the earth, shall make the blood tingle under the rudest or the most conventional exterior. The people fancy they hate poetry, and they are all poets and mystics!—*Emerson*

riper as we laugh, and cleaner mentally and better-set morally and willing to think.

If we really want to see the world made a better place, then let us, wherever we can or may, plant the seeds of true humor. STUDENT

The Psychology of Music

A MAN writes to the music critic of a New York journal asking for directions in the acquirement of a fine musical taste. The answer is almost the celebrated *Don't*. But it finally tries to come to closer quarters and advises the querent to avoid the "Broadway best sellers," "the last popular thing," and to learn to read for himself—as well as constantly hearing—the scores of the best musicians, "Bach, Beethoven, and the prophets."

The advice is undoubtedly very good. But how is the aspirant of himself to know good from bad music? There is music which, though "good"—that is, fully answering to or awakening states of strong feeling—is morally bad. An exceedingly vicious person may be greatly stirred by such music, and immediately give evidence of the stir of the element which is stirred, by a deeper plunge than usual.

For music throws down the barriers between latent and common objective feeling. It floods the common field of consciousness with the waters of deeper levels. In other words a deeper self comes out. But what, or which, deeper self? For there is more than one.

If the higher of these be very strong in its nature, low music, music which in other men liberates the lower of the two selves, will be distasteful, will not be allowed to get beyond the ears. But if this is weak or negative, then such music will release the other, which will proceed to expend vitality in various ways—from stamping the rhythm with the feet, on *downwards*. But higher music, not calling out the lower self or the lower floods of feeling, will give the higher elements their chance of conscious development. It will be the opportunity and stimulant for what is really a meditation, even a prayer in the unworded way of prayer. There will be no stimulant to the ex-

penditure of vitality or any sort of outer energy. Real evolution in the higher nature is going on. So the test is not so difficult, though, since everyone must apply it to himself, it will not be universally or even generally applied for a considerable time yet.

The keynote of this higher musical perception has, however, been sounded in the Rāja Yoga School and Academy of Point Loma, as also in those already established by Katherine Tingley elsewhere. But it can only be understood by those in whom the highest ideals are the very fountain of life itself for it is based upon a knowledge of the soul and its laws, a deeper knowledge of life. STUDENT

The best things that I know came to me by obedience, not revelation.—*Selected*

IN a transition period such as the present, at the dawn of a new age in which women are evidently destined to play a very different part from that with which they have long been familiar, it is impossible to mass the influence of women as a whole, as—with a few notable exceptions—it was for many centuries quite possible to do. The forces at work causing the upheaval are so mighty, the tendency to individualize is so general at present, the eagerness among women to avail themselves of various opportunities is so great and has called out such unsuspected ability and versatility, that acute observers feel justified in suspending judgment until a time when the reaction upon women of this new order of things has had its effect upon their general character, and they stand revealed in the strength they have gained by dealing with their new opportunities. At a time like this it is the influence of women as it may be in the future, when they have adjusted themselves to the new conditions, that it is most helpful to consider. The study of present conditions, present tendencies, present needs, and the means of meeting them, will enable us to determine to some extent the kind of influence which it will be possible for women to wield in the glorious new age that is opening before them.

If women knew the new force that has entered human life, if they knew its bearings upon their own lives, they would surely all awaken to the possibility of doing what has not been thought possible before. If they sensed the full significance of the age, if they were conscious of the dawning new life, instead of blindly following the urge they feel to press onward and outward, woman's movements would be very different in their workings and their results. For it is a deplorable fact that while this inner urge impels some women towards heights of intellectual and artistic attainment, and wide fields of philanthropic and other useful labor, there is also

Woman's Part in the New Age

at work some deadly influence that drives women to great extremes of self-indulgence and morbid weakness. There is also a growing insensibility to the sacredness of certain moral ties which threatens dire consequences. It is impossible to ignore the conditions that point to the fact that with all the achievements of the educated and humanitarian women taken duly with consideration, there is sad need for some strong holding force to be exerted that shall restrain the unwary; for many,

WOOD MAGIC

Beth Slater Whitson (*Selected*)

"THE gods are dead. The Pipes of Pan are still."
So say the wise, but in the wood's deep heart
I feel the slow reverberating thrill
Of music, human touch cannot impart.

The murmur of a thousand strings at play
In sobbing ecstasy! My dull ears thrill
To every note. 'Tis but the wise who say
"The gods are dead, the pipes of Pan are still."

many, are the women who have wandered far from the old base of action that kept them near to duty, and the example of whose lives is likely to undo much that is undertaken by worthier women. None of us would choose to go back to the old conditions—we realize too well that a great future is going to be built by our mastery of present evils—but it is true that with the passing of the times have come about a shirking of duty, a senseless extravagance, a dependence upon abnormal stimuli, a loosening of ties, a lowering of ideals among working women who weakly imitate the follies of those who do not work—and many other indications that the extraordinary impetus that has been given to everything relating to the advancement of women has not as yet been subjected to the most discriminating direction. There is something unbal-

anced about it. It is not related to the deepest, truest parts of the woman nature. Much that we see is a mere riot in the external.

Many women acknowledge this, but they do not know where to look for guidance. Some of those working most unselfishly confess that they see these conditions, and some among those who seem irresistibly drawn downward, seeing so much being done by women in the world, look feebly about for a strong influence to steady them, but find none strong enough to stir them to *save themselves*. There is no doubt that in the rush towards work in the external time will show that many women have been less *influencing* the world than *influenced* by the action of natural forces tending to bring about new conditions in human life.

What then is the key to the mystery? How shall women learn to command the situation and direct their efforts so that the new impulse shall be diffused throughout the world in the way that will work for the best in all things? How avail themselves of the present opportunities in such a way as to make of the future such outcome of the past that certain depths of degradation for women may never need to be experienced again?

This is what is in the Law for women to do at this time, and it was also in the Law that a woman should come bringing to the world the key with which to open the doors of conscious participation in the work of uplifting humanity. Long, long before the blot of priest-ridden centuries had been made on the world's history, women were among the interpreters to the human race of the great mysteries of life. Then a knowledge of these deep truths, the only truths that are urgent, was manifested in their lives; the young grew up in this atmosphere that breathed knowledge of their divinity, knowledge of the unity underlying humanity, and knowledge of the great purpose of life that binds souls to incarnation and is a thread which can be taken up only

by the hands of those who have the key to the mysteries. The rest must grope in darkness, must experiment in outward works which, not being based on knowledge of the Law, nor conducted by those who possess any discernment as to causes, will vanish at last as all such things are bound to do.

This waste of effort, this dealing with effects, need not be. The importance of the Woman's Age may be gathered from the fact that at its dawn it was also in the Law that a woman should come to remind all women of their ancient offices, of the truths known to them and interpreted by them in ancient days — so long ago that the world did not remember that woman had had a past glorious enough to blot out all she has suffered in darker ages on the path to today's dawn. But it is none the less true, even though the world had forgotten it, and the most inspiring and effective work of the Nineteenth century on behalf of woman was the work of H. P. Blavatsky, who brought back the knowledge of the great truths concerning human life, and made it possible for women to take up the thread of a glorious life lived long ago, possible for women to wield the influence that makes the world trend upwards to the highest mark it may reach while the present cycle lasts.

The extraordinary power of H. P. Blavatsky's work for women is shown by the fact that she removed the bar that prevented a universal movement on the part of women, such a wide-spread and far-reaching and all-including movement as might benefit women of every race and creed. This she did by showing that Theosophy is the mother of religions, making it possible for people to see the unity underlying them all, thus disarming prejudice and enlightening the ignorant. This was a mighty blow at the barriers shutting women off from one another. It was the work of one aware of the causes that prevent advancement. The effects of her work are seen, though only those who have familiarized themselves with her aims and efforts may be fully aware that hers was the hand that broke these barriers down.

Nobly did she strive, this greatest woman of the Nineteenth century, to bring before all women in the world the truths so necessary for them to know, truths about their own natures, about life, about death, about their higher possibilities. Thus, as they moved out into wider fields of action, they would go armed with the necessary knowledge, holding the key to unlock everywhere the higher aspects of all offices and functions, everywhere interpreting the sacredness of life and of work. So armed, no woman need be a prey to evil influences, but will have the power to discover within herself the means of counteracting any evil tendency and of becoming a positive, uplifting force. Well did H. P. Blavatsky know that by working in externals it may be possible to afford better conditions for woman's development, *provided that women have the inclination to better the conditions within themselves*. She taught that the real work must begin within and all know well that women may move out of their old places without moving un. The Theosophical teaching inspires a righting of the nature *within*, so that there results a movement outward and upward in harmony with the Law, its ultimate the betterment of all humanity. STUDENT

Jottings and Doings

(From a Student's Note-Book)

MRS. Hertha Ayrton, it is said, is England's foremost woman scientist and has been distinguished by being awarded the Royal Society's medal for her unaided efforts in scientific research. This medal was awarded because of Mrs. Ayrton's investigations on the electric arc and the nature of sand ripples. She is said to be the only woman member of the English Institute of Electrical Engineers.

At sixteen Mrs. Ayrton, then Hertha Marks, had graduated from school and begun to earn her living as a professor at Girton College, Cambridge, the youngest teacher in the history of that institution. While there she began systematic research work and invented, among other things, a sphygmograph for recording pulse beats. She finally left Girton to study electricity and later became the wife of her preceptor, Prof. Ayrton. In 1893, when the latter was summoned to the United States on

had my boy to think of (her son is a student at the Naval Academy at Annapolis) and my music. And the knowledge that such a book is needed and will be of use made the work, in the real sense, an inspiration.

The advance sheets have been examined by French scholars who highly commend the work.

Mrs. Gorham has carried through this remarkable piece of work entirely unaided and it is said that she is at present the only woman in the world who has ever written a dictionary.

THE following, clipped from one of the later writings of Charles Norton Eliot, has a very Theosophical ring; for Theosophy aims to teach both women and men to appreciate the nobility of their calling *and their true position in life*:

THE main object of the higher education of women has not been kept sufficiently in view. Of course, there are other objects, plenty of them — training for the professions, training for all the varieties of work that women are now engaging in, training for all that enjoyment and usefulness that

Lomaland Photo. and Engraving Dept.

THE GRAVE OF MINNA HERZLIEB, GOETHE'S FRIEND

business, Mrs. Ayrton continued during his absence his own investigations and experiments. She is by birth a Jewess.

A QUITE remarkable book has just been completed by a Washington (D. C.) woman writer — an idiomatic French-English and English-French dictionary. No such work has heretofore existed — at least, none in any sense adequate — and it was while searching one day in the State Department for something of the kind that the idea came to this woman — Mrs. Gorham — to write one. It was a tremendous undertaking, for it finally came to involve the reading of practically everything of literary value in both the French and English languages. The five or six months originally allotted to the task stretched out into nine years, years of desperately hard, often monotonous, work, for the mere mechanical task alone of selecting, translating, verifying, arranging and rearranging 100,000 French and English phrases, each one probably written and re-written a dozen times, would test any one's will-power and endurance.

I do not believe I have been to the theater twice in the nine years, and as for social pleasures, these have been wholly *tabu*. I had to choose, you see. But when the task grew too monotonous I always

comes with knowledge of the fine arts, and with appreciation of the artistic spirit, and of whatever the artistic spirit can do for the activities of a nation. It is woman to whom falls in greater part the training of the population in the sense of beauty and in appreciation of the worth of beauty. Who keeps the flowers blooming in the average house lot? Who fills the one southern window with plants in tin cans and broken pieces of crockery? Who engages the florist to keep the rich house filled with flowers through all the seasons? For whom are all the beautiful objects in the rich home procured and set forth? Always by and for the woman. Who teaches the little children to enjoy the beauties of nature and of art? Always, or most always, the woman. *I look forward, therefore, to the future of the higher education for women as a great influence in the perfecting of family life, of civic life, of household joy and good.*

IN the Dress Designers' Exhibition recently held in London, was shown a gown done in goods of a rich ultramarine with a pattern of lotus flowers embroidered upon it in shades of blue, violet, and mauve. An archaeologist happened to pass by and discovered that in cut and design it had been copied from the war dress of Rameses II of old Egypt. One may as well take these revelations calmly. After all, why not? The dress, if copied after Rameses' own pattern, is probably beautiful and beyond a doubt comfortable and hygienic.

OUR YOUNG FOLK

GRAY MIST

THE soft, gray mist drifts in from the sea,—
In from the sea and over the land,
Hiding the castle, the tower, and tree,
Hill and valley and low-stretching strand.

The soft, gray mist drifts over our dream,
Shifting, obscuring the scenes that unfold
To our vision; then darkness, and only a gleam
Of the brightness recalled, of the dream we behold.

But these bright glimpses, which mem'ry holds fast,
Giving the joy-touch to thoughts through the day,
Hold them all sacredly, long as they last,—
Use them to guard other thoughts as they stray.

Under the dream-mist, real castles are hidden;
Let us but drive the gray fog from our mind,
Beautiful visions will come then when bidden;
Truth and the dreams will be one, we shall find.

Student

Rubber

DID you ever stop to think how indispensable rubber has become to our modern life? We can hardly imagine getting along without it, for there is no other material known at the present day which could be used as a substitute. It would mean railroad trains without air-brakes; automobiles without tires; electric wires without insulation; not to mention doing without rubber footwear and clothing and the innumerable articles of everyday use which have become actual necessities under our present mode of living. Yet, it is less than a hundred years ago that rubber was unknown commercially. As far back as the time of Columbus a certain gum from tropical trees and shrubs attracted attention on account of its unusual elastic and resinous qualities, but it was not until 1839 that it was discovered how to make practical use of it for industrial purposes.

Credit for this invention, or discovery, which is certainly one of the most important in modern times, belongs to an American—Charles Goodyear. For some years before he became interested, experiments had been going on in Europe, which resulted in the discovery by MacIntosh that rubber would dissolve in benzine. Soon after that water-proof clothing began to be manufactured in England with some success. A company in New York that tried to start the industry in America a little later was unsuccessful, for the real secret of the manufacture of rubber had not been found out. Goodyear was a young man in the employ of this company and he undertook to solve the problem on his own account. He gave the best years of his life to the task, enduring poverty, persecution, and years of discouragement on account of repeated failure. By untiring experimentation he finally found that rubber gum and sulphur mixed in just the right proportion and subjected to the right amount of heat produced an elastic water-proof material which would not become sticky with the heat nor crack with the cold.

A great variety of trees, shrubs, and vines, all natives of the equatorial belt, produce a gum which has the properties of rubber in

Lomaland Photo. and Engraving Dept.

A FINNISH GIRL IN NATIONAL COSTUME

ENDEAVOR to be patient in bearing with the defects and infirmities of others, of what sort soever they be; for that thyself also hast many failings which must be borne with by others. If thou canst not make thyself such an one as thou wouldst, how canst thou expect to have another in all things to thy liking?

Resist thine inclination in the very beginning, lest perhaps by little and little it draw thee to greater difficulty.—*Thos. à Kempis*

some degree. The best and most plentiful at present are found in the Congo Free State and the Amazon Valley. So far, artificial cultivation has not been necessary, but the experiments have been so destructive to the trees in some localities that it is expected new rubber forests will soon have to be started to supply the ever-increasing demand.

The process of rubber manufacture requires the greatest care and skill. As much depends upon proper selection of the raw material as upon its treatment afterwards, perhaps. It still costs the manufacturer a higher price than almost any other material in general use. One hundred and twenty-five million pounds are used in the world every year, it is estimated, and of this the United States uses one-half.

Like the history of many another discovery which has greatly benefited the civilized world, the history of the rubber industry is one of terrible human suffering. Labor is the greatest problem in connexion with its production. Only natives can possibly live and work in the tropical districts where the rubber plants grow and the death rate among gatherers of the gum is appalling. It is said that at least one human life is sacrificed to each ton of Brazilian rubber produced. At best dreadful hard-

ships must be endured by the poor fellows who go into the rubber fields, but added to this, there is cruelty and tyranny resulting from greed and selfishness, to wring any heart save one so hardened by the lust for gold that it is no longer capable of a throb of human sympathy. A recent writer on the subject states that the rubber industry holds more human beings in abject slavery than any other product of the world. We who enjoy the benefits so dearly bought should know the truth about it, and by compassionate thought at least, try to counteract in some degree the great wrongs being done to thousands of fellow creatures. Who can say, "I have no responsibility in this matter"?

STUDENT

Perseverance the Keynote of Success

THE industry which is necessary to achieve great works is illustrated by the lives of almost all great men and women. Although the wonderful creations of the immortal music masters are in a way the results of divine inspiration, yet they were not accomplished without hard work.

It is a well-known fact that Beethoven frequently wrote his compositions over dozens of times before publishing them, and would never leave a production until he felt satisfied that it expressed the best within him. When this was finally accomplished however, nothing could induce him to make the slightest alteration.

An interesting anecdote is told of the gifted composer, Mendelssohn, who was exceedingly earnest in his efforts toward perfection. One evening his friend Ferdinand Hiller found him in a very agitated state of mind because, as Mendelssohn said, he had been "trying for the last four hours to alter a few bars in a song and couldn't yet do it." This painstaking musician had made twenty different arrangements none of which satisfied him, although they would have pleased many other people with less lofty ideals.

Such examples of perseverance and conscientious endeavor should certainly encourage and inspire all boys and girls who do not succeed in attaining desired results at their first effort.

MUSIC STUDENT

Heard at a Boys' Brotherhood Club

"GREATER hero is he who saves a life than he who destroys one."

"We must conquer with tolerance the enmity which exists in the world."

"Well, boys! here again is a new duty for us. Men think if they show tolerance they abase themselves before their adversaries and they do not like to be considered of small account."

"But they do not know what is tolerance! Everywhere one sees hatred, cheating and selfishness; everywhere the desire to gain profit, each for himself, at the cost of others. What does it matter if another goes down if only they themselves profit by it?"

"Against this evil we must fight." E.

THE CHILDREN'S HOUR

Lomaland Photo. and Engraving Dept.

THE STATELIEST BIRD THAT SWIMS

The New Fountain

MISTRESS Road Runner saw it first. She was running through the Lomaland gardens, before the sun was up, keeping a sharp lookout for breakfast for her large family. Suddenly she stopped short. Her tail went up in the air like an arrow, and the little feathers on the top of her head stood up too. Here was a fine how-do-you-do! And Mistress Road Runner called out "Qua, qua, qua, qua!" in her surprise.

There at the very entrance of the Wild Flower Garden, was something new. What could it be? Mistress Road Runner ran lightly all around the big thing, and stretched her long silky neck in every direction, but she could not make it out. Then she stood still, and her pretty bright eyes showed that she was listening.

Tinkle, tinkle, tinkle, splash! she heard. Then Mistress Road Runner knew what it was. There was water in the big thing. So she lifted up her striped wings, and in a moment she was on the edge of it.

"Qua, qua, qua," cried Mistress Road Runner again in huge delight. "Water, water, water," and she thought of the little birdies hidden away in their leafy nest on the ground. She walked around the edge of the big pool, dipping and raising her tail as she went, peering down sideways into the water. Then she stopped and leaned far over and took a sip of the clear water. As she lifted her long bill to let the cold drop slip down her throat, the sun came up and tipped it with gold. Mistress Road Runner wished she could take a bath in the shallow water, but no, her birdies must have their breakfast first.

Having found a nice morsel, Mistress Road Runner sped lightly back to her nest. As she lifted her wings to fly over the sage brush, she thought what good news she had to tell.

A MORTIFYING MISTAKE

I STUDIED my tables over and over, and backward and forward too; But I couldn't remember six times nine, and I didn't know what to do, Till sister told me to play with my doll, and not to bother my head. "If you call her 'Fifty-four' for a while, you'll learn it by heart," she said.

So I took my favorite, Mary Ann (though I thought 'twas a dreadful shame To give such a perfectly lovely child such a perfectly horrid name), And I called her my dear little "Fifty-four" a hundred times, till I knew The answer of six times nine as well as the answer of two times two.

Next day Elizabeth Wigglesworth, who always acts so proud, Said, "Six times nine is fifty-two," and I nearly laughed aloud! But I wished I hadn't when teacher said, "Now, Dorothy, tell if you can." For I thought of my doll and—sakes alive!—I answered, "MARY ANN"!

—Selected

"Next year I will build my nest in that garden. Then every morning I can take my babies a drink of fresh water for their breakfast, and when they are big enough, we can all run to the pool for our morning bath.

"Qua, qua, qua," and Mistress Road Runner dropped down upon her nest. First she fed the birdies; then she told them all about the new fountain in the Lomaland Wild Flower garden. What the children thought when they saw the new fountain, which is really a very interesting kind of fountain with a wonderful history to be told about it, you must hear at another time. People are still going to look at it.

Avis

A Pretty Cuban Custom

THE Râja Yoga children of Cuba have many charming little customs. I remember one especially.

During the early part of my visit, some years ago, the children were very anxious to show me their garden at the foot of a high sun-clad hill, right under their magnificent marañon tree. Here each had his own well-arranged flower-bed and quite a number of plants set out in old tin cans.

On one occasion when Katherine Tingley visited Cuba, the roses which adorned the table were secretly claimed after the meal. The stems of these flowers were planted, and named for Katherine Tingley. Their growth was watched with the greatest interest, and when they began to put forth their first shoots there were such joy, such delight and clapping of hands, such ecstatic exclamations, that they succeeded in summoning the household to the scene. The thriving slip was accepted as a good omen for the person for whom it was planted.

This custom the children continued with all their teachers. If a new instructor arrived or went away to another locality, the same ceremony of planting a slip took place.

Often while attending to their gardens their conversations would ring with the names given their beloved plants; and I remember well the great joy and gladness over the first half-blown rosebud born from a cast-off stem which had grown into a beautiful plant, called "Katherine Tingley's Rosebush." TEACHER

In Lomaland is a garden which will in time bear magic fruit for the good of all the people on earth. It is cared for by one of Humanity's great Teachers, and the plants in this garden are little men and women. A.

THE SECRET DOCTRINE

THE
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

THE MYSTERIES OF THE HEART DOCTRINE

Prepared by
KATHERINE TINGLEY
AND HER PUPILS
The Theosophical
book of the
Twentieth century

Tells the story and the history of the Theosophical Movement.

The prices are \$2 in cloth and \$1.25 in paper, which barely cover the cost, for it is printed and bound, not gaudily, but with such carefulness and thoroughness of art and craft as to make it unique among modern edition books.

SOME OF THE ERRORS OF CHRISTIAN SCIENCE CRITICISM

by H. P. Blavatsky and William Q. Judge

CONTENTS:

"The Empty Vessel Makes the Greatest Sound"
A Note of Warning

—by H. P. Blavatsky

Of "Metaphysical Healing"

Affirmations and Denials

The Cure of Diseases

Replanting Diseases for Future Use

—by William Q. Judge

A MOST VALUABLE PAMPHLET. Outside of Theosophy there is given no adequate explanation of the healing that is at times accomplished, nor of its rationale, nor of the ultimate price that must be paid and the dangers connected with such practices.

This pamphlet is invaluable to all students.

Price 15 cents

Heredity

WITH regard to the use of the word *heredity* there is the same confusion of thought as there is in the use of *gravity*, and other similar words. It is employed in two senses, which, being used interchangeably, without the user's perceiving the fact, lend confusion to the argument. Heredity is defined in the dictionary as meaning the fact of the hereditary transmission of qualities from parent to offspring; so that it is thus correct to speak of a child's qualities as being a *case* of heredity. If, however, we say they are *due* to heredity or *caused* by heredity, then clearly we are using the word in another sense, and we now mean some force or influence (goodness knows what) that is presumed to operate in causing the heredity. It is just the same as with gravity: a stone falls, and we call that fact a case of gravity; then, confused by our own language, we get to saying that gravity caused the fall of the stone, and so the word comes to stand for some supposititious force. But what reason is there for supposing that there is any such force? The stone falls as the result of certain conditions which may include a large number of different forces. So with heredity: what is the fact of heredity caused by? It is the final result of sundry agencies and conditions, but why postulate any one force and call it heredity?

Heredity

a Condition
Not a Cause

Every child born into life brings with him certain qualities in a latent or seed form, and these afterwards unfold and become manifest, according to the soil and other conditions provided. In addition to this, he acquires other qualities during his life after birth, by imitation or absorption of influences from outside. Biologists are interested in discussing whether or not the child carries from the womb any unchangeable physical vehicle, such as a cell or group of cells that might act as the conveyer of the qualities inherited. But this does not really matter, since the materialistic explanation will not suffice to explain anything at all, let alone heredity. Even if there is such a cell or group of cells, it can only grow by the impulse of something ultra-material that is coming into it from without; and all the latent life of germs is dependent on the fact that they are the physical centers through which something that is not physical may manifest itself.

Another point of dispute is whether *acquired* characteristics can be inherited. But if they cannot, then the inference is that those qualities which are inherited have not been acquired; and the question arises, What then is their source? The truth is that a newly acquired quality or habit does not at first acquire enough strength to impress itself upon the race; but, if repeated until it becomes strong, it will impress itself upon future generations by heredity. In animals we see no new impulse generated strong enough to impress itself as a permanent change on their kind; and so they remain nearly the same; but when Man interferes, then his initiative is able to produce transformations, both in animals and plants. If ever the new molding influence is withdrawn, then the accumulated force of long ages tends to restore things to their habitual condition. We are a great deal too fond of creating the imaginary forces — idols they ought to be called — and making them responsible for the bad things we do, and the good things we ought to do, ourselves. When, one wonders, will it occur to us that the laws of nature, the laws of economics, the laws of heredity, the decrees of fate, the hand of God, and many another such, are to a large extent just — *ourselves*?

Many biologists, in speaking of heredity, really seem to imagine a kind of deity who presides over the business, only they call it laws of nature, or heredity, or some such name. And plant breeders mix together different germs and then wait to see what will happen; when perhaps a wiser man would not wait for things to happen but would make them happen.

If we spoil our constitution by drink, then any child we have will have bad physical atoms and bad atoms of other kinds to deal with. But then there is his heredity on other planes, and that is a very important factor. For the parents may not have much say in that matter: they provide the vehicle for a Soul to incarnate, and it may be a weak Soul or a strong one. Again, a great deal of what is attributed to "heredity" is due to ignorant handling in infancy — another case of shifting the blame.

Theosophy is above all things practical in its treatment of things: it is interested in current problems so far as concerns their practical aspect; and it maintains that this practical way of regarding things results in a clearing up of the question.

The practical question about heredity is that we cannot do wrong without injuring the race generally; and whether it comes off on our children or on our grandchildren, it will surely come off somewhere. And the same

quired; and the question arises, What then is their source? The truth is that a newly acquired quality or habit does not at first acquire enough strength to impress itself upon the race; but, if repeated until it becomes strong, it will impress itself upon future generations by heredity. In animals we see no new impulse generated strong enough to impress itself as a permanent change on their kind; and so they remain nearly the same; but when Man interferes, then his initiative is able to produce transformations, both in animals and plants. If ever the new molding influence is withdrawn, then the accumulated

force of long ages tends to restore things to their habitual condition.

We are a great deal too fond of creating the imagin-

ary forces — idols they ought to be called — and making them responsible for the bad things we do, and the good things we ought to do, ourselves. When, one wonders, will it occur to us that the laws of nature, the laws of economics, the laws of heredity, the decrees of fate, the hand of God, and many another such, are to a large extent just — *ourselves*?

Many biologists, in speaking of heredity, really seem to imagine a kind of deity who presides over the business, only they call it laws of nature, or heredity, or some such name. And plant breeders mix together different germs and then wait to see what will happen; when perhaps a wiser man would not wait for things to happen but would make them happen.

If we spoil our constitution by drink, then any child we have will have bad physical atoms and bad atoms of other kinds to deal with. But then there is his heredity on other planes, and that is a very important factor. For the parents may not have much say in that matter: they provide the vehicle for a Soul to incarnate, and it may be a weak Soul or a strong one. Again, a great deal of what is attributed to "heredity" is due to ignorant handling in infancy — another case of shifting the blame.

Theosophy is above all things practical in its treatment of things: it is interested in current problems so far as concerns their practical aspect; and it maintains that this practical way of regarding things results in a clearing up of the question.

The practical question about heredity is that we cannot do wrong without injuring the race generally; and whether it comes off on our children or on our grandchildren, it will surely come off somewhere. And the same

quired; and the question arises, What then is their source? The truth is that a newly acquired quality or habit does not at first acquire enough strength to impress itself upon the race; but, if repeated until it becomes strong, it will impress itself upon future generations by heredity. In animals we see no new impulse generated strong enough to impress itself as a permanent change on their kind; and so they remain nearly the same; but when Man interferes, then his initiative is able to produce transformations, both in animals and plants. If ever the new molding influence is withdrawn, then the accumulated

force of long ages tends to restore things to their habitual condition.

We are a great deal too fond of creating the imagin-

ary forces — idols they ought to be called — and making them responsible for the bad things we do, and the good things we ought to do, ourselves. When, one wonders, will it occur to us that the laws of nature, the laws of economics, the laws of heredity, the decrees of fate, the hand of God, and many another such, are to a large extent just — *ourselves*?

Many biologists, in speaking of heredity, really seem to imagine a kind of deity who presides over the business, only they call it laws of nature, or heredity, or some such name. And plant breeders mix together different germs and then wait to see what will happen; when perhaps a wiser man would not wait for things to happen but would make them happen.

If we spoil our constitution by drink, then any child we have will have bad physical atoms and bad atoms of other kinds to deal with. But then there is his heredity on other planes, and that is a very important factor. For the parents may not have much say in that matter: they provide the vehicle for a Soul to incarnate, and it may be a weak Soul or a strong one. Again, a great deal of what is attributed to "heredity" is due to ignorant handling in infancy — another case of shifting the blame.

Theosophy is above all things practical in its treatment of things: it is interested in current problems so far as concerns their practical aspect; and it maintains that this practical way of regarding things results in a clearing up of the question.

The practical question about heredity is that we cannot do wrong without injuring the race generally; and whether it comes off on our children or on our grandchildren, it will surely come off somewhere. And the same

applies to good work; that too must have its effect somewhere. The channel of our own offspring is only one of many channels through which may flow the Karma of our acts. The seeds which we sow by our thoughts, words, and deeds, fly out on the currents of the ether, to fall and germinate—who can tell where?

We Have Created And looking backwards on
Our Present our own heredity—we see
Ones that it must have come to us through many channels, some through our parents, some through other people, but all primarily through *our own past actions, in other lives*. We cannot excuse ourselves on the ground of parental heredity, since that heredity is part of our own Karma, created by ourselves; and if, through some misadjustment, we may have inherited more evil than we are entitled to, it is equally likely that there is a compensating overplus on the side of undeserved good. STUDENT

The New Year and Rebirth

THE birth of a new year should serve to remind us that birth, death, and rebirth are the world's eternal ways, and to forbid us from making an exception to that universal rule in the case of our own birth and death. True, it is only mentally that we ever do this, for each one of us is conscious within of his own immortality. Were it not so, how should we ever face the awful catastrophe (as it would then be) of death that is ever with us and all around us? We read in the papers that so-and-so is dead, and it scarcely occurs to us that it will sooner or later, perhaps tomorrow, be the turn of our friend, our relation, or ourself. Think what this would mean if that single brief span of earth-life were the Soul's whole story? Would not life be a mockery? Would it not then be best to give up all ideals and endeavors and just try to get through that absurd mockery of existence with as much pleasure and as little pain as possible? What matter if our excesses should curtail its duration; for what difference could it possibly make, once we were forever dead, whether we had lived seventy years or only seven? No, a Theosophist cannot believe in that kind of life and death; such a life and death is *conceivable* only in the case of beings who have no reflective self-consciousness and cannot hold any views in the matter at all.

The truth is that unless we accept as a fundamental postulate the principle that our consciousness contains an immortal element, we cannot reason coherently on the subject at all. For in all our arguments is involved that assumption, and we cannot prove that a thing is not when for the purposes of our argument we have already assumed that it is. The mere fact that we argue at all involves the assumption that a thinking self-examining mind exists; and that mind can only explain its own existence and functions by starting with the axiom that its ultimate essence transcends all its own manifestations and states. We cannot see our own eyes, though our eyes can see the greater part of the rest of the body. We can know many of the mental faculties, but we do not know the knower: except by means of a faculty which performs a function like that of a mirror.

But there are also *mortal* elements in us; it is as hard to believe in the continued exis-

tence of the transient as it is to believe in the transience of the imperishable. There is much in us that we would even now gladly consign to the limbo of destruction; and there is still more that the soul, purified by death, will gladly leave behind.

The question as to how much of us is immortal and how much not, is a great mystery, at least outside of Theosophical teaching, and we should neither cavil at being unable to immediately solve it nor despair of ever being able to solve it.

But what a grand message for the world is the proclamation of the truth of universal Rebirth! Nothing lost, no effort in vain, never too old to begin. To regret in the autumn of our years, the buoyant springtime, is as absurd as to wish it was always morning. Seasons must succeed each other, on the grand scale as on the small. In the autumn, after the reaping of crops, seed may be sown. The old message used to be that few and short are the days of man on the earth, and he must use them in preparation for an eternal life elsewhere.

The heart alone sees no renewing
The light of other days,

has been the spirit that has clouded so much of our happiness and usefulness. But the heart is no exception to the general rule; it only purges off its mortal elements and is renewed in an even brighter light. STUDENT

Jonah and the "Whale" Again

THE story of Jonah and the whale seems to have excited interest again in ecclesiastical circles, judging from a press report which says that a lecturer attacked the Higher Critics on this question, at a Methodist ministers' meeting, and declared that—

If the text of the Old and New Testaments were not believed, the whole structure of Christianity would topple.

Another professor did not believe the story was literally true, and said the words of the Bible are meant to be taken allegorically.

There is at least something whole-hearted about the former professor's position which commands respect for its uncompromising courage; he at least is not on the fence. The old doctrine is that even the frailties of the Biblical scribes were supervised by the inspirational power, so that mistakes were avoided. This is a good sound dogmatic position for those who can tolerate it; but of course it makes Christianity a sect among the world's religions, every one of which religions may also possess its inspired Bible.

The little bit of mystic symbolism contained in the legend of Jonah and the great fish—the account does not mention a *whale*—is traceable in other sources. The fish is, in fact, a very well known and ancient symbol. Much will be found about it in *Isis Unveiled*, Vol. ii, pp. 256-259. The earliest Christian emblems for Jesus were the Lamb, the Good Shepherd, and the Fish. This last comes from the Chaldees, who had their Man-Fish or Dag-on, and is also connected with the zodiacal sign Pisces and the astral conjunctions which prefigured the coming of a Savior. In several Hindû books Vishnu assumes the form of a fish with a human head in order to reclaim the Vedas lost during the preceding deluge.

The "big fish," says H. P. Blavatsky (*op. cit.*) is Cetus, connected through the Greek with Dagon and Astarte. Jonah went to Nin-

veh, an Assyrian city, and some commentators think we must understand by the fish one of those Assyrian vessels which had the image of the Man-Fish on the prow. However, it is clear that the story is allegorical and an odd and metamorphosed fragment. As has been pointed out before, it is harder for us to swallow the tale of Jonah converting Nineveh in a day, than for the fish to swallow Jonah.

The spirit in which scriptures ought to be studied is that of seeing what help and instruction we can derive from them. Now in the Judæo-Christian Bible there is much that is most helpful, especially in the teachings of Jesus and of Paul. If we are really in earnest in searching for the path of self-knowledge and liberation, we shall profit by these, as also by the scriptures of other religions and any other source whatever wherein we may chance to find the help we are seeking. As to the Old Testament narratives, though on the surface they are perhaps historical or fabulous, they *are* allegorical; and a deeper study of ancient symbology can unravel for us these riddles so that we may gain help from them also. STUDENT

The Planets Self-Luminous

THE planets, it now appears, do not merely say ditto to the sun. They are self-luminous, and their light—corresponding to their constitution—is neither identical with that of the sun or of each other. The difference from the solar light increases, apparently in a regular progression, with their increasing distance from the sun, becoming therefore most marked in the case of Neptune and Uranus.

The work which demonstrated this was of course spectroscopic and is to the credit of Mr. Slipher of the Flagstaff Observatory, Arizona. The spectrum of the moon was used as the standard of comparison, she having, so far as is known, no atmosphere. A very large scale of dispersion was necessary to bring out the differences and it was then found that the spectrum of each of the planets presented lines of absorption not in the solar spectrum, the lines being upon some regular plan of addition according to distance, and not at random. The intensity of the new lines was greatest in the outermost planets, Uranus and Neptune; less and less the further in. C.

The New Language

PROFESSOR GARNER is still studying the language of monkeys, being in the French Congo for that purpose. He is even preparing a dictionary, though it will not have to be very extensive. No grammar, it appears, will be necessary for those who wish to acquire this tongue, for it is not even agglutinative. It consists of single words for the expression of single unrelated ideas. As Professor Garner literalises them, the sound *Qhui* means want; *Khiu* means look out; *Eu-nh* here; *Chu-h* listen. He has gotten six sounds for the expression of as many emotions, though the monkey may possibly be more complexly emotional than that; and there are three call sounds. But one fears that the language cannot be adopted as a universal medium of thought-exchange, notwithstanding that the emotion list might perhaps be adequate for some of us, and indeed might even be unnecessarily large. STUDENT

Some Views on XXth Century Problems

The Church's Lost Thread

"THE history of the Church," says the well-known *Christian World* contributor "J. B.," "might have been ordained as the evidence offered by Providence that men are not saved by theology. Christians have always been changing their theology. Great masses of it, held once as of first authority and importance, have disappeared absolutely from view." Names only have remained more or less fixed, giving an appearance of continuity where there was none.

It is sufficiently significant, when one thinks of it, that the first Christian orthodoxy—held by the majority of the Apostles, with its seat at the Mother Church of Jerusalem—had practically been abandoned within two generations! That Church believed and taught that the Gospel was a Jewish Gospel; that its message was first and foremost for Israel; that its reception in no wise abrogated the Levitical law; and that outsiders, if admitted to its privileges, must reach them through the gate of circumcision and along the line of the Mosaic observances. By the end of the first century that orthodoxy was dead. . . . That first age . . . began with a belief in an immediate Second Coming of Christ and consequent world-revolution. . . . But the thing did not happen, and the belief had to go. . . . Almost as strange, and fully as pathetic, was the fate of Paulinism. The unsophisticated believer of today, as he reads the Epistles of Paul, regards them as the accepted teaching of the Church at the beginning and all through. It was far otherwise. Condemned by a large portion of the Church as heretical during his lifetime, the Apostle was ignored by it after his death.

These are but instances.

In all departments of doctrine the most opposite and contradictory views have successively prevailed. . . . And if things were thus as to the doctrine of Christ's Person, not otherwise was it as to the doctrine of His work. How fantastic the notion of the Atonement which for a thousand years held its ground in the Church; the notion that Christ's sacrifice was a ransom paid to the devil! Saint Ambrose of Milan wrote: "It was necessary, in order that this fraud should be carried out on the devil, that the Lord Jesus should take a body."

Then followed the view that the debt was one due to God himself, "a *quid pro quo* for the injury done to his personal honor. Since Anselm we have had almost as many theories on this theme as there have been theologians."

"It is evident," summarizes the writer,

that the continuity of religion, if there be such a thing, is something different from that commonly held by ecclesiasticism. It is neither a continuity of mechanically-transmitted priestly powers, nor one of infallible and unchanging dogma. Neither the one nor the other has existed except in the ecclesiastical imagination.

He then goes on to show that it is *religion*, not a religion, which is continuous—and that in all ages from pre-Christian to our own.

Our heart throbs today with a new sense of kinship as we read the records opening to us in Egypt, in Babylonia, in India, in China. Our religion, we perceive, is theirs, and theirs is ours. Everywhere we find the human heart beating to the same tune, everywhere the filiation of ideas. The Bible, so far from being an independent book, is, we discover, one of the greatest of borrowers.

But how came it that immediately after the departure of the great Teacher such absolutely discrepant views of himself and his

teaching at once began to succeed each other?

Among his immediate followers there must certainly have been some who understood him; and still more certainly some who did not—either him or what he said. What he taught privately we do not know, except for certain leakages. But we do know that he expressly divided his doctrine into two parts; one, ethical and within the comprehension of all; the other esoteric, the "Mysteries of the Kingdom of Heaven," *not fitted for the multitude*. Whoever will examine what has reached us will perceive that it can be but the former only. Where is and what is the second?

None of what we have was written down for at least a century and a half after his death. But many of the early Fathers quote profoundly suggestive sayings as parts of general oral tradition concerning Jesus handed on for the generation or two or more from those who knew him and had been taught by him; or as parts of extra-canonical Gospels which have mostly totally vanished and which were evidently very numerous. One of these sayings, from the *Acta Petri* is exceedingly apropos: "*They who are with me have not understood me.*"

Professor Bernhard Pick has collected all these sayings, including the Oxyrhynchus ones, and published them in a little book *Paralipomena*. Many more will certainly be discovered and from them the real teaching may finally come forth.

But whoever will read what we have may possibly come to the conclusion that that part of Jesus' teaching which he said was not for the multitude *has never been in the possession of the Church at all*, diverged at once from that other over which the wrangles at once began, and was soon lost—perhaps because it took some other name. And the wrangles did their work with what was at their mercy.

According to Augustine, Christianity has been in the world since the world's beginning; but, as he says, under other names. It has; the core, the esotericism, of all religions has been one and the same. To dissect out that core from non-essentials, from the accretions of time and human fancy, from the misconceptions of devotees and from popular misrenderings—is part of the work of the Theosophical Society, which is thus working for the resurrection of real Christianity. Whoever will study Theosophy and then with the key thus obtained go through the existing sayings of Jesus Christ, canonical, and extra-canonical, and then back through the older creeds of the world's uncounted millions, will find how much has been already done.

STUDENT

Let Us Play

THE play of children is often the only creative thing they will ever do, and if they have the misfortune to be wealthy they are likely to be despoiled of it. They are imagining, creating chairs and stones and mud into living and splendid things. To create is consciously to imagine something into existence, whether it be then seen by others or not.

But wealth may leave their imaginations nothing to do. Elaborate toys, renewed every week, fill their attention. They imagine nothing. The more elaborate the toy, the less can imagination add anything to it; least of all can imagination ensoul it and make it live. And; incidentally, candy-eating between meals and excessive eating at meals, use up in digestion the force that would otherwise serve the creative imagination.

Lastly, they have too many books. Imagining is done for them, the creative power left unused.

Undeveloped in childhood, it has little chance of development later on. All the ways in which we earn our living, all the ways in which we amuse ourselves, are calculated to leave it sleeping. Business is likely to be the merest routine, hardly even calling for thought. The making of a pin is divided among ten men, one of whom will pass his years fixing the heads. The factory girl pastes the same label on to the same candy box.

To recreate is with us to *be recreated*, to be amused. The newspaper, the novel, the short story, the play, wholly occupy the hours that might be made to yield life. We even look down upon the man who, in the pursuit of some hobby, is actually creating something. But in his evolution of a new chrysanthemum in his 6×10 foot greenhouse he may have done more real work—from nature's point of view—than if he had exhausted a free library. Work, from nature's standpoint, is using consciousness to create something; and in so doing it is amassing life. The poet, the chrysanthemum grower, the musician, the inventor of a new kind of pin, the child who sees a fairy in the broken leg of a chair—are among the workers she respects. And if they otherwise and at other times conducted themselves wisely, they would find in their added wealth of conscious life how much she respected them.

Prayer, or meditation, was once reckoned the highest of the creative arts. It was creating an ideal of self, creating self into that ideal, and, when in that state, working creatively and divinely in the field of human consciousness then perceptible. The divine was found at every step, helping.

But modern prayer creates nothing; it merely asks for something, and even that often in words only.

To alter our lives so as to get life we must begin to refuse to be recreated; must take up hobbies, think, imagine. But chiefest of all, we must daily practise that highest of the creative arts. As we do that, the rest of our lives will become lit up so that we see how best to work therein. We must imagine ourselves—not in, but—into touch with the teeming world or sea of human consciousness, so full of pain and disappointment, of hope and despair; must let it in on us, go out to it, meet it, try to think light into it, to help and encourage and bless it. That is a use of the imagination that will call out all its powers and place it and us in touch with the fountain of life from whose waters is the life and joy and growth of everything. STUDENT

Stonehenge

STONEHENGE, together with the many similar megalithic structures found in all parts of the world, are standing puzzles to archaeologists, confuting, as they do, all conventional theories as to the past history of the human race. Hence, in the attempts to explain conveniently their undoubted existence, we find both ingenuity and variety. But while the inquirer will seek in vain among these theories for any which will satisfactorily answer the doubts in his own mind, he will find that Theosophy alone has an explanation which is both consistent in itself and conformable to universal tradition. For Theosophy such facts are not stumbling blocks, but on the contrary sign-posts, testifying, as those who erected them intended they should, to the truth of the teachings. And in view of the rapidity with which in recent years so many of H. P. Blavatsky's teachings have mysteriously passed from the category of derided superstitions to that of orthodox belief, Theosophists may conclude that a similar change will attend their opinions about these megalithic structures, and that their views will not be many years ahead of the fashion.

The belief in the Divine origin and Divine nature of man, which is the dominant note of Theosophy, is intimately involved in Theosophical teachings as to human history; and similarly the scepticism with regard to man's Divinity is involved in a derogatory view as to his past achievements. But the overwhelming accumulation of facts, in every department of research, is rapidly taking away all ground from under the feet of such sceptics.

The circle of gigantic monoliths standing on Salisbury Plain must be considered in connexion with the very large number of similar monolithic erections found in all parts of the world. Most of them are the relics of the latest Atlanteans.

Stonehenge was not erected upon any Roman measure, as is shown by the fractions obtained when using such measures; on the contrary the figures become even when measured by the ancient cubit of the Hebrews, Egyptians, and Phoenicians. The position of the stones has been found by astronomers to have reference to the positions of the heavenly bodies at certain seasons. An examination of the circular kinds of monolithic buildings will show that the number of stones in each of the various circles is that of the numbers of the mysterious chronological cycles as used in the ancient Science. These gigantic monuments were set up by giants, of whose existence in prehistoric times there is ample testimony everywhere. Even many of the perched blocks and rocking stones, attributed by geologists to the work of nature, are stated by H. P. Blavatsky in *The Secret Doctrine* to have been set up by the giants. Some of these isolated boulders are too far from their source to have been brought by glaciers.

Mr. William Tooke (*French trans. Sépulture des Tartares. Arch. vii, p. 2227*), speculating upon the enormous blocks of granite which are strewn over Southern Russia and Siberia, tells the reader that there, where they now rest, there are neither rocks nor mountains; and that they must have been

Lomaland Photo. and Engraving Dept.

A LATE PHOTO OF STONEHENGE SHOWING THE SIZE OF THE STONES BY COMPARISON WITH THE FIGURES ON THE LEFT

brought over "from immense distances and with prodigious efforts." Charton (*Voyageurs Anciens et Modernes*, Vol. I, p. 230) speaks of a specimen of such rock "from Ireland," which had been submitted to the analysis of an eminent English geologist, who assigned to it a foreign origin, "most probably African."

This is a strange coincidence, as Irish tradition attributes the origin of her circular stones to a 'Sorcerer who brought them from Africa.' (*The Secret Doctrine*, vol. ii, p. 343.)

In *Stonehenge* (Flinders Petrie) it is said that "Stonehenge is built of the stone of the district, a red sandstone, or 'sarsen' stone, locally called 'grey wethers.' But some of the stones, especially those which are said to have been devoted to astronomical purposes, have been brought from a distance, probably the North of Ireland." (*Ibid.* p. 344.)

Many of the megalithic structures, including that of Stonehenge, were set up by traveling Initiates, belonging to the Second Sub-race of the Aryan family, at an age which can only be computed by geological time (they went by land from Europe to America), to serve as receptacles for the ashes of future generations, as astronomical records, and as imperishable monuments of the existence of the Sacred Science, which might survive as a witness to succeeding ages. Stonehenge is not Druidical; it belongs to a class of structures which was universal, and the Druids were but the heirs to the cyclopean lore left to them by the mighty Builders and magicians. STUDENT

Age of the Habitable Earth

THE late Lord Kelvin is quoted as having said in a letter dated 1906, that the age of the earth as an abode fitted for life cannot probably be vastly more than 20,000,000 years. This is his minimum estimate of the age of the earth as an abode fitted for life. The interesting question arises, "Was Man there?" If not, then the earth must have been given over for long ages entirely to animal and vegetable life, with possibly God or his equivalent scientific expression reigning over it all. Theosophy says that Man *was* there, many millions of years ago. This teaching as to

the antiquity of Man is evidenced by its forming part of a comprehensive and self-consistent presentment of history; by its agreement with universal tradition; and by its reasonableness. The scientific theories are not reasonable; they contradict tradition; and they are inconsistent with scientific theories on other related matters. As to palaeontological evidence for the existence of Man so long ago, we cannot expect much; but what little has been discovered by chance has invariably been explained away by various forced arguments in the interests of the established theories. Again our explorations are so far very incomplete in extent. But evidence will come in plenty as our minds broaden. STUDENT

The Serpent Symbol

THE existence of the Serpent Mounds in Ohio, together with the Snake Dances and the serpent mythology of many aboriginal tribes, have been considered in connexion with the serpent symbols used so much by the ancient nations, of the Old World in their religious symbology; and various attempts have been made to account for the existence of so universal a cult consistently with the usual theories as to history. These attempts all fail unless they take into account the existence of the Secret Doctrine of antiquity, which, at a time when some of the races that preceded the present historical ones were at their zenith, was universally diffused and understood. All these animal symbols and geometrical symbols are, so to say, the alphabet of that ancient Science; and this accounts for their universality and for the veneration which attaches to them. The Serpent was a symbol both good and evil. This is because it stands for a certain power in human nature which is hostile to man so long as it is not mastered, but which, when mastered, is the minister of his power and wisdom. The Serpent is the guardian of the portal to the Halls of Wisdom. STUDENT

The Trend of Twentieth Century Science

How Old Are You?

"A MAN is as old as his arteries," is a medical saying that one hears more and more. In fact, that hardening of the arteries *signalizes* old age, sometimes seems to mean that it is old age.

The brain is of course full of arteries, and if they are diseased in spots they may give way at those spots, unless habit is wisely arranged against the contingency, and finish their owner.

But otherwise the connexion is much less close. For the arteries and brain have quite different developmental sources. At a very early period in the evolution of the embryo, the mass of cells composing it are already in three groups with very different future functions. They are known as hypo- (inner), meso- (middle), and epi- (outer) "blasts." The arteries develop from the middle one, the mesoblast; the brain and the nerves connected with it from the outer, the epiblast. A deepening groove forms in this outer layer; the sides of the groove fold over and finally make a tube of it. Most of this groove is the central canal of the spinal cord; but one end of it, bending at right angles, becomes the central canal of the brain. Around this tube, the cells, all epiblastic, multiply to make the spinal cord itself; at the front end the multiplication is very great and forms the brain. Later, all this becomes permeated by arteries growing into it from the middle layer.

We ordinarily think of the brain as a solid quiescent mass. It is — when it is dead. In life, if we could see it with finer vision, it would look more like a dense forest whose every tree-branch and twig and leaf was being swayed by the wind; or like a mass of anemones at the bottom of a sea pool, with every tentacle swaying. There are millions of large nerve cells, not very incomparable to anemones. For each cell throws out long tentacles, some of them branched, which wave about in the gelatinous, almost fluid, matter in which they are set; the tentacles of neighboring cells constantly making and breaking contact with each other. One of these tentacles is longer than the rest, going to remote cells, breaking also into branches near them, making and breaking contact with others, and thus bringing distant parts of the brain into communication with each other. All this is the physical side of that kind of thinking which is the reproduction and comparison of sense pictures. The neuroglia or semi-fluid medium in which all this incessant waving of these millions of tentacles is done, is also an epiblastic evolution.

Anatomically it would therefore seem possible that man need *not* be as old as his arteries, man as a thinking person; he might be either older or younger. And this one finds to be the fact. Men are often far more advanced in senility than their arteries in disease and they often preserve splendid mental activity when the arteries are full of weakened spots.

People recognize that if they are to keep their bodies healthy they must take daily

bodily exercise. They forget that the brain requires the same, and that if it does not get some fine strong new-land-breaking thinking to do every day, it will wear out and become senile. The Sunday supplement, the novel and the short story will not do. They make the mind pleased and comfortable, of course; but they are about as near to mental exercise as stretching in an arm-chair is to physical.

You can do a good deal for arteries that are diseased. How much can you do for a brain that has begun to get senile? M. D.

Eyes that do not See

A GERMAN scientific contemporary describes two curious organs found in certain cuttle fishes living at great depths in the water. At first sight, even microscopically examined, they would do for eyes. Nature evidently had the eye plan in view, but she slightly altered it for purposes of which we are not sure.

In one case the resemblance is nearly exact. There is a cornea; behind that is a lens; and behind that a retina and nerve, a retina on the same general plan as our own. But the lens, instead of being transparent to light, is so full of black pigment as to be impermeable. The suggestion is that as black substances readily absorb heat, the organ is a heat eye. But the creature lives at depths so great that there can be no heat to detect. And what could it gain, anyhow, from detecting what little there is? The eye may on the contrary be arranged to see by light that comes from higher up the spectrum than the octave we see. To it the black depths may be quite well illuminated, for we know that every living thing is radiant somewhere up the spectrum. For the trifle of ordinary light that gets down there, this creature has also two ordinary eyes. So it is equal to any situation.

The other creature has an eye that *generates*, instead of receiving, light. Here also there is a cornea; behind that is a lens; behind that some glassy jelly corresponding to our vitreous humor; then there is a retina; then a mirror; then a dead black layer. It is the retina that generates the phosphorescent light; the mirror behind throws the light forward, the black or pigment layer behind the retina serving to protect the tissues from the effect of the glare of light. The light passing forward is concentrated by the double lens constituted by the vitreous humor and the lens proper, and so leaves the eye properly focussed. For what range? The eye is set in the *side* of a little cup-like depression in the skin. This cup is also lined with a mirror-like layer of cells so set that when the rays from the eye fall upon it after crossing the cavity of the cup, they are reflected straight out of the mouth of it. The pencil shaft of light is thus transformed into a diffused glow.

It is probable that our own eye is also slightly phosphorescent. And behind the retina we have a layer of pigmented cells corresponding to the protective layer of the eye of this cuttle fish. Whether the human eye will ever learn to illuminate objects in the dark

and then look at them by the light it has itself supplied, is a question we leave to the biologists. STUDENT

Brownian Movement

A BOTANIST, Robert Brown, in 1827 very securely tied his immortality to the motion of particles in liquids. He found that pollen grains ceaselessly oscillated when suspended in water. Then he found that particles of many other kinds did the same.

He left the matter at that and it has stayed pretty much at that until fairly lately. But now some more investigative work has been done; the motions of particles have been photographed and reproduced cinematographically.

The most significant fact is that the smaller the particles the faster the motion. At the limit of microscopic vision, where the size is one millionth of a meter—a meter being about 39 inches—the actual oscillations are far too fast for visibility and the gross motion from place to place in the liquid is alone measurable. Such small particles fly about in a non-viscous liquid as do molecules of gas and exert a pressure on the walls of the vessel by their bombardment of it. Boiling does not stop them, nor a temperature of 0° C. but the very extreme cold probably does. Viscidity of the liquid also slackens them.

We have not yet exact data to bring magnitude of particle into relation with speed of oscillation; we only know that the smaller the one the faster the other. We want to know whether at one-molecule size the oscillations are equal in rapidity to the vibrations of light, and if not, how fast? and then what are the rates of oscillations of electrons—for we can hardly doubt that they too oscillate as well as move about. We should then like to know the rate of Brownian oscillations in the molecules in *solid* matter, and so on.

The "absolute zero" of temperature, minus 273° C., is threatened of late. It is the temperature at which all molecular movement is supposed to cease and matter to be "dead." But what of the electrons? Why should they condescend to notice any such temperature? What would be the temperature which they *would* acknowledge as one at which a cessation of motion would be discreet? And then the smaller units of which they are doubtless composed? Cold could never be more than the cessation of motion from without inward, never its total cessation while the universe lasts. The ceasing of motion would be the ceasing of any property of matter, the ceasing of being of matter, the ceasing of the objective. Cosmic consciousness would have ceased its causative and sustaining functions and entered into itself. That is the Vedāntic conception of Nirvāna.

It would seem probable that we must look in, in to the finer and finer elements whose correlations constitute matter as we know it, for the cause of Brownian movements. What finally emerges into visibility as Brownian movement may be a sort of resultant or compromise of all the finer motions that have come together in the compounding. STUDENT

President Roosevelt on Forest Conservation

IN his executive appeal to Congress the President said that we owe to our children and our children's children the duty of safeguarding the forests, the nation's chief asset in national resources. It was difficult to have patience with people who, through shortsighted recklessness in the desire to make money, made light of the danger; for, thanks to past recklessness, we had already crossed the verge of a timber famine, and needed all our care to prevent the mischief going further.

The damage done by deforestation in Mediterranean countries of Europe, Asia, and Africa was well known; but the similar damage in Eastern Asia was not so familiar, and he appended to his address some photographs of conditions in China. Here were barren mountains, and gravel and sand-covered plains, following deforestation. Not many centuries ago northern China was one of the most fertile and beautiful spots in the world and was heavily forested, as we know from old records and from the accounts of Marco Polo. As an instance of the change in rivers, may be taken Polo's statement that the Hun Ho was so large and deep that merchants ascended it from the sea with heavily laden boats; today it is simply a broad sandy bed, with shallow rapid currents wandering hither and thither across it, absolutely unnavigable. As long as the forests existed, the plains at the foot of the mountains were among the most fertile on the globe and the whole country was a garden. But not the slightest effort was made to check the cutting or to secure reforestation, and even now the same reckless destruction continues on the little wood that remains. Individual supervision is not adequate to protect the land; state action is needed. Otherwise the naked land will be carved into gullies reaching down to bed rock, and the bottom lands piled up with detritus; and when the soil goes, the men go too. Thus we are actually destroying our own land and our own nation.

The climate in northern China is also changing as a consequence, and the Mongolian desert is extending eastward. The forests formerly absorbed the heat of the sun and sent up currents of cool air which brought the clouds lower and forced them to precipitate; but now the barren ground sends up currents of heated air which drive away the clouds. The rivers, instead of being deep and constant, are now broad shallow beds in which the muddy water slowly trickles in the dry season, and down which in the wet season disastrous floods pour, tearing huge chasms and burying the fertile soil which has taken ages to form. And what has happened in North China has happened elsewhere under the same conditions and will inevitably happen in America if the shortsighted greed of individuals is allowed to have control.

The above points a moral in economics. Economics is based on the so-called law of supply and demand, which again is grounded on the assumption that each individual will

inevitably act in his own selfish interest. That such a motive has actually inspired a great deal of our activity, and that it is capable of generating a certain kind of energy, is undeniable; but the experience of older nations as quoted, and our tardy discoveries in our own case, prove that such a system is not stable

Lomaland Photo. and Engraving Dept.

BROOK IN THE ENVIRONS OF
HELSINGBORG, SWEDEN

HERE Wisdom might resort, and here Remorse;
Here too the love-lorn Man who, sick in soul
And of this busy human heart aware,
Worships the spirit of unconscious life
In tree or wild-flower. Gentle Lunatic!
If so he might not wholly cease to be,
He would far rather not be that he is;
But would be something that he knows not of,
In winds or waters, or among the rocks!

—Coleridge

and that the energy liberated thereby is of the self-destructive kind.

In truth the science of economics that is based on such an assumption as the persistence of human selfishness is a false science based on dogma. If we assume that self interest is the ruling motive, then the science of economics becomes the science of how best to prevent the evil consequences. If the people

are to rule themselves, they must manifest in themselves those powers which make for continuance and harmony, for these powers alone can bring peace and happiness, and selfishness and heedlessness can bring nothing but destruction. The President's "State" or "Nation" is another name for the "people" considered as a collective unit. For minds accustomed to think in ordinary channels this will be a mere abstraction; but for Theosophy it has a definite meaning. The people, collectively considered, is an actual Being, a real entity, having its own life and existence. It is embodied in the people as a whole. It constitutes a kind of collective Will and Intelligence, a kind of Over-Man. Acting under its inspiration, a man will act, not in his own personal interest, but in that of the people; he will be moved to do things for the advantage of other people and future generations. Thus the realization of our unity means the actual growing up in us of a sense that we actually are a unit.

When we have individual men and women who feel in themselves the consciousness of a larger life, beyond their narrow self-interest, and who find their joy in obeying its promptings, then we shall have people fit to govern, fit to constitute a State or Nation. It will not then be necessary to make laws to compel them to do what will then be an instinct for them. As things are at present, however, many people are only capable of responding to the grosser impulses arising from the selfish nature, and they act shortsightedly in their supposed interest. Theosophy teaches us to refine and enlarge our nature, so that we may become responsive to the finer and higher impulses that proceed from our better nature and may acquire a sense of our true interests and become filled with the inspiration to perform acts that will be serviceable to all men and to posterity. Such a person as that — and there are some — will conserve forests naturally; he will be gentle, wise, and orderly in all that he does; his touch will be a touch of life, causing life to spring up wherever he passes. No longer will he sweep through the land like a plague, leaving devastation behind him to show where he has been. He will be kind to his fellow man, to his beast, and to his trees; he will help Nature, instead of despoiling her. By the light of his new wisdom, springing from a purified heart, he will discover new methods of getting along with the animals and plants without shooting and burning; for it is only ignorance that causes us to think that our interests demand the sacrifice of our younger brothers.

But what is most needed in our people is principles of the active do-something kind; for energetic mischief fattens on the inactivity of the lazy "good" folk. We have a few people who are *both* principled and energetic; but crowds who are *either* principled *or* energetic. People should realize that principles are not meant to stick in one's cap or oil the road from earth to heaven, but that principles should be made to *count* for all they are worth. T.

Students'

Path

DAYBREAK

DAY had awakened all things that be,
 The lark, and the thrush, and the swallow free,
 And the milkmaid's song, and the mower's scythe,
 And the matin bell and the mountain bee;
 Fireflies were quenched on the dewy corn,
 Glow worms went out, on the rivers brim,
 Like lamps which a student forgets to trim;
 The beetle forgot to wind his horn,
 The crickets were still in the meadow and hill;
 Like a flock of rooks at a farmer's gun,
 Night's dreams and terrors, every one,
 Fled from the brains which are their prey,
 From the lamp's death to the morning day.

—Percy Bysshe Shelley

The Progressive West

IN studying the various races of humanity geographically scattered over the earth, we find they vary very greatly in intelligence and general advancement. At one extreme we have the Australian bushman or the African pigmy. At the other we have the product of our American or European universities. Between these extremes the range is so wide and varied, covering all the nations and peoples of the earth, that it would appear at first sight difficult to mark the chain of progress in any definite way over the geographical surface of the globe.

And yet there is one general idea which careful examination makes clear. To give this its full value, we must not only study both modern and ancient history, but also modern and ancient geography and archaeology. And we are helped very much by a careful reading of the works of H. P. Blavatsky, as these have brought to the light of day so much of the forgotten lore of the past.

The general idea, briefly stated, is that the wave of progressive life-force, or evolutionary advancement in human progress, flows around the globe in the opposite direction to the earth's revolution on its axis; that is, while the earth revolves from West to East, the progress of human evolution is from East to West. Its path is in the same direction as that of noonday upon the revolving globe.

Let us begin with China. Before us is a country which includes within its dependencies 400 millions of human beings. They belong to the Mongol or Turanian race, and are the remnants of the Atlanteans, or Fourth Race of humanity, the glory of which departed more than a million years ago. The origin of their customs and language, and the history of their forgotten empires, are lost in the night of time. As a people they are almost ignorant of the ideas of the Western nations. In most of the excellent qualities, however, which make up a worthy human character, they are not wanting. They are patient under suffering, honorable in business transactions, and devoted to the tenets of their own religion, which has many lofty and beautiful ideals. Hidden in the heart of this gigantic empire, we are assured, there is still a race of men who carry with them the impress of the finest culture and past refinement of this ancient race. Of noble stature and great learning of the true kind, they may still come forward as a potent force in the regeneration of the people of the Chinese race, before the disappearance of the latter from the face of the earth.

Traveling with the sun we next see the mysterious

mountains and deserts of Central Asia. Once a populous and cultivated land, the seat of long forgotten and glorious empires, it was afterwards a sea, and then a desert. This comparatively unknown country should be sacred to the nations of the West, for somewhere within it, was the birthplace of the Aryan race which now overspreads Europe and America. The floods which destroyed the mainland of ancient Atlantis, left a seed or remnant of its wisest men who settled here and gradually grew and expanded into a new race of human beings of which we are the descendants. As they increased their migrations extended to the South West and the North West, in two separate streams. In the south they laid the foundation of the ancient Hindû and Persian empires. The glories of Babylon and Assyria were in their line of progress. The Greeks destroyed the Persians, and were in their turn succeeded by the Romans. The empire of the latter came to an end through the invasion of the Gothic Aryans of Northern Europe.

And so as the deserts of Central Asia disappear from view, we see before us the remains of all these nations of the past. Mounds of earth and broken bricks show us the sites of the gorgeous cities of Assyria and Babylon, once beautiful with hanging gardens and gilded temples. Around them we see the ruined water-courses which once made fruitful what is now a desert. Modern Persia, too, is but a feeble reminder of a once heroic people.

As the earth rolls on, we see the Acropolis of Athens, a mournful picture of the beautiful buildings which adorned it, perfect in their symmetry of form and in their lines of aesthetic proportion.

After a while we catch sight of Rome, the last great metropolis of the ancient world. On its site have been piled one city after another, each built upon the ruins of the last. Its greatness has disappeared with the national decadence which brought it to destruction.

To the north we see the ancient homes of the Gothic Aryans along the shores of the Baltic, and the great rivers of Northern Europe. A brave and hardy race, and not contaminated with the luxury and profligacy of the Romance peoples, they brought about the destruction of the Roman Empire fifteen centuries ago, and then mingling with the conquered nations and pressing westward they founded the nations of Western Europe. The tide of progress rolled westward with the sun.

From our position of advantage, looking over the continent of Europe, we recognize that we have before us the theater of all known history up to the end of the 15th century. The Greek and Roman historians knew very little, comparatively speaking, about the Western shores of Europe. A few traditions remain of Phœnician expeditions through the pillars of Hercules, now Gibraltar, but the Roman world ended on the shores of the Atlantic Ocean. Then the breaking up of the Roman empire was followed by the creation of kingdoms whose story forms the world-history through the dark times of the middle ages. Much of the ancient culture had departed, and the history of a thousand years is little but that of the wars of the petty sovereigns whose principal ambition was to found a world-wide empire, which might recall those of Greece and Rome. Each of these kingdoms has at one time or another taken the principal part in the drama. Germany, Holland, France, and Spain, have each come forward at different times as the foremost nation. All of them, separated only by rivers or mountain chains, have been subject to conquest and reconquest by their neighbors. For a thousand years the progress westward was stayed by the Atlantic shore line, in the ignorance of the then world that there was anything beyond it.

One nation, however, was comparatively free from these troubles, on account of her isolated position. As we look down upon the British Isles, we see the "narrow streak of silver sea" which was her safeguard.

Thus the tide Westward beat upon the shores of the Atlantic for centuries. The most powerful na-

tions of the world were on that seaboard. And so at last the time came four centuries ago when the shore of the vast unknown ocean could no longer stay the impulse. We can imagine the oft-told tale of the voyages of the early explorers who took their lives in their hands, the bravest and best of the nation, whether of Spain, or Holland, or England, pressing ever Westward, all unconscious of the mighty urge behind them. Some were influenced by a thirst for fame and gold, others by a hunger for freedom and peace. Whatever their motive they were the pioneers in the occupation of the great unexplored land of the West.

As the globe rolls on, the shores of America come into view, the land which welcomed the Pilgrim Fathers, and the Spanish adventurers of early times. In the north, the former laid the foundation of the States, which continued the English customs of law, and the language, which for so many centuries had been evolving in the little island on the West of Europe. In the South, the pioneer bands of Spain subjugated the natives by measures which have led to the extinction of her empire.

After a brief stay upon the Eastern coast of the new continent the march farther west began once more. As the lakes and rivers and plains of the United States pass before us, we can picture the scenes of this comparatively modern history. We see the little outpost forts, the farming camps, and the mining camps, become great cities with universities and stately buildings. We see the states of the Louisiana Purchase become a part of the Union, and spring into prosperity and opulence. We see the expedition of Lewis and Clark strike far out still further Westward, until they reach the limiting shores of the great Western ocean. We see the Western states arise from the desert soil. And lastly, upon the shores of the Pacific itself, we see a country, a century ago comparatively unknown, now covered with fruitful orchards and farms which have rapidly arisen from a smiling wilderness. As if by magic great cities have grown here within the memory of living men. In no portion of the world is there a more rapid development of natural resources, or a greater yearly increase of population. Miles of sunlit desert are continually being turned into productive farms, as the engineering skill of the age is being brought to bear upon them. Everywhere are signs of increase and progress.

And now as we look down upon the shores of the great Pacific Ocean, we naturally remember that we began our outlook from the other side, on the coast of old China. From the oldest of ancient lands we have passed round to the newest of the new.

There is an ancient symbol which forms part of the seal of the Theosophical Society. It represents a serpent bent round in a circle with its tail in its mouth. It has many significations, but we may perhaps not inaptly employ it here to represent the march round the globe of evolving humanity. The tail of the serpent is China, the head of it the Western States of America. They meet in the middle of the Pacific Ocean.

We may naturally ask ourselves, "What is to be the next step in this great progress?" To this, of course, we can give no definite answer, as it is mercifully hidden from us by the veil of the future. Reasoning from analogy, however, we may confidently conclude that a great world-impulse like this, cannot be stayed in its mighty course. The Western States of America are increasing in population at a far greater rate than any other portion of the globe. Whilst European nations remain stationary or decline in numbers here there is a continual increase. Millions of people have come out West to better their conditions, and have prospered. Unconsciously they have obeyed the law of the world's advancing life-wave.

And in this connexion we cannot forget that the Headquarters of the Theosophical Movement has been established upon these shores. The object of that Movement is the production of a New Order of the Ages, and it represents the very essence of

all the ideas of progressive growth which have lain back of every movement of true reform. Its position and the objects which it has in view are of significance for the future well-being of all the peoples of the earth. Under its influence and by the wise guidance of its Leader, Katherine Tingley, a new race of humanity is being evolved from the ideal into the objective form and already the results are being felt and acknowledged by thousands of men and women in every country which has come under its influence.

It would seem hardly possible to over-estimate the importance of this great law of progress westward, which has been shown to be woven into the very heart of the world-life, and to have run its course through untold ages. The geography and history of all time are but fragmentary indications of the great unknown force which guides it. But careful students of the writings of H. P. Blavatsky will find therein much light upon the question.

One thing is very clear. Geographically no further progress is at present possible by a further extension westward. The pioneers of humanity have, for the time, reached their territorial limit. And yet such a force as this cannot be stayed, and must therefore take on another form. The work of the earlier settlers has but paved the way for that which is to be. In this favored clime must be gradually gathered many of the most advanced souls of humanity. On the shores of the Pacific and restrained by its boundary, will assemble those higher potencies which make for the true evolution of the Aryan race. New conditions of life will unfold themselves which will produce a nobler manhood and bring a great promise for the future. Schools of learning and universities will arise which will be founded on new and progressive lines. The fountain-head of the world's wisdom and knowledge will gradually focus itself on this Western land. C. W.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

✽

Question Can you explain the saying "Whoso doeth the will of the Father shall know of the Doctrine"? It would appear to mean that right conduct and a high standard of living are essential before one can really understand the truth about things; and I believe this is also the teaching of Theosophy. But why? What has morality to do with perceptive intellect?

Answer We have grown up unbalanced for so many generations, that we are all at sea about most vital questions. If intellect, imagination, intuition, and so on, were different entities huddled together into one body, and it concerned each one to fight for best place, we might doubtless play ducks and drakes in one department and never expect to pay the piper in any other. We might sin as much as we pleased, and lose no intellectual light; or we might let the mind go to seed, and fear no ethical deterioration. But the fact is that they are not independent in that way, but instruments and organs for one being. We ought to hold them for nothing more than the instruments of the soul, of which they are functions.

The soul is within, and contacts the world through all these. Heart and mind and imagination are its gateways into life; and whatever is allowed to enter in those gateways, either drives the soul from its shining into this world, or else attracts it and draws it forth. You cannot be wounded in one part of your body and isolate the pain in that part; but must feel it all over, all the members are concerned. Whatever hurts one part hurts the whole and all other parts as well, and this is a universal axiom, in spite of appearances.

To think that genius can live apart from morality is a grand mistake; although at times we see the two so far separated, and genius dwelling in unclean habitations. But those habitations were not always unclean. Great cleanliness was there formerly, and the earnest striving which invoked genius; the soul could never have shed such fire into the man's mind if it had been otherwise. But now the light is destined to fade away. He has had his grand opportunity, for which he worked long and well, and has made poor use of it: now, before it shall come again, lives of purification and lives more of effort must be spent.

Whoso doeth not the will, knoweth not the doctrine. Because you may say that, from the standpoint of men, doctrine is something that is taught in books or by word of mouth, you could clap on an "I believe" before it, and make it a creed; you could expound it and expatiate upon it; you could trace it to this source or that, build theories upon it to last in the discussion until Doomsday; be very learned about it; amputate yourself and co-believers from the rest of humanity on the strength of it, and so on. For men look at things in a queer, indirect sort of way; all upside down and mirrored in the brain-mind. You do not yourself see anything really, but just your brain-mind's version of it. That reports everything to you, and has such a strong bias to begin with, that you might almost say it *cannot* tell the exact truth; certainly it will not, as a rule, unless firm guard is kept upon it.

But the Gods—or whoever see directly, having wisdom; whoever have done the will and know the doctrine—things stand revealed in another light for them; for them there is no "I believe" about it. Universal workings are directly before their eyes; they know, because they are the truth. You could not say accurately of them, that they *believed* in Karma, for example; for such belief as theirs must mean, to see the universe impelled mightily onward, and to be themselves impelling it; to see the wrongdoer hedged about and driven irresistibly toward that kind of life which at last it is imperative all men should lead; before the action seed has reached the ground in its falling, to see the effect spring forth and burst into bloom.

To know the doctrine so, would be to hear the heart-beat of the suns, the systole and diastole of the spiritual sun. That is to say, the Doctrine itself is a real thing and vast perception, not something that can be treasured in the brain, and with no being beyond that.

Any fool can believe in this or that, whatever he pleases. You can formulate it into a creed for him, and he can go to the church where they talk about it, and quarrel with whomsoever may be wearing a different cut of creed-jacket. Many can go no further; advance arguments for their belief, and perceive them as a system with extreme skill and precision: and all they believe may be as true, as representative of what is actually *the true*, as words and thoughts can be made to be; and yet still not possessing the Doctrine.

Ultimately seeing and doing fade into each other and become the one thing, which is right action or right living. Perhaps neither path, if followed alone, will bring a man to this goal; perhaps it would be better to say

that neither path, followed for one's own sake, will do it. There is abundant energy in the world, and men are already doing work enough almost to alter the shape of the globe; but it is neither energy, nor industry, nor persistence that will heal up the wounds of the ages. The energy must be *used*, and not squandered as it is now; and we need to see in which direction lies our true goal. If the vast force now wasted on money-getting were turned to sound uses, it is not likely we should have to wait long for some kind of millenium.

Work can only be rightly done, and energy only rightly expended, "as a sacrifice to the Supreme Spirit": they flow rightly then, in the channel appropriate for them, and go to carry on the business of the manifested universes. But deflect them toward self, and it is no legitimate universal work that is being carried on; rather, a wrong current has been established, a blockade set up; nothing has been accomplished but congestion and confusion, and infinite tumult and delay.

And then there is all that perception, unbacked by will and divorced from energy, which makes so many men and women brilliant and futile. This is no asset either, but a hindrance and delusion. No doubt they came by it through cultivating the arts as an indulgence, for the pleasure they might get out of them, till the arts and their aftermath became to them a kind of vice. They are off the track, and in no way furthering evolution. Let them come back to action; let them chain themselves down to hard work; let them do service, or they shall be lost. It is not that they must seek to become brutes and laboring oxen; but certainly servants of the world.

There lies the secret. Do service; put aside self and do service; and you shall learn how to serve, the one thing that it is imperative you should know. You shall learn more and more wisdom in service, how to make your service of more and more avail. So shall we arrive at the condition of Gods, great Servants or Masters of the World. M.

Question Do you think that the Theosophical ideas will ever be accepted by the mass of the people?

Answer Why not, one may ask; and doubtless the assertion would be made: They are too abstruse. Let us see. Universal Brotherhood; Karma, that a man reaps what he sows; Reincarnation, that he comes back to earth many times to reap the harvest of past deeds; the dual nature of man, that he has a higher nature and a lower nature, that this higher nature is divine, the lower, evil; that the higher is his true self, and that by following the best that is in him, by doing his work in the world as a man should he can control and subjugate the lower nature—what is there in all this so abstruse? It is plain, practical commonsense such as the *masses* can understand. But what of Reincarnation, you may ask; this is surely new? Yes, to our ears; we have forgotten it; yet not to the understanding of most of us.

Will the masses ever accept Theosophy? Look at the changes that have taken place in the thought of the world since H. P. Blavatsky taught again these world-old truths. The masses are hungry and thirsty for the truths of Life. Theosophy offers these again to the world, and one day not long hence the whole world will turn to them. STUDENT

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

Eternal Life

IF we attempt to realize what is the meaning of the word Life, if we try to define it to ourselves, even with that wordless thought which is often clearer to us than the idea expressed in words, we are met at the outset with a strange difficulty. There is no variation which will give us a sidelight upon it. It does not help us to change the word, and to think of "*existence*" or of "*being*." We return at once to the word "*life*," as the better expression. What is life? What is the life of everything that exists? Whence does it come? How long does it endure?

The student of the Secret Doctrine of the ancient sages knows that these questions have been answered millenniums ago, by those who are well qualified to inform their less instructed brothers, pilgrims on the road to knowledge. This body of truth, the foundation of all the variant historical world-religions, has come again to our knowledge in its own cyclic period, at the close of the 19th century.

The Secret Doctrine declares that from the one Life or Deity have sprung all those myriads of beings which make up the sum total of the existing universe. It also affirms that the world is suspended in an ocean of life which pervades and causes to exist, not only the animal and vegetable kingdoms, but also the minerals, liquids, and gases, which form the crust of the earth, the heat which warms it, the light which enables us to see it, and the lightning of the storm.

The mysterious essence which is the cause of the appearance of everything which we know or can think of, is the producer of the life of the universe. The teaching further is, that although it may appear in many forms, yet there is only one life-power, and that this is common to all creation. In essence, then, the life of a man is the same as that of everything with which he comes into daily contact.

Thus there are countless myriads of lives, numberless as the sands of the sea-shore. They pass through every sort of experience on an eternal journey of progress. Dissolved from one form, they appear a step higher in countless variations. Acting and interacting, now dispersed, now segregated, they pass onwards and upwards.

Modern science has lately been much interested in the discovery of evidences that there

MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

exists a mysterious life and consciousness in the matter which was hitherto supposed to be without life, dead, totally inanimate. As time goes on and we dip still further into the knowledge of mineral nature, no doubt these surprising discoveries will continue. It has become known for instance that metals can suffer from fatigue and become nearly useless until they have had some rest. A razor that has been constantly used, is much improved by being laid aside for a few days. Every metal has its likes and dislikes and its individual characteristics. It has a color of its own, crystallizes in a special way, melts at its own given temperature, unites with some other metals and rejects the rest, dissolves in certain liquids and not in others, can be hammered or drawn out to suit its own temperament.

What is the essential motor force which thus variously manifested, lies behind and gives effect to these separate individualities, to these likes and dislikes of the mineral world? Is it not the life-power which has been the cause of their manifestation and has called them into existence?

From the lives of the mineral kingdom, by passing through an infinitude of delicate gradations, are built up the lives of the plants. From the lichen which grows upon dead oak-trees to the sensitive plant which will recoil at the slightest touch, or the creeping vine which stretches out a tendril towards the support which it somehow perceives to be near it, all the plant life of the world is built up from the minerals below it.

Passing onwards, the lives which have passed through the vegetable stage become still more refined. They form the basis of that kind of life which we know as animal life, when the outer form presents certain characteristics of segregated and united action. The grass of the field becomes food for cattle. The tiny lives which make up the fruits and the roots and the herbage reappear in the animal. From the apparently senseless oyster to the highly intelligent horse, dog, or elephant, there

are endless gradations upwards.

Next there is man. Where does he come in? If his animal body is dissected, barely a trifling difference from the bodies of some of the higher animals can be detected. Brain, blood, bones, nerves, and the physical organs generally are apparently identical in composition, use, and function. Where does the difference come in? What is the next step taken by the tiny lives in the march upwards? What more can we see? *Nothing*, with the physical eyes. The body of man is the most highly evolved *visible* matter on the planet.

Here then we have a climax which is worthy of our serious investigation.

The study of Theosophy explains how every man can do this for himself. It teaches us to look towards the invisible, to recognize that visible matter is but an outer form built around that which no physical eye can see, and that by our inner senses we can discern further steps in the eternal ascent.

The power to do this rests with man alone. Endowed with *self-consciousness*, he is able to investigate everything within his own nature. His intelligence makes him the connecting link between visible and invisible creation.

To understand this completely we must realize that man himself, the self-conscious higher Ego, dwelling in the body, is of another order of beings than the form-producing life which animates the body which it occupies. Descending from the realms of the divine it enters the human body to carry on the great duty of elevating the animal man to the status of divinity. By the power of mind, and by self-devised action induced by its own free-will, it performs its mighty task.

Thus matter is refined through an endless series of existences or life-forms on its long journey from cold inertness to the stage which approaches divinity. And man stands at the crucial point of the ascent as a responsible agent of the creative life-force.

In the broadest sense, therefore, life — the One Life — is coeval with the universe itself, and it is the active agent in its expression. It is that which underlies existence of any kind, from that of the pebble on the sea-shore to that of the greatest archangel.

But some may say: "This may be all true, but how about my life?" The reply is, that no man has any separate life from his

(CONCLUDED ON PAGE 11)

THE THEOSOPHICAL ADDRESS AT ISIS THEATER

LAST Sunday evening Mr. Kenneth Morris lectured at Isis Theater at the meeting of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, upon "The Living Universe." Human life, he said, is a thousand times richer than we have been led to suppose. We go our ways shut in by interests, desires and anxieties, arising from some center within ourselves; our own minds are exuding clouds upon clouds about us, which darken the whole world. We fear to stop for a moment lest someone else should get ahead of us. We are in dread of other people, of events, of everything; we are hypnotized by our personalities, and dare not look up at the great life which we share in; we call ourselves miserable sinners, and live well down to the name.

The speaker contrasted this with the universe as it appeared to children, saying that it was because we were allowed to grow up with no high ideal of manhood, that this gray sordidness had come to surround all our thought and feeling. But, he said, when we were children we knew better. We had some gleams then, of a brighter and more glorious kind of life. It was as we came out from childhood into youth that the golden imagination faded away. It was then that we were bereft of all heroism, of chivalry, and magnificence. Life, it seemed to us, was to be all monotone and drab, a time at the best that was to be got through with as much enjoyment as might be possible under the circumstances, and very adverse circumstances they were.

It is a mistake, he said, to laugh at the sorrows of children and think them trivial besides our own. But there is also no joy in ordinary adult life like the joy of childhood. That is because the world is alive; alive and wise in every detail of it for the child. This means that you cannot turn anywhere without coming upon forces, influences, powers, romances, histories, adventures, magic, beneficence, powerful allies: that humanity is still not fallen, and that the golden age is not a myth.

Continuing, he said that the universe has not changed since we were children. It is the same now as it was then, every bit as potent, as glamorous, as golden, as alive. The change has all taken place within ourselves, through passion, ambition, self-seeking.

The explanation given by the speaker of the change that takes place, causing us to lose touch with the living universe, is that there exist two selves with us, the personal and the divine, and it is only given to the latter to enter into the living universe and the Kingdom of Heaven. The Kingdom of Heaven is to come upon earth, upon this very earth we so ignobly now inhabit. We can only bring it back to earth and realize that the universe is a living universe by realizing the divinity within ourselves.

Eternal Life

(CONCLUDED FROM PAGE 10)

fellows. The forces of life may indeed pulse through one man with greater or lesser intensity than through another, but it is all one

life. In these latter days men are beginning to discover that much which they once thought belonged to themselves personally is really common property. Not only the life of the world, but its thoughts, its aspirations, are in reality all one. Each individual may be one facet of the general whole—one apparently separate and limited expression of it—but in reality there is no separation.

For each man, however, there is a permanent spiritual individuality which lives again life after life. Every one of us has a duty to perform in the world because we are all parts of one consistent whole. If we wish for a happy and peaceful permanent existence, we must march with the ordered progress of the universe, and in harmony with the Law of that life which we all share. This Law is one of continuous progress. He who attempts to

working out some definite design. One life on earth, we know, would never accomplish this. It is barely enough to impress upon our souls some little fragment of eternal truth. We make mistakes, and we suffer through the action of the Great Law. Well is it for us if we learn our lesson and let that suffice. We may be vastly helped in doing this if we pause in our mad rush after personal ends, and realize the object of life and the meaning of its lessons.

Theosophy is therefore a bringer of good tidings to all. It brings a promise of eternal life to him who will accept the conditions laid down for his guidance through its laws.

As long as one tie remains which calls for his individual help and love, he will always, to all eternity, be able to give it.

And if in the unthinkable future the world

Lomaland Photo. and Engraving Dept.

THE ALEXANDRIA-WASHINGTON LODGE ROOM

AS WHEN GEORGE WASHINGTON WAS W. M.

break this Law by the persistent striving after selfish and personal ends is in danger of losing contact with the Divinity within him, and may become a lost soul. This was also the teaching of Jesus, for he said, "What shall it profit a man if he gain the whole world and lose his own soul."

In regard to a future life, there are a few considerations which are worthy of attention. We are all conscious that not one of us remains the same for an hour at a time. We are all vastly different from what we were years ago, and as the days and years roll on we shall continue to change. Very few of us pass a single day without some experience which afterwards we would not willingly have otherwise. There is surely nothing, then, in our outer life which we would wish preserved if the forces of progress demand a change. It is clear that we must continue to advance into new individual experience. None of us have reached a knowledge of all truth, or are perfect, and yet the goal before us is the building up of the perfect man. Through the action of the Law, and through many births, we shall march on the royal road which is the destiny of the race. The eternal urge is behind us all the time, and our days and our years and the sum total of our life experiences are

is at last resolved into the Great Eternal Cause which brought it forth, he will pass with all the rest into the full knowledge of the One Eternal Life.

STUDENT

Chinese Reading Western Romances

THE many prophecies which one hears as to what course the future history of nations is likely to take are interesting; the actual course of events is another matter altogether. Anyone could prophesy future history correctly, if he had at his disposal all the data together with a judgment capable of estimating their effect; failing these, he can only prophesy incorrectly; nobody has these things, therefore nobody prophesies correctly.

Who would ever have predicted such a state of affairs as the following? In China there is a great interest manifested for translated Western novels. Historical romances of the Dumas type and tales of adventure like Jules Verne's are the rage. *Robinson Crusoe* and *The Conquest of Mexico*, are mentioned among other high-class books; and among inferior literature *Sherlock Holmes* and *Looking Backward* are enumerated. Even a Chinese romance on Western lines of complex character-development, is mentioned. T.

Modern Turkey

MR. EDWARD OZMUN, United States Consul-general at Constantinople, recently paid a visit to Point Loma, at the International Headquarters of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, and during his stay he was invited by Katherine Tingley to deliver a public lecture in her Isis Theater in San Diego, such as he had been giving in the chief cities of the country, upon the Consular Service of the United States and its commercial importance. On December 28, a most attentive audience listened to an eloquent treatment of a theme which at first sight seemed to offer little but dry facts and statistics.

The speaker commenced by saying he was greatly struck by the rich endowment of nature in the wonderful country around San Diego. He had been making two kinds of addresses, one to commercial people and one to university students in order to interest them in the foreign service and induce young men of intelligence to take up the honorable, interesting, and patriotic career of Consul as a life-work. He said:

San Diego was not on my itinerary. . . . But I came down here for another purpose, and then I was asked to lecture and was offered for my use this magnificent theater—I think one of the most beautiful I know of in the United States; I do not know of one that is so artistic as this, and I have seen a great many,—and when I was offered the free use of this theater by your bounteous and patriotic citizen, Mrs. Katherine Tingley, I felt it was a great honor to meet you this way. It seems to me that you have special advantages here not only in soil and climate, but you have educational advantages right here; and that is significant. With your other advantages it is the very place where education should be developed to its highest point because nature in her provision has poured out her richness to a far greater extent here than in many places, and that is sufficient to call forth the noblest intellectual efforts on the part of anyone.

Mr. Ozmun then gave a brief sketch of the conditions of foreign trade, and pointed out that more than four-fifths of the exports from the United States consist of unmanufactured material. Much of this could be manufactured at home, thus giving more employment. He spoke of the changes in modern times produced by new economic conditions, cheap manufactures and quick transport, so that everybody in the great family of nations is touching elbows; then he dealt at some length with the consular service.

The audience showed close attention to Mr. Ozmun's description of his observations during the recent astonishing revolution in Turkey. He said the revolution of the 24th of last July was in some respects the most marvelous that had ever occurred in history, because of the self-abnegation of the people, their self-control, absence of vindictiveness, lack of the

spirit of revenge, and the practical absence of bloodshed. A Turkish constitution had been established in 1876 but it was never carried out until last year. Turkey had seemed to be going down an inclined plane, the people were hopeless, and even when the constitution was re-promulgated in July no one believed it was serious until the unfortunate political prisoners were released. Then there was great rejoicing, for it was clear that something was happening.

The effect of the revolution was remark-

in trade or gain, and he is polite and considerate; he is not very energetic. The accounts of Turkish intolerance in religion are grossly exaggerated. For instance, the great bronze inscription from the Bible has never been removed from the mosque of Saint Sophia during all these centuries since the building was a church. The Mohammedans of course believe in Christ, Elijah, etc., as great prophets and teachers, but practically they lay the greatest stress upon the splendid code of morals promulgated by Mohammed. The Turks, Armenians, and Greeks are really trying to sink their religious differences. Mr. Ozmun thus concluded:

The various religious bodies said, "We must all stand together in this brotherhood of man we are bringing out of this despotism." That was an example for us all. If the Turks could do such a thing as that—could say to another man who had a religion different from their own, that as long as they had the same God they were brothers, it seems to me these people were entitled to a respect which should be very great and should never be forgotten.

OBSERVER

National Pledge-Fever

IT is surely a notable sign of the times that the war and revolution rumors everywhere in the air are nevertheless being held in check by an indefinable something, itself part of the unrest, that seems always to stand behind the utterances of even the most fiery. The comity of nations, the idea of international co-operation towards better things, has, it would appear, sub-consciously penetrated the minds and hearts of real leaders of men—those whose influence is silently felt to be paramount. While every new invention, like that of the aeroplane, is often looked at through war-spectacles, is not this but a hypnotic survival of something that is waning? Not that man's irrepressible energy is waning, but that his leaders, learning wisdom, are no longer swayed to the same

dangerous degree by the hydra-headed monster of yellow journalism. So too, the masses of workers are learning wiser ways of attaining legitimate ideals.

Have we not had object lessons, so powerful that the whole world has been touched by them? Lessons that have cost more than lives—the weary unremitting toil of many unrecognized workers for humanity.

The peace settlement on American soil of the Russo-Japanese war, the freeing of Cuba, the amicable settlement between Norway and Sweden, the adjustment of labor troubles there and elsewhere, and so on, illustrate the new spirit. Even in Russia the fire is being controlled.

Are not the nations, unknown to themselves, already pledged to human solidarity, peace, and fraternal progress?

able: he saw an Armenian bishop and a Mohammedan priest embrace in public—an unheard-of sight. There seemed to be something extraordinary in the conduct of this revolution, the blossoming of the flower of liberty. The eloquent public speakers who sprang up everywhere—and public speaking has never been permitted before in Turkey—told the people that liberty was not license, that the higher citizenship demanded things they had never done before, and the people understood and followed them! There were no outrages, no need of police; the people were seemingly raised to a higher plane. The Mohammedans assured the Christians there would be no more massacres, for they were ashamed of the past.

No one has been so much misunderstood as the Turk; he is kind and generous; he is not invariably looking out to get the best of you

Art Music Literature and the Drama

The Middle Way in Shakespearean Interpretation

AN eminent English actress has made a plea for some method of producing Shakespeare's plays that shall be guiltless of the bare simplicity of Elizabethan times as well as of the ultra-extravagance of the modern stage. In *The Theater* she said in a recent article discussing the difficulties and temptations that beset the modern impresario:

The Elizabethan stage was simple, because Elizabethan audiences were simple: they had no prior scenic traditions in their blood, they had no exceptional interest in the shape and architecture of the old Globe Theater, little bluecoat boys were the quite constant and commonplace solace of their eyes. All this, however, does not take away from what is the special praise of the Elizabethan method of representation, namely, its reverence for the text of the author and for the integrity of the play. I suppose it may be conceded that modern Shakespearean productions are frequently overburdened with expensive and distracting exhibitions of the scene-painter's art; that they are sometimes arranged with apparently no other end in view than the exploitation of Mr. Actor-manager This or Miss Star That, and that such planetary influences, fighting in their courses, have not infrequently produced effects very often unintelligible, sometimes even unintelligent; although it is only fair to add that precisely the same effects might conceivably occur among unskilled apostles of the simple school. But is there no middle way?

A way which may satisfy—if not the exponents of these conflicting schools, for I suppose they will never be reconciled—but at least which may satisfy the large mass of the general intelligent public having sympathy with both modes of thought? I think there is. In the first place, is it necessary to preserve for the modern stage every single syllable of the original play in its entirety? Or is it not possible to preserve the entire integrity of its thought, its characterization and its story, while judiciously cutting much of the purely efflorescent in description and expression, for which modern audiences have no instinctive feeling nor desire, and much of those overscrupulous explanations of the minor details in plot, which modern audiences are more or less schooled to understand by imaginative sympathy, and which modern theatrical contrivances do so much to suggest in other ways? It may be said that this has been generally done. Has it? The truth is, that so much of the Shakespearean "arrangement" for the modern stage is put into the hands of the incompetent and unthoughtful people—people having no true dramatist's instinct for the shape and construction of a play at all.

Indeed, very often the cutting process only takes place at a rehearsal, and then depends upon the haphazard interventions of the stage manager, the assistant stage manager, the actor manager—whose simplicity of method should satisfy the Elizabethan school itself—and perhaps those two or three other people, friends or hangers-on of the management, who may be privileged to order lines in or lines out, as best pleases them. The result is sometimes appalling. I remember seeing a performance of *The Tempest* once, in which the crisis of the play was cut out bodily, probably to suit the aesthetic prejudices of some friendly Polonius; and another, of

one of the tragedies, where the line giving consummation to the catastrophe was similarly excised. Let us bring back the ordinary humanity of Shakespeare's characters to the stage, let us present his stories with some semblance of consistent plot, and we may be sure that the sane and healthy instincts of the public will welcome him, whether he be presented in the full panoplied splendors of all the limelights, or in the dim obscurity so dear to the heart of Mr. Poel.

There is a middle way. It has been found by Katherine Tingley, as all who witnessed, understandingly, her production of *Midsum-*

terpretation of Shakespearean characters, nor need we look for the final word to be spoken in the staging of Shakespearean drama until the insights and revelations of Theosophy are become the daily bread of men. STUDENT

The Music of the Future

THE following, by Professor Wylde, MUS.D. of Gresham College (an institution founded in London in 1575) is quoted from a College Lectures report of several years back. It is very Theosophical in tone, and tempts one to turn at once to *The Secret Doctrine* where the subject is also touched upon, but more fully. STUDENT

Music opens up to the faithful student profound depths of unexplored scientific meanings as yet scarcely dreamed of, much less understood, in the vastness of their scope and the subtlety of their occult influence. Quite as much may be learned from the negative as from the affirmative side of any question; hence, finding that other forms of art cannot emulate music in its wonderful susceptibility to reflect personal idiosyncracies, a certain amount of information is obtained which forces the inquiry, "Can music do what other arts fail to perform?"

Passing from the negative on the one side to the affirmative on the other, the conclusion is arrived at that music transcends every other art, not only in the charm of its emotional influence and the immense variety of sentiments to which it appeals, and which it so felicitously depicts, but that it stands as an isolated branch of science in its capacity to represent the mentality of its creator and reflect the most secret things of that creator's heart and mind.

Through all ages, and in all lands, the subtle and penetrating tones of music speak in lines of life-history not to be misunderstood—ever revealing to the mind capable of interpreting the wondrous eloquence of musical tones, what manner of man was he who wrote, and what specialties pervaded the nature of every great musician whose works have descended to posterity.

Truly then may music be considered as one of the most truthful and analytical of all art revelators; as one destined to become the speech of the future, the interpreter of the most secret problems of nature and the powers of the human mind.

Long as the race has known and loved music, keenly as its occult influences have been felt and blindly acknowledged—its profoundest meanings are as yet only just looming up before us in the form of a truly musical science. The music of the future is a vision of harmony and beauty which casts its sunlit radiance in broad and ever-widening lines of light upon the pathway which scientific analysis has yet to read. Assuredly patient research and well-directed study will safely marshal the way to the desired goal. Thus, every new experience of the almost boundless resources of musical art, and every faithful endeavor to master them, will be rewarded. . . . Just as surely may it be expected that *thousands of hidden mental mysteries will be explained, and countless problems of mind and matter—now inexplicable—yield up their solution, beneath an earnest and patient research into the sublime and Occult Principles of Music.*

THE WOLF SUCKLING ROMULUS AND REMUS
BRONZE WORK IN FRONT OF THE CITY HALL, SIENA, ITALY

mer Night's Dream and other Shakespearean dramas recognized. The dramas were cut, but judiciously and reverently, with an eye to preserving absolutely the integrity of the play. There was no star in her student-cast, nor any star-part. Personality was subordinated to the welfare of the whole. The result was unique and wonderful. Above all, there was that mystical touch that only a teacher of Theosophy could give, for only such could fathom the deeper meanings of that old Theosophical playwright, William Shakespeare.

Only a Theosophist can have that grasp of human nature that is needed for the right in-

The Lesson of Response

HOW inevitably does unselfishness awaken beautiful and refining feelings, and the outflow of these emotions from the heart calls forth an echo and response wherever they touch. How glorious it is when people are able to catch the notes wafted to them, and ring out their own exactly true response! We have no words to express these experiences. As love, help, sacrifice are given out, back come gratitude, effort, faithfulness. If not, Nature is somehow cheated of her dues and we feel aggrieved on her behalf. There is a faulty instrument somewhere to be detected, perchance some dreamer slept, or waste, dead matter clogged the path, and so there is a debt to pay.

A royal way of working suggests itself from the consideration of this subject; it is to attain those qualities that will impel others by their awakened feelings to the right action. Who is the royal commander? Is it not one who has no shred of a desire to domineer, but, instead, has conquered the little imps of self-will and laziness in himself? Do not others gather round such leaders with a happy sense of freedom and joy in being directed by them? And is it not true that in women unselfishness and the pursuit of high ideals, purity, and the calm of inward repose, are the adornments that bring out in their brothers true manliness, a desire to use their strength in protection and service, to express their devotion in knightly deeds?

To strike the note that shall arouse the best in another is what brings true joy. We each know within ourselves what strange creatures we are and how many different aspects we have in reserve to show to different people. As in visiting we ring the bell and ask for the one with whom we wish to converse, even so we may approach the strange complexity within each person and call upon that in them which we wish to meet. If we call upon the surface we have no right to expect that anything but the surface will respond; but look-

ing deeper we may meet with an unexpected response. Suffering, misrepresentation, misunderstanding, nobly endured, arouses in others, through the appreciation of such heroism, a desire to help and give that might otherwise have lain dormant.

And this is equally true on the evil side. Hatred awakens revenge and this leads to crime, and there is a tale of woe; while every little slip on the wrong side helps to close up the channels of the heart life for the world.

WE must try to take nature's long view if we would understand her work in its beneficence. Some characters only bring forth their finest flower after great pain. The pain is transient, the flower eternal; and it was the flower that nature wanted to secure. . . . If outer life is monotonous, there is the opportunity to light up this outer life with the radiance of the inner life, with the companionship of the divine. If outer life is painful, it is the opportunity to develop will and endurance.

—Theosophical Manual No. 1

A little note of sarcasm brings pain, sending regret and suffering back to the offender and a withered shrivelled feeling lies in its train. But this chain of feeling is destructive and must die at its own hands, while the feelings that spring from love and mutual helpfulness are unendingly constructive, universal, pure, eternal. Their many-colored threads pass back and forth in action and reaction, to cross and re-cross, binding souls together for their eternal weal and the weal of all mankind. W.

The Women of Burma

THE Bishop [Buddhist] had made an end of his slight luncheon and now looked out over his little congregation of the faithful gathered in the teak meeting house of Myanong. These, with eyes that never wandered from his face, and with minds playing tense and eager for his instruction, sat upon their heels, in the manner of the East, and patiently awaited his pleasure. More women than men were there, that is true, as usually it is true of Buddhist gatherings in Burma, but of men were

thirty or forty, and their pink or orange-colored silk head-coverings and the white jackets and bright skirts of the women gave to the place varied and handsome color. It was, in truth, but a roof and a floor, as is the country custom; yet with the assembly and the yellow-robed Bishop somehow it seemed to lack neither dignity nor worth. The Bishop sat in a little chair at a little table, whereon his followers had served him rice and cakes. He was about seventy, clean shaven and spare, of good features and a grave, kindly, sincere manner, yet bearing himself as one having authority. He now pushed away his plate and saucer and began to speak in slow, measured, even cadences, every sentence apparently well considered, and delivered with neither hesitation nor formality. In the usual Buddhist (Burmese) way he spoke of the common affairs of the every-day life of his people, their family duties, trading, work and homely cares, and about all these he gave wise counsel. Sometimes he introduced humor (of a dry sort, doubtless) into his discourse, and his hearers, men and women sitting there together, would interrupt him with soft laughter, and he himself would pause to chuckle—a feat of which you would hardly have thought him capable. His attire differed in no way from that of the hundreds of other pongyis you see in Burmese towns, but everywhere his manner would have distinguished him.

In all the East, Burma is the only spot in which you could see such a spectacle of men and women gathered on equal terms in a religious or any other assembly. But from the uttermost reaches of the Irrawaddy to Elephant Point, Burma is chiefly an exception to the Orient and filled with strange things. Where else in the East shall you find people that laugh? Or populations that have enough to eat? Or people without castes or crushing traditions? Or such handsome children?

The above, from an article in *Harper's*, written by one who must have been endowed with rather more perception and sympathy than the common traveler, will interest all. The account quoted is written by one who claims to be no philosopher, but an honest observer rather, and has therefore a value far above any that could be written by exponents of a special dogma or some particular creed. It seems a little strange that we should send missionaries to a people so innately and purely religious and whose religious teachers (if the good old Bishop described is a fair pattern), in teaching their people to apply religion to

"their family duties, trading, work, and home-ly cares," might come and dwell among the Occidental peoples with profit to the latter.

The position of women in Burma affords an interesting contrast to conditions in many of the nations of the Far East, and in the following description of their devotion to religious ideals much may, by the Theosophist, be read between the lines. To quote:

If women had the franchise in Burma you should see them holding all the offices, acting as mayors, sheriffs, judges, and, I doubt not, as police likewise; for Burma is possessed by its women, and (whether the facts have relation I know not) it is by all odds the happiest country from Switzerland to New Zealand. Such freedom and independence as the Burmese women have are hardly to be equalled even in the West. In public they appear on equal terms with their husbands; they can get a divorce for the asking; they are not property but partners; they manage their households, finance the family, and do most of the business that is done in Burma by Burmans. So strange that will sound in your ears I know; yet it is perfectly true. In all Burma are very few shops of any kind (government opium dens excepted) that are kept by Burmese men. Cheroot and cigarette making is a great industry, but all the factories I ever saw there were owned and managed by women, and all the workers in them women. Go back to that great bazaar at Mandalay: you find there to sell you goods one hundred women to every Chinaman, and scarcely shall you find a Burmese man. Or at Nyaungu, here on the river, where the Burmese lacquer-work is made so cunningly and handsomely, all the industry is in the hands of women. Except for here and there Chinese and Hindû merchants, the rice crop is financed, managed, and sold by women; and Rangoon is the largest original rice market in the world.

The Burmese woman is clever, witty, well-informed, one of the shrewdest of business persons, usually an excellent housekeeper as well as a good merchant. . . . The Burmese woman not only manages all the material interests of her household but she keeps the Buddhist faith intact. Without her influence it may be doubted if John Burman would care very much. He is too indolent and too fond of his ease in smooth water. But the women are strict in their performance of religious duties; you can see them at all hours praying in the shrines where not often you see the men. If this theory about the women is correct, it is wonderful testimony to their strength of mind, for Buddhism in Burma is rock-ribbed and apparently unassailable; and then, in the last analysis, it must be to the women that we owe the beautiful pagodas, the excellent monasteries and the gemlike shrines that dot this pleasant country. It is not only the huge Shwe Dagon pagoda at Rangoon, nor the Arrakan at Mandalay, that attests the tremendous power of Buddhism, though the gold on the Shwe Dagon be all it is said to be, and though the gifts of the pious at Arrakan pass ready belief. Every town, every village, every hamlet has its reminder of Nirvâna and the way thither. Sometimes every hill shoulder, whichever way you look, bears one; sometimes a village will show literally as many pagodas as houses. Since more merit lies in building new than in repairing old pagodas, and since neglect and the climate have dealt sadly with many, the bright new and forlorn old pagodas often encroach upon one another in the same village; but of that no matter. The pagoda usually contains nothing and shelters nothing. Its one significance is to remind mankind of lofty thoughts and purer ways. The shrines, monasteries, and meeting-places are quite different from the pagoda, though often near at hand. Buddhism is at its best and purest in

Burma; thither Buddhists make pilgrimages from distant lands, and many of the monasteries have good collections of the sacred books and writings of the faith.

Monastic architecture here has the one general plan of stories diminishing one above another until the top is reached in a mere point; but the carvings vary the design, and the richest monasteries have much gold-leaf adornment within. The monastery is a great matter in Burma. As in European countries every young man must undergo military training, so here every young man must pass a certain time in a monastery and even serve as a priest, going about with his one garment of coarse silk and his head closely shaven. Buddhist priests receive no salary, and are supported by the charity and the gifts of the faithful; hence the begging-bowl, an indispensable part of every priest's outfit. The young men are educated in the monasteries; but the girls too have schools, and illiteracy is comparatively rare among the Burmese proper. There was one of the girls' schools at Myanong, as in other towns, but this I remember particularly because of the dignified port of the old schoolmaster as in huge spectacles

Lomaland Photo. and Engraving Dept.

FOUNTAIN IN SPRING GARDEN PARK, HALIFAX, NOVA SCOTIA

he trundled up and down his unwall'd schoolroom. On the floor the little girls knelt in straight rows, each with her text-book before her; and ceaselessly in concert, at the tops of their shrill voices, all recited their lessons. It seemed strange enough, and yet I recalled that I had known something of the kind in a board-school in London. . . .

Destiny, opium imports and foreign domination seem to point to Burmese annihilation, and on the whole it seems a pity.

With this pessimistic reflection the writer concludes. The Theosophist will smile and say, "Well, perhaps not!" STUDENT

Jottings and Dōings

(From a Student's Note-Book)

IT is a woman who has at last succeeded in opening to women students of architecture the *Ecole des Beaux Arts* of Paris—Miss Kellogg, the leading woman architect in New York City, and, a contemporary states, in America. She began her architectural studies when a slip of a girl, under a German tutor, then went to Pratt Institute, then to Paris where she found that being a woman was sufficient to debar her from the benefits of the *Beaux Arts* School. Later, after working in an architect's office, she entered the field on her own account as an architect.

She modestly disclaims credit for having done something a bit unusual and says that her success is entirely due to forgetting that she is a woman and "sticking to her task." For the last decade she has had all the architectural work of the American News Co. under her charge, and has of course a thorough knowledge of the theory of plumbing, heating, ventilation, electricity, and every branch that would be covered by the general term "construction." The *New York World* states:

But very few people who admire the Hall of Records realize that Miss Kellogg had a hand in making full-sized details, from the base moldings to the crown of the roof. She also made all the colored sketches for the interior, that the contractor might know exactly what combination of colors she had in mind. Even the floors she worked out in colors, every line showing the construction and foundation of the design, and the kind of marble to be used. The most important work done on the Hall of Records by Miss Kellogg was the grand staircase, on the drawings of which she spent six months alone. In this time hundreds of full-sized details, showing every turn and twist that this remarkable staircase makes, as well as all the delicate artistic work on the decorative buds and leaves, were made.

"There is no reason in the world why women should not succeed as architects," said Miss Kellogg recently. "One must expect that it will take a little time to gain the confidence of fellow-architects who are men, for the field is a new one to women, but the woman whose work will stand the test will find encouragement on all sides." STUDENT

As a tribute to the value of services rendered by her in connexion with the treaty of Paris between the United States and Spain, a young American woman, Miss Marie McNaughton, has been presented with the diploma and insignia of Officier d'Académie of the Académie Palms, the Department of Public Instruction of France, the donor.

OUT of several hundred applicants a young Eastern woman has been appointed chief nurse in the United States Navy, a position of great responsibility. In America, where the man nurse has long found a place in the established order of things, the appointment of a woman is significant. The present appointee is directress of the work of the entire corps of nurses scattered in marine hospitals along both the Atlantic and Pacific coasts as well as on the Gulf and in case of war it will devolve upon her to outline complete plans for a nursing force at each naval point. The appointment was made at the recommendation of the Naval Medical Board.

IN Munich the sale of the "Christbaume," as the Germans call the Christmas trees, is carried on almost solely by rosy-faced peasant women. They assist in felling the trees in their mountain homes, they cart them to the city, nail them to wooden blocks so that the trees will stand upright on the sidewalks, and when sold deliver them to the homes of the purchasers—tasks demanding tremendous physical endurance, or so it would seem.

OUR YOUNG FOLK

THE NATIONAL MONUMENT, GENEVA, SWITZERLAND

The Pianoforte

SOME of the musical instruments which are played today existed in a crude form many thousands of years ago, as the flute, trumpet, etc.; but the piano which is found in almost every home today is a more recent invention, having been in use only a few hundred years.

In its earliest form the instruments which are now known as pianos were called *claviers*, from *clavis*, which means a key. They were small boxes something like zithers, with a few strings stretched over them, across bridges. These strings were made to sound by plucking them with the fingers or a quill, or by striking them with small wooden hammers.

Later, keys were used connected with pins which struck the strings at various points, producing a greater number of tones than had formerly been possible. Then more strings were added and by the beginning of the 16th century the keyboard had a range of about four octaves. The instrument of this period was called the *clavichord* and became very popular. It could easily be carried under one's arm, having no legs, and when played was placed upon a table. The tone of this little clavichord was so feeble and quivering that it could be heard only within the distance of about a yard, yet because of its sweet and sympathetic qualities it was a favorite instrument of the great master Bach and other noted musicians in Germany.

There were several kinds of clavichord in use at this time, which differed slightly in the details of their construction, and which were given various names in different countries. The one most used in England was called the *virginal* and it is said that Queen Elizabeth and Mary Queen of Scots were skilled performers on this instrument. In France the

IF we were faultless, we should not be so much annoyed by the defects of those with whom we associate. If we were to acknowledge honestly that we have not virtue enough to bear patiently with our neighbor's weaknesses we should show our own imperfection, and this alarms our vanity. We therefore make our weakness pass for strength, elevate it to a virtue and call it zeal; an imaginary and often hypocritical zeal. For is it not surprising to see how tranquil we are about the errors of others when they do not trouble us, and how soon this wonderful zeal kindles against those who excite our jealousy or weary our patience?—*Fénelon*

spinet was in vogue while the *harpsichord* was popular in Italy and other places. This latter instrument possessed a very brilliant tone though it could not be varied in intensity, and many improvements were made to increase its beauty and power until it grew to be what is known as the pianoforte.

The first pianofortes were invented in Italy in 1711 by Bartolomeo Cristofori; and in 1737 Gottfried Silbermann, a very skilful and painstaking manufacturer of Saxony, made several instruments which proved to be so superior to all previous attempts that pianofortes gradually came to be adopted everywhere. They were made in various shapes, square, or rectangular, upright, and triangular like our grand pianos.

As musicians constantly made greater demands upon the resources of the piano, its makers continued in their experiments and improvements, increasing its compass, sustaining power, expressive qualities of tone, etc., until they succeeded in producing the beautiful instruments which are so universally enjoyed today.

Great composers have written more music

for the piano than for any other instrument. Although its tone is not as much like the human voice—which is the most beautiful of all musical instruments—as is that of the violin and some other instruments, yet the best pianos can bring forth a lovely, singing quality of tone with almost infinite gradations of shading from the softest *pianissimo* to the loudest *fortissimo*.

Our modern piano has a range of over seven octaves and can produce all the tones which an orchestra does. It is complete in itself while many other instruments can produce only one, or at the most three or four tones at a time, being dependent upon another instrument for the sustaining harmony.

When the piano is well played it can express many of the emotions of the human heart, and future inventions and improvements will no doubt enlarge its possibilities and make it a vehicle of still grander expression.

PIANO STUDENT

A National Monument

THE National Monument of Geneva is a most effective group in bronze commemorating the annexation of Geneva, in 1815, to the Swiss Confederation; it being the last of the twenty-two cantons to join the union.

The monument represents Switzerland as a goddess with her right arm encircling the neck of her daughter, Geneva, who holds a sword in her hand and whose shield bears the motto *Post tenebras Lux*. The figure of Switzerland also holds sword and shield with the words *Un pour tous et tous pour un*.

The monument was unveiled just forty years ago at the Union Festival of Geneva amidst scenes of great rejoicing, ringing of bells, and much popular enthusiasm. L.

THE CHILDREN'S HOUR

The Coming and Going of Scyld

ONCE upon a time, thousands of years ago, on a summer morning, just as the sun arose, lighting up the ocean with rose color and silver, a band of fishermen wandered down to the shores of the North Sea. How they loved the ocean, those strong, fearless fisherfolk! It fed them, it sang to them, and on it they launched their boats to go forth upon adventure. So, as they climbed down the steep rocky cliffs, the fishermen from time to time looked out over the sea. Suddenly one of them called out, "Look, something is coming to us over the ocean street!" The men strained their eyes. "A boat, a boat," they cried, as the speck drew nearer; and they hurried down to the sea. They plunged into the foaming waves and stood up to their waists in water, and waited for the oncoming boat. While they waited they lifted their voices, and sang a wild sea-song. Then a great rolling wave came, bearing the boat on its shining crest. They caught it in their strong arms, and held it high above their heads, while they waded to the shore.

It was a treasure boat, indeed, that drifted to the shores of that northern land in the rosy light of morning. In it lay a little boy, naked and asleep. He lay in the midst of shining armor, golden treasures, and flashing jewels; so they knew him for a king.

"Our king!" cried the fishermen in a breath, "a king has come to us out of the sea, a king has come to us over the silvery swan-road!" And so it proved. Out of the sea, whence all good things came to them, there came to the Danes, Scyld, their hero-king.

Scyld ruled over the Danes wisely and well for many long years. He made good laws for them, which the wild sea-rovers obeyed. They became a mighty people under his rule, sending their ships, like sea-birds, far and wide over the broad ocean.

When Scyld was an old man and knew that he could not live much longer, he said to his faithful warriors, those whom he loved the best, "My days are nearly over. The sea brought me hither; to the sea I would return." So when the hero-spirit of the mighty chieftain had fled, his warriors wrapped his body in royal robes and bore it down to the sea.

There in the harbor stood a stately ship, its white wings spread. It tugged at its moorings, eager for sailing. Such a beautiful ship had never been seen nor heard of before. It glistened like ice in the bright sunlight. The sides were covered with golden rings. Shining armor and flashing swords hung all round it. In the bosom of this beautiful bark, in the center by the mainmast, the warriors tenderly laid the body of their king. Golden treasures, "fretted things of fairness," so says the story-book, were heaped around him. On

his breast a pile of gems was poured. Just as many as he had brought with him, when, a little boy, he had drifted over the sea, in an open boat, to the Danish coast. Last they set a banner, all of gold, above his head. And when the wind caught the broad, heavy folds, and the golden flag waved above him, the warriors cut loose the moorings, and the ship with its treasure, floated out to sea. Sadly the warriors wended their way homeward. The hero-spirit of Scyld lived on in the hearts of his son and grandson and in many kings after them in the northern lands. ASTRID

Lomaland Photo. and Engraving Dept.

I AM HAPPY. ARE YOU?

THE CLUCKING HEN

"WILL you take a walk with me,
My little wife, to-day?
There's barley in the barley field,
And hay-seed in the hay."

"Thank you," said the clucking hen;
"I've something else to do;
I'm busy sitting on my eggs,
I cannot walk with you."

"Cluck, cluck, cluck, cluck,"
Said the clucking hen;
"My little chicks will soon be hatched,
I'll think about it then."

The clucking hen sat on her nest,
She made it in the hay;
And warm and snug beneath her breast,
A dozen white eggs lay.

Crack, crack, went all the eggs,
Out dropt the chickens small!
"Cluck!" said the clucking hen,
"Now I have you all."

"Come along, my little chicks,
I'll take a walk with you."
"Hollo!" said the barn-door cock,
"Cock-a-doodle-doo!"

---Selected

Aquariums

PERHAPS the finest aquariums in the world are in Naples and New York. These contain specimens of almost every kind of fish and small water animal in the world.

The interior of the aquarium is kept rather dark and the fishes are in glass tanks arranged along the walls, each species having a separate tank. The light from outside shines directly into the top of the tanks, illuminating them perfectly, so that as you pass along you have spread out before your delighted eyes the home life of these representatives of all the seas, oceans, great lakes, and rivers of the world. They are all swimming round in their own particular family-group and tank, happy and at home, unconscious of the crowds of wondering people daily coming to admire or study them. You can watch them swimming in and out among rock grottos, sea-weed and shells, water-fern and flower, coral and sponges. Some of the fish are more beautiful than you ever dreamed. There are

angel-fish from the Bermudas, with filmy, white trailing fins and tails like wings; bright blue fish, red fish, rainbow fish, spotted fish, silver and gold fish. There are fishes great and small, beautiful and hideous; crabs and lobsters; great sea turtles and tiny sea-horses; horrid bat-like creatures clinging to rocks, with wings and tails like black velvet.

There is also a hospital for sick fish, where the invalids are kept and given special care and attention until they are able to join their family group again. L.

Sand-Pictures

IN the CENTURY PATH several years ago you may have read about the sand-pictures which Japanese children can make so skillfully with fine sands of different colors. The Navajo Indians of America use these sand-pictures, or "dry paintings," as they call them, in some of their sacred ceremonies.

On the smooth earth floor of the *hogan* where they meet, the medicine-man makes pictures of symbols by sifting powders of different colors, ground fine. He will paint thus a rainbow border for the picture, in which will be figures that stand for their gods, who always make their journeys on the rainbow and are therefore painted standing on a piece of one. Lightning flashes are painted on their legs, and bracelets of eagle feathers upon their arms. On every head will be painted five rain-feathers pointing up to the clouds.

The Greeks pictured Hermes, or Mercury, or Quicksilver, with wings on feet and head; but the Navajos use the streaks of lightning on the limbs of their Divine Ones to symbolize the speed with which they can travel through space. The sand-pictures of the Navajos are full of meaning and power. G. S.

THE SECRET DOCTRINE

THE
Synthesis of Science, Religion, and Philosophy

By H. P. BLAVATSKY

2 Vols., Royal 8vo., about 1500 pages; cloth.
(Index of 30 Pages as in First Edition)

NEW POINT LOMA EDITION

To be reprinted from the original edition of 1888, as published by H. P. Blavatsky

Vol. I treats of Cosmogenesis
Vol. II treats of Anthropogenesis

THE MYSTERIES OF THE HEART DOCTRINE

Prepared by
KATHERINE TINGLEY
AND HER PUPILS

*The Theosophical
book of the
Twentieth century*

Tells the story and the history of the
Theosophical Movement.

The prices are \$2 in cloth and \$1.25 in
paper, which barely cover the cost, for it is
printed and bound, not gaudily, but with
such carefulness and thoroughness of art
and craft as to make it unique among
modern edition books.

Order now from

**SOME OF THE ERRORS OF CHRISTIAN
SCIENCE
CRITICISM**

by H. P. Blavatsky and William Q. Judge

CONTENTS:

"The Empty Vessel Makes the Greatest Sound"
A Note of Warning

—by H. P. Blavatsky

Of "Metaphysical Healing"

Affirmations and Denials

The Cure of Diseases

Replanting Diseases for Future Use

—by William Q. Judge

A MOST VALUABLE PAMPHLET. Outside of Theosophy
there is given no adequate explanation of the healing
that is at times accomplished, nor of its *rationality*,
nor of the ultimate price that must be paid and the
dangers connected with such practices.

This pamphlet is invaluable to all students.

The West as Seen From the East

O wad some Power the giftie gie us
To see ourselves as others see us!
It wad frae monie a blunder free us
And foolish Notion.

BURNS

TO know ourselves we should welcome and use wisely every means available. We must "examine ourselves"; we must "judge ourselves if we would not be judged." And there can be no doubt that we are often assisted in attaining self-knowledge by seeing ourselves in the light in which others see us—by criticisms which our friends are generally quite willing to give us *gratis*.

In a recent number of a contemporary, our friend P. Rāmānathan, C. M. G., H. M. Solicitor-General in Ceylon, has been telling the West some of its faults which are plainly visible from the East. Europe and America have for some time looked down upon the East. There have been a few exceptions: Max Müller has written on "What India can teach us"; and H. P. Blavatsky, as is well known, was a great champion of the East. But, as a rule, the West has not treated the "East, the place of light," very kindly, as witness the exclusion laws in various countries. It may, therefore, be a wholesome thing for western peoples to see themselves in the light in which a man of great ability, such as Mr. Rāmānathan, sees them. "The miscarriage of life in the West," the name of his article, indicates pretty closely how the West appears to the eyes of an Oriental who is well fitted to judge.

The main thought which runs through Mr. Rāmānathan's paper is that the West has given itself up to the pursuit of the sense-world. This is the miscarriage of life in the West: for the true goal of man is not the life of the senses, but the life of the soul. This leads him to speak of what life is. "The soul has been endowed with the instruments of breath, knowledge and action, and this for the beneficent purpose of emancipating itself from corruption." Hence, "Life is taken to mean the aggregate of those ministers of the soul who labor for it." "Reason and will are indeed most important parts of life; but life is more than reason and will." It includes "*prāna*, or the principle of breath, or the breather, because, say the sages, it is not only powerful, but also intelligent in its way, and accommodates itself to every conceivable position, and keeps order among the other aerially constituted powers within us when disarrangement takes place."

What is
Life,
Really?

"In the body it permeates every other instrument of the soul, and imparts to them both initiatory movement and endurance in their respective works. Hence the word *prāna*, or life, is often used to include all its colleagues." Mind, or *Manas*, is the greatest of these colleagues; and it is by mind that the soul is uplifted or resurrected, as is said in the *Bhagavad Gītā*, vi, 6. "The uplifting of the Soul (*ātmā-uddhāranam*) from corruption has to be done by the mind. Since mind only is the ally of the Soul, and mind only the enemy of the Soul, the mind should not be made impure by letting it run on sensuous things."

From all this it is evident that there must be a "miscarriage of life," whether in the West or the East, whenever the bent of the nature is downward and not upward. And though the

line of thought in Mr. Rāmānathan's paper is almost wholly devoted to the West, he does not forget to glance at the East, and note that the miscarriage of life in India has for one of its causes that "Corporeal Caste System which has all but strangled the intellectual Caste System taught by Sages under the name of *varnāśrama-Dharma*, for the practical advancement of all who would be spiritual in every part of the globe." His main purpose, however, is to point out the things that cause the miscarriage of life in Europe and America. The first point he notices is the failure in the West to distinguish between the kernel and the shell in true religion. Though Christ declared that his teachings existed from the foundation of the world, Christians soon became lost in verbal controversies. "These controversies," he says, "were due to the literary ability as well as the spiritual ignorance of those learned in the words of the Bible."

Literary Ability: This is a passage which deserves to become classic. Again he says:

How few in Christendom know that religion does not consist in words, professions, and ceremonies, but in heartfelt longings for the Imperishable Substrate of all things! The names and forms, ideals and practices of every creed are intended only to create a love for God, a bond of union between God and man. Religion, from *religare*, to bind, is the love-bond which unites man to God. This love of God is the essence of all religion.

In all the great departments of thought, theology, philosophy, and science, Mr. Rāmānathan holds that the West has failed to follow the real purposes of life. Theology ceased to speak with authority in certain matters after the rise of physical science. Then it restricted itself to matters of faith, leaving physical science to study phenomena, and philosophy to

give an explanation of causes; or to deal with speculative thought. Thus the West came under the sway of a triumvirate, a strange coalition, incoherent, and contradictory. Theology proclaimed God to be the goal; while the scientist and philosopher became agnostic, or materialistic. These three great elements of life being so discordant, true harmony and progress became impossible.

The Irreligious West

Yet the West maintains that it is progressing satisfactorily and is proud of its success in science, politics, and industry. "Fifty years of ever-broadening commerce; fifty years of ever-brightening science; and fifty years of ever-widening empire." This is the boast of the West. Is it well-founded? Mr. Rāmānathan believes it is not; and shows that there is a higher and a lower side, a body and a soul, so to speak, in science, industry, and politics. But, he holds, the West has followed the lower path. When Mr. Rāmānathan speaks of the higher gains of industry we are strongly reminded of Ruskin. The lower result of industry is the production of something useful or ornamental. The higher result is the mental improvement produced. The external benefits are increased comforts, and these are perishable, and of little value to the worker himself. But when the work

The End of Work is Character

is done ably and justly, "the mind is cleansed and strengthened, and becomes qualified for the higher work of calm reflection and meditation, by which alone the spirit within may be found." The mere increase of perishable wares, if divorced from spirituality, is a mistake. If the welfare of the soul is neglected, the commercial spirit is but the fuel to the fire of sensuousness, which, alas! has been burning in the people for some centuries, and slowly withering what is holy and beautiful in them. If the artisans and traders of the country live for the spirit while working hard for the maintenance of the body, and the improvement of the cities, they will be a "shining light and perpetual source of joy to their brethren at home and abroad."

In science and political matters Mr. Rāmānathan holds that the West has fallen far short of the true aim of life. The scope of science as it works with the microscope, the telescope, or the chemical tube, is wholly, or chiefly, confined to what relates to the physical body.

The Abode of Strife, Desire, Selfishness

To turn the forces of nature into so much horse-power; to produce or transport so much merchandise; or to fashion instruments of destruction, is not the true goal of life. Of the three kinds of knowledge: knowledge through the senses; knowledge by reflection; and direct knowledge without the intervention of the senses or the mind, western science deals chiefly with the first, and ignores the last. The result is the materialistic spirit, or the atheistical spirit, which dominates so largely in the West. And socially, the result has been that the "cities of the West are not the abodes of righteousness and peace, but of selfishness, strife, and gnawing desire."

In the political world Mr. Rāmānathan asserts that the West has taken the wrong path as much as it has done in science. The right path is the rule of the noblest, the wisest, and

the best. As Carlyle said long ago, the great problem is to find a sieve to sift out the best men, the noble and the good, the true rulers, devoid of ambition and selfishness.

The West is in a sad plight as seen by learned men of the East. It is being tossed to and fro on a sea of sensuousness. The cities are filled with people from the country who have

The Menace of a Fevered Life

been drawn from their homes by the desire for finery and amusement. "This is like the rush of insects into a bonfire lit in a tropical night, and affords positive proof that the spread of sensuous ideals is breaking up the very foundations of society."

Such in brief is the contention of Mr. Rāmānathan; and it becomes us to listen with patience, and to examine with much care, and without prejudice, in order that we may honestly find out how much is true in the view of the West which he presents.

The time cries aloud for that synthesis of science, philosophy, and religion which Theosophy alone is able to present. The true knowledge of Self is necessary to enable us to understand and carry out the lofty and real purpose of life. And along with this there is needed the divine fire of a noble enthusiasm, without which all else is as machinery lacking motive power.

(REV.) S. J. NEILL

Photographing the Mind

IN a Sunday edition of a paper (*New York American*) appear some illustrated articles on the photographing of states of mind, such as sorrow, anger, and prayer. The pictures represent luminous mists, blotches, streaks, etc., around or above people. They were obtained, it is stated, by a French doctor, photographing in a green electric light or in the dark. An insane woman comes out as a confused mass of clouds; as she recovers sanity, the photograph shows less of the clouds, and the face begins to appear. A crowd praying is surmounted by an appearance which, in the cut, looks like smoke and sparks from a conflagration. Sorrow and anger produce characteristic appearances, etc.

This amounts to a demonstration of the fact that besides the physical matter of the world, which is perceptible to our gross senses, there are other orders of matter not thus perceptible. This fact may be said to have been always known; though the spirit of modern culture has been in favor of limiting the confines of the world to those states of matter which are perceptible to the gross senses. Many times people have come forward with proofs of the reality of the other kinds of matter — such as Reichenbach, for instance — and been hastily shouted down. But now it is too late; too many people are favorable to the belief, and the penetrating eye of the camera has been called as witness — that eye upon whose vision we rely in scanning the stellar depths beyond the ken of our own eye.

And, as usual, the demonstration of this little fact in nature has been the occasion for a great deal of gush about religion and science. It is quite customary for people to worship and exalt that which has excited their wonder from its being a little beyond the customary grooves of their experience; and we may compare ourselves in this respect with almost any tribe of savages that worships the thunder or believes

that a talking machine has a God inside it. But to the balanced mind there will seem nothing particularly holy about these photographs of astral emanations, nor any special occasion for heralding a new *rapprochement* between science and religion. Rather should they help to make us realize that the mental conditions which we create and indulge are *real forces*, potent for good or evil, and entail upon us an increased sense of our responsibility for those moods and for the effects they may work on others. Let us not, by too much attention to these mere manifestations, lose sight of the fact that the Will is the Magician, and that our duties are rather with the cause than with the effect. Since our minds are such realities, and since our thoughts are neither so exclusive nor secret as we had imagined, should we not guard them better? The thoughts and emotions which may come into our own mind may proceed from—who knows where? Are we not living, according to these demonstrations, in the midst of an atmosphere of possible infection? May not many of the fancies we so fondly indulge, and the moods we so dearly cherish, have been absorbed from the surrounding atmosphere? And then again, what of our own contributions to that atmosphere? May not our personality have a value quite different from that which we assign it by our words and outer actions, so that people with whom we converse are invisibly affected by what we are throwing off? May not our own "secret" conditions react disastrously on our loved ones? Do we poison the air for our friends and family, or do we make it better for them?

The reflection should surely urge us to increased sense of responsibility. A man's thoughts are neither secret nor his own. On the other hand what promise there is for the aspirant to beneficence! He realizes that no effort of his is wasted, for his "secret" thoughts must surround him like a holy *aura* and go forth on their mission of good. By keeping his own house clean he can make a beauty-spot in the universe, from which will radiate out lines of force to start new centers.

Karma, the law of cause and effect and just recompense, acquires a clearer meaning in the light of these demonstrations. For may not many of the events of our lives, for which we have hitherto been unable to assign a cause, be directly due to the influence we carry around with us? It is not difficult to imagine that an atmosphere full of angry and discordant vibrations might provoke quarrels with the people we meet or even throw us down and break our limbs. The chain of cause and effect called Karma or Destiny must of course have some mechanism or substratum in which it inheres and lies latent like seeds in the ground. Some of it may lie latent in our physical cells, in the form of diseases generated by bad habits; some of it may have its germs in this invisible substance that is around us; some of it again is stored up in still more refined forms of the Cosmic Substance. Our belongings are very extensive, and we have many accounts laid up to our credit or debit.

The thoughts suggested in this connexion are many and important; and for such as have a serious purpose in life, the demonstrations cannot but be helpful, though they will doubtless set some minds agog with idle and unprofitable curiosity.

Some Views on XXth Century Problems

Twentieth Century Gods

A GOOD deal of the "New Thought" only needs to be turned upside-down so that it no longer stands on its apex, to be very good thought indeed. It represents — to use Professor James' words —

the belief in some form of superhuman life with which we may, unknown to ourselves, be co-conscious. We may be in the universe as dogs and cats are in our libraries, seeing the books and hearing the conversation, but having no inkling that there is any meaning in it all.

According to the "New Thought," we can find a meaning in this cosmic conversation going on all around us, and read the cosmic books whose turning pages are the growth of trees, earthquakes, and the roll of the sun. They call this vast cosmic consciousness by many names, sometimes God, more often by such paraphrases as "The All-embracing Good." The individual human mind is a derivative of this great mind, and in constant touch with it. The effort is to become conscious of the relation and open it up more fully. But now, instead of letting go the self in order to expand, they try to bottle up the great self in the little one. Like jealous cats, of which each wants the whole attention of their mistress, they expect the whole attention of God. He, or It, (according to the school), is perpetually worrying about *me*, wondering what *I* want, whether two dollars a week more salary, or a sweetheart; and having ascertained, rushing to supply it. I speak my requisition into the ears of the sun and the moon, and the hands of the planets are outstretched to supply me.

Let us be more modest. The forces of the universe ran together, and run now together, to make my body, and in it I am conscious. But they also ran together, and run together every morning, to make the body of this rose tree in which the tree's soul is conscious. I cannot know the rose by insisting upon personality; but by attuning myself to that other arrangement that makes up the rose. Do I come to know another man by demanding in every thought that he shall give me something, shall turn his exclusive interest or even any part of his interest, upon me? or by giving *him* something, because by sympathetically touching his nature, I have learned what *he* needs? I only really know him by dropping myself out of my own sight. The moment I make any kind of demand anywhere, in any direction, I have raised up myself as a barrier between myself and that which I would fain understand. My consciousness has contracted into the *Me*. What sort of understanding of the earth should I get if I supposed myself to be its center of gravity? It is man's unique privilege that he can discharge himself of such instinctive illusions and betake himself to real centers of gravity. And in so doing he can lose nothing of himself, nothing that through experience has become his own. The Great Self thinks some of its thoughts in me. But some also, of equal value, in each other man, indeed in all other things that live. The whole universe is the sounding-board of its thought. I must try to see its

thought at work in the diviner depths of all other consciousnesses, struggling up as best it can through the turbid surface layers of sensuality and selfishness. I must try to feel myself, through it, at work in all the rest, going out in mind into universal human life. So I help it in its work; *so I give it the only gift it can receive* — service through service of what else lives. But the moment I ask anything of it I am hindering it and hindering my knowledge of it, the knowledge that can only come in co-partnership in work.

That is one aspect of it, its aspect as inspirer of men's highest thoughts and feelings and deeds. Its other aspect, as Karma, causes the results of such deeds and thoughts as men choose to do and think. We can as yet only know, of these results, that whether pleasant or painful, they tend, age after age, to soften men's minds and predispose them to feel the inner touch, the inner urge to work and think at the highest. We can trust the Great Self with the workings of this its law, careful only, ourselves, of duty. But duty covers action on many planes. Is not duty always *gift* of some sort, rendering, radiation? The cup of cold water may have quite a number of gifts in solution, or may be no gift at all, only an attempted bargain.

Pulling Out the Axle-Pin

THE Spirit of Confusion, in his conferences with himself, decided that mankind was in some danger of finding the truth — or rather that he was in some danger of mankind's finding the truth. In times past the same critical point had been reached, but he had tided over the difficulty by making the best thinkers believe that no truth could be reached by human effort. Now, however, the philosophers were gradually converging to a great truth that was in sight. Something new had to be done. How if they could be induced to juggle with the very word truth so that it should lose all its meaning? Would not the axle-pin of their minds be pulled out? At least the idea was worth trying.

So certain professors decided under that inspiration to apply the word "true" to any statement which when applied enabled them to work practically. Thus it is "true" that the volume of all gases varies in a certain way with respect to pressure and temperature; it is "true" because if we proceed on this assumption, our machines, made according to it, will work. But it is also untrue, because certain gases obey it in a very modified manner and no gas obeys it at the extremes of temperature. By a further study of gases we can find a larger law which includes these exceptions and the rule; that is, we can make a better statement of how gases behave. With the aid of this, chemists can do certain work not before possible to them. The new statement is therefore "true." But it is also very likely untrue, for at any moment we may find that under some circumstances some gases do not conform to it. "But," objects someone, "why not reserve the word true for some statement which we shall ultimately be able to

make which will actually correspond with the absolute radical facts?" "Because we can never reach such a point; because we must always hold ourselves ready for facts which our statement does not cover and which will render it untrue." "Then we may never regard ourselves as knowing anything? It is a mere conveniently-working belief, what we call or ever shall call knowledge?" "Quite so; as you have seen, a certain statement respecting gases is beautifully true when we are making machines, but crudely untrue when we are in our chemical laboratories. When you are using the words true and untrue you must first consider what your day's work is and whom you are talking to." "And the same with respect to philosophy and the deeper matters of life, religion and conduct?" "Certainly; any statement about anything may be true and untrue at once. It depends on what you are going to try to do with it. The very words ultimate truth, are absurd; we should always be in danger of an ultimate truth which might completely upset the ultimate one. We cannot have knowledge; we can only have conveniently working statements; they are true over the area in which they work — only; and that is the only proper use of the word true." "But surely things *are*, and therefore *are* according to some mode?" "Not at all; they behave as if they were, and we can work as if they and we were; being is therefore real and true; but at any moment we may find out that it is not and we are not." "What is the name of this philosophy?" "Pragmatism." C.

Will-Culture

THE word resignation usually brings the picture of a hopelessness and a lapse into dispirited passivity. But there is a far better meaning; there is a very active form of it which frees the will for its full activity. A man in perfect darkness, groping along the road and repeatedly knocking against the fence, may presently come to think he is *surrounded* by it and cannot progress. If he will trust and grasp the fence and go along with it he will be all right.

Many men cannot bring their will into action on their own weaknesses for a similar reason, cannot "culture" it, to use the modern phrase. They are wasting it in belaboring the fence of circumstance and event. Yet that fence is a guide that may be perfectly trusted, and is a better guide the more it is trusted. *Circumstances* are not *around* us, but straight along, leading ever ahead for our growth if we will grasp them and trust them. Once we are *set* in positive contentment and trust, the will is freed and can be turned inward. The one remaining fetter is any sort of hostility towards any other person. Undo that and there is now no interior difficulty that cannot be surmounted. Growth will begin of itself; concentration can be developed to any degree, even better than by gazing at a nail on the wall or muttering *will, will*, while you wash your face and hands in the morning. The will must be freed before it can be used, and the disengagement from its hooks is by trust and benevolence.

Glacial Man

HUMAN footprints, says a report, have been found under Toronto bay in the blue clay seventy feet below water level, by workmen engaged on the water-works tunnel. It is an interglacial clay deposited from 50,000 to 100,000 years ago. It looked like a trail. There were over a hundred of the footprints, from large prints to the print of a child's foot three and a half inches long. All were toed in and were made with moccasined feet.

Another report says that human remains believed to be the oldest in existence have been discovered at Chapelle Aux Saints in southern France. They consist of a skull and other bones, which the Director of the Paris Museum of Natural History declares to be the earliest vestiges of man in the world. He assigns them to the pleistocene or glacial period. The skull is of the Neanderthal type, having but little forehead, and of course attempts are made to show that it is between that of a monkey and that of a man. It was found in a pleistocene formation in the upper layer of tertiary beds and belongs to the age of the mammoth.

There have been numerous other evidences of the existence of Man in these times, but nothing that supports the theory of a chain of forms connecting him with monkeys. Even if such a fact could be established, we should still need some theory to explain the marvelous power that could effect such an evolution. Would such power be considered as being latent in the monkey, or would it be an outside agency? Whichever way it is, we cannot, having regard to the results of that evolution, deny that it is a great and wondrous power that is thus unfolding itself. STUDENT

Grandeur of Ancient Civilization in Asia Minor

THE temple of Diana at Ephesus was one of the most remarkable structures ever reared by man. Throughout hundreds of years it has been used as a marble quarry for mosques and public buildings in Constantinople and Ayasalouk; even so has the culture of later centuries been built of the ready-hewn materials left behind by creative and virile intellects. So prolific is this source, however, that as late as 1904 an archaeologist made new discoveries on the site. He went to such a depth that he found the original layer of charcoal upon which the foundations were placed. Piercing this, he found the

pavements of two former temples; and at some considerable distance under the altar unearthed a large stone box filled with gold coins and ivory figures dating from the time of "Solomon." The theater at Ephesus had a seating capacity of 24,500, and 66 rows of seats one above the other. The ruins of Ephesus are so vast that it is impossible for anyone adequately to describe them.

The theater of Miletus rivals the Colosseum in size. The length of the stage is 459 feet, and the upper semi-circle of seats is 1640 feet long in a semicircle. Though scarred and weather-beaten, it yet remains after the storms of 2500 years. Miletus was a great center of Ionic philosophy exercising a supremacy over the world for over 1000 years.—(Facts from an article by the American Consul-General to Smyrna, in *National Geographic Magazine*.)

New Discoveries in Mesopotamia

REPORT states that a well known traveler who has just made a seven months' tour in hitherto unexplored parts of Syria and Mesopotamia, found, on his way to Chabur in Central Mesopotamia, an immense heap of ruins, the remains of a magnificent palace, believed to have been built in the Hittite period, after the downfall of Chaldaea and before the rise of Assyria. Near by were stone slabs with reliefs of winged animals with human heads, grotesque figures of goddesses, lions, and griffins. Most interesting was a gigantic stone figure of a veiled woman, believed to represent Astaroth, the wife of Baal, and the

goddess of Love. No sculptured representation of the veiled goddess has, it is said, hitherto been discovered.

It is striking that there should still be unexplored parts in Mesopotamia, and that such a discovery should have been made; and it proves that there is still much to be learned and consequently but a narrow basis for dogmatism.

With regard to Astaroth, however much the symbol may have been profaned in later times, it was originally that of a pure and lofty conception, being, like Isis, the female aspect of Deity, the universal Mother.

Astoreth was in one sense an impersonal symbol of nature, the ship of Life, carrying throughout the boundless Sidereal Ocean the germs of all being. And when she was not identified with Venus, like every other "Queen of Heaven" to whom cakes and buns were offered in sacrifice, Astoreth became the reflection of the Chaldaean "Nuah, the Universal Mother (female Noah, considered as one with the ark), and of the female triad, Ana, Belita, and Davikina; called, when blended into one, "Sovereign goddess, lady of the Nether Abyss, Mother of gods, Queen of the Earth, and Queen of fecundity." Later, Belita, or *Damti* (the sea), the Mother of the City of *Erech* (the great Chaldaean Necropolis) became Eve; and now she is Mary the Virgin, in the Latin Church, represented as standing on the crescent-moon, and at times on the Globe, to vary the program.—*The Secret Doctrine*, II, 462

Alas! that the pure and sublime symbolism of these ancient pantheons should have been degraded by a lapse into sensualism and materiality, until the spirit of humanity was so weakened that ecclesiasticism was able to fasten its enslaving grip on the world. STUDENT

Mythical Astronomy

THE astronomy of the ancients, which treated certain groups of stars as real compound units, is being vindicated. The vindication has not yet included the zodiacal constellations; that may come. It only applies to the closer groupings of the Hyades and Pleiades. When we look at these, says Professor Russell in the *Scientific American*, "the question naturally arises: Are these stars really near one another (as compared with their distance from us); or do they simply look near, because they lie nearly in line with us, though some are really more remote than others?"

Such groups as these, if real groups, would be moving as a whole in some one direction, as well as moving individually among each other. If receding from us as a whole, the effect of the perspective would make them seem to be getting closer to each other; if approaching us they would seem to be spreading out. And stars in their apparent neighborhood would not be sharing in these effects, might be moving in all sorts of promiscuous directions, would at any rate have some other plan of movement and arrangement.

In this sense the classical and legend-embroidered Hyades and Pleiades are real groups. The motions of many of their stars have been determined with some accuracy, in three cases with the spectroscope. Professor Boss, to whom we owe the work, has shown that the stars of the Hyades are (apparently) nearing each other, and that their lines of motion (from us) appear perspective-ly to converge to a point in the constellation Monoceros. About 700,000 years ago, he thinks, they were at their nearest to us and have since been receding, being now about 120 light-years distant. (Our sun is about 8 light-minutes away.)

Astronomy does not yet consider that the zodiacal constellations are real groups in this sense. No one has yet explained why the ancients universally treated them as such, going on to credit them with a connexion with human and terrestrial life. It is not even explained why they received their names. You can plot their stars on paper and then by means of lines draw a resembling figure corresponding to the name. But you have to "fake" it, as the schoolboys say; and by selecting appropriate stars you could perpetrate a similar fake a thousand times over. So the mythical zodiac awaits vindication.

STUDENT

Radium in Medicine

THE physiological rôle of radium appears to be the exact opposite of that of alcohol. Its emanations are a true stimulant, hurrying forward all the vital processes. But as it does not *add* to vitality, the hurrying presently becomes injurious and finally produces death from exhaustion or localized old age. The effect is naturally greatest on the most susceptible kind of cell, the most newly born, undifferentiated and unevolved into higher tissues, the embryonic cell.

Professor Gager, of the New York Botanical Garden, has been investigating its action on plants. Oat seedlings were raised in three concentric circles in large pots. A tube of radium was placed in the center of the innermost circle. A control pot was planted like the others, but with no radium. In a few days the seedlings in the radium pots were taller than those in the other. But the three circles had gained unequally, that nearest the radium having gained least; that furthest, most. The radium was doing better work at the greater distance. By changing the tube from one to the other pot, either set could be stimulated ahead of the other.

But the Professor noted that too long exposure, or at too close range, began to do harm and finally killed. The growing part of plants is the delicate layer of young cells just under the bark. It was these that the radium stimulated, then over-stimulated, and finally made senile just as if they had done their full life's work. The same happened with the respiratory cells. Radio-active air and water were found beneficial. They do not overdo the thing. Professor Gager thinks that radio-activity in this form is one of the normal factors of plant growth. The chief metallic food of plants, potassium, is radio-active; and so is calcium, both emitting free electrons.

Radium has been more or less disappointing in the treatment of cancer. Judging from the above experiments, it would seem possible that we have not yet found the right distance from the diseased tissue, or the right duration of the application, or whether the emanation in water would not be better than the pure salts. Has continuous dressing with solutions of innocuous potassium salts, mildly alkaline or acid such as the bicarbonate or bitartrate, been tried?

STUDENT

Positive Electricity

CHEMISTRY seems inclined to insert an order of atoms or fine particles between the electron and the present atom. The electron is regarded as a particle of negative electricity; a stream of them is a current. A thousand of them, grouped in a certain way, make an atom of hydrogen; sixteen times as many, grouped in another way, make an atom of oxygen. And so with all the elements. They are known to be negative by the fact that a stream of them is repelled by the negative pole of a magnet. If two wires are fused into the two ends of a vacuum tube and then connected with the poles of a sufficiently strong battery, the tube becomes luminous and from the tube end of that wire which is connected with the negative pole of the battery a stream of electrons—torn from the atoms of the wire—flows along the tube toward the other wire. These electrons are regarded as identical whatever the material of the wire from whose atoms they are torn and whose atoms they compose.

But other rays or streams of particles are also generated, known as canal rays; and these, as proved by the magnet, are positive. The mass of one of these is far greater than

that of an electron; yet they are not atoms. They are generated from the gas which the tube contains, and *they are the same whatever the gas*. They therefore lie between the electron and the atom and represent the first grouping of electrons on the way to become atoms; when *they* group in their turn, the atom results.

So far then, the stages of grouping, from the simplest to the most complex, are somewhat as follows: the electron, the unit; its first aggregation, the canal corpuscles; the atom; the molecule; the crystal; the colloid inorganic molecule; the colloid organic molecule, such as the molecule of albumen; the protoplasmic molecule, if there is one; the cell. But there may be other stages to be inserted here and there in the list.

STUDENT

New-Born Hydrogen

SIR William Ramsay has for a long time been making experiments on the decomposition of water by radium emanation. The emanation of radium seems to be a somewhat short-lived element soluble in water. Water in which a salt of radium is dissolved presently contains this body also. As soon as it is formed it begins to decompose the water as would an electric current. The products are of course the two gases oxygen and hydrogen, which compose water in the respective proportions by volumes of one and two. But in all the experiments made by Sir William Ramsay the amount of hydrogen resulting from the action of the emanation was in excess of its proper proportion. All the theories which might account for this were tested as far as possible. The only one that finally remained, and may be said to stand provisionally, is that some of the emanation itself changed into hydrogen.

If we may look a little way ahead, say a few years, we can see a table of the generation—or degeneration—of all the elements downwards from uranium, the heaviest we now know, to hydrogen. The table may have been realized in the laboratories. And the next chapter, the evolution of them all *up* from hydrogen, may be in sight.

STUDENT

Fluid Gold

ANYONE who heard for the first time that a cube of sea-water with edges one twenty-fifth of an inch in length contains several hundred millions of atoms of gold might naturally ask where the water came in, and why we did not ship blocks of the golden fluid to the mint for immediate coinage. But the atoms, or rather molecules, of water in that particle of space are about a thousand million times as many; that is, sea-water contains only one fiftieth of a grain of gold to the ton. But it takes a good many molecules to make one fiftieth of a grain! So it was hitherto reckoned that the extraction of this amount is unprofitable. It has however quite lately been shown that not only is the surface water three times as rich in some places as in others, but that at great depths it may be thirty times as rich. Hopes have revived and men are planning a way of bringing apparatus and water together. C.

A Curious Rainbow

THE heights of Point Loma, where the International Headquarters of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY are situated, is peculiarly favorable for the witnessing of rainbows and other sun and cloud effects. A large expanse of view is commanded on all sides, the broad Pacific on the south and west, and range beyond range of purple mountains fringing the horizon on the north and east. The dome of heaven is vast and untrammelled, and many different strata of air, with differing clouds and wind currents, may often be discerned at the same time. The setting sun sports with myriad beautiful and ever-new effects among all this celestial and terrestrial scenery; nor can anyone live at Headquarters so long as not to expect any evening to be charmed with some totally new and marvelous spectacle. On Christmas day, in the afternoon, an unusual kind of rainbow was seen. There were the usual two concentric arches, both perfect semicircles; but part of another arc could be seen, not concentric but intersecting the others, cutting the inner circle at one point and thence crossing over to the outer circle. This could only have been caused by the presence of two distinct sources of light—two suns as it were; and, looking back, one instantly saw the second sun—mirrored in the ocean. The extra rainbow had been produced by the sun's image in the clear waters. On another evening the clouds were so disposed that one could see the sun reflected in the sea without being able to see the sun himself; an effect which gave the impression that the sun had sunk below the horizon without going to bed as usual. T.

Peat Coal

ACCORDING to a new German process of manufacture, peat can now be made into briquettes of a kind of coal by a method which much shortens the time taken in drying, removes more of the moisture, and is economical. The moisture is removed, not by ordinary drying, but by electrolysis. After preliminary mixing and crushing, the peat is fed by a screw conductor to what is called an electrical mouthpiece. Here the fibers are treated in a tank by rotary or single-phase alternating currents. Thence the peat passes to a machine which shapes it in endless bands 11 inches square in section, and then cuts

SEA-CLIFFS AT POINT LOMA

NATURE AND LIBERTY

THE Sensual and the Dark rebel in vain,
Slaves by their own compulsion! In mad
game

They burst their manacles and wear the name
Of Freedom, graven on a heavier chain!
O Liberty! with profitless endeavor
Have I pursued thee, many a weary hour;
But thou nor swell'st the victor's strain, nor ever
Didst breathe thy soul in forms of human power.
Alike from all, howe'er they praise thee,
(Not prayer, nor boastful name delays thee)
Alike from Priestcraft's harpy minions,
And factious Blasphemy's obscener slaves,
Thou speedest on thy subtle pinions,
The guide of homeless winds, and playmate of the
waves!
And there I felt thee!—on that sea-cliff's verge,
Whose pines, scarce traveled by the breeze above
Had made one murmur with the distant surge!
Yes, while I stood and gazed, my temples bare,
And shot my being through earth, sea, and air,
Possessing all things with intensest love,
O Liberty! my spirit felt thee there.

Coleridge

these bands into cubes of 11 inches. Afterwards the cubes are dried in chambers with a forced draft, and subsequently in drying towers through which the exhaust steam is passed. The whole operation occupies only from 10 to 12 days, in place of from two to

four months as required by the ordinary drying process. The product can be kept for months in the open air without alteration; although not brittle it is very hard, and can be cut into shavings or sawed and cleft with an axe. Raw peat contains 80 to 90 per cent of water, ordinary worked peat 45 to 50, and peat coal only 25 to 39. STUDENT

A Telegraph Line Across Sahara

THE French are constructing a telegraph line across the Sahara Desert from Algeria to Senegambia, which will be about 1660 miles long. The construction of the desert section will be very difficult, owing to scarcity of water and the necessity of transporting everything on camels. The wires are being supported on hollow steel poles, made telescopic so as to pack easily; and the wires will be 15 feet above the ground, so as to allow plenty of room for camel caravans to pass under them. A camel corps will maintain the line in connexion with military posts at the principal wells along the route. It is in contemplation afterwards to extend the line to Timbuktu and to Lake Chad, and also to form a junction with the existing line to Bamako in Senegambia. By means of this telegraphic system the French possessions on the North coast of Africa will be put into rapid communication with those on the West. E.

Students'

Path

EVENING

FROM upland slopes I see the cows file by,
 Lowing, great chested, down the homeward trail,
 By dusking fields and meadows shining pale
 With moon tipped dandelions. Flickering high,
 A peevish nighthawk in the western sky
 Beats up into the lucent solitudes
 Or drops with guiding wing. The stilly woods
 Grow dark and deep and gloom, mysteriously,
 Cool night winds creep and whisper in mine ear.
 The homely cricket gossips at my feet.
 From far-off pools and wastes of reeds I hear,
 Clear and soft piped, the chanting frogs break sweet
 In full Pandean chorus. One by one
 Shine out the stars, and the great night comes on.

Archibald Lampman

Brotherhood

WE find today all about us the signs that man is looking for brotherhood. Not merely in the name, but the quality itself; and he finds it also. It may take a great disaster, such as a fire, a flood, or an earthquake, to bring him a realization of its existence; but once realized he seeks it again and again. He seeks it because there is something in his nature which craves this assurance of comradeship in the journey of life.

In our moments of greatest joy, we feel a kinship with the whole world; we recognize the common brotherhood of man; we even extend our love to the animals, to inanimate nature; nothing is too mean for us to find beauty in it. We love the stars, the world for being—we love life itself. We have forgotten the personality and its limitations; a door into our secret chamber has swung silently open and we flood the whole world with that love which we know is from our better self. Or perhaps it is that our forgetfulness of self has given us the magic key which opens for us the door of our cell, and for an instant we stand forth in the glory and radiance of life as it should be—as it would be if we did not each build his own little chambers of horrors to hide from its radiance.

The times when we recognize all to be our brothers from the highest to the lowest, when we recognize the golden links binding all together from the tiniest atoms to the highest beings—those are the moments when we really live. They are the moments that keep alight in the world the faith and hope of the people. They are the assurance of our divinity, of our knowledge of something better than the present turmoil of what we miscall life. Hold them, do not feel afraid; they are the life-buoy thrown the swimmer in a rough sea. But alas! these moments with most of us come but rarely, perhaps once in a lifetime. Too often we wonder whether our brother's desire to show his love and friendship is not a rather clever way of deceiving us for his own benefit; or if his demands for recogni-

tion are not rather demands for the possession of our personal belongings. When we look at him and see him happy in his successes, do we rejoice with him, and are we glad to know there is that happiness in the world; or do we envy him and wonder why it is not ours instead of his? Have we shut our cell door so tight that we have forgotten there is a door, and so imagine that this dull horror of our present existence is all there is of life?

"But," you say, "what can I do? I cannot go out and say to every tramp I meet: You are my brother, and I love you; come home and share what I have with me." No, this would be neither wise nor right; but you can recognize the fact that he is a brother-man, and if he is suffering or in need, you can, so far as you are able, extend to him help and sympathy.

True brotherhood can not exist apart from justice nor is it subversive of the eternal fitness of things; it neither countenances injustice to one's self, nor does it condone injustice to another. And it cannot be said that it is justice or helpful to encourage idleness and shiftlessness. Such is not true helpfulness, it is not brotherhood, it does not aid in the pathway of true progress, in becoming a better man, a better citizen. Yet the practice of brotherhood demands that all these shall be taken into account; it demands the recognition of the dual nature of man, and that you shall so act as to call out the powers of the higher and aid in the control of the lower nature. That which panders to the lower nature, and the demands of the personality, disregarding the needs of the higher, is only weak sentimentality; it is not brotherhood.

And though you are alike in origin, and your goal is the same, that of ultimate perfection, yet he may be experiencing other lessons than you. Perhaps your human soul would shrink to helplessness at the problems he has faced. You say he has evidently failed. How do you know? You say, "Why failure is stamped all over him." Well, perhaps it is stamped all over you too, for the eyes capable of reading your failures. Believe me, the failures shown by ragged clothes and broken body are as nothing compared to the failure shown by a human soul that has never fairly faced its problems and mastered them.

What shall you do? Simply do not pass him by on the other side with the secret feeling "I am better than thou." He is a part of the state of society for which you in degree are responsible. Grant him the compassion and helpful recognition which you in your best moment would ask for yourself; nothing more, nothing less.

Unfortunately to many the idea of brotherhood is that it gives them the right to manage their own affairs and also to interfere in the affairs of their neighbors. Is there one of us who has not suffered from the mistaken individual, who, from what he might call a sense of duty, tries to settle our affairs for us; or brings us some unwelcome bit of news for our own good? And have we not wondered whether the help came from a desire to be brotherly or a desire to be spiteful, or patronizing? Robert Louis Stevenson said, "There is an idea abroad among moral people that they should make their neighbors good. One person I have to make good, myself. But my duty to my neighbor is much more nearly ex-

pressed by saying that I have to make him happy."

It seems to me that if every one of us recognized the fact that our neighbor is our brother, possessed of equal rights with ourselves; and, perhaps along the line of his own development knowing some things better than we, we would be more charitable, more thoughtful, more careful to mind our own business, and the world would be a better place to live in.

Sometimes brotherhood is shown by lending a helping hand in time of need, and forgetting the "I told you so" part of it. Sometimes it comes out in just standing back and clearing the way for your brother to get on his feet. Some natures are weakened by help; they only want the fighting chance, but they need the fight. Give them the chance, but stand back. Don't interfere. You can learn the great wisdom of dealing with your brother-man only through loving him, only through the brotherliness which is truly in your heart. Your profession of brotherhood may stand the wear of peace, sunshine, and fair skies, but in the battle and storm of existence it must be a brotherhood of the heart and soul which will hold you firm to your ideals and make the world better for your having lived in it.

E. M.

He who is learning to be wise, begins to realize that he must either *drive* or be *driven*. Most men are driven hither and thither by every tide of desire and feeling, by ambition, desire for so-called success in life, wealth, or fame. They fancy they are in command of their own destiny, and that they are working for some desirable end. But if we do this we are violating the laws of our being, and our purposes will, in the end, avail nothing. But he who recognizes that he can *take hold of his own nature*, and become the driver thereof, through the potential strength of the divine soul within him which is born to command, is less anxious about outer events which the Law may bring to pass. They are welcomed as experiences of truth rather than as annoyances or worries. And this self-control by the inner man, is known to the student of Theosophy as *Râja Yoga*.

STUDENT

THE much talked-of strenuous life of today is largely a desperate scramble for possessions and sensations and to keep busy enough with externals to drown the voice of the inner man. It is at best a materialistic counterfeit of living. Real life is continued growth into a larger, stronger, purer, sweeter sense of being. Competition and strife, venom and littleness are elementary lessons which belong to nature's kindergarten; man, as the flower of all this experience, can only truly live in expressing the peace and breadth and beauty of the natural human life.

STUDENT

THE mere selfish desire of a person to escape the trials and discipline of life is not enough to set nature's laws aside, so the soul must be reborn until it has ceased to set in motion the cause of rebirth, after having developed character up to its possible limit as indicated by all the varieties of human nature, when every experience has been passed through, and until all of truth that can be known has been acquired.—*W. Q. Judge*

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question Theosophy, no doubt, is all very well for those that like it; but surely it is altogether too idealistic for the world today. Ought we not rather to wish for some system advocating enlightened selfishness, something more in harmony with the modern competitive system?

Answer Is this world so delightful a place then? Let us see what it is you are advancing.

A man has a bad cold; let the doctors then give him something thoroughly in harmony with his condition. He got the cold through exposure; let us therefore strip him, and take him out to lie in the snow. You do not, it appears, want to cure the evils of the day; you want to dose them with something of their own nature, to enhance them. Let us not pour water on our burning home, but oil; it will be more in harmony. This man is a drunkard; let us then preach to him salvation through whiskey. This man is a morphine-maniac: give him some more morphine, and show him that it is the best thing he can have, spiritually, mentally, and physically. The world is sunk in selfishness; encourage it to be the more selfish. Let the vicious man fly to his vice, and the sow that is washed to her wallowing in the mire. This is the doctrine you advocate. We are to cast out devils through Beelzebub, the prince of the devils.

You remember what George Stephenson said, when it was suggested to him that a cow might get on his proposed railway track and work untold havoc. "Sae muckle waur for the coo." The great Law of this universe is the train; selfishness is the track, and the man who rules his life by it is the "coo." Now that cow does not want a religion that will assure her of her perfect safety on the line. She does not want to be made to believe that the train will prove accommodating, and be sure to get out of her way. She does not require anything the least in harmony with her present comfortable position and elegant desires. The one thing needful is that she should be swiftly and suddenly removed. Do not put a tub of mash for her there where she lies. Do not pat her on the head, and tell her to lie still and God will protect her. He will not protect her. The most that she can expect is that the hooter will scare her away in time, and that she will be a more circumspect and judicious beast ever after.

We are told that an ordinary man in the world wants to support a family; he wants to look out for himself, for number one; he does not want altruism. What is it that lies before him, on this selfish road? Disappointment, and again disappointment, and forever disappointment. Those who urge such arguments against Theosophy have never taken the pains to understand the condition of things in the world; they have never studied life. Selfishness is the disease of all diseases, and the fountain of all our troubles. Palliatives are no good; to speak of "enlightened" selfishness is a mockery. Selfishness is not the law of life; but harmony is; it is the will of the universe to attain harmony and to preserve it. If you had said "enlightened unselfishness," it would have been to some purpose; for the

true thing must not be confounded with sentimentalism.

If there is one truth more certain than all others, it is that the young man at the start of life needs Theosophy. His aim is to marry; very well, then above all things he needs Theosophy. He needs to see altruism as his star and goal, and battle towards it without pause or compromise. We know the world is run on the lines of selfishness, that is, the world of men is so run. That tendency enters into the marriage question, and debases it. Sometimes it wrecks one or both of the lives concerned; generally it breeds disappointment and misery — is it too much to say generally? — and conditions that do not end in one generation, nor in two; but go from one generation to another increasing and carrying damnation in their track. Look at the thing; face the problem of life; examine the facts, and do not lose yourself in a maze of bottomless theory. Your idea is what shuts the door of the world against all upliftment and enlightenment. Look at the thing; and say if it is not just this gospel of uncompromising unselfishness that is needed first and most.

As to what unselfishness means — for there are all sorts of opinions on the subject, some of them very feeble. It would be very easy to bring forward a lot of suppositious occurrences with a view to trapping up the advocates of altruism, and ask "Is a man to be unselfish *then*?" Let us say at once that it is the mark of the shallow mind to require a religion that tells him what exactly to do under all circumstances, and so save him the trouble of standing on his feet and thinking for himself. Theosophy invokes the intuition and self-reliance; it resembles a sword, a spur, a pair of wings, a battlesong; not a feather-bed or an easy chair. It shows you that there are a higher and a lower self within yourself; that to follow the lower is to follow the path of endless disappointment, loss, ruin, and decay; whereas to follow the higher is the only success — which things are facts and not theories, as you shall find upon examination. And it urges you to find for yourself your higher self, and take all your directions from it; to take it as your guide and follow its living directions moment by moment; to try to do so and to go trying.

It is ever so easy to follow the directions of a priest or a book, but to be a living man is a different thing. Yet it is such *men* who are going to pull this poor old world out of the quagmire the advocates of enlightened and other kinds of selfishness have plunged it in. It is men whose consciousness is big and universal, not wrapped up in themselves nor bound down to ignoble commonplace aims.

We are not always to be cramped up, shunning everything large and wholesome and life-giving. We are to be complete, and spacious in our minds and imaginations. We are to go our ways with a certain chivalry, to understand that it is a magnanimous and dignified thing to be human. For God's sake then let us bring Theosophy into our lives, and scorn to imagine that circumstance is a mightier thing than the human soul. M.

Answer II. Only by an examination of the teachings of Theosophy can this question be answered. On the face of it, the one making the statement that

Theosophy is too idealistic thereby shows his ignorance of its main teachings. He may perhaps be more or less acquainted with teachings and practices that go under the name of Theosophy, but are no more truly Theosophical than much that has been taught and done as Christianity is in harmony with the teachings of Jesus. For instance, it is historically recorded that during the conquest of Mexico, it was a frequent practice to baptize infants and then dash out their brains; and all this done in the name of Christ — are we to accept this as Christianity? This may be said to be an extreme instance, but there are many instances that could be mentioned of things done and said today that we feel perfectly justified in refusing to accept as being in any way a part of true Christianity or sanctioned by the teachings of Jesus. We should be doing a grave injustice to all true Christians and to Christianity to regard them so.

And similarly we cannot recognize those as Theosophists for whom Theosophy is nothing more than a means of intellectual *entertainment* which never enters into their lives, instead of a living teaching to be *studied, and to be practised*. And no matter how loudly he or she may profess the name, we cannot recognize as a Theosophist any person who teaches that "The Theosophical Society has no moral code." Some people, alas! regard the absence of a moral code as a sign of enlightenment, but Theosophists condemn such a position. Nor can we regard as a Theosophist anyone who gives immoral teaching, whether to boys or adults, nor anyone nor any society that upholds such a person or puts him forward as a teacher.

Yet such things are taught under the name of Theosophy, and in the meantime there is much ridiculous aping of wisdom, much professing to give out occult knowledge, statements if you please about animals, that certain ones will reincarnate on Mars or another of the planets, and other balderdash. And there are people, poor gullible humanity, who sit open-mouthed and swallow all this; and some shut their eyes to the statement, and others boast of it, that the Society to which these people belong "has no moral code."

Such is not Theosophy; it is not enlightenment, though it is of the very essence of selfishness. Yet some people still take their conceptions of Theosophy from such false presentations.

Is Theosophy applicable to the needs of the day? Is it applicable to everyday life? Is Theosophy what humanity needs? Let us change the question. Is there a need for more brotherliness, for a knowledge of universal brotherhood? Do men and women need a deeper knowledge of themselves, of their own natures, and of the world they live in? Is there a need for more trust, more faith, more hope? Those who have studied Theosophy and applied it to their lives know that Theosophy gives all these.

If you wish to know what Theosophy does give, read H. P. Blavatsky's, William Q. Judge's and Katherine Tingley's writings. Study the Theosophical teachings of Universal Brotherhood, of Karma, of Reincarnation, the essential divinity of Man, and the duality of human nature. A faithful study of these and an endeavor to apply them to daily life will give you the answer. J. H. F.

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

Christianity and Pagan Symbolism

ORIGIN OF THE GIFT TREE

WHEN Christianity spread abroad men knew that in the story of Christ's nativity was revealed what they had in their blindness striven to typify. So they adapted the old customs of their ancestors to the new order of things. Among northern European tribes a great fir tree was set up in each household at Christmastide. At its base were placed representations of Adam and Eve; in the branches coiled the serpent, and on the top-most bough gleamed a candle symbolizing that Light of the World through whom alone was victory over the serpent possible.—*Detroit Free Press*

As a matter of fact, the dogmatic proselytizing Christian churches took the ancient symbols and customs which they found among barbarian nations and wove them into the fabric of Christian observance. But these same symbols originally had a far grander and higher significance than any which Christianity has ever given them. This symbol of the tree, entwined by a serpent and crowned with a lighted candle, may mean, for Christianity, merely Jesus Christ overcoming sin; but the pregnant and far-reaching meaning which that symbol has in the Esoteric Doctrine as far outshines the Christian interpretation as the sun outshines the candle. The Tree, Serpent, and Star, are symbols found the world over. Christianity does not seem to explain the Tree at all, and has turned the Tree of Eden (which it transplanted from Chaldea) into a fable about a man and his wife. It is mentioned in a certain obviously mystical writing, which Christianity accepts as being a biography of Jesus, that the Master gave a *blind* man sight, and that the man then saw "men as trees walking."

These ancient symbols, which the churches adopted from the barbarians, are like a collection of pillars belonging to mighty temples that have passed away; and the churches have brought them together from various lands, planted them indiscriminately, and used them to support the roof of a cathedral. But the churches do not know that some of the pillars are full of priceless gems and others are of the commonest rubble stone.

If we but take a little trouble to inquire into the history of Christianity, we shall find that the religion as we have it today is indeed far removed from what it was as far back as we can penetrate. Only think of the autocratic changes introduced into it by various Roman emperors, of the quarreling sects, of the mys-

MEMBERSHIP

In the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

terious centuries called the Dark Ages, and we shall see that what has been handed down to us is the child of many and curious ancestors. Christianity is in need of resurrection from the tomb. It needs to throw off its grave-clothes.

Some time in the early centuries a great light seems to have been shed on the earth by the teaching of the ancient doctrine of the Logos, the Word in flesh, the God in man; and at some later epoch some of the disciples of this doctrine appear to have lost their way and turned it into a dogmatic religion. At first this new sect caused great trouble to the rulers of Rome, but afterwards they adopted it and made it into a state religion, by means of which they obtained a continuance of their despotic power. If we could but get back to that original Christianity, as it was before it was turned into a dogmatic religion! In the gospel narrative we find Jesus, a Master of Wisdom, teaching the gospel of Compassion and of spiritual enlightenment through knowledge of the Higher Law. He tells us plainly what is the road to enlightenment and emancipation, and shows us that by renouncing the selfish personal life and devoting ourselves to deeds of mercy, we shall have our eyes opened and be able to understand the deeper mysteries of his doctrine.

And as to the Serpent, does he not commend the wisdom of the Serpent? (*Matthew x, 16.*) The Serpent has been made by the churches into a symbol of pure evil, whereas it is really a symbol of wisdom. But one of the earlier races, symbolized by Adam, misused their wisdom and tried to snatch personal advantages out of it, whereby they "fell." So "enmity was put between the Man and the Serpent" (see *Genesis*). But Man has to master that Serpent, not by destroying it, but by making it the servant of his own liberated Will. That is one of the things symbolized by the light on the top of the Tree. Christ's original teachings, which he gave in secret to his disciples, comprised the Mysteries which

lead to a knowledge of Self and to the Wisdom and Power that come from that knowledge and its application. Where are those Mysteries today? The churches have them not, and it has remained for Theosophy to arouse people to a sense of what underlies the various streams of belief current in both the West and the East. STUDENT

Reform by Spasms

ALL who have paid the least attention to their inner life must be aware that we are subject to alternate tides of influence. One is the effort of the soul to draw us upward, and the other the recurrent impulse of the animal to drag us down. Most people guide their conduct by whichever of these two opposing forces is the stronger for the time. Under the gracious influence of a periodic visitation of the soul, we make a furious onslaught on our inward foes who long have occupied strongly entrenched positions; but when the heavenly visitant withdraws, our fervor cools, our efforts are relaxed, the hostile force takes heart at the withdrawal of the party of attack, sallies from out its stronghold, and assumes once more its interrupted sway.

The man who puts his trust in the eternal ebb and flow of the emotions is fore-doomed to meet disaster and despair. We should of course avail ourselves of every tide that sets our way; but our entire dependence should be placed in that unfluctuating urge that has its secret seat and source within the Soul. To flutter the emotions to a spasm of reforming zeal is a comparatively easy thing; but to evoke the sleepless, tideless will that rises in the secret place needs an unflagging effort and an indomitable will.

Those who accept Reincarnation are invited to consider whether the self-inflicted tortures of ascetics are not the natural outcome of unbridled pleasure-seeking in past lives, the pendulum of vehement desire swinging from one extreme of folly to its opposite. Yet even spasmodic effort, if directed to the cultivation of broad sympathies and the purification of thought, tends to awaken an ever-increasing response from within.

Middle lines are always best. A wholesome, sane conformity to simple ways of living which avoids extremes; combined with never-wavering aspiration, is as the steady, glowing heat of some old alchemist's fire that slowly turns the baser metals into gold. STUDENT

THE THEOSOPHICAL ADDRESS AT ISIS THEATER

AT the Isis Theater last Sunday evening, at the meeting of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, Dr. Herbert Coryn gave an interesting and instructive lecture on "The Destructive Force of Humanity's Fears."

Men become paralysed by fear, he said, fear of sickness, fear of old age; it is either a sudden wilting of the will or a slow dry-rot of it. A man may be correct in seeing the near-coming of his old age; but why the unnecessary feeling of fear? Is anything gained? Every evil that comes upon us, once we succeed in not fearing it, is an opportunity to win something; and that is what it is for. Whenever there is a moment of fear, in that moment something valuable is disintegrating, and it may not be easy to build it again. How, asked the speaker, would an artist picture fear? As something cowering and grovelling. How fearlessness? As a heroic figure, erect, superb, open-eyed, a visible champion and conqueror. That last should be our ideal.

Fear always plays the part of a disintegrator. It always does mischief and nothing but mischief. It may cause sickness, and ruin health, it may even cause death. It is the body's enemy. In the same way it will stop thought; it is the mind's enemy. In the same way it will paralyse the will and the power of decision; it is the will's enemy. And it paralyses the moral nature, for when the knees of will suddenly take to trembling, the fight against vices and failings must stop and they rush back in all their force.

But cannot fear conquer a vice or weakness? Discussing this question Dr. Coryn took the position that where a vice is given up through fear there is no gain of moral strength. He contrasted such a man with one who in struggling against a vice calls out his reserves of moral strength, invokes the light within and above, energizes his will from hour to hour and from day to day, and at last wins the battle. The first, who gave up the vice through fear, still has the weakness of the vice, though not the vice itself. He never conquered it, and he was conquered by fear. The other has slain the vice and also has slain fear. Now suppose the two men back on earth again for another incarnation. The unslain vice of the first will reappear; it was never killed; his fight is still in front of him, the fight with that and with the old fear. But in the second that vice is dead; his will is strong and keen; his higher nature is awake. Weaknesses unconquered in one life must be faced in the next, vices dropped through fear are vices still.

OBSERVER

Theosophical Meetings

PUBLIC Theosophical meetings are conducted every Sunday night in San Diego at 8.15, at the Isis Theater, by the students of Lomaland, assisted by the children of the Rāja Yoga School. Theosophical subjects pertaining to all departments of thought and bearing on all conditions of life are attractively and thoughtfully presented. An interesting feature is the excellent music rendered by some of the students of the Isis Conservatory of Music of Lomaland. Theosophical literature may always be purchased at these meetings.

Capital Punishment

FROM Ohio it is reported that a county prosecutor who has been conducting the case against a boy of seventeen, charged with murder, announced that he would not ask for the death penalty if the boy was found guilty of murder in the first degree, though that is the legal penalty. He declared that the time for capital punishment had passed.

And so it has. This relic of barbarism is about as sensible as trying to kill a weed by cutting off the stalk. As in physical science, so in the world of thoughts and deeds, there is a law of the conservation of energy, which makes it ridiculous to suppose that we can rid the world of all the force represented by a bad character by simply killing the body. The body was only the instrument through which

be found out. Finally the fact remains that it has not prevented murders. The most one could possibly allow for this aspect of the argument is that it does not count either way; if it has any influence at all as a deterrent, that influence is too slight to weigh against a good argument against capital punishment.

But most important of all is the question as viewed from the criminal's standpoint. From his point of view, the reformatory side of punishment disappears altogether, and nothing is left but a mere act of retribution or self-protection. But the reformatory side of punishment is its most important side—perhaps in reality its only side. We are coming to look upon the criminal more and more as a patient; and if we can avoid that weak sentimental view which imagines that a patient has to be

A BRIDGE AT HEIDELBERG

the evil passions were acting; we have cut it off, but we have not cut off them. They still exist, and will seek a new channel of expression, inspiring the weak and unbalanced among the living to like deeds. One reads in history of ambitious adventurers who sought to pave their way to power and peace by massacring all their opponents in wholesale proscriptions. But, instead of finding what they sought, they either died violent deaths themselves or retired to seclusion in order to give way to unbridled debauchery. The specters of their victims haunted them. Thus execution is a most foolish thing considered as a possible means of removing evil from society.

Another aspect of the question is that by which it is considered as a deterrent. The question as to whether it is a deterrent or not is so far from settled that it is still a matter of debate. Where the murder is the result of sudden violent anger, it may be accepted that the death penalty has no influence whatever on the mind of the criminal. It may also be argued that in many cases the criminal does not propose to

coddled, that is the right way to regard him. But a patient needs medicine, sometimes strong bitter medicine—for his good. What we ought to do for the criminal is to isolate him and guard him; and if we cannot reform him, we can at least try. However bad he may be, there is something that can be done for him, if it is only keeping him out of mischief. And if we had a reasonable knowledge of life, we should see this. As it is, the common absurd doctrines, or rather *lack* of doctrines, about what happens to a man after death, stand in our way.

If it were realized that the soul is destined to return to earth for another try, we would be willing to give it a chance by helping it as much as possible for the remainder of its present life. It would surely be sufficient deterrent if murderers were removed from society until cured. And, in any case, the proper way to deal with crime is by prevention; otherwise we are merely punishing people for the results of evil conditions which we ourselves have allowed to exist.

Our Wealthy Selves

A FINANCIAL contemporary, Bradstreet's, gives us some extraordinary figures respecting the commercial growth of this country, not omitting, however, a little touch or two on the other side by way of warning.

The agricultural part of the figures is taken from Secretary Wilson's report, which appears to be a sort of paean. "He is in fact the farmer's bard, and feels so firmly the importance of the industry he represents, that he is, perhaps, not inclined to reflect that the vast increase of wealth he depicts has been the result of some very high prices paid by the rest of the country."

The total value of the country's farm produce stands now at the astonishing figure of \$7,778,000,000. What it may be in another ten years, anyone who thinks that in the following he has enough data to go ahead upon, can calculate.

This total value is an increase of 4% on that of last year; of 15% upon that of the year before; of 31% upon that of 1903; and of 65% upon that of 1899.

Next in value comes the mineral production. This now exceeds \$2,000,000,000 a year. How much longer can we keep it up?

The available and easily accessible supplies of coal in the United States approximate 1,463,800,000,000 tons. It is estimated that for every ton produced, half a ton has been lost or wasted, and that at the present increasing rate of production this supply will be so depleted as to approach exhaustion before the middle of the next century.

But we shall be getting power from some other source by then; and so will other countries.

The known supplies of high-grade iron ore approximate 3,840,068,000 tons, which on the basis of the present increasing rate of consumption cannot be expected to last beyond the middle of the present century.

As to wood supply, "we take from our forests each year, not counting the loss by fire, three and one-half times their yearly growth." But we may learn to correct our wastefulness in this matter.

Banking power is the best index of present wealth. So we can pleasantly read this: "The banking power of the United States in 1908 exceeded that of the whole world in 1890." Mulhall's estimates for the other countries in the latter year are about eleven thousand millions; for the United States in the same year, about five thousand millions: in this just closed year, about seventeen thousand millions. In other words, the increase for us has been about 240%; for other countries about 160%.

Some of this picture may look very pleasant; but there is no use in forgetting some possible darker touches not put in by Bradstreet's. For instance Professor C. J. Bushnell, in 1907, argued that we were moving towards bankruptcy notwithstanding our increasing wealth. His contention rested on the fact that whilst we were adding five thousand millions to our wealth every year, we were spending six thousand millions on the criminal, pauper, and vicious classes.

Ten millions of our people, one-eighth the population, now are constantly in such poverty that they are unable to maintain themselves in physical efficiency, and 4,000,000 of them are public paupers. In 1899—one of our prosperous years—18% or nearly one-fifth of all the people of New York State, had

to apply for charitable relief; in 1903, 14% of all the families in Manhattan were evicted. . . .

Would it not be well for us to lay stress rather on the darker colors than the others? Self-gratulation leads nowhere—at best; the other policy might lead to thinking, then to some conscience-work, and even finally to compassion and sense of duty and corresponding action.

STUDENT

My Idol and Yours

THE *Missionary Review of the World* tells us that the Viceroy of Fuchau in China has issued a prohibition of idol processions and idol services. It expresses relief, explaining that Christians have often been beaten and otherwise maltreated for refusing to subscribe money towards these functions.

The edict might have stopped short at merely absolving them from contributing, but it has done something more radical. The Viceroy may however have known what he was about, and may have his own interpretation of the word idol. To his benighted mind a statue of a Christian Saint or of the Virgin may be an idol. A procession carrying the Host through the streets for general veneration, may seem to him an idol procession and eminently likely to excite disturbance. He may not be able to distinguish between the adoration of statues and the worship of them. And when it is explained to him that these statues merely serve as means through which worship is directed to the persons they represent, he may say that the assertion is equally true of the other statues called (by us) idols. Such is the nightlike darkness of the heathen mind. We can only trust that no one has told him, nor will tell him, of that *idol* of Isis and Child which the ecclesiastics of Paris once transformed with a touch or two into a *statue* of Mary and Child.

At any rate the Christians will be no longer disturbed by the sight of idolatrous processions nor the Chinese of saintly ones. C.

Medievalism Today

A PROMINENT member of the Jesuit order, Father Giorgio Bartoli (late editor of the *Civiltà Cattolica*, says the journal from which the translation which follows is taken), in resigning his membership, thus relates in the *Corriere della Sera* the reasons which moved him:

The Society of Jesus has not expelled me. I have gone out from it spontaneously, for reasons of conscience, and for other reasons of which I shall give a hint. A year ago, on account of doctrinal accusations brought against me, my superiors prohibited me first from living in large cities and centers of culture, took from me every means and opportunity of coming into contact with educated men, and rendered it practically impossible for me to study, to write, or to publish anything. Recently, too, I was banished to a secondary town, with injunctions not to go out unless accompanied by a colleague, who (these are the actual words of my superior) "was to watch over my private conversation."

I was condemned, not only without knowing who my accusers were, but without knowing the charges against me. Of some doctrines attributed to me I have written and preached the contrary. Though, on appeal to my superiors, they admitted in writing that I had not in public preached erroneous doctrines, yet they persisted in continuing the punishment. I appealed from the local superiors to the higher. I asked to go to Rome, to exculpate myself. All was useless. I inquired of a competent person if I could

find protection from the highest tribunal of the Church. The answer was that my case would not be taken into consideration. Nothing remained for me but to lead a useless and ignoble life in the Society, or to take the case into my own hands and vindicate for myself that honest freedom of thought which God and His Christ had given me. I chose the latter course and sent in my resignation. Then, without waiting for its acceptance, I took my hat and went about my business. . . .

E così si muove.

Personal Nobility

THE Marquis Samela's name ought not to be forgotten, whether he lives or dies. His certificate of honor is in the newspaper report, an item from the Sicilian earthquake scene:

MESSINA, Jan. 2.—Rescuers today tracing the sound of a voice discovered the Marquis Samela alive in the cellar of his castle, enclosed by tons of debris.

"I have food enough to last several days," shouted the Marquis. "It is dark, but my eyes are becoming accustomed to it. Turn your attention to others in more imminent danger."

He inquired the extent of the damage and wept bitterly when told of the destruction. He had thought that his castle was the only building badly damaged.

Only too likely to be afterwards forgotten and sure of death in the event of another earthquake, he will not accept rescue until the others have been attended to; and it is *their* property whose loss he weeps at! A.

Observers versus Experimenters in Medicine

DR. —, who, in a letter published in the *Lancet*, advocated that criminals condemned to death should be given the option of being handed over to vivisection, and claimed that "direct experiment on man is what we want," upon this occasion reiterated his belief in the necessity and morality of such human experiments. (Report of a meeting at Bath, England.)

In France, it is said, there are two schools of medicine, of which one, called the experimenters, following Pasteur, declares in favor of the injection of a serum to prevent hydrophobia; and the other, called the school of observers, states that Pasteur has increased the number of deaths from "dog-bites" by giving hydrophobia to patients who might never have been ill. One doctor says that the vivisectionists are poisoning the human race. The serum and inoculation treatment he denounces as humbug. Another points out that by the use of the X-ray, the internal workings of a body can be seen without vivisection.

There are the two tendencies both strongly marked: the one towards intelligent study and observation of living human beings in their ordinary life; the other towards performing experiments on the dead or living bodies of subjects. The utility of the latter method is open to grave question, even among doctors themselves, as we see. As to the former, no one raises any doubt about its utility; it is surely the saner and brighter side of medicine; it outrages no feelings, excites no scoffs. About the other method there is a morbidity which stamps it as one of the things that lie on the borderland of usefulness and need to be kept in check, as far as possible. Surgical and toxic operations on sentient creatures "in the interests of science," are an offense that contains the seed of Karmic retribution for those by whom the offense cometh and those who in their ignorance condone it. T.

Art Music Literature and the Drama

Synopsis of the Second Part of Goethe's *Faust*

THE *First Act* shows us Faust at the court of the emperor; the fool has disappeared, but Mephisto has taken his place and whispers into the ears of the wise man of the court, the astrologer, words of cunning. Faust fills the empty coffers of state, creates a life of carnival and carnal enjoyments, in which the emperor appears as the great Pan, and Faust as the God of opulence, dealing out his gold; but the seed is ill and the harvest evil. The emperor commands new and different entertainments, he demands of Faust to produce the two beauties of antiquity, Helen and Paris. Mephisto objects, but finally yields to Faust the keys to the realms of the dead, where "the Mothers" dwell in a void, the illimitable, the boundless. A drama is to be produced; the highest in the land are invited to the palace, where the theater has been erected and the audience has assembled; Mephisto undertakes the office of prompter. A planned performance is expected, but it is more, much more. Faust conjures up the ancient beauty, Helen, and places her in the romantic age, but he falls in love with her; embracing her, a mighty explosion takes place and he is thrown to the ground unconscious. Mephisto, in the confusion and tumult, makes off with Faust.

Art now content? With a fool in his arm
The devil himself must come to harm.

The *Second Act* gives us the visionary condition of Faust, into which we are introduced by the reality of the surrounding world. We again find ourselves in Faust's study, the same as in the first part of the poem, but everything is deeply covered with dust. The pen which Faust had used to sign away his soul lies on the floor, with a drop of dried blood still clinging to it. Mephisto throws Faust's old coat over his shoulder, the insects upon which jump and dance in abandoned round. The pupil, whom we have seen in the first part humbly and modestly listening to the great master, stands now before us a baccalaureate, much further advanced than Mephisto was aware of. His aim was to be a God, in knowledge so wise, that without his will the devil could exist no longer. In the laboratory works Wagner, and by compounding the elements, creates, or crystallizes, a man, *Homunculus*, who is just receiving the final gift of life as Mephisto enters. How knowing, amusing, and wise, the little creature, but yet something is lacking, he has to remain within the glass to retain his equilibrium; not even bodily is he complete, but the will is there; he thinks of self, of Faust, still oblivious, and commands Mephisto to throw his cloak upon the sleeper. Gloriously shining, *Homunculus* floats in advance and leads them into the antique world, the home of the beauty-realm of Faust, to the classic Walpurgisnight. Here Faust revives and is overwhelmed in ecstasy, for this is Greece, this is the air which Helen breathed; the Sphinx reminds of Oedipus, the sirens of Ulysses; he asks for Helen, and Chiron then takes him upon his broad shoulders, once Helen's seat, and carries him to the daughter of Aesculapius

who conducts him to the realm of the dead. The earth trembles, *Scismos* arises, to rouse the very depths of the foundations; gold and treasures roll forth, it roars and ripples; pygmies, dactyls, and cranes of Ibycus in wild confusion; the *lamias* of the graves in a mad dance encircle Mephisto, who as a medieval devil, does not at once feel at home on classic ground. But soon he learns that even in the land of beauty vampirism may be found, such as he is wont to know, and he now pays court to loathsome *lamias* and the ugly daughters of Chaos. . . .

The *Third Act* is laid in Sparta; we are at the palace of Menelaus, to which Helen has just returned, accompanied by a host of Trojan female prisoners, to take possession again of the riches left behind her and which had been greatly augmented by her noble consort during her absence. He has brought her here, but spoke not a word to her on the whole way. At home he comes not near her, she only knows his commands that everything be prepared for an immolation. Phorcyas, the ancient warden of the palace, forcibly renounces her mistress, which awakens the anger of Chaos. Phorcyas then reveals the will of Menelaus, that Helen herself is to be the victim. She becomes horror-struck, and asks for advice, but the old woman knows but one expedient: beyond the river Eurotas a potent stranger—it is Faust—had built a strong castle, there she must seek refuge, and there she is carried on a cloud, she and her attendants. At the castle she is received as a queen. Menelaus and his warriors storm the castle, but they are turned away by magic power. Now they love, breathe, and revel in bliss, the two, Helen and Faust, the beauty of antiquity and medieval romance. With them rejoices and sings their most beautiful child, Euphorion. He is their happiness, their joy, their fear, for Euphorion rises like Icarus, and soon his earthly frame sinks into the grave, whence he beckons to his mother. She obeys, but the raiment of her beauty, her gown and veil, she leaves behind, which, dissolved into a cloud softly bears aloft her beloved one Faust, while the chorus of the phenomena passes into primitive music of the spheres. Then, giant-like, arises Phorcyas. It is Mephisto, his phantom art unrolls the whole to our view.

The *Fourth Act* again brings us back into reality, carrying us over the dream-period of Faust. The clouds return him to the hills of home, the land of the emperor; he re-awakens, strong and vigorous, he feels the impulse to act, to effect the extraordinary, to stem the annihilating tide of the ocean, to let the potency of spirit have its scope. But the whole realm of the emperor had given way to anarchy, with a new regent in his place. Faust stands with the majority and with righteousness, and at his behest the powers of nature, through Mephisto, must act in his service for the good and the true. The emperor regains his throne, he endows his trenchmen with authority and honor; at last come the clergy. The archbishop declares that malignant powers had gained ascendancy, he demands atone-

ment. A church is built on the place; valleys, meadows, and broad acres are donated to the priesthood, but it proves insatiable, it demands more and finally devours most of the empire.

The *Fifth Act*. After a long nomadic life a wanderer returns to his home, where two old people live in contentment and satisfaction; they will not exchange their hut for the fine abode which the mighty Faust has offered them, for the hut spoils the view from his castle. By his wisdom and power has the sea here been embanked, meadows and forests have sprung up, cities have arisen, and much has been done; but Faust has become an old man, powerful through good fortune and wealth, but not yet powerful enough to erase yonder hut from the landscape. Mephisto promises him that it shall be done, that the old people shall be removed. The first breath of the new morning wafts to the castle the smell of smoke, the hut has succumbed to the flames, the old people have perished. Faust is shocked; thus he did not want to gain his wish. "This will be scored against you," says the evil one to him. During the night four ugly hags come to the castle, their names being Want, Debt, Care, and Need. Here they find no place where to lay their heads, but Care glides through the keyhole and makes herself at home in the rich house of Faust; he begins to perceive pain and privation. She breathes upon his eyes and he becomes blind, but yet within he sees more light; he calls his people to work, he drains the poison-laden swamps and leaves them dry; the acres thus won from the sea he turns into fruit-bearing fields. "To live free with his people in a free country," is the aim of his life in the fulfilment of which all that is earthly drops from him. Mephisto and his minions try to gain his escaping soul, but a heavenly host intervenes, seeing which, Mephisto is overcome by the greediness of the cat lying in wait for a bird. The angels are so appetizing and for a time the soul-prey is forgotten. Fragrant flowers fall upon him, but his evil power is not strong enough to withstand the heavenly onslaught, the roses burn Mephisto, but his altogether fiendish nature cannot be burned out, cannot be purified. He shakes the load from him, the while the angels carry the immortal part of Faust on high and the servant of hell sinks in impotent defiance into the abyss. The chorus of the anchorites is heard, the souls of children destined to die at birth float over the region of the earth, while the world of matter is shown them and explained, but they desire greater beauties and float higher and higher to attain them. Souls of penitent women arise, among them Margaret. She begs for her child, to teach it of this world—"it is blended with the new day," and with her, lighted by her love, Faust arises into glory.

As man, Faust has miscarried in the strife of his earth-life, yet by the power of will through sublime truth and light, his soul attained to greater growth, and therefore it must, borne up by love, rise to eternal bliss.—*From the German of Hans Christian Andersen, Translated by E. A. Nercsheimer*

See that each hour tells in mastery of character.—Katherine Tingley

The Power of Habit

IT is difficult to appreciate the stupendous power of habit. Perhaps no one realizes to what extent his own life is directed and controlled simply by this. We are born into environments which are charged with strong currents of energy made by the thoughts and acts of generations before us, which are as real and forceful on the plane on which they act as are strong electrical currents on another plane. And the entering soul, thrown into them, is swept along with them, unconscious for the most part that it is being moved by another force, and not by its own will. It almost seems as if every part of one's constitution were a creature of habit, except the soul; and that until the body and mind comes under its control, one but falls a prey to one habit after another.

There are habits not only of the body as a whole, but of each separate organ and cell; habits of taste and of thought. Then there are habits of the social organism, such as customs, conventions, and so on. It takes an iron strength to break away from these and initiate a new departure. Anything, however marvelous, if but repeated often enough, will seem natural, and scarcely excite comment. We stand before the mysteries of nature and often are not even moved to wonder, so easily does the mind drop before something to which it is accustomed. An outrageous abuse may be perpetuated for centuries, simply because it was under the swing of action, and people will suffer and endure under it as if there were no alternative; until suddenly someone asks "Why must this be?" and by a turn of the hand, it may be, frees the passive multitude.

There is an old Persian saying, "Commit a sin twice, and it will not seem to thee a crime." The very committing of an evil thing takes off the fine edge of one's inner perception. It is dangerous to relax the least in one's self-discipline. Little by little, imperceptibly, such a course leads to what would at first be re-

garded with horror, and the true nature of which will only be realized through some terrific shock, if at all.

It is with understanding of this mighty factor of habit in human life that the Râja Yoga School is working. It prefers as pupils those who enter in infancy, and regards these early years as the most valuable. Good habits are even more powerful than bad, and where enough of these are established to create an atmosphere in the world, into which the entering souls can live and breathe, one can imagine that a new day indeed will dawn.

STUDENT

HAVE we not all, amid life's petty strife,
Some pure ideal of a nobler life
That once seemed possible? Did we not hear
The flutter of its wings and feel it near
And just within our reach? It was. And yet
We lost it in this daily jar and fret.
But still our place is kept and it will wait,
Ready for us to fill it, soon or late.
No star is ever lost we once have seen:
We always may be what we might have been.

Adelaide A. Proctor

Woman and Her Critics

"WHEN at a loss for a topic, take 'The Modern Woman,'" would appear to be the basic and final rule in the play which some public men, and a few speakers and writers among women, are making to secure and hold public attention. Yesterday a leading Professor in a leading American University published a book on *The American Woman*, in which he exhausts the dictionary vocabulary of uncomplimentary epithets and adjectives by the end of the first chapter in his effort to make the dear blind public see what a sordid, abject, miserable and utter failure its wife and mother is. From across the water comes a similar lengthy indictment of "the American woman," from the pen of an Englishman, more chivalrous than his American contemporary, however, for at least he

does not assail the womanhood of his own land. We might learn a bit of loyalty there.

Today we read of a bill just introduced into the Legislature of a Southern State (this is stern fact, not fiction) the object of which is to prohibit women from using paint, powder, high heels, unhygienic garments and false tresses on the score that men are thereby, against their wills, "deluded and deceived!" One looks in vain for a companion bill which shall prohibit men from using the various artifices and deceptions by which mental and moral uncleanness, foul thoughts, sordid and impure motives and even physical disease are being covered up by thousands daily, to the deception and undoing of those who should, by innate rights, look upon men as their protectors on the highest lines. Today's paper contains also a report of a lecture in which American mothers are wholesaley, so to speak, announced as "degenerates"—and so on, *ad infinitum* apparently, *ad nauseam* most certainly.

The extent to which humanity's progress is delayed by a certain class of people who would simply die if they were to drop out of range of the public eye for a week or an hour cannot be over-estimated. We find them in politics, in finance, in literature, but most of all in the world (a bit misnamed in some of its aspects) of reform. If they only could know that they were deceiving chiefly themselves, that only the inane or very ignorant fail to see beneath this pseudo-chivalric guise they put on the real motive underneath! If they only dared look into their own hearts and analyse their motives—just once, for one hour, for a single moment even! But ah, no!—they dare not, they do not, they cannot—they know that it would mean actual death to the craven, vain lower part of themselves which has been so pampered, so fed, that it has practically driven out and away from reach their higher possibilities. Force that creature into a corner—there would be no life in them at all.

This is the actual truth of the matter and

goes far towards explaining not only the prevalent tendency to harangue about the mote in one's brother's eye while perfectly oblivious of the beam in one's own, but also the custom among a certain class of manufacturing motes out of their own imaginings whenever there looms up the least possibility of an audience. It is the spoiled child's habit of "showing off before company," grown detestable and over-mastering.

No person of any common sense is deceived by these meanderings, least of all a Theosophist, yet the conditions of life about us, the misery, the sin and shame, the unbrotherliness, the hypocrisy, the vanity and love of power—all these cry to heaven of the fact that in a large majority of the human race, real, pure common sense is lacking. They loud enough proclaim the utter stupidity of thousands and tens of thousands and millions. And it is from the stupid class that the agitator's audience is raised up, some to be deceived, some to be turned into pessimists, some to catch the germ of this disorder (not modern, for there have been agitators in all ages) and go out as "reformers" of the same ilk themselves. That is the pity of it.

Meanwhile "the American woman" appears to be keeping steadily along, perhaps doing as well as any other class would do in the midst of perplexities, problems, cares, temptations and a dozen other surrounding difficulties that were all unknown to her forbears. There is no question that a certain proportion are more eager for what they consider "knowledge" than for what they know to be "duty," and it is from this class that the pseudo-"occultist," the "authority" on the care and education of children, and the political agitator draw their audiences. There is no question that a certain proportion of women are, sometimes thinkingly, sometimes unthinkingly, selfish. There is no question that all American women, in the present transition period, when the whole world is under a pressure from the death-throes of the old order of ages and the birth-pangs of the new, have much, very much, to learn, much to adjust and somewhat to undo. But can we not have patience? It is a testing-time, a time of trial and probation for nations as well as individuals and he chooses wisely who attends to his own business and postpones indefinitely all such criticism of another, no matter what the seeming provocation. To do otherwise is to proclaim oneself knave as well as fool, it is but to wind a Karmic noose about one's own neck. It is wonderful, just now when there is so much on every hand waiting to be done, to discover people who have time to waste in unsettling and agitating and tearing down! One wonders when they will awaken and turn about.

This is another evidence of the need of an awakening of the public mind. The fact that these agitators keep on with their lecturing and writing proclaims that audiences are forthcoming from somewhere. For have they a ghost of a motive higher than that of the man who sings the praises of "the skeleton-lady and the snake-charmer from Siam" in front of a country side-show? They aim to attract a following—it would seem that almost any kind will do—to pose and impose, as long as there is an empty brain left in humanity's poor collective head, or a chance to carry out selfish schemes.

Jottings and Doings

(From a Student's Note-Book)

SANITARY-INSPECTION is opening up a great sphere of work for capable and unselfish women. With the free entry accorded to her in her official status the woman sanitary inspector has proved herself a godsend to the most degraded and hopeless class of people, for she is never viewed with suspicion and is often accepted as a friend. While her business is to inspect, she is able to enter into the most pressing needs, making claims for repairs, recommending cases for relief, advising for instruction in the rearing of children, etc. She can call the attention of the public to all cases of neglect, and may expose to lasting benefit the hopelessly degraded condi-

KING GUSTAF V OF SWEDEN

tions in the slums, resulting from low wages, unsanitary homes, dissolute habits, and ignorance. Is it possible that people live, ten persons in one small room (1600 cubic feet) where the sunshine never penetrates, with bedding and clothing virtually never washed, with refuse piled up close to the windows, drain-pipes broken, germ-laden flies swarming everywhere? Yes, in these enlightened days it is possible, and just such appalling descriptions of unsanitary conditions still come to light from time to time emanating from a poisonous swamp that has been stirred at last by earnest humanitarian workers. To the fortunate dwellers at Point Loma where life is lived in simplicity and purity, under perfect sanitary conditions, these things sound like legends of a bygone Dark Age. Yet since we realize that it is no dream of the past, but that still our brothers and sisters are held bound in conditions worse than slavery—what a spur to our endeavors! Can we for one moment afford to relax our efforts?

We know that the magic of brotherhood alone can cure these ills. We realize that every steady and persistent effort on right lines does hasten the advent of the happy day which shall herald the dawn of a Golden Age, when the spirit of brotherhood shall gather to one standard a nucleus of true hearts and strong warriors for humanity, when all life shall be remodelled according to the newer plans. Then earth will be a Paradise indeed!

HERE and there women are doing successful art-craft work in heavy metal, the kind of work ordinarily deemed suitable only for a man's more quiescent nerves and stronger muscles. One speaks of nerves as factors advisedly for not the least trying feature is the needed pounding. The work makes necessary, of course, the use of a forge, and one Eastern woman has been especially successful in carrying out for architects special designs in large metal pieces, fire irons, fenders, brackets, lamp-standards for within the house and without, etc. In addition she has done a number of smaller and more beautiful pieces, such as tea-sets, in hammered silver, spoons, forks, and trays, all being worked out in the lighter metals with exquisite traceries and relief work, the designs of all being original. And all such training fits women the better to take up the tasks of a home environment, should these also present themselves.

In describing the horrors of conditions in earthquake-stricken Italy, Minister of Justice Orlando recently paid a high tribute to Queen Helena, who went with the King to the devastated region as soon as the first news reached the court and remained at his side constantly, dressed as a working-woman and toiling like one, night and day, at the work of relief. He said:

Any eulogy I might utter would be far below the truth. Unrecognized, not caring to be known as Queen, she assisted many ladies who believed she was a simple hospital nurse.

With her own hands she bound up the injuries of 200 people.

A woman who was grievously wounded had to undergo an operation, which it was necessary to perform promptly. No one else being available at the moment, the Queen, without the slightest hesitation, took a leg of the injured woman in her own hands and held it throughout the operation. Finally, when the surgeon finished, she consoled the sufferer with tender words.

From a Californian daily we clip the following interesting account:

Madame Michaelis, the architect, is now constructing several important buildings in Marseilles. Great Britain also has a famous woman architect, Miss Elizabeth McClelland.

Madame Curie, who helped her husband to discover radium, has just been elected a corresponding member of the St. Petersburg Academy of Sciences. She is a professor of physiology at the Sorbonne.

Buda Pesth has a woman apothecary. Madame Bertha Hainisch, after passing the examinations, was granted a druggist's license, the first ever issued to a woman in Europe.

More than 600 women are studying medicine at the French universities and Paris has 100 women medical practitioners, most of whom hold official positions of more or less importance.

Women physicians are preferred as practitioners in high schools, normal schools and public schools, likewise in the post-offices, telegraph offices and in the nursery schools.

Mlle. Gaussell, M.D., has just been appointed director of a clinic of Montpellier University, an honor never before conferred upon a woman.

OUR YOUNG FOLK

In Holland

THERE is a quiet charm about the low country of Holland with its great expanses of flat fields divided by tall straight rows of tufted trees; its canals, and flapping, groaning wind-mills; the queer costumes of its peasantry; its quaint old towns and villages with their many-gabled, steep-roofed houses.

One of the most noticeable features of every Dutch house is the pulley firmly fixed to the topmost gable of the roof, by means of which heavy furniture, laundry-baskets, etc., are lifted through the windows from one story to another. For a Dutch housewife with her passion for cleanliness would be horrified to see baggage-men or truckmen with muddy feet tracking even her back entrance and stairway.

The houses of the rich merchants in Amsterdam are plain on the outside with solid, massive, front door. Within they are often resplendent with marble and carved woodwork, beautifully sculptured cornices and balustrades, walls hung with rich old tapestry or canvas covered with oil painting. The panels are waxed and the brass knobs and fixtures highly polished; the chairs are arranged in formal rows along the wall; perhaps there are a few rare old pictures. The rooms are handsome, bare, and scrupulously clean, and blessedly free from the knick-knacks that so frequently encumber the houses of the rich in other countries. L.

Felix Mendelssohn-Bartholdy

A SHINING example of an aspiring soul in a fortunate and happy environment is to be found in the life of the famous composer, Felix Mendelssohn-Bartholdy, who was born just a hundred years ago in Hamburg, Germany.

The Mendelssohn family had brilliant intellectual powers, the exercise of which had won them fame as scholars and financiers; and they had also the rare heart qualities which enabled them to make an ideal home. Their magnificent mansion, afterwards used as a Parliament building, was a gathering-place for poets, sculptors, musicians, and other great men who came to share the spiritual life of this united family, to take part in their artistic activities, or to enjoy the delightful atmosphere of love and harmony which always prevailed there.

Moses Mendelssohn, Felix's grandfather, was called "the modern Plato," being the most celebrated scholar of his time in Europe. His writings on the immortality of the soul have

Lomaland Photo. and Engraving Dept.

IN HOLLAND

NO man is safe in speech,
Unless he loves the quiet tongue.
No man is safe in power,
Unless he loves the lower place.
No man is safe in places of command,
Unless the lesson of obedience is learnt.
No man is safe in joy,
Unless he have within a conscience that is good,
The witness of his life.

Thos. à Kempis

been translated into a dozen different languages. Felix's father, Abraham Mendelssohn, was a clever business man, but one who did not let business consume all his time and energy, for he had a deep understanding of art, and Felix always retained the greatest respect for his father's opinion, and never gave up seeking advice from him. Felix's mother was beautiful and gifted, and was a true mother, having the strength and knowledge to train her children so wisely that their best possibilities were realized.

What a delightful home for the two musical children, Fanny and Felix! They played, practised, and studied together, always a help and inspiration to each other. Their education was not unlike Râja Yoga in some respects; for besides studying music they had the best masters in all other branches, and, most important of all, were under a firm but loving discipline as to every-day conduct, being taught industry, self-control, and obedience.

It is seldom that young people who are surrounded by so much wealth and possessed of so many gifts, do not become vain, or get

spoiled by praise and indulgence; but these children lived a busy, healthful life. Felix excelled in games and never lost the ability to enjoy himself heartily. He knew how to make the most of the sunshine of life. Later he was met by all the temptations offered by fame, power, and adulation; but he remained true to the loftiest ideals of art, and continued to work indefatigably. His life was so pure and upright that he is called "the blameless musician." This shows the splendid results of the higher education—the wise training which Râja Yoga affords, and which all children need.

Not only as a musician did Felix Mendelssohn attain fame. He was also an artist of no mean ability, a writer of merit, a fluent linguist, and a student. Then he had the gift of social grace and charm which won all hearts.

One of the greatest services rendered by him was his bringing to light the neglected and forgotten works of John Sebastian Bach. It was Mendelssohn who unearthed these greatest of musical treasures and labored with untiring devotion and zeal to have them brought before the world in a worthy manner. For this unselfish and inspired work alone he has deserved perpetual renown.

As a composer, Mendelssohn did not possess the originality and depth of the greatest masters like Beethoven and Bach; but his compositions contain much that is beautiful, and are models of fine form and phrasing. Though his works are now less frequently heard, his music is still loved and played the world over. His violin concerto, especially, and some of his shorter piano pieces retain very great popularity.

It is seldom that there is a man of genius with such a finely balanced character as Mendelssohn had. He combined versatility of gifts with rare virtue and a happy disposition. His life will always shine out as an inspiring example to those who strive to bring out the higher attributes of human nature and endeavor to live purely and unselfishly.

A RÂJA YOGA MUSIC TEACHER

In Holland, the government has a plan to reclaim about 40,000 acres of land on the Zuyder Zee. The cost, besides that of pumping and maintenance, would be a little more than \$280 per acre. But the Dutch people feel confident that the project will pay. The many reclaimed morasses in Holland have proven valuable because of their fertility. The Dutch seem to be fulfilling their old proverb, "God made the seas, but we made the land." H.

THE CHILDREN'S HOUR

CHICKADEES

CHICK-CHICK-A-DEE-DEE! Saucy note
Out of sound heart and merry throat.
As if it said, "Good-day, good sir!
Fine afternoon, old passenger!
Happy to meet you in these places
Where January brings few faces."

Ralph Waldo Emerson

"Living the Life"

NORA was very quiet on her way home from school, so silent that at last one of the merry little comrades asked if her head ached.

"No," she answered — "but do you like the new teacher?"

"She seems very kind," said Ada.

"She means to have things done well," Maude commented.

"She seldom gives you any praise," and Nora looked very rueful.

"Oh, praise!" laughed Jessie, "Surely we do not work for the sake of praise; for if we do, we shall feel very lonely when the praise doesn't come."

"And that often happens," Maude chimed in, "so don't be downhearted, Nora."

Nora flushed. She was beginning to realize how the praise of her late teacher had been the spur of her efforts, and felt at present one of the "lonely ones."

"Good-bye," she said stiffly, as they reached her gate.

"Good-bye, till tomorrow," Maude replied. "Cheer up, Nora."

"Poor Nora," said Ada, linking her arm in Jessie's, "it is a sudden change from favorite, to be just one with the rest of us."

"Miss Florence will have no favorites. There is something about her different from the other teachers we have had, and it gives one heart to feel the certainty of just treatment," said Maude decidedly.

Some six months later the same quartet walked home together, and when they reached Nora's home she said, "Come in and see the acacia in bloom. We can finish our chat and enjoy its beauty at the same time."

Gone were her stooping shoulders and dissatisfied air; tall, strong, straight, and clear-eyed, Nora led the way. After the first expression of admiration had passed away the girls sat on the greensward under the grateful shade, continuing their interrupted conversation.

"The holidays would be quite a blank," said Maude, "only that we know dear Miss Florence will be so happy in seeing her friends again."

"How glorious it is to work for a teacher who really *knows* what you need to make you happy," said Ada.

"And of some use in the world," added Jessie.

There was a happy smile on Nora's face. "Isn't it wonderful," she said, "the change that one's way of looking at things can make

Lonaland Photo and Engraving Dept.

JUST AS TALL AS THE GRASS

GOD gave me a little song
To sing upon the way;
Rough may be the road and long,
Dark may be the day;
Yet a little bird can wing,
Yet a little flower can spring,
Yet a little child can sing,
Make the whole world gay.

Laura E. Richards

in one's life? Miss Florence has taught us where to look for happiness, and by the only way in which we *can* be taught, by the practical example of her own life. Is it not because *she* was a living 'Rāja Yoga' that we are trying to be the same?"

"Well said, well said!" and Jessie dramatically presented her with a flower, "let us always honor gratitude, for it is a noble quality."

"And that also Miss Florence has taught us; for has she not always said, 'It is Theosophy, girls, that has brought joy into my life, Theosophy as *lived*, and *taught* by H. P. Blavatsky, William Q. Judge, and Katherine Tingley.'"

"Oh girls, do you think we shall ever see Point Loma?" cried Ada.

"We live in hope," replied a smiling chorus and a harmonious silence fell on the group.
E. I. W.

Thoughts are Things

HOW can thoughts be things when they cannot be seen or felt? But thoughts *do* things. They exist, and they make things come about; and if you stop to think about it you will realize that nothing could have been if it had not been for thought. For instance: suppose a man wants to build a house. Now he must think just how he wants it to look, just how many rooms, doors, and windows; and after he has thought it all out, he must go to the architect who draws out the plan, after the man has told him what he thought about it.

The architect knows how to draw the plan

because a great many men have thought about houses and have built houses ever since houses were needed and have thought out the best way to build them. The architect using the accumulation of thoughts on house-building, makes the plan of the new house.

So it is with all the thoughts we think. They fly away to find others of like character. They are never lost and are always ready to enter a person's mind and cause him to build houses or do anything he desires, and so make everything to happen that ever does happen.

I wonder what some of our wrong thoughts are doing. Hadn't we better consider this? for they have a way of gathering more like themselves and coming back to the place they started from, and doing much mischief to everyone else as well as to the one who sent them.

EUGENIA

Zoological Gardens

NEARLY every large city in Europe and America has a zoological garden, the best of which contain specimens of almost every known animal in the world.

The zoological collections in Paris and in Cologne are among the finest, and are like an international gathering of bird and beast.

On a fine afternoon in summer the gardens there are swarming with nurses and children, and grown-ups too, come to see the animals. Little French and German boys and girls are every bit as eager to feed the elephants on gingerbread and peanuts as are their American cousins, and make them toss their heads and trunks back to catch a sweet cake.

One feels sorry for the wild things imprisoned in cages far from their native jungles. The keepers feed the tigers and lions once a day by fastening their food on the end of a long pole and reaching it through the top bar of their cages.

There are two huge orang-outangs in the Zoo in Paris that look almost like old wild men. Their names are Max and Maurice.

The less fierce animals roam round inside their enclosures and seem happy and at home in spite of being transplanted. The kangaroo is always ready to race the small boy on the opposite side of his fence, leaving him far behind at the second jump.

L.

Dogs in Harness

WHEN settlers first went to the north-western parts of the United States, they often used dogs to draw their sleighs over the snow in the severe weather. And the farmers still use dog-teams, because they find that they can travel faster than the horses and keep going longer in the bitter cold and storm. With six dogs harnessed to a sleigh, a man in the upper part of Michigan found that he could easily go ten miles and more in one hour, without causing any discomfort to the animals. When dogs do so well they are sure to be given a chance to bound over the snowy country with light loads, even though fine horses are in every stable.

The Resurrection a "Psychic Phenomenon"

THE changed attitude of the public mind towards the question of religion is forcibly shown by the fact that a leading London daily morning newspaper should have seen fit to serve up to its readers, on Christmas morning and on its principal page, just after the leaders, the following remarks, which appear as a notice of a recent book by a psychical researcher. A fine digestive, truly, for the Christian breakfast, especially for those readers who might find their thoughts on that particular day turning with fond recollection to the teachings of their childhood.

His argument is that which was first suggested by F. W. Myers, to the effect that the Resurrection of Christ belongs to the same category as the facts collected by psychical research. On the whole, this view seems likely to find more and more supporters as time goes on. The result of historical inquiry is to show that, whereas the story of the empty tomb does not bear investigation, and that there is no reason to believe, apart from dogmatic argument, in the resuscitation of the body of Christ, the evidence is strong that the first Christians were convinced that they had seen and spoken with the risen Lord. In the same way other people at other times have been convinced that they have seen and spoken with those who have died. It is therefore reasonable that the explanation of the one should also be the explanation of the other. In this sense it is certainly true, as Myers maintained, that the result of psychical research is to support the genuine character of the reports of the Resurrection of Christ, and that the spiritistic hypothesis of these phenomena, if it be ultimately adopted, will justify on intellectual grounds a continued belief in the fact of the Resurrection, in the sense of a survival of Personality. (Morning Leader)

So the Resurrection has gone by the board, reduced to a mere doppelgänger; and has of course carried with it in its fall many essential parts of the rigging. For what is Jesus without the Resurrection? And, as for the Creed, it can now neither sport gaily in the breeze nor even lie-to in a gale of wind. But we note that the pious printer has insisted on giving it its capital R, though this circumstance is somewhat lessened by the fact that personality is also treated to a capital initial. But what of the Christians, after the sad fate of their ship? Are they to cling to it and try to make it still seaworthy? Not so; it is a case of "Leave the poor old stranded wreck and pull for the shore!" It is a case of "Man the life-boat!", for reading further, we find that

It is however, by no means unnecessary to warn theologians that this is not the basis of religion.

Too bad! What a way of treating an old

friend who has piloted one through so many dangers and led one to so many triumphs. When he gets old and rickety and turns to us for support, he is cast off and disowned. This is very shabby. "Mr. Resurrection, I don't require your services any more, and must beg that our acquaintance forthwith terminate."

The writer then goes on to give the reasons why religion is not dependent on the Resurrection. One would have supposed that the reason was that the Resurrection had failed and therefore religion had simply got to get along without it somehow. But our authority does not say this; he says:

The reason why a belief in the Resurrection of Christ is not really the center of Christian religion, although it has often played a central part in the development of Christian theology, is that religion deals primarily with things which are spiritual and eternal in the sense that they are outside or above space and time. You do not really make religion more or less acceptable by a greater or smaller amount of belief in various facts of history, and this is equally true whether the matter under discussion be the empty tomb or the appearances of one who has died. A belief in, or the experience of an "eternal" life does not depend upon the reappearance within the limits of space and time either of a body which has been placed in a grave or of a spirit which has been separated from the body. This is really self-evident so far as religion is concerned: that it is not more widely recognized is due to the fact that when people talk of the Christian religion — for instance, in education — they frequently confuse religion, which is an experience of the soul, with theology, which is a theory invented to explain it. Psychical research has nothing to do with religion, but, as Dr. Hyslop points out, it has and will have a very great deal to do with theology.

The editor ought to have left a blank page after this, to assist the imagination in filling in the things he has suggested but left unsaid. For what about the other theological doctrines of Christianity? Are they to go too? And, if not, why not? If you say to a man that you will take away his loaf, because the existence of the body does not depend upon food, he will begin to be anxious about his cheese and butter also. There is, for instance, the birth of Jesus; how does this stand historically? Any surer than the resurrection? And it staggers the imagination to conceive of the complicated questions of mixed psychic research and medical jurisprudence that might arise in connexion with such a subject. The star of Bethlehem was a conjunction of Venus and Jupiter or a comet; the temptation by the devil was a hallucination produced by fasting; the raising of the dead was suspended animation and magnetism; and so on. Needless to say, reli-

Beatific Emotions Instead of Spiritual Meanings

And What of the Other Christian "Foundations"

gion, cut off from all these doctrines, ceases to be Christianity at all and tends to become the Universal Religion — Theosophy. We defy anyone to make out a case for Christianity as a special and paramount religion, without the aid of these doctrines. The most that can be said is that it is the religion of Europe and that we mean to uphold it for that reason. It is at least a comprehensible position to maintain Christianity as a dogmatic religion; but it is not compatible with the desire to widen it to the scope of a universal religion. We cannot have it both ways; let us choose.

But our choice may be rendered easier if we reflect that we are by no means in the dilemma of having to choose between what theologians have offered us in the past and what is offered now. Because we are told that the Resurrection is not what they said it was, it does not follow in any sense whatsoever that it was nothing but spooky phenomena. If people in the past have foolishly taken sacred allegories in their dead-letter sense, it *does not follow that there is no other way of understanding them*. Again, the explanation given above takes no account whatever of the fact

The Parting of the Ways

that the Resurrection is a universal allegory, to be found in other religious systems, in connexion with other Saviors. How the gospel accounts came to be written is still unknown, but they look a good deal like dramas or rituals of an initiation ceremony, afterwards used as the basis of an ecclesiastical system. If people would recognize that in the Christian symbolism, they have, preserved in allegorical form, the most sacred teachings concerning the Life of Man — teachings to be found in all similar records, they would value them more, and not waste time in discussing whether the Ark was made of oak or teak, or whether the wine that Jesus made at Cana was alcoholic or not. As an allegory, the Resurrection teaches us that the Christ in us is immortal and conquers death. Let the people lay hold of that truth and they may find themselves on the way to a worthier realization of what the word "Christ" means, and these allegories may acquire a deeper significance for them. STUDENT

Why Not an Allegorical Truth?

False Perspective in History
MR. GARROW DUNCAN, B. D., has been — almost unkindly — devoting archaeological attention to the "land" of Goshen, in Egypt, the place where the Children of Israel sojourned. They are recorded to have multiplied to such degree that by the time of their exodus the men alone numbered six hundred thousand. All told, there must therefore have been, say three million. It turns out, however, that Goshen was a quite insignificant little area, not big enough to be even named among the regular divisions of the country. If we are to accept a set of miracles to explain the nutrition of these three million people in the desert, we must do the same for their nutrition in Goshen. Moreover investigation of the city (which, it appears, was "also" inhabited at that time by an Egyptian population) yields no indications of any Hebrew sojourn there at all. And Egyptian history, in its silence as to the presence of such a formidable Jewish contingent as *Exodus*

would have us believe in, corroborates the archaeologist's findings. The hand of nature, in obliterating records, has conspired with that of the Egyptian scribe in not writing any. The three millions must evidently come down to little more than that many thousands.

We cannot ask how this small people managed to make its mark in history, for it hardly made any; but how this small history managed to make its large mark in the Western mind.

The Jews gave birth to one who became an initiate, a Christ — a Greco-Egyptian mystery-term far antedating the times of Jesus. He began to teach first among his own people, and for three years continually drew lessons for them from their own history. When his light spread far and wide, other peoples, studying the same lessons and remembering his nationality, conferred on the history of his tribe a wholly artificial importance, certainly never intended by him. And his work is reported to have been brought to an end in three years, while he was still teaching the few about him, before he had time to adjust its key to the infinitely wider audience it was subsequently to get. Jewish history stands out so markedly because of him, not for its own importance. Among whatever people he had chanced to be, would he not in the same way have pointed back to *their* history for moral lessons, for exemplifications of spiritual law? Would he not have thrown light for them on their own legends and quoted the sayings of their own past teachers and leaders? It is merely that he had not time to get among such peoples. STUDENT

Mass is Believed to be Energy

RECENT electrical research, and experiments with radio-active substances, have led in the direction of a new conception of the ultimate constitution of matter — that it is the same thing as energy. The theory is, however, not new, for the idea that atoms were vortices in a perfect fluid had been enunciated for many years. But the idea is now becoming more general and is receiving more support from experiment.

According to a newspaper, a professor of physics in Massachusetts has been led to the theory that

The mass of any body is proportional to the total stored-up energy within it.

Which really means, we are further told, that

In the last analysis, matter and energy are different phases of the same thing.

Since it follows from the above that a body, by being heated, should have its mass increased — a hot body weigh more than the same body when cold — an explanation is necessary; and the explanation is that such is indeed the case, but that the increase of energy due to the heating of the body is so slight by comparison with the total quantity of stored-up energy in the body that the increase in weight due to that cause is inappreciable even by delicate balances. (One remembers, however, to have heard of certain very delicate experiments in weighing which led to the conclusion that a body weighs more when it is hot than when it was cold; but the results were attributed to convection currents in the air and to experimental errors.) Of the existence of this enormous fund of latent energy we now

have proof from the experiments with radium.

It also follows that —

The two great laws of the conservation of energy and the indestructibility of matter are not independent truths, but are really both expressions of the same universal law. In other words, matter and energy are in this sense the same thing.

Finally the question is asked whether we shall ever be able to get at this enormous store of latent energy. That expression "get at" is significant. May it one day be man's privilege to become a wise disposer of the energy, but let us pray that he may never "get at" it. If in his present stage of civilization he gets at it, what will happen?

Thus the two fundamentals of physics have become reduced to one, and instead of energy and mass we have now only energy. This necessitates an entire revision of dynamic formulae, since energy has hitherto been defined as a function of mass and velocity. According to the current system, a body having no mass could have no energy, no matter how fast it might be moving. But according to the new idea, there can be energy without mass, mass being now a product of energy instead of a concomitant thereof. So we come to the idea that energy is something ultra-physical. All substance, mass, matter, is merely the result of an activity in — in what? Either we must answer, "In nothing," or we must postulate some other kind of matter — or, in effect, postulate over again *mass*, the very thing we have just explained away. The postulating of this ultra-physical matter is inevitable; for otherwise we get the proposition that matter is Nothing-at-all in rapid motion. The case may be illustrated by reference to the theory of numbers. Given the numbers One and Two, we can build up all the other numbers. But, given the number One alone, we can never get any further. If we attempt to explain the number Two by saying that it is simply two Ones, then we are merely assuming what we have to prove. The proposition that mass is merely energy is like saying that the number One is made up of a large number of Noughts.

So, just as in numbers we have to rest content with accepting the One and the Two as fundamental facts incapable of further analysis, so in physics we must accept a fundamental substance and a fundamental force or energy. There must be in the universe an ultimate Matter and a *Vis Viva*; this is as far back as the mind can go. Given these two, however, we can build up all the rest. Physical matter will be the result of the *Vis Viva* (or rather of one of its manifestations or derivative products) actuating a supra-physical matter; that supra-physical matter, in its turn, will be the offspring of energy actuating a still ulterior form of matter; and so on backwards.

The supra-physical matter will not be perceptible to the physical senses — except of course when it becomes energized into physical matter. It will correspond with a higher function in man than the physical sensorium. One of the kinds of matter is the matter in which we think, the substance which we mold when we make ideas. And so on. It will clearly be useless trying to conceive of these higher manifestations under the forms of physical perception; they do not pertain to space as known to our sensory cognition. STUDENT

Some Views on XXth Century Problems

New Attempts at Old Problems

SEVERAL books — three, at least, by noted scientists — appeared last year on the old problem of immortality. All of them use the word soul, for the immortal; and some later, discard it for some special term. This last, and soul, and self, personality, individuality, ego, and even consciousness, are usually regarded as equivalents. And while they are so, the problem will not clear up, still less be solved.

In the center of his consciousness, man feels himself to be himself: as if he should be continually saying there, I am *I*. But he adds something to this *I*. He adds to it a mass of material which changes. He feels himself as *I* to be a little child, looking up to its parents and out to its schoolmates; to be a young man entering life; to be middle-aged; to be old; to be well, ill, handsome, important, deformed, passionate. The thread *I* persists; these other threads, which are woven all around it, change. And these other threads, *as which* the man mainly considers himself, *through which* he sees himself, and which alone others see, make up the personality or mask. The outermost of them are his age and personal appearance; the innermost are his "character." The character may, by efforts, or by the absence of them, entirely change — in the first case for the better, in the second for the worse. The center thread *I* persists. It exists in the infant; but then the other threads have not yet been woven around it. It exists in deep sleep, though then the other threads have mostly ceased to pulsate with consciousness. It is the *individuality*, while the wrapping threads are the personality; it is the soul; it is the immortal.

Is it then mere naked self-assertion? When all the threads have been removed, is it mere bald *I*?

By no means. To some extent it selects and arranges the surrounding threads; it may do so completely; it may be so overwhelmed by the threads amid which it finds itself from heredity and environment, as to be almost passive. Many men, at some moment in an evil life, have suddenly changed their character entirely, started their minds on a new direction, deepening, altering and enriching them. We must distinguish between activity of the personality and activity of *I*. A man may seem very active when eating his dinner; but the really active thing may be the physical hunger-impulse — one of the threads — the *I* being quite passive. Most *I*'s are passive somewhere — say to the impulse to read novels, to eat, to amass money or power; to anger, to sensuality. Some of such men we consider very active, not knowing of the passive *I* within.

It is characteristic of the *I* that as soon as it comes to itself, it begins to reform, to strip off some of the threads and weave on others and better. It then shows its real nature and property. It tries to realize that nature, and its watchword is *opportunity*.

Everything becomes opportunity, the whole personal life. Is there temptation to anger? That is opportunity for equanimity. Is there pain? That is opportunity for fortitude. Is there a sensual impulse? That is opportunity for will. Everything that happens or is, within or without, among the threads of character or in the train of events — each and all are opportunity, opportunity to make one step towards realizing and recovering *its own nature*, which is divine; its own powers, which are of the god; its own knowledge, which is of the universal meaning of life and all things. In other words the purpose of its presence in terrestrial life, at first overwhelmed by circumstance, the world, and the developed personality, that compound of long or short-lived impulses — is that it may *recover* its own nature, powers, and knowledge, against so much resistance; and therefore have them clearer, stronger and more intensely conscious than they could be to pure untried and unexperienced spirit. Only when man begins this undertaking, the steps towards *true* self-realization in consciousness and then in lofty action, can he regain the knowledge of his immortality. From the basis of mere personality, of intellectual reasoning, of experiment (!), immortality cannot be proved. The immortal thread must find itself and then it will know.

STUDENT

Lessons of an Earthquake

THE calamity of southern Italy has naturally made the theme of many sermons. But after reading some of them and abstracts of some more, we cannot acknowledge much illumination. Shrinking from the attempt to justify the ways of God to man, perhaps as impious, the preachers spoke rather of God's "inscrutable purposes." No few of them fetched out the somber and forbidding old phrases "*hurried into eternity*" and "*hurried into the dread presence of their maker*." That *compassion* underlay the matter we nowhere saw argued. Perhaps the preachers saw few data on which to base such an argument. In the absence of belief in Reincarnation they would indeed be hard to see.

Yet *compassion resulted*; that is obvious. If there was terror, pain, despair, in much greater volume was the universal compassion. Are not "the purposes of God" by that much less "inscrutable"? May not the compassion be *more of a good*, speaking as it were quantitatively, than the pain and terror were of an evil?

Suppose further that against one or two hundred thousand killed before the normal time, we set as many, or many times as many, awakened from a pleasure-sunk "life" — far more essentially lethal to them than an earthquake that should merely end their bodies — into *thought*; and that of these some proportion disentangled themselves, remained thinking, and finally faced their own souls; and that some much smaller proportion utterly changed themselves and became real helpers of humanity. Is not the picture bettered?

Deep in human consciousness there is a potentially divine center which, in most cases, only finds its voice and freedom after intense pain, after *mental* earthquake of some sort. It can *teach*, when the storm that freed it is over. And the storm is over when death's hand removes the terrified human *animal* from the *man* within who during life was so closely tied to it, when the brain and nerves have ceased to throb. Then is the moment when the man, illuminated by that awakened part of himself, learns something concerning the very Heart of being, something of its purposes with him and with all. After that is his rest-time; and then rebirth, deep within him being the lesson he learned. His lives are never more as futile, as thoughtless, as before. He is a thinker, and the trend of his thought is guided by what, in a region deeper than thought, he knows. Perhaps that was the only way to arouse such a man to thought; perhaps not otherwise could he be saved from the long numb of priest domination.

The Fall of the Rocket Stick

ABOUT a year ago one of the Pentecostal epidemics of which every century of our era has presented an example or two, descended upon a number of our people, and the usual phenomena resulted. Especially was there speaking with tongues, regarded as crowning proof of the work of the Holy Ghost. Excepting perhaps the "Holy Ghost," no one understood what was being said — which is usual in these cases; indeed with certain reservations invariable. But the victims and their friends considered that the "tongues" were among the vernaculars of India, and six of them, all girls, decided to go thither and preach to the natives. One only of these six has returned — disillusioned. The others — "well, they just vanished." And the survivor winds up her account: "Our gift of tongues was not from God. It was from some devil."

She is wrong again, as far as the last sentence goes. The "tongues" are automatic chatterings of the vocal apparatus, irregular discharges of nerve force, setting in when excitement and hysteria have reached such a point that reason has to abdicate. Only in certain very rare cases are they the emergence of long latent memory, as when some foreign language has been heard in extreme youth, even babyhood, and registered without comprehension in the depths of subconsciousness. In still rarer cases, very mediumistic natures may catch tags of old languages from their echoing-places in space.

When will people learn that the advent of the "Holy Ghost," the *Breath*, is rendered absolutely impossible in an atmosphere of the slightest excitement or emotion, even in the possibility of them? Or, to speak more accurately, for it is always and everywhere present, its *reception* and benediction are then impossible. *Silence* is its condition, silence of lip and thought and emotionality. Great Civilizations Under Swiss Lakes

THE *Chicago Sunday Tribune* has an article headed:

How the Ruins of Ancient Cities have been Concealed for Countless Centuries under the Lakes of Europe. Exploration of the Bottoms of the Lakes of Europe by German and Austrian Professors has Revealed Relics which Furnish Proof that the Cities of the Stone Age Surpassed Pompeii in the Splendor of their Buildings and Statuary.

The Stone Age, considered as a definite age, is a myth. At all times there have been peoples who have used stone implements instead of metal ones, and such peoples still exist and continue to use such implements in various parts of the earth today. Explorers, finding the remains of such peoples and their instruments under the soil, have tried to make out that there was a definite Stone Age, affecting the whole of humanity. Their theory is to some extent favored by the fact that stone implements last longer than those of metal and therefore may be found in strata of such an age that all metal tools have corroded away.

It seems that some Swiss villagers took advantage of low water in the winter to wall off the exposed parts of the lake-bottoms in order to reclaim them for agriculture; and that while doing so, they discovered the heads of wooden piles around which were parts of stags' horns, stone hatchets, etc. This, being reported to the scientists, led to further explorations from 335 lacustrine stations scattered over 55 lakes or bogs. The lake villages cover sometimes a square mile or more. The remains found show that the inhabitants "even in the Stone Age" understood how to weave linen, make bread, utilize domestic animals in agriculture, employ all sorts of tools, such as stone axes and saws, rope, bone needles, pestles, and picks, and to make pottery on a vast scale.

The age of bronze, we are told, added a great number of new arms and instruments, swords, lances, knives, razors, jewelry, mirrors, etc. But—

There was often a great diversity in the relics even when they lay close to each other. Some belong to the stone-bone-horn age, some to the bronze age, some to the iron.

But an eminent antiquary is quoted as saying that he questions if there is any class of antiquities that gives greater support to the chronological sequence of the stone, bronze, and iron ages, or throws more light on the introduction of metals into Europe, than those collected from the lake dwellings.

The woven and embroidered cloths are remarkably fine and prove the existence of looms "in those ancient and simple days." They knew ways of preparing leather so as to make it durable and supple. They were "quite refinedly civilized" and used spoons, pins, needles, buttons, combs, etc.

Lomaland Photo. and Engraving Dept.

THE FAMOUS "MIRROR TOMB," NEAR AMASIA, ASIA MINOR

The wonderful elegance of the lake-dwellers' workmanship has been the puzzle of their discoverers and explorers.

Not puzzling, however, except with reference to some preconceived theory to the contrary. If we insist that these people must have been simple barbarians, even when we find they were not, then of course there is puzzlement. It is as if one were to imagine that all countries beyond one's own were barren and inhospitable, and then say that even in these desolate regions men build houses, raise crops, have parliaments, and so on.

What is proved is that at times when, according to the theories, there should have been nothing but barbarians in Europe, there were civilizations; which is quite in accordance with more enlightened views of history derived from an intelligent study of the traditions and records of the past.

A Zulu Creation Story

UNKULUNKULU, the Old-old-one, broke off the nations of the universe from a reed which typifies the source of being and represents a father from whom the children are broken off, says a writer on the Zulu legends in the *London Standard*. Why should the Zulus have imagined such a strange origin for humanity as that it was broken off from a reed?

The *Ases* of Scandinavia, the rulers of the world which preceded ours, create the form of

Man from the ash-tree. This ash-tree is identical with the Hesiodic ash-tree, whence issued the men of the generation of bronze, and with the *Tzite* tree of the Mexican *Popol-Vuh*. In India we have similarly the *Asvattha* tree, in Tibet the *Zam-pun*, in the Kabala the *Sephirothal* tree, and finally the tree of Eden, derived from the Holy Tree made by Ahura Mazda. (See *The Secret Doctrine*, vol. ii, p. 97.) In *The Myths of the New World*, by Brinton, we read that the Yurucars of Bolivia say that when all men had been destroyed by fire, the god Tiri opened a tree and from it allowed various tribes to emerge. And one might multiply instances indefinitely. The Tree of Life, and other symbolical trees are found universally. Hence it is clear that the Zulus did not invent this story, but have handed down the symbolism of the ancient race from which they have sprung, just as we have still the Eden story, derived from the Hebrews, the Chaldeans, and still older sources.

Unkulunkulu sent this message by the chameleon: "Go, Chameleon, go and say, 'Let not men die!'" The chameleon set forth, but it loitered on the way and ate of the fatal purple fruit of Ubukwebezane. Then the Old-old-one dispatched a lizard after the chameleon. The lizard ran exceedingly fast, for it bore the fateful message: "Let men die!" And it accomplished its mission and returned to the Old-old-one before the chameleon had reached its destination and had shouted: "Let not men die!" But the chameleon was too late, for men answered: "Oh, we have heard the words of the lizard, and through its word men will die!"

Here we have a form of the universal Fall of Man story; only one instance out of so many that might be cited. It is really absurd to go on believing that our particular biblical form of it is in any way unique. But the fact that this legend is universal should not detract from the reverence we feel for it; on the contrary, we should recognize it as being one of the allegories of the Universal Religion, and both we and the Zulus should forbear to take it in its verbal sense and endeavor to grasp the real significance of it. That significance, together with the meaning of many another ancient symbol, is explained in Theosophical writings, especially in H. P. Blavatsky's works, *Isis Unveiled*, and *The Secret Doctrine*.

"Mirror Tomb," Amasia

THIS tomb was ancient even in Strabo's time. Resemblances have been traced between these ancient tombs in Asia Minor and those of the Etruscans in Italy, who are now admitted by some antiquarians to have come from Asia Minor.

✻ The Trend of Twentieth Century Science ✻

The Afterglow

SOME French scientific papers which deal with that phenomenon of twilight which is known as afterglow are condensed in *Science Abstracts*. Travelers in mountainous regions have often noted that about half an hour after sunset the peaks take on a new glow which endures some minutes. The whole eastern horizon may do the same; on the western or eastern horizons—in the former case from where the sun has sunk, in the other from an opposite point—diverging rays may be seen to stream up, perhaps half way to the zenith. And with these is the “second ray” phenomenon seen in India and Egypt. In one case, says the writer:

Directly the sun disappeared behind the Pyrenees, the gray-blue shadow of the earth was projected on the mists overhanging the sea horizon in the east. More than half an hour later there appeared below the dark band a light band, followed later by a second dark band. This lower dark band slowly widened, gradually overtaking the other two.

Since the appearances may also be seen in level country, the writer rejects the ordinary explanation—that the chilled air of the valleys causes a curving of the solar light. He invokes a luminous layer high up in the earth's atmosphere to account for the phenomenon. We know now of three or four distinct layers; one of them, for example, is the inversion of temperature layer, at a height of about eight miles; in another the wind is rushing continuously in the one direction and at an enormous speed. And another, or others, may quite likely be luminous.

But from one or more of these layers sun-rays at a certain angle may be largely reflected as from a mirror; and the angle of reflection may be such that at about half an hour after sunset the reflected rays fall upon the horizon. As the sun sank further the horizon would be again left in darkness. STUDENT

How Much Sleep?

WE are all interested in the habits of great men. And the journals very kindly gratify us from time to time by symposial printing of their replies to sets of inquisitorial questions.

An English journal has been asking them how much they sleep, and, as usual in such cases, the replies are conspicuously devoid of utility for the average man. Some do with as little as four or even three hours; some confess to eight or nine and an afternoon nap.

For several reasons little could possibly result from any amount of such information. First one would have to separate the amount of sleep which a man thinks he needs from that which is necessary for him.

Having determined what is necessary, one would have to consider why it is necessary. Is the necessity real or artificial? Which means: If certain faulty habits were corrected, what would *then* be the necessity?

Close rooms, by day or night, induce sleep; but then part of this sleep is really narcotism and must not be counted.

Excessive feeding, whether on nitrogenous

or carbonaceous matters, means more sleep; but this sleep also is partly narcotism from the products of decomposition.

The user of alcohol and perhaps of tobacco, also needs more sleep. Physical work also demands more than mental work.

So to get down to the foundations and compare properly, we should have to eliminate all these sources of confusion. And then, when we had done, we should still find that men differed. Sleep is the recovery of bodily cells, especially nerve cells, from the exhaustion produced by the pulse of vital consciousness. The cells of some individuals do this quickly, some very slowly. Few people recognize that in most cases the best of this work has been done by sunrise, and that somnolence after that, except for those in ill-health, near the extremes of life, or with special occupations, is then useless and often injurious. Our bodies are a part of that nature that has for countless ages got its stimulus from sunlight, awaking to the day's life under the first touch of the first rays. The rhythm persists, though we have carefully trained ourselves out of the way of noting it. Most people would find a good many little troubles disappear if they would imitate the birds. Their brains would be clearer for the whole day, and the processes of digestion more perfect. For a few days it feels rather a bleak sort of thing to do, but as soon as the body gets the habit it craves the stimulus of the first rays as much as the mind will crave the beauty of the daily spectacle. It must surely be a good thing to begin the day by an aesthetic feast on the grandest spectacle in nature. STUDENT

The Electric White Ant

OUR concrete skyscrapers and other buildings are ready to stand for all time to come as witnesses of our grandeur, on one condition—that we do not live in them, at any rate use no electricity in them. Mr. U. J. Nicholas has made some exceedingly important researches upon the effect of electric currents on reinforced concrete. Electrolytic corrosion of the contained steel is apparently invariable, taking place at the positive pole. It occurs even in neat cement, but is greater the higher the proportion of sand. If standing in brine, the concrete is not an insulator, for it invariably cracks. And as small a current as 0.1 ampere will do the work.

But the walls of our concrete buildings are lined with electric wires—for lighting, telephonic and telegraphic work, for machinery and for elevators. Every current must excite an induced one in the concrete steel. And although the concrete foundations do not usually stand in brine, they stand in water more or less impregnated with alkaline salts or in soil damp with such water.

Deterioration of the reinforcing seems therefore absolutely inevitable. Yet we are relying on it more and more and for higher and higher buildings. Are we not inviting a set of unparalleled catastrophes? STUDENT

The Puzzle of Gold

A FRENCH chemist, puzzled with the existing theories of the origin of gold, or rather of its presence in the crust, has made a new one. Gold is agreed to exist in the earth's nucleus; how did it get up into the crust? According to the usual theory it associated itself with sulphur and tellurium—two chemical cousins—and so, as sulphide and telluride, got into solution in hot springs along with semi-dissolved gelatinous silica. The silica crystallized into quartz as the springs got up near the surface, and the gold, dissociating itself from the other elements by whose aid it had climbed, deposited itself metallically in the new quartz.

But M. Fieux finds gold without quartz and quartz without gold. Some gold-bearing strata are quite free from quartz; in some quartz strata where is also gold, the two are quite separate. So he thinks that gold exists metallically in the earth's nucleus and got entangled in eruptive volcanic rocks, thus reaching the surface pure and by way of rock instead of salted and by way of water.

Chemists do not yet speculate on the possibility of the formation of gold *de novo* and *in situ* by some process of natural alchemy. In addition to which, it might of course also reach the crust from below, already made. Any fine morning chemistry may, however, light upon its parent, whether a metal or non-metal. STUDENT

How Many More?

WITH the naked eye, which was the first astronomical instrument to be discovered—unless it is the cover of another eye, in use before we acquired our coats of skin—about 8000 stars are visible.

With the best telescopes about twelve thousand times as many may be seen: that is, about one hundred million.

On long-exposed photographic plates forty or fifty times as many again come into view.

But no one supposes that we have come to the end of inventable instruments, or that each new one will fail to multiply the number of stars. How many stars then are there? It has been argued that the number is finite because if infinite the sky would be a uniform blaze of light.

It might—if there were no “dark stars” to intercept light; and we know there are; and if space, that is to say ether, were absolutely pervious to light, absorbing none. And it may absorb some. The number therefore may or may not be infinite. If we could make some instrument which revealed every star composed of any sort of matter that we now know or can by analogy imagine, worlds of some other sort might still be scattered unsuspected in any numbers throughout space. We might look through a tumbler of fluid containing “liquid crystals” without any suspicion that they were there. So there may be etheric worlds almost homogeneous with the ether in which they float; and worlds of yet subtler substance interpenetrant with them. C.

Pest Destroys Pest

A PORTUGUESE scientist is reported to have achieved successful results in destroying an insect pest by inoculating it with another pest inimical to it. The pest experimented on was *Leconium hesperidum*, and it was inoculated with a fungus of the genus *Sporotrichum* which is parasitic on many insects. The development of the fungus commences in the interior of the insect, and it grows out until it forms a layer between the insect and the plant. Finally it forms a white sheet which often covers the insect completely and reduces it to an empty shell which falls to the ground. The fungus draws all its nutriment from the insect and does not injure the plant. It is first cultivated on potatoes, which are then converted into a paste which is spattered on the plants, usually in spring. T.

Bee-Stings for Rheumatism

IT not infrequently happens that familiar folklore remedies in medicine, slighted by professional authority, which did not see a way of harmonizing them with the professional theories and principles, have later on been received into favor and provided, by way of credentials, with a scientific explanation. Thus grandmother's wisdom is vindicated, though the acknowledgment of the fact is often made, by some mysterious process, to redound rather to the glory of science than to that of traditional lore.

As an instance of this it may be noted that a doctor, writing in *La Nature* (translated in the *Literary Digest*), vindicates the ancient and popular belief in the curative action of bee stings in cases of rheumatism, quoting instances of its beneficial effect, and also direct experiments which have been made with it. The belief is widespread, and several doctors in different countries are mentioned as having investigated

... NATURE ne'er deserts the wise and pure,
No Plot so narrow, be but Nature there,
No waste so vacant, but may well employ
Each faculty of sense, and keep the heart
Awake to Love and Beauty!

AND what if all of animated nature
Be but organic harps diversely framed,
That tremble into thought, as o'er them sweeps
Plastic and vast, one intellectual breeze,
At once the Soul of each, and God of all?

Coleridge

that the bee, besides providing us with honey, is a boon even in his anger, and, like the Eternal Power whose creature he is, is merciful even in his punitive aspect. E.

The Greeks and Animals

A WRITER in the *Classical Review*, who had at first accepted Gomperz's view that "the temperament of the Greek people was never especially friendly to animals," investigated for himself and has come to this conclusion:

The Greeks not only appreciated the wonders of animal life, but sympathized with it, and, in some cases at least, believed that animals have their rights. To this school belonged Empedocles, Aeschylus, Theophrastus, Plutarch, and perhaps Sophocles and Euripides. And however much reasons of health, asceticism, and even "crankiness" influenced the less intellectual of those who followed the Pythagorean mode of life, it cannot be maintained that respect for animals was confined to a few persons, or to any one period of history. Singularly human, and singularly free from prejudice, the Greek reached a moral plane which, as regards animals and their rights, compares favorably with the theory and practice of the 20th century.

Another nail in the coffin of the theory that pre-Christian culture was cold and unfeeling. The Greeks had hearts and heads. STUDENT

Spiritual Gifts

I SHALL begin this paper with a quotation from *Galatians* v. 22, which is as follows:

The fruit of the Spirit is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance: against such there is no law.

I use the word Spiritual in the same sense as the word Spirit is used in this text, and there can be no doubt as to what that sense is. There is no possibility of confounding it with any other use of the word; the writer has used enough terms to make his meaning perfectly clear. It is the holy Spirit that he means—the Divine Breath—for the word I find in my Greek Testament is *Pneuma*, a word which, like the Latin *Spiritus*, means at once a breath or wind and a refined essence or presence. In the same chapter the writer says:

The flesh lusteth against the Spirit, and the Spirit against the flesh (in modern English we should say "desireth contrary to the Spirit"): and these are contrary the one to the other.

And this still further emphasizes the meaning which he gives to the word Spirit. The importance of thus dwelling on the distinction lies in the circumstance that the words "spirit" and "spiritual" are so much abused today. There is the same confusion as there seems to have been in the days when Paul wrote his letter. He found it necessary to tell his pupils in Galatia plainly what was the difference between the things of the flesh and the things of the Spirit; and if he were here now, he would find it advisable to emphasize the same point. What some people mean by the phrase "spiritual gifts" it is easy to see by reading what they write on the subject. We have all of us read some of these lucubrations, emanating from people who go in for "psychism," "soul-culture," "magnetism," "new thought," and so on. They are not all as bad as some, but the worst are pretty bad. Sometimes, as you know, these alleged powers are invoked for the purpose of gaining an increase in one's business, more wealth, more bodily comfort, advantage over one's neighbors, or some other such personal desire. Everywhere we see advertisements and prospectuses offering to teach people how to satisfy their personal desires by invoking some mysterious power out of their own nature. Can this be what Paul meant by the gifts of the Spirit? It seems rather to fit what he says about the works of the flesh. And there are some even who actually pretend to invoke the Divine Presence itself in furtherance of their petty wishes, and think that Almighty God will gratify their desires—like some naked savage praying to his wooden fetish.

I do not doubt for a moment that these people do actually evoke some kind of power; but what kind of power is it that they evoke? Are we to suppose that any and every power that happens to be to us strange and unfamiliar is therefore a holy or sacred or divine power? If so, we thereby confess ourselves most wofully ignorant and most wofully deficient in the power of imagination. For there are *innumerable* latent forces in man and in Nature that can be evoked, some of them good, some bad, some indifferent; some safe, some dangerous; some high, some low; some constructive, others destructive. What, then, is likely to happen to a person who lies down on his back and makes himself as passive as he can; or who fools with his breathing; or who reflects on some particular spot of his ana-

tomy; or does any other of the various kinds of gymnastics prescribed as means of attaining occult powers? Nobody can possibly predict what may happen to him; but one or two things are sure: that he will evoke a good deal more than he bargained for; that it will not be quite so easy to get rid of the power evoked as it was to evoke it; and that whatever else he may get, he will get—more desires.

One of the forces in man is his *vitality*. A person with an abundance of this and a well-balanced temperament can command the force sufficiently to be able to heal the sick. Some people hope to be able to summon this power to heal their *own* sick and infirm bodies. But it is a very strong power; and usually our sickness results, not from lack of vitality, but merely from our inability to control the force; for the vital force is a *universal* principle, permeating all Nature like the air. Hence these people, if they succeed in evoking this force, may only make themselves worse. Vitality is *not* what is needed to heal people; for they abuse their vitality, and if they had more they would only abuse it worse. But there is a still stronger objection; for behind vitality lies the force of desire—*Kâma*, as it is called in the Theosophical teachings—the driving force of the lower nature. It is this principle that controls our vital currents; and we by our will ought in turn to control it, but as a rule we are all more or less under its dominion. Now such practices as have been mentioned have the effect of arousing this principle to greater activity and setting it loose as it were. Hence, unless the will and the moral nature have been carefully and properly trained beforehand, the person who thus arouses the sleeping dragons in his nature is in danger of being by them devoured. Thus it is that we so often find these practices resulting in disaster, to the body, mind, or moral nature, or all three of them.

The gifts of the Spirit are nothing showy, but consist of everything that is humble, unpretentious, and serviceable. No one will deny that the evils of the world are the outcome of selfishness and indifference, and that what is needed to overcome them is higher standards of life for the individual. The seeking of so-called powers will not help; for they would only be used selfishly and unwisely and so increase the strife among mankind. "Seek ye first the kingdom of God and his righteousness: and all these things shall be added unto you." "To live to benefit mankind is the first step. To practise the six glorious virtues is the second." "That power which the disciple shall covet is that which shall make him appear as nothing in the eyes of men." The world has need of such disciples as this. The first thing which the seeker of true Spiritual knowledge sets before himself is to kill out the *giant serpent of self*. This serpent is the great enemy of all true knowledge, perfection, happiness, attainment. In many an ancient myth it is represented by some dragon that has to be slain by the armed knight, some monster to be killed by the Perseus or Hercules, ere the desired boon can be attained. In all these ancient myths, preserved among all peoples, is symbolized the conquest of the dragon of selfishness, through which victory Man attains to wisdom and peace. It is a hard fight, for the demon of self clings tenaciously to our every fiber, and lurks in the most unexpected places. Yet it has some day to be fought and won, for the selfish life is not permanent and sooner or later must become impossible. Though we may now be living in a state of compromise between the good and the evil, that state of compromise cannot endure for ever. For, as life succeeds life, in the cycle of rebirths, our desires will strengthen by being fed, and our spiritual aspirations will also strengthen, until there is declared war between the two and a choice of masters must be made.

But the path of Spiritual knowledge is the path of joy and peace, for it liberates man from the slavery of his passions which are the source of woe.

The churches are supposed to be the dispensers of spiritual knowledge—at least they claim that their

intervention is necessary to the aspirant thereafter. A minister of the gospel is a person to whom is attributed the power to act as an interpreter of the divine will and an intercessor for spiritual grace between God and man. I will not venture to say whether or not they *fulfil* this high function, but will merely put it in the form of a question and leave it to be answered by whomsoever likes. But judging from the doubts which they seem to feel regarding the merits of their own position, they are not likely to inspire much confidence in others. Again, one might ask whether the kind of spiritual gifts that are dispensed at some revival meetings and that produce convulsions are the same as those mentioned by Paul in the above quotation. Yet all men feel that the gifts of the Spirit are a reality; to each and all of us comes the conviction that our ordinary life is but the shadow of the real life within. And we all yearn after the knowledge of this true life. The world is crying out for it. And the churches are failing them. In the last resort men will turn for aid, not to those who make great claims, but to those who are *actually able* to help them. They will turn to Theosophy; for Theosophy has teachings that *can* show the way, and make the religion of our inmost hearts real and practical.

It is absolutely essential to bear in mind the *dual* or twofold nature of man: man the animal and man the God. Science, in attaching too much prominence to the study of man, the animal, has threatened to plunge us into a reign of animalism and materialism, from which, however, we are rapidly reacting. The churches recognize that besides man the animal, there is a *spiritual* nature; but they can tell us little of importance about it. For them the spiritual nature is for the most part an affair of the after-death state and plays but little part in this life. But men are yearning for a knowledge that shall make their spiritual nature a concern of the life they are called on to live *here and now*.

The importance of recognizing the dual nature of man is especially great in connexion with the question of the so-called psychic powers; for we find that the distinction is usually completely ignored. In the movements for healing, now going on in some churches, the divine and the material are singularly mixed up. A certain clergyman throws his subject into a hypnotic trance and then suggests to him that he will be cured. The clergyman is asked in what respect his treatment differs from that of the ordinary hypnotizer, and where religion comes in. His answer is vague and unsatisfactory. He says that there can be no real reform unless the moral nature is reformed first; otherwise the reform will be merely an exercise of the hypnotizer's will, leaving the moral nature and will of the patient untouched. This is of course perfectly true; and the clergyman adds that only religion can supply the moral strength required. If so, then why hypnotize the patient at all? And is the religion of the churches the only influence that can strengthen the moral nature?

The means of strengthening the moral nature are the same now as always; they are plentiful and sufficient, and they do not include hypnotism or any other such treatment. These are only adventitious means called in to supplement our failures. The church has found itself unable to reform the patient by the proper means and has borrowed a very questionable and dangerous practice from the hypnotists and mental healers.

Great religious Founders have come at times of degeneracy, in order to recall to men's minds the laws of moral health and so save humanity from destroying itself by ignoring these laws. But, after the great Teachers have gone, their teachings have often been taken and misinterpreted. Religion is removed from daily life and made into a separate affair, and an ecclesiastical machinery is created to administer it. Thus the spiritual life comes to be regarded as something supernatural and artificial, and spiritual gifts are associated with the idea of great holiness and sanctity. But in truth the spiritual underlies all our life and should be an affair of every day, entering into our smallest actions; for

it is nothing artificial or grandiose, but something perfectly natural and sane.

The great Key to a realization of spiritual life is to overcome the delusion of selfishness; for this is a force which binds us down to a narrow circle of attractions and prevents us from escaping into the larger life. All Teachers of humanity have pointed out this fact, but the teaching has been converted into a kind of artificial pious regimen for the holy man to follow but not meant for the ordinary man; whereas it is really a law of nature, a rule of life. The will in man is bound by his desires and the delusions which these desires create in his mind; hence the will is a slave and cannot break free and elevate the man into the larger life. Therefore the universal rule for those who would tread the path of wisdom and emancipation is to set themselves free from these desires. These desires are but the manifestation in us of some of the most powerful forces of nature; hence the man who can master them becomes a *magician*; (but this is not a thing to be played with). The way to overcome the stupid selfishness and personalism of one's nature is to find higher ideals than those of mere personal welfare—whether temporal welfare or fancied spiritual welfare. Hence it will always be found that the sincere seeker after wisdom is engaged in altruistic work involving a forgetfulness of his own private interests and an absorption in a larger work for humanity in general.

This is the old old message, preached again and again to humanity, again and again forgotten amid the absorbing delusions of the flesh. And when religions have forgotten their true mission and have taken to preaching an artificial sanctimonious life and that man is born in sin and unable to save himself, then the old message has to be proclaimed anew. In the present century this message is being proclaimed as Theosophy, and H. P. Blavatsky was a Teacher who taught the ancient doctrine of compassion and self-forgetfulness which is true wisdom. It is thus that she made many bitter foes among the ranks of those who do not care to hear the naked truth, and many staunch adherents among those whose loyalty to all that is true and honorable enabled them to recognize her for what she was. It is safe to say that those whose hearts are pure and whose minds are bent on the pure truth will be able to recognize it when they see it. For the truth is manifest by its own nature. Those in whom the Spiritual nature is quickened become more balanced and natural and healthy in every way. Their lives become more useful; they cease to be troubled with the ambitions and anxieties that harassed them before. And the Spiritual gifts which they attain to are the power to *help and serve*, the power of discrimination showing them how to discern between the good and the evil in humanity, and an ever-present, never-failing deep-seated contentment that cannot be shaken by any superficial storm.

"Life is Joy" is one of the familiar watchwords of the Theosophical banner. The Spiritual life is Joy—not a common trivial joy but a deep-seated tranquil abiding peace that radiates out and illumines all around it. One who has this joy in his heart has his power to help others multiplied manifold; he becomes as it were a *Sun* radiating life and light all around. We still read in the Bible about the powers of the Spirit, about grace and faith and hope and charity and other mysterious powers. These words, partly by mistranslation and partly by wrong use, have lost nearly all their original meaning and now signify nothing more than pious states of mind. But the original teachers meant by them actual powers which radiated from the disciples who follow the Divine Law. They were *magic* powers—not vulgar magic but true Divine Magic. This is the message which the churches are failing to give, and which Theosophy now proclaims—that man is not meant to remain for ever the poor creature he is now, but that by his own God-given powers of Will and Aspiration he can raise himself to that level which the world's great Teachers have indicated for him.

H. T. EDGE

LIVES ARE BUT PETALS

LIVES are but petals flung upon the breeze,
Blown here, blown there, o'er land, o'er seas—
A little while to rest upon the bosom of the wind;
Till, unto earth relapsing, unto fate resigned,
Units of countless myriads, mellowing the earth,
Passing thro' countless cycles to rebirth—
Spark of the Infinite, thro' Ages born,
Gliding at last into the Everlasting Morn.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question If it be true, as Theosophy teaches, that everything is governed by divine law and takes place according to the law; how is it that the law which is good places tyrants upon thrones and permits other forms of oppression and injustice?

Answer In answering this question, we must take note that there are two main factors to be considered. One is the law, of which it is said in the question, and correctly according to Theosophy, that it governs all things. The other factor is that in order to carry out the law there are needed agents or instruments, and these agents are man and other beings of whatever kind existent in nature, acting as such either consciously or unconsciously. From these two flow the stream of events and circumstances with which we are surrounded.

The law which thus operates and governs all things is known in Theosophy as Karma. In *The Key to Theosophy*, H. P. Blavatsky says:

We believe in an unerring law of Retribution, called KARMA, which asserts itself in a natural concatenation of causes and their unavoidable results. . . . And it is this, and this alone, that can account for the terrible, still only *apparent*, injustice in the distribution of lots in life to man. . . .

For Karma in its effects is an unfailing redresser of human injustice, and of all the failures of Nature; a stern adjuster of wrongs; a retributive law which rewards and punishes with equal impartiality. . . .

As I have said, we consider it as the *Ultimate Law* of the Universe, the source, origin and fount of all other laws which exist throughout Nature. . . . Karma is that unseen and unknown law which *adjusts wisely, intelligently and equitably* each effect to its cause, tracing the latter back to its producer. Though itself *unknowable*, its action is perceivable. . . .

We must not lose sight of the fact that every atom is subject to the general law governing the whole body to which it belongs, and here we come upon the wider track of the karmic law. Do you not perceive that the aggregate of individual Karma becomes that of the nation to which those individuals belong and, further, that the sum total of National Karma is that of the World? The evils that you speak of are not peculiar to the individual or even to the Nation; they are more or less universal; and it is upon this broad line of Human interdependence that the law of Karma finds its legitimate and equitable issue. . . .

It is impossible that Karma could readjust the balance of power in the world's life and progress unless it had a broad and general line of action. It is held as a truth among Theosophists that the interdependence of Humanity is the cause of what is called Distributive Karma, and it is this law which affords the solution to the great question of collective suffering and its relief.

And in *The Secret Doctrine*, H. P. Blavatsky says:

Those who believe in Karma have to believe in destiny, which, from birth to death, every man is

weaving, thread by thread, around himself, as a spider does his cobweb; . . . When the last strand is woven, and man is seemingly enwrapped in the network of his own doing, then he finds himself completely under the empire of this self-made destiny. . . . It is not, therefore, Karma that rewards or punishes, but it is we who reward or punish ourselves according to whether we work with, through, and along with Nature, abiding by the laws on which that harmony depends, or—break them. . . . The law of Karma is inextricably interwoven with that of Reincarnation.

And in *Aphorisms on Karma*, which were given to William Q. Judge by Teachers, among whom was H. P. Blavatsky, and which he published for students of Theosophy, the following are of special value in connexion with this subject.

(1) There is no Karma unless there is a being to make it or feel its effects.

(14) In the life of worlds, races, nations, and individuals, Karma cannot act unless there is an appropriate instrument provided for its action.

(29) Race-Karma influences each unit in the race through the law of Distribution. National Karma operates on the members of the nation by the same law more concentrated.

It is of interest to note that Jesus also spoke of the necessity (by inference) of an instrument for the action of the Karmic law, "for," said he, "it must needs be that offenses come; but woe unto that man by whom the offense cometh." (*Matthew* xviii. 7.)

In the light of the above teachings, the answer to the question is clear. It is not the law that places tyrants on thrones, in the sense of acting arbitrarily (in which case it would not be law) or independently of man; but it is man himself who has produced the causes that result in such an effect. The presence of a tyrant on the throne or in power in any degree, is the nation's Karma; it is the result of the nation's own previous acts, and it is the way by which the nation reaps what it has sown in the past. In addition, it is an opportunity for the nation to awake and to realize its responsibility as a nation.

No tyrant can remain on the throne except by the apathy or consent of the nation. Once that a nation realizes its own power as a collective body, in other words as an entity, once that its higher powers are aroused, tyranny becomes impossible. Remember that "the aggregate of individual Karma becomes that of the nation to which those individuals belong," as was quoted above. If the individuals of a nation give way to self-indulgence and so establish, each over himself, a tyranny of the senses, what more natural than that this should at last find expression in a tyranny over the whole nation, as embodied in a ruler. Then comes the awakening, then in the effort to shake off the external tyranny the necessity is seen of self-denial, of fortitude, of self-conquest.

Look at the pages of history, and mark the rise of some nations after a period of tyranny, and sometimes the downfall of others where the people have not known the power they have through individual self-conquest. Accepting the fact of Reincarnation, can we not see then that tyrants are on thrones or in power because of the will of the people, not directly expressed may be, but nevertheless their will, and the outcome of their acts? The teaching of Karma answers the question, and shows also the way out.

THE UNIVERSAL BROTHERHOOD AND THE OSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

Tranquillity versus Selfish Indifference

Why Is It?

A PERSON unconscious or intoxicated who has a fall, unconscious of danger, without fear and with relaxed muscles, is never so seriously injured as a sober and alert person subjected to the same accident.—*Press Clipping*

A recent newspaper paragraph told of an automobile accident in which were two women with two babies; the women were hurt, but the babies not. Also, when we are engaged in an outdoor game, we can fall heavily without feeling the slightest pain or receiving any injury; whereas, if we fell while walking quietly along the road, we should probably hurt ourself a good deal. In hard work we may cut our finger without being aware of the fact until we see the blood; yet it would be extremely painful to cut one's finger deliberately.

All these instances go to show that the mind plays a very important part in our sufferings; and that it can not only intensify the pain felt but even cause wounds to be made where otherwise there would be none. A man expecting an accident concentrates his attention, and with it a great part of himself, into the part that is threatened. Hence he is intensely conscious of what happens in that part. But more than this, the shock to his imagination seems to be actually able to cause lesion of the body. If we could always fall as we do when we are playing a game or when our attention is otherwise absorbed and diverted from the accident; if we could be as unconscious as a babe or a drunkard; we should escape much pain and injury.

But though we may emulate the babe and the drunkard in this one respect, we need not copy their other qualities — ignorance and stupidity; if the avoidance of pain were our only object, we might as well become a log or a stone and so do the thing thoroughly. But we can learn the lesson of keeping our mind controlled.

And, passing from the consideration of physical evils to that of evils generally, we may ask to what extent our misfortunes are due purely to the imagination. To what extent might they be mitigated, or even altogether obviated, by our assumption of a right attitude of mind towards them? A Chinese book on the philosophy of Chuang Tze gives the case of a drunken man falling out of a cart without injury, as an instance of the immunity that

MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

arises from the possession of a mind isolated in serene equanimity; and though the example of a drunken man is not in other respects held up for our emulation, the lesson to be enforced is the lesson of poise. The book is on the philosophy of "inaction," by which one's powers are concentrated in the stable center of one's being; and those who have read anything about Taoism will be familiar with the nature of the ideas conveyed.

And it is a solemn truth that we do cause the greater part of our own affliction by the attitude which we adopt towards the causes to which we attribute it. Pain results far more from a restless perturbation of the mind than from any other cause; the overcoming of it consists far more in controlling the mind than in attempting to change our circumstances.

There is one objection to speaking on this subject; and that is that the doctrine may to a certain extent be exploited in the interests of personalism, as has in fact been done by various cults which profess to teach a peculiar kind of self-culture and healing. It is needless to say that Theosophy does not advocate anything in the nature of smug complacency or callous self-sufficiency. It may be admitted that selfish indifference and hardness constitute one way of attaining (temporarily) to a condition of equanimity; but that condition is neither admirable nor enduring. The existence of several such persons is not conducive to each other's peace, since selfish wills always clash. Also the rhinoceros, and other pachydermatous beasts, shut themselves out from a great deal of what makes life worth living. We may build an incrustation around our aura, in order to keep off hostile forces, and we may suffocate therein, poisoned by our own emanations.

The seeds of Wisdom cannot sprout and grow in airless space.

Self-gratulation, O disciple, is like unto a lofty tower, up which a haughty fool has climbed. Thereon he sits in prideful solitude and unperceived by any but himself.

The Lion of the Law, the Lord of Mercy (Bud-

dha), perceiving the true cause of human woe, immediately forsook the sweet but selfish rest of quiet wilds. (*The Voice of the Silence*)

But selfish indifference, which turns away from the voices of compassion and duty, is very different from that calm poise which comes from a consciousness of the invincible power of right, that freedom which comes

from the cessation of interest in objects of desire and aversion. The *Bhagavad Gita* is full of this teaching. He who can center himself upon the real source of his Being becomes superior to the ordinary causes of unrest. Troubles pass him by without the power to disturb his serenity. He does not live in his emotions and delusions. But the attainment of ease and immunity is not his goal; he acquires them only as a means to his great end — that of duty and service.

Both action and inaction may find room in thee; thy body agitated, thy mind tranquil, thy Soul as limpid as a mountain lake.—*Op. cit.*

STUDENT

Misdirected Philanthropy

TO spend our lives in doing good is well; but it is better still to do the best: to ascertain the greatest needs of suffering men and then direct our energies where they will do the greatest good. Hundreds of able, well-intentioned men devote their lives to the translation of the Bible into the petty, local dialects of ignorant savages, so that they may, to quote the words of an enthusiast, have access to "a magnificent literature for the price of fifteen pounds of arrowroot." In Africa alone the Bible is now sold in eighty-one distinct and barbarous tongues! By all means preach what you conceive to be the gospel to the heathen; let them have access to "the Plan of Salvation" in plain print; but the essentials of the christian scheme could easily be stated in the compass of a two-page leaflet and the attempt to provide "magnificent literature" for people whose mental life often barely rises above the level of an average child, seems a deplorable misuse of human power. Fancy attempting to translate the splendid nature studies in the Book of Job into the savage *patois* of the natives of Fouta Island, whose zoological vocabulary is limited to the names for pig, and rat, and dog!

What profit is there for a Nicaraguan na-

THE THEOSOPHICAL ADDRESS AT ISIS THEATER

AT the meeting of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY at Isis Theater last Sunday evening there was present a large and most interested audience. Two addresses were given as follows: "The Influence of Theosophy on the Home," by Mrs. Marjorie M. Tyberg; and "The Building of a City," by Mr. Iverson Harris.

In opening her subject, Mrs. Tyberg stated that the influence of Theosophy upon the home is that which is exerted upon those in the home, and can be seen in so far as they make Theosophy a living power in their daily life. The knowledge that Theosophy gives of one's divinity, of the law of rebirth, and of the perfectibility of human nature, has a very great influence in helping one to make the true impersonal demand, or call, upon those we love, for the working out of their higher possibilities in daily life. There has been enough of personal demand in family life. But Theosophy teaches the wider *impersonal* life, and opens the gateway to deeper joys of life hitherto unknown.

Of course, said the speaker, the greatest joy from the influence of Theosophy in the home is from the children who have been so fortunate as to have had presented to them very early in their lives these great truths, appealing to the highest and best in them—not new souls, but old souls, in new bodies. The influence of children thus blessed in childhood by a knowledge of Theosophy, is a constant spur to older members of the family, leading them on as does a radiant star.

Mr. Harris in opening his subject, which he declared to be one of vital importance, said that those who try to build a city may be divided into two groups; first, those who seek to build one in population, buildings, wealth, and on material lines generally; second, those who seek to build an invisible city in the heavens. The first ignored the heavens and the second forgot the earth, and consequently failed to build a city that shall be enduring. How is such to be done? It must be one in which both heaven and earth unite. The motive must be divine, the method practical. The soul furnishes the one, the mind the other; the heart is the meeting place. Looking back through the ages, where do we find, however, cities that have endured? Can we find one that approaches to our ideal? Yet, there are noble people in every city; there are practical people in every city. Why do they fail? In considering what was lacking, the speaker referred especially to altruism. Are there people, he asked, in whose lives altruism is a supreme power, and which are dominated by an undivided allegiance to the higher laws of life?

To ask, however, whether such a city can be built is like asking, is there a soul? And is it immortal? And because man is a soul, and because he is immortal and divine in *essence*, again and again must he try to build an enduring city, and in the end will not fail. It will be a city in which the divine is the ruling power and universal brotherhood the practice.

tive in the study of the letters of St. Paul when in his language there is no equivalent for "sin," so that the idea must be rendered by a word meaning "bad to eat"?

Again, the Eskimos, not being a pastoral people, have no word for lamb, and therefore in all passages where "lamb" occurs, the Eskimo for "little seal" is substituted. How many noble passages are utterly ruined by such a rendering, *e. g.*, "Behold the *little seal* of God that taketh away the sins of the world." All this would be amusing, were we not oppressed with the thought that the streets of our great cities swarm with neglected children, friendless people of our flesh and blood, boys in need of helpful comradeship. Is there not close at hand a greater need to satisfy, than the supposed desire of jungle-dwellers to possess mutilated translations of antiquated oriental books?

PERCY LEONARD

The Anomaly of Wordsworth

FOR Wordsworth was not only a great poet, he was also an incorrigible versifier, and he seems to have perpetrated his most trivial rhymes with as much solemnity as he wrote his immortal and heaven-born verses. He can move us almost to tears of happiness by the sheer beauty of some of his lines, such as these, for instance, in "The Solitary Reaper,"

For old, unhappy far-off things
And battle long ago.

And he can equally well make us weep with chagrin at the solemn inanity of hundreds of his verses.

So writes Mr. Bliss Carman in the New York Times *Saturday Review*, and from the Theosophical standpoint the whole question is one of high interest. Of importance too, be-

universality; inspiration against mediocrity; the unbounded against the narrowly confined.

The soul was there, and made Wordsworth a great poet. We should have dismissed him into obscurity, along with Dyer and the didactics, if we could have taken him at his own brain-mind's valuation of himself. The world does not require to be preached at; least of all in poetry. What it demands of the poet, and alone ultimately values, is new revelation of the soul and the beauty and grandeur of the soul. This Wordsworth did sometimes give; because the soul in him would sometimes take possession of the brain-mind, and sweep the theories and inanity away. It stole into his study now and again, you may say, while

Lomaland Photo. and Engraving Dept.

A CASTLE ON THE RHINE

cause it involves that most fascinating and vital of all subjects, the real nature of man. He has "all Africa and its marvels within him"; nay indeed, continents undiscovered and uninvaded. All kinds of systems of government are in full swing within us; unities and grand diversities; anarchies above all abound. We have only to look into ourselves for romances past all penning; who is there that has not seen some scene or two from Dr. Jekyll and Mr. Hyde played out in his own life?

The secret of the Wordsworth anomaly is of course to be found in that masterkey to all our mysteries, the doctrine of human duality. Wordsworth stands, not merely as an example of this; he is, par excellence, the example. Be it noted, too, that the duality need not be one of good versus evil. In this case, indeed, the lower side of it was painfully and laboriously good: a kind of goodness without profit. Often the brain-mind will ally itself with the passions and selfishness; then what we call evil is the result. But in this man's case we find no mark or sign at any rate, of evil or passions. The soul and the brain-mind made the duality of themselves; the lower elements do not appear to add further to the confusion. It was simply personality against

the brain-mind was dozing, and penned immeasurable things. It breathed its own marvelous music into some of his lines and verses, so that they cannot be forgotten: they have the same spell and glamor as the clouds and mountains, and belong to eternity. The soul is always devoid of creeds and theories; it looks on nature unveiled, and beholds directly all truth and beauty. Theories inevitably disappear before the great deeds are done or the imperishable words spoken.

Meanwhile the brain-mind awakes, and reads over what has been written. "Why, what a great genius I am!" it says. "No one could have evolved that line," it says, "without having thought out the theory of the thing as carefully as I have done. Simplicity," it says; "let me jot that word down in my note-book. That shall be my method; that shall be the distinguishing mark of my work. Simplicity! There you have the Open Sesame of the kingdom. Now I will go on writing this poem, or perhaps write another and better one, and let simplicity be my guide!"

So the brain-mind goes on with it, and reels off dreary platitude after platitude, dull inanity after inanity; and makes it all sweetly simple, after the fashion of water gruel or

prisoner's skilful. That is not the kind of simplicity the world wants. If we fed ourselves upon that, we should soon perish of ennui.

The soul has no rule of art and no doctrine, but sets down that which is immediate, intimately divine, life-giving. It echoes the tune to which the old world is moving; it voices the basic music of the universe. Simplicity no more conveys its method than any other word does. You cannot make a rule by which the work of the brain-mind will be equal to the work of the soul. You can make the two one; you can silence the brain-mind, and make it the ready instrument of the soul. You can be the soul, evoking it into your daily life by clean living and compassionate service; but, not being it, you cannot ever imitate it. Inimitability is one of its characteristics.

True, some men have written divinely and lived in a very opposite manner; but this will not destroy the argument. A habit that has been formed is not quickly to be wiped away. At some time or other those men worked and lived for the soul; they were inspired by whole-hearted compassion, and the grand voice came to them. They may have flung themselves among the passions since, and be unwinding the fabric that they wove; we may see no trace of weaving in their lives, but only of this unpicking and drawing out. Their singing was the remnant of the pattern which, for all their present blasphemy of life, it was still the soul that made. They are addressed to dumbness and the end of inspiration. Their magic may last for a few years or even for a lifetime; but it is cut off at the roots, and beginning already to wither.

Wordsworth had no sense of humor; and perhaps his case will give us a clue to as good a definition of humor as we shall find anywhere. He had no idea of his own duality. When he was the soul, he had no idea that there was such a thing as the brainmind of himself in existence; and when he was the brainmind he was sublimely unconscious of the soul. A sense of humor is perhaps, broadly speaking, an innate consciousness of inward relation and interrelation. It is oil for the wheels of life, to perceive that your own personality is not the ultimate reality of yourself, that no personality is final, but has always behind it that larger and universal thing the soul. The brainmind indeed, is a great Malvolio; all its strutting is based upon a false report. Perhaps the origin of the whole idea of humor is to be found in its solemn antics. It is the fool of the world, at whom the world is continually laughing. It conceives itself to be robed like a king; but its purple is only a beggar's garment, threadbare and full of holes. It would have the world respect its dignity; but only becomes dignified when it throws off paste and tinsel, and kneels down before its master the soul. It would have you admire its freedom, but in reality is never free until it accepts the glorious mandate laid upon it: "A servant of servants shalt thou be to thy brethren." K. V.

THE French *Académie des Sciences* has distributed fifty prizes for good scientific work. The prize of \$20,000 for communication with the planet Mars remains unawarded. There does not seem to be a sum appropriated as yet, for preliminary conversations with any other planet in our system. STUDENT

Some Sayings of Jesus

(From *Paralipomena*, a recently published collection by Professor Bernhard Pick, D.D.)

Kingdom of Heaven Attainable Through Self-Knowledge

THE kingdom of heaven is within you, and whosoever shall know himself shall find it; for if ye shall truly know yourselves, ye are the sons and daughters of the Father Almighty, and ye shall know yourselves to be in the city of God, and ye are the city.

Could anything express more clearly the teaching as to the Divine nature of Man and the means of realizing it? There is no room for ambiguity here. The kingdom of heaven cannot possibly be an earthly kingdom. It is within us; and moreover we can attain it. Nothing is said about postponing the attainment until after death. Self-knowledge is all that is required. Hence it is clear that the writer of this meant that self-knowledge was possible and the kingdom of heaven attainable. It is also perfectly clear what is meant by the term "Son of God"; for it is here applied to that man, whoever he may be, who, through true self-knowledge, has found the kingdom of heaven. This is fully in accordance with the well known ancient mystical symbol which describes the Divine Soul in Man as the "Son," the Universal Spirit being the Father. Again, the city of God is — Man himself. Thus the earthly tabernacle in which the real Man dwells is, after the purification of his nature, the city of God. What is this but the teaching that even the humble clay can become exalted so as to be a dwelling fit for the Divine? Should this not teach us to reverence the faculties and powers with which we are endowed and to keep them pure and strong?

This quotation is one of those found at Oxyrhynchus in 1903. It is at least as authentic as the sayings in the four authorized gospels.

Negative "Goodness"

A saying from St. Matthew's Gospel (*Codex C*, Palestinian Syriac Library) runs:

And I say unto you, that men must give an account of every good word which they shall not speak.

Negative goodness is all too common. What becomes of the pious recluse after this? How can one do one's duty, and attain, by shutting oneself away from the world? Jesus himself did not do this. In the canonical gospels he says, "Let your light so shine before men that they may see your good works."

Mercy

The following is from a Coptic fragment translated and published in 1903 by Professor Julius Böhmer:

It happened that the Lord went forth from the city and walked with his disciples over the mountains. And they came to a mountain, and the road which led to it was steep. There they found a man with a sumpter-mule. But the animal had fallen, for the burden was too heavy, and he beat it, that it bled. And Jesus came to him and said: "Man, why dost thou beat thy animal? Seest thou not that it is too weak for its burden, and knowest thou not that it suffers pains?" But the man answered and said: "What is that to you, I can beat it as much as I please, since it is my property, and I bought it for a good sum of money. Ask those who are with Thee, for they know me and know thereof." And some of the disciples said: "Yea, Lord, it is as he says. We have seen how he bought it." But the Lord said: "Do you not notice how it bleeds, and hear you not how it laments and cries?" But

they answered and said: "Nay, Lord, we hear not that it laments and cries." And the Lord was sad and exclaimed: "Woe to you, that ye hear not how it complains to the creator in heaven and cries for mercy. But three times woe to him of whom it complains and cries in its distress." And He came forth and touched the animal. And it arose and its wounds were healed. And Jesus said to the man: "Now, go on and beat it no more, that you also may find mercy."

It is easy to comment on this in the ordinary sermonic way, but there is more to be gotten out of it than that. The essential point in it is the surprise and sorrow of the Master on finding that *his disciples were unable to hear the supplications of the animal*. He heard them; why did not his disciples hear them? Alas, their finer senses were dulled and calloused by selfishness and indifference.

Does not this show that the range of our vision depends on the purity of our minds, and that an animal may be a very different thing in the eyes of the pure and holy from what it is in the eyes of some people? Do we not know that to some the animal is so much material for experimentation. Are not the minds of some so warped that they can talk of their desire to "benefit humanity" by means of cruelty to animals? What could their so-called benefits be (supposing the whole thing is not utter cant) but curses to humanity?

What an opportunity professing Christians have to learn from their Master the glorious gospel of Mercy! It beams on the heart of the Man who invokes it and melts and softens his whole nature like the genial sunshine. Let a man but resolve to do his duty, and straightway the power to see it is his. In the disciples the senses had become dulled to suit the requirements of unsympathy; the wish was father to the thought; they had surrounded themselves with a pachydermatous covering to shut out inconvenient sights and sounds. Such are some of our materialistic philosophies.

How many of the Master's present-day disciples practise mercy with the idea that the eyes of their Soul will be opened? How often is it a mere weak sentiment, with little power to do good? Not so the Master's mercy; that was strong and masterful, potent to relieve suffering.

There is a truer wisdom than that of the unawakened mind. Mercy and Illumination go hand in hand. The ray from the Logos is dual, manifesting as Love and Wisdom — Aphrodite-Hermes, as the Greeks called it, in a much misunderstood symbol. The gift of the Holy Spirit is dwelt upon by the early Christians; and in some of the epistles in the New Testament we find the philosophical terms used by them to denote these powers, words which have been translated *faith, hope, grace*, and so on, and now stand for little more than pious moods. But they were originally Divine gifts to be sought and attained by all disciples who followed the behests of the Master. T.

Remarkable Digging

CLEARLY we shall have to find new ways of using our muscles. Flying and swimming suggest themselves. A steam shovel at Panama, working an eight-hour day with stops for change of location and refreshment, has been digging soft rock unconcernedly, at the astonishing rate of 277 tons per average working hour. J.

Art Music Literature and the Drama

The Drama of the Future

IF it is part of Theosophy's mission to sow broadcast the seeds of a higher ideal of art, music, and the drama, it is also part of that mission to recognize, accentuate and encourage all who are striving for higher things on these lines. And those who best know Katherine Tingley's teachings regarding the higher drama, its true use and office, and its mighty future as an educative factor in the life of mankind, will best appreciate the very Theosophical utterances contained in the article quoted below (by M. Henri Bataille, Parisian critic and playwright, and for the translation of which we are indebted to the *Boston Transcript*). They will also see its limitations and recognize in it as a whole one of the signs of the new time.

Truth does not mean mere vulgarity; it has its sublime qualities, and may even attain lyric beauty; but it must dispense with literary lyricism, the verbal exaltation the word usually implies, the intoxication of words which springs from that mischievous romanticism which is still a blemish upon the drama! For the lyricism that rages too much and seeks to attain intensity by the massing of epithets and a profusion of rambling images we must substitute what may be termed "exact lyricism," a lyricism which is the true child of the artistic verities it proclaims.

Yes, the lyric state of mind exists, just as genuinely as other states of mind exist; only it must henceforth find its precise expression. It is by maintaining the exact and patiently studied relation between the exterior verities and the inner movements of the soul that we shall attain it; by the judiciously observed relations between the visible play and the invisible play, between the visible rays and the mysterious X-rays of our sentiments.

The inner world, the other world, their relation and their respective positions—*there you have the great reality, there the real problem; it is not an easy problem to solve.* . . .

What, then, is this famous Truth, goal of good pilgrims, eternal Mecca of artists? At first glance it may seem somewhat puerile to call it so refractory; it appears easy of access. But let us not deceive ourselves. We are not speaking of a superficial truth, compounded of appearances, or of a vulgarly effective realism, easy to arrive at and giving a cheap illusion of life. Such will bear to humanity the same relation that a picture post card bears to a Velasquez. No, we would speak of the relation between the inner truths of the soul and external verities. To set these two worlds face to face—this is the whole business of the drama! From their clash or their blending springs beauty.

By outward truths, we mean the exact and duly proportioned appearances of things, all that is tangible and outspoken in nature; we mean both their language and their visual expression of their totality. This is the very armature of the drama. By inner truths, we mean the secret of character, that which seethes within the individual and is not directly expressed—his deep and determined motives, as well as the subconscious but dominant forces of his life. Only on rare occasions does a man fully express himself. What he says is generally only one aspect of him, a single communication between his personality and the realm outside him. And doesn't this world of the mutely mysterious constitute the thing most interesting in life? Here you have the other

great and admirable goal! Do you ask how to reach it in an art as concerned with the surface as the drama, an art that precludes the possibility of description?

Ah, this is precisely the genius of the drama! It is elliptical. By cries, by words, by doors opening inward upon the soul, and by wonderful and truthful syntheses, it leads its audience to the dark, living waves of character, and it does so without in the least doing violence to external reality or to the verbal verisimilitude which we insist must be complete in our dramatis personae. To attain this end, we have two languages that correspond to the "ex-

ings—not in their full scope and variety, but at least in their essential interest. The proper mingling of these two means of expression will accordingly form the very basis of the drama and will constitute one of the surest phases of its progress. . . . which ever path he elects, your playwright may take for fact the following aphorism: *Whatever is untrue is doomed to perish, and if there is any element of conventionalism in a man's work, then, despite the success with which it is received or the genius with which it is defended, that element is already stricken with mortality and foredoomed to die.*

Truth! Profound and difficult ideal, source and end of all art! With what studious and unwearying care the generations hand on the mirror in which its image is reflected! How futile their yearning to grasp its entirety! And yet truth, however inaccessible, is forever before our eyes. It is not a hid treasure. It imparts itself to us with a devotion like that of a patient, tender mother. But in spite of this, we are always far away from truth, and thence comes our constant sorrow as well as our best aspiration.

The difficulty that we find in drawing from so patient a model is not merely because we are personally inadequate. Contemporary taste and the reactionary sentiment in the public (that two-cent Meccenas)—these are the principal wrongdoers. To be sure, one must not overestimate the brief resistance offered by the crowd; the artistic progress of the stage is not to be checked by it. Little by little the drama will rid itself of that vast collection of conventionalities which it has dragged like a ball and chain through the centuries. For it is inevitable that dramatic art should become the splendid thing it was meant to be. Is it not, indeed, the one art, in which all the others are blended, since it is speech as well as silence, the expressed as well as the unexpressed—action, soul, nature? It depicts the whole being. The present state of the stage and the present attitude of the public allow only a few reforms, but the drama will, nevertheless, some day or other attain that degree of perfection which is its right, that plenitude of expression which seems to be its ultimate goal and the very essence of its laws. The period in which we live is already more favorable than its forerunners to such development; it exactly coincides with moral, theoretical and personal evolution touched with glowing enthusiasm. . . .

Books on Battleships

PART of the work of the officers of the Bureau of Equipment in Washington consists of the selection of books for libraries on battleships. The books on a single ship often cost many thousands of dollars, and comprise not only fiction, science, history, and miscellany, but dictionaries, encyclopaedias, reference works, and also the latest and best books on fortifications, hydrography, seamanship, navigation, tactics, naval architecture, etc. Sailors are great readers and the response made by both officers and men to Katherine Tingley's gift of Theosophical literature, recently made to all the ships of the Atlantic (now the "Pacific") fleet, showed a deep interest in the more elevating and beautiful things of life. The books of these floating libraries are always in demand and it is said that serious works form a large part. H.

terior" and the "interior" states: the direct language and the indirect language. The direct language—what need of defining it?—is that which we employ to express our sentiments and desires without detour. The indirect language is the language the meaning of which is not the same as that of the expression employed, but which veils or reveals the inner sentiment; it is our most common language in real life; it gives our words that special power which becomes at times so moving and so delicately modulated.

The direct language was almost the only language of the primitive drama—the drama from Sophocles to Racine. Shakespeare alone allowed himself an occasional divergence from it, and yet we find in Shakespeare its severest formula—the monologue. The indirect language would doubtless have been acceptable to the audience in the olden times. Our own public, actually more refined than it professes to be, is already clever enough to follow such shad-

People never forgive those whom they have wronged.—*Helena Petrovna Blavatsky*

Kew—and Our English Queens

WE visited recently the Royal Botanic Gardens at Kew, that spot so famous in English history and which was for so long the residence of English sovereigns. It lies in a curve of the Thames, between the Richmond and Kew bridges, and here, they told us, originally lay the little town of Kew, which was later moved to the eastward.

Hardly any spot in England has been more closely associated with royalty and more particularly with English queens. It was the home of Queen Mary for many years (indeed, the palace at Richmond was built by her grandfather, Henry VII, and in it her father, "burly King Hal," entertained Europe's then greatest ruler, Charles V, Emperor), and at various times it witnessed the activities of Queen Elizabeth and her court. Kew was the residence, also, of George III, his mother and his children, and it is to his mother, the Dowager Princess of Wales, that we owe the beginnings of today's marvelous botanic gardens. She began a small botanic garden for her own pleasure, and her son, who deeply loved her, lent every encouragement. However, when the mind of this unfortunate ruler became clouded, the Kew gardens were sadly neglected and not until the accession of Queen Victoria did they seem to anyone of sufficient importance to be kept up.

In 1840 the gardens were adopted by the government and were officially placed under the department of woods and forests. The original gardens contained but eleven acres, but today, with the adjacent pleasure-ground, they comprise between three and four hundred.

In 1850 the most wonderful and famous of water-lilies was added to the collection, having been originally brought from the waters of the Amazon by a botanist sent there by the Spanish government. Its discovery dates from the year 1801, and in 1837 permission was obtained from the Queen to name it *Victoria Regia*, by which name it has since been known.

Not until thirteen years later were seeds of it brought, in the gardens themselves, to successful bloom, and ever since in its blossoming periods it has been one of the glories of the place.

Today the Kew Gardens are the pride of the scientific world so far as botany is concerned, and a great pleasure-ground for the English and for tourists as well. More anon.

Harmony

THIS is a law of life; one of the fundamental conditions necessary to life.

Above, below, and throughout every conceivable manifestation, it is the first essential. The lack of it, driven to its ultimate, produces an absolute stoppage. If we can imagine all the forces concerned in any undertaking to be at variance, they would either kill each other or leave a surviving force, which, in its turn, under the supposition of disharmony, must meet an opposing one, and so on until the end is annihilation—nothing less.

On the other hand, its presence, carried to its ultimate, is unlimited in power. Under its

action, the stars move in their appointed courses. Infinite space, alive to its last atom, in majestic poise, pursues its purpose; and, over our earth, the Higher Law of Harmony prevails, leveling from time to time the clashing work of half-formed man. For man has not become, as yet. Half beast, half divine, his evolution is in process—but held back, because the law of harmony is not obeyed. As a result, instead of peace, happiness, health, glorious attainments—a golden age, in fact—we have war everywhere: nations armed to the teeth; individuals pitted against each other and themselves, doing what they would not, and wishing for what they can not do; sickness, poverty, despair; suspicion, envy, jealousy; misery, littleness, degradation—the last expression of defilement.

The lack of harmony, the hideous discords of life now are appalling; and yet history and human experience are full of examples which show its power. A recent one is the result of the Young Turk movement. Turkey stood, but a day since, as a helpless nation; apparently, no people so hedged in, so held in iron chains. No one could leave his own town without a permit, almost impossible to obtain. The press was strangled. Railroads nowhere in the interior; thousands acquainted only with the town in which they were born; education not general. What obstacles to freedom! Insurmountable, the world said. Yet underneath, behind all this, in silence, a mighty, united purpose was born in the hearts of the people. How it grew, none can say; yet when it came to maturity, by a simple turn of the hand, without bloodshed, without confusion, through the irresistible power of harmony the heavy cloud of centuries was lifted.

And so, in like manner, for a true universal peace, how little is needed! Each one has but to establish harmony *within himself*, and, silently, a mighty army is born, which, when the hour strikes, will bring a *new golden age*, as if by magic. GERTRUDE W. VAN PELT

A New Saint

AFTER an exhaustive investigation, extending in and out over four centuries or so, it will probably be decreed at Easter that Joan of Arc is officially a saint. There will be various ceremonies, and newspaper accounts of her are beginning to thicken. A long one thus begins a paragraph:

Joan of Arc was burned at the stake by the English at Rouen in May, 1431. Twenty-four years after her death, that is to say, in 1455, the bishop of Rheims, with the consent of Pope Calixtus III, instituted the initial proceedings with the view to her canonization.

The English at that time were as ruthless as any other people and doubtless felt vindictively enough towards this girl who had turned the tide against them. But it was the Church, not they, which burned her, the charges being heresy and sorcery. The inspirers and writers of statements like that quoted above, know very well that the public will never turn for their facts to an encyclopaedia. Let us therefore parallel it with a few lines from the *Encyclopaedia Britannica*:

By means of negotiations instigated and prosecuted with great perseverance by the [Roman Catholic, of course] university of Paris and the *Inquisition* — [the *Encyclopaedia* forgets that the proper title is *Holy Inquisition*] — and through the persistent scheming of Pierre Cauchon, the ejected bishop of Beauvais, she was sold . . . to the English, who, on January 3, 1431, at the instance of the university of Paris, delivered her over to the *Inquisition* for trial.

In other words the *Inquisition* maneuvered successfully to get her into its own hands, her delivery into English hands being but a transitional step in the game. Her examination related to the purely ecclesiastical charges of heresy and sorcery. Being absolutely loyal to her ideal of the Church, believing it to have God behind it, she humbly assented to that Church's God-inspired verdict that she was a heretic and sorcerer. The Church could do no other than pardon her — ostensibly; but it had not the slightest intention of permitting her to escape. She was handed back to the English and on various pretexts induced to resume the male attire which she had found necessary for the battle-fields. This was accounted a relapse into heresy. The Church got her again and carried out its fixed purpose.

Even Andrew Lang misses the point, fine as is his eulogy of her. He says:

In a tragedy without parallel or precedent, the flower of chivalry died for France, and for the chivalry of France which had deserted her; she died by the chivalry of England, which shamefully ill-treated and destroyed her.

She died not so much for what she had done as for what she was going to do, must have done, in the natural course of her interior development. As her mind unfolded under the clear spiritual sunlight that was shining

upon it, she would have gone on from the political liberation of her country to its spiritual. The priestly organization which held the soul of France in its grip knew very well that such a mind as hers must inevitably go on ripening until it saw far too much; that the influence she had acquired from her military prowess would presently make her every word echo throughout France; that, in fact, the game was up unless she were silenced. Her eyes had first opened upon France's political degradation; in fighting against that her whole attention had been concentrated. The peasant girl who could suddenly show the abilities of a great general on the field of battle, might

Lomaland Photo. and Engraving Dept.
THE FIREPLACE, OLD BOARD ROOM, ST. PETER'S HOSPITAL,
BRISTOL, ENGLAND

show some other abilities when her attention got fixed in other directions. She saw one kind of degradation; she might see some others when she had remedied the first. Certainly she must be hurried out of the way. And she was. But not, we repeat, for what she had done, but for what she certainly would do. No one outside the Church saw the danger, for it was only the Church that was in any danger.

It is impossible to estimate the spiritual emancipation that would have blessed France had the Church failed to silence Joan of Arc; but most certainly not at this late date would the battle for liberty of conscience be waging there. France would have shaken off ecclesiastical domination centuries ago. STUDENT

"My Members Fail Me"

ON the road towards utter loss of heart lies the forest of despondency. The sun never shines there and paths that were worn by numberless erratic wanderers lead through wildest perplexities nowhither. A densely populated place, yet each traveler there feels and knows himself to be alone. Those who walk in paths of light and joy hear a strange sound of groaning issuing from this dismal wilderness and they name it "The cry of discouraged humanity."

Why do any ever enter there? Why do they not come out again? Why do they weakly complain of a condition doubtlessly entered willingly? Cowardice and ignorance led them in, bearing (they imagined) all the treasures of life; bewildered and fearful they go on wandering alone, like an "owl of the desert," lonely as "a sparrow alone upon the house-top."

Despondency is an unfailing outward sign of inward emptiness: an overturned bowl; a sun-burned shell; a sapless branch; an ash-strewn hearth; a frightened soldier. The meat, the life, the essence, the fire, the Cause, no longer animate. The disheartened who cry out in the darkness do not know that under foot there grows a potent herb, that, wisely applied, will restore life to that which seemed dead; will make of good use that which had been thrown away.

The one sweet plant that borders the paths of happy life and sends vigorous roots into even the poisonous black soil of despondency is Theosophy. Well might the insane world go down wild paths to despair, were there nothing to man beside a body sick with complex ailments and a "mind" dizzy with endless whirlings. But Theosophy reaches a vital, a healthful spot, if there remain one, infallibly. It fills the veins of the sufferer with living power; it washes all poison out of his brain. He assumes an attitude of authority, for he has remembered his royal identity. He is Man the Ruler once again. The body is the staff of the kingly pilgrim and the mind is a light to

him. Never again will he cry for help, but, with force conserved, felling and burning through the entanglements that have closed in upon him, he will retrace a way for himself and for countless despairing souls pressing behind him, out and up, towards the unconquerable kingdom they had almost lost and forgotten.

In a recent terrible flood in the West hundreds of people owe their escape to the heroism of one telephone operator, a woman. The flood came on in the night, sweeping away half the city, the while this woman remained at her post sending alarms to residence after residence. She herself perished, her own escape being cut off by the water. STUDENT

OUR YOUNG FOLK

Abraham Lincoln

FEBRUARY 12, 1809—APRIL 15, 1865

"With malice toward none, with charity to all."

THE day will never come when young folks cannot learn many lessons from the life of Abraham Lincoln; for it is a story of obstacles overcome, of strength and wisdom gained in the overcoming, and of steady growth in the power to serve unselfishly as patriot and statesman.

Abraham Lincoln's early struggles do but endear him to all those who are interested in the great American republic. They are bound up with the growth of the United States. The wandering spirit that drew the boy's restless father from the more settled regions to those which offered only hardship and ceaseless labor, was one aspect of the explorer's instinct. The very poverty which prevented families from returning, even if they so desired, to their old homes, and which drew many hither-to well-to-do families, like the Lincolns, into the class of borderland strugglers for a living, was an element that contributed to the march from the Atlantic to the Pacific, and helped to make the country what it is. It is an interesting fact that Abraham Lincoln, the grandfather of our hero, was a friend of Daniel Boone, whose fearless spirit and love of the wilderness made him a pioneer of pioneers.

One picture of Lincoln's youth is especially worthy to be recalled because of the influence this experience had upon all his later life. His mother, a beautiful, sensitive and refined woman, after doing her part bravely in the task of making a home in the rough region to which they had gone, fell ill and lay helpless for a long time before she died. Lincoln's great tenderness showed itself then—he was not yet eleven years old—for he nursed her as a daughter might have done, and during these hours when he was caring for her the soul of the mother revealed itself to the boy, touching and uplifting him in a way he never forgot.

It was Lincoln's good fortune to have a step-mother, who did her best for the struggling family and who also was remembered by Lincoln with constant gratitude, one of the first large lawyer's fees he ever earned being devoted to making her last days comfortable in a home of his providing. We often read of the faults of Lincoln's father, but it is well to remember that two of the great man's most striking characteristics were an inheritance from Thomas Lincoln, namely, his extraordinary physical strength and his gift for relating anecdotes in a dramatic and humorous way.

This very physical strength of Lincoln's—what a temptation it might have been to a boy with a cruel instead of a compassionate nature. It is recorded, however, that Lincoln never made unworthy use of it but was always a champion of mercy and justice; and that strong as his body was, there was something else about him which his neighbors and play-fellows early in his life learned to depend upon, and that was his ability to see the two sides of everything—and every person—and to form a correct judgment. It is said that he

was an umpire as often as he was a champion.

Wherever Lincoln went he soon became recognized as a leader and superior. This was because what he did not know he at once set himself to learn, and soon was in advance of his surroundings. His ability to learn without an instructor was astonishing. He found out that a knowledge of English grammar was indispensable, so he walked eight miles to borrow a book on the subject and soon mastered it. His friends secured him a position as surveyor. He knew nothing of surveying, but got a book telling about it, and soon knew enough to go to work at it. He was most accurate in his calculations too; for once there was a dispute about the place where a corner should be, and Lincoln, being chosen to decide the matter, settled upon the very spot where, a few inches below the surface, was found the stake originally placed to mark the location in question. It was the same with military affairs. When Lincoln became President he knew nothing of them, but he studied hard, and it is said that no military action decided upon contrary to his judgment ever led to last-

THERE are no accidents in my philosophy; the past is the cause of the present, and the present is the cause of the future; all these are links in the endless chain, stretching from the finite to the infinite.

LET us have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it.

—Abraham Lincoln

ing advantage, and that none suggested by him and carried out according to the lines he laid down, failed to win a measure of success.

As a lawyer Abraham Lincoln stands as an inspiration and a rebuke. What steps might have been taken in bringing the law of the land into accord with the Great Law of Compassion if more of his countrymen had used their abilities as wisely as Lincoln did his. He discouraged lawsuits over points that could be settled by a little tact; he refused to uphold those who would attempt to use the law to support them in their dishonest claims; he would not take a large fee for a small service; and his honesty and generosity enabled him to see conditions clearly and to attain a singular sagacity in judging human nature and events. The practice of law was a great mental training to him, and it has been said, was a continuation of the training begun by the study of geometry, enabling him so unerringly to trace results from present causes.

What a triumph it was for this Western orator when he stood in the hall of Cooper Union in New York and delivered a speech which proved to all who heard or read it that here was a man who from the rude circumstances of the uncultivated West had emerged with a dignified, thoughtful, and convincing style of speaking and a modest but undeniably masterful manhood that won all hearts. Later, as President, Lincoln proved to a doubting world what manner of great man could be pro-

duced in America amid struggle and hardship and lack of opportunity for culture, when one sincere and persevering enough proceeded to carve out his own fortunes along lines of helpfulness and with devotion to an ideal ever expanding. It was this patient progress step by step, his constant readiness to give help, his knowledge of human nature, his love for his fellows, and his determination to lift them, that fitted him to guide events in the terrible period of conflict during which he was the head of the nation. James Russell Lowell, the great poet and scholar, compares Lincoln with Henry of Navarre, the dashing hero of the white plume; but of them he says that while Henry IV went the nation's way and left France strong, Lincoln steadily drew the nation over to him, to those higher hopes for the future, which he, because he was so close to the American hearts though free to soar above their heads, could best feel at that time. What a wise, compassionate hand was this, to guide a nation so!

Abraham Lincoln was a devoted student of the Bible and of the Declaration of Independence, two writings which Katherine Tingley has recently commended to the closer study of patriotic Americans. He was not a sectarian in religion, but no religious enthusiast or dogmatic theologian ever guided his life more strictly according to the practical teachings of Jesus. His life has inspired many a beautiful verse. In his *Commemoration Ode* Lowell writes of Lincoln:

Nature they say doth dote
And cannot make a man
Save on some worn-out plan,
Repeating us by rote:
For him her Old-World molds aside she threw,
And choosing sweet clay from the breast
Of the inexhausted West,
With stuff untainted shaped a hero new,
Wise, steadfast in the strength of God, and true.

Edmund Clarence Stedman, a beloved American poet, who died a year ago, wrote apropos of the cast of Lincoln's hand:

Look on this cast, and know the hand
That bore a nation in its hold:
From this mute witness understand
What Lincoln was—how large of mold.
The man who sped the woodman's team
And deepest sunk the ploughman's share,
And pushed the laden raft astream,
Of fate before him unaware.

Firm hand that loftier office took,
A conscious leader's will obeyed,
And when men sought his word and look,
With steadfast might the gathering swayed.

What better than this voiceless cast
To tell of such a one as he,
Since through its living semblance passed
The thought that bade a race be free.

And Richard Watson Gilder, looking on a mask of Lincoln's face, wrote:

Yes, this is he who ruled the world of men
As might some prophet of the elder day—
Brooding above the tempest and the fray
With deep-eyed thought and more than mortal ken.
A power was his beyond the touch of art,
Of armed strength—his pure and mighty heart.

STUDENT

THE CHILDREN'S HOUR

A Bird Story

ONCE upon a time, in a dark, miserable yard in a large town, someone had wired in a lot of poor pigeons close to the ground. The walls of the houses rose high on each side shutting out the bright sunshine; only away up on the roofs could glimpses of the blue sky be caught at times. The pigeons had been so long shut up in their prison that they had almost forgotten about the clear sky and scarcely ever looked up to it, although the remembrance of it still slumbered deep down in their hearts. Sometimes one of them would be seized with an impulse to fly and would make a sudden dart upwards, but the cruel wire netting caught him and hurled him back to the ground, often bruised and bleeding.

But one wonderful day a strange pigeon appeared, a beautiful white bird, which perched upon the wire netting and told the poor prisoners about the beautiful sunshine and the free air where they could dart about like lightning. "Look up, look up," she said, "there are better things in life than keeping your eyes fixed on the ground to greedily snatch up the grain that is given you only to fatten you for the table of your keepers! See, the wire netting is getting rotten in places where you can force your way out and even if you cannot fly at first, don't you see that long ladder resting against the side of the house? You can hop up that to the top."

The pigeons began to look up and listen and some even did as she told them and pushed their way out; but as they and their ancestors had lived so long in that prison that they had almost forgotten the use of their wings, they did not try to fly but began hopping up the rungs of the ladder. Some reached the top, and, rejoicing in the bright sunshine, called out to their comrades to follow them — others, stopping half-way to argue about how many rungs there were to the ladder, lost their balance and fell down to the ground, some getting so badly hurt and maimed that they could not try again.

The beautiful white pigeon kept on, urging and encouraging them, but even while she spoke a shot from some of the cruel people, who lived in the houses, reached her and stretched her lifeless on the ground. The pigeons all began to mourn and say, "Now we shall never escape — who is there to show us the way now?" Suddenly they heard a sweet voice near, and looking up they saw another white pigeon that had been standing by all the time, though only a few had noticed him. He began to cheer them up and tell them not to despair but try to remember and understand what the first white bird had told them.

By this time the pigeons were beginning to wake up and have a little more sense and they listened more attentively than ever before,

LOTUS BUDS WAITING TO HEAR A STORY ABOUT THE BIRDS

SLUMBER SONG

NOW the golden day is ending,
See the quiet night descending,
Stealing, stealing all the colors, all the roses from the west.

Safe at home each bird is keeping
Watch o'er nest and children sleeping,
Dreaming tender dreams of sunshine, sleeping warm, for sleep is best.
Sleep then, sleep, my little daughter,
Sleep to sound of running water,
Singing, singing through the twilight, singing little things to rest.

Down beside the river flowing,
Where the broom and flax are growing
Little breezes whisper gently, as night's music softly swells;
And like bells of Elfin pealing,
Lonely through the shadows stealing,
Tinkling, tinkling through the twilight comes the sound of cattle bells.
Sleep then, sleep, my little daughter,
Cattle bells, and wind, and water,
Weaving, weaving chains of slumber, cast about thee Dreamland's spells.

Mary H. Poynter

while he told them of the power they had within them. And again the cruel people came and wounded him to death also and carried him away; but even as he went he called out, "Don't lose heart, hold on, help is at hand."

And lo! there came a third beneficent, strong white bird, and seeing the pigeons all waiting and listening she began to sweep around in beautiful curves, and say, "See, use your wings like this, you all have the power to fly if you will but try." Some of the pigeons who were still painfully climbing the ladder, called out, "No, no — it's too dangerous, this is the only safe way — you have to climb each rung of the ladder — it's the way we were told to go."

"Not so," said the Great White Messenger, "that way was only pointed out to those who were not brave enough to try to fly, but you are birds born with the great gift of flight;

look into your hearts and find your divine heritage there!"

And the birds listening, a great hope and courage entered into their hearts, and rising with a mighty effort to spread their wings, the rotting wire netting gave way before the rush of their united action. It fell to pieces all around them and the birds rose into the air and began timidly to try to fly upward. Many times they fluttered down into the dust, but the tender, strong helper was always at hand to encourage and help, and little by little their wings grew strong and active — one by one they began circling around like their leader, higher and higher still, till at last they reached the top and away they darted into the free air and the bright sunshine, who knows with what gratitude and desire to help others in

their hearts.

I hope they all went right off to find other poor prisoners like themselves, to whom they could bring the message of liberation — don't you? Z.

The Singing Shell

THE great abalone shell in the garden at Lomaland, which forms the new fountain into which the fresh water constantly flows, is a musical shell. It has brought with it from King Neptune's realm all the magic of the palaces beneath the sea.

Sometimes it tells of the wind in the sails of the great ships at sea, and the storm waves as they dash against the rocky shore. Sometimes it murmurs the songs of the sea-fairies and the gurgling sound of the water in the coral caves. Sometimes it sobs and moans telling of disasters which might never have been if selfishness did not rule the hearts of the people; but mostly it sings of the joy to the world when the children of Lomaland go forth with brotherhood in their hearts to help the people.

The little red fish swim contentedly about in the shell, waving their soft little fins, like little bits of gauzy ribbon, through the clear water. Do they hear the song of the shell and listen to its sweet note of hope for all that lives? Who can tell? E.

itarian work. All who assist in this work are directly helping that cause.

THE MYSTERIES OF THE HEART DOCTRINE

Prepared by
KATHERINE TINGLEY
AND HER PUPILS

The Theosophical book of the Twentieth century

Tells the story and the history of the Theosophical Movement.

The prices are \$2 in cloth and \$1.00 in paper, which barely cover the cost, for it is printed and bound, not gaudily, but with such carefulness and thoroughness of art and craft as to make it unique among modern edition books.

Order now from
THE THEOSOPHICAL PUBLISHING COMPANY
POINT LOMA, CAL.

Isis Conservatory of Music OF THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

POINT LOMA, CALIFORNIA

SOME OF THE ERRORS OF CHRISTIAN SCIENCE CRITICISM

by H. P. Blavatsky and William Q. Judge

CONTENTS:
"The Empty Vessel Makes the Greatest Sound"
A Note of Warning

—by H. P. Blavatsky

Of "Metaphysical Healing"

Affirmations and Denials

The Cure of Diseases

Replanting Diseases for Future Use

—by William Q. Judge

A MOST VALUABLE PAMPHLET. Outside of Theosophy there is given no adequate explanation of the healing that is at times accomplished, nor of its rationale, nor of the ultimate price that must be paid and the dangers connected with such practices.

This pamphlet is invaluable to all students.

The Yezid Lucifer

THE correspondent of an English paper relates how he passed one Christmas in Armenia, at a village in the mountainous district between Kars and Erzeroum. Here he met a very intelligent and relatively traveled member of the Yezid sect, a Kurdish people whose creed is usually summed up as devil-worship. To a Christian who has never understood the myth of Lucifer, who has never even learned that there is anything to understand in it, the mistake may be natural. But for the Theosophist the creed is quite transparent to the truth behind it.

Its hero, so to speak, is a being known as Melek Taouz, or King Peacock, once chief of the archangels, now fallen from heaven, but ultimately to be restored to his place. The cause of his disgrace is uncertain, but the Kurd gave this as the most credited account:

One day the Supreme Being ordered the angels to recognize their inferiority to Adam, who had been called into being shortly before. All of them hearkened to the behest save Melek Taouz, and he reasoned thus: "Adam has been formed of slime, which is matter, whereas I am a spirit. How can a pure spirit be inferior to gross earth? It is impossible. I will not lower myself before him." So he was thrust out of heaven for a time. Before this he had wielded great power. And he had ever shown himself well disposed toward the human race. Why should we forget these things now that he is under a cloud?

The speaker repudiated the suggestion that his people *worshipped* Melek Taouz; they merely felt grateful to him for what he had done for man, were sorry for his degradation, and commended the souls of the dead to his care. His care of the dead and his old-time services to men clearly differentiate him entirely from the orthodox form of the western Devil.

Worship, he said, was for God only; and he quoted a prayer in use among his people:

O God! No one is aware what manner of Being thou art. Thou hast no countenance. Neither thy height nor thy movement nor thy quantity is known. Matter thou art not. Thou hast neither feathers nor wings nor hands, nor voice nor color.

The student will recognize at once in Melek Taouz a hardly disfigured, however incomplete, version of the Theosophical teaching of man's soul, the "fallen angel," whom the law of compassion which is at once itself and beyond itself, made to incarnate in and become the unrecognized guide of its human personality, the "slime," so conferring on the animal the power of ultimately becoming divine. From

Self-Doomed
to Serve
on Earth

its presence in the personality arise self-consciousness and the voice of conscience. Man has the potentiality of genius because of this Genius within him. And after his death all that was worthy of it in him becomes for a while one with it. From this light-bearer, Lucifer, self-doomed to an almost endless task and responsibility, early Christian dogmatism constructed the Devil—and later Christian bigotry and pride now lightly labels as devil-worshippers those who preserve something of the original sublime conception! But that has its Nemesis, for Christianity itself will never be understood until it is illuminated with the light of all the elder creeds, even of all the old religious myths and legends.

H. C.

Real "Mental Science"

FROM the moment that a man begins to lead the life that conquers death, the word *opportunity* acquires an extraordinary applicability. Like Mesopotamia, but certainly with more reason, it becomes a blessed word. It becomes a key which first *reveals* the ten thousand unexpected doors which it will then open. An opportunity might be defined as an open door; the *thought* opportunity may have been the key that opened it.

The alchemists are credited, or discredited, with the search for a stone whose touch should make all things gold. If for *things* we read *conditions*, the thought *opportunity* becomes that "stone," and is the "stone" the higher alchemists used.

The side-crag of steep mountains may be considered in three ways, said an Arabian mystic: first, as impossibles; second, as difficulties; third, as steps. "And," he added, "they become what they are considered."

(Of course life's difficulties are very great. The morning is chilly and raw: how can a man be expected to feel genial and serene? Last night at bedtime he would have done a little meditation and thus stepped himself up a few volts, spiritually; but the baby was crying. It is really useless for a married man to try.

The wife is in still worse case. Worries, worries; all that about the higher life is not for women with families, my dear.

The drunkard even would occasionally like to get a glimpse of the promised land, and even the poor soul-sterilized morphine victim. Are not the barriers to the higher life for them too obviously insurmountable? They surely, must take the first view of the crags?

And another has no time and no energy. The grind of life is too wearing, too insistent. His overcoat was stolen yesterday, and two children are out at heel. Money, money! How shall *he* elegantly lead the higher life? Where is *his* "opportunity"?

KATHERINE TINGLEY'S WORK IN CUBA

Additional Report (From an Observer's Notebook)

SINCE the publication of the Supplement to the CENTURY PATH of January 3rd, reports have been received of the addresses on San Juan Battlefield, November 22, 1908, on the occasion of the Unveiling of the Memorial Archway, and Dedication of the Granite Shaft, erected by Katherine Tingley to the memory of the Cuban, American, and Spanish dead, of the War of 1898; additional newspaper reports have also been received, and to make the previous account more complete the present Supplement has been prepared. With the exception of the address of U. S. Consul Holaday, the addresses and also the newspaper reports were in Spanish and have therefore been translated.

Address of Emilio Bacardí

YOUR Excellency the Governor; the Mayor of the city; Consuls of foreign nations; officers and soldiers of the U. S. Army; Artillery and Rural Guards of the Republic of Cuba; Mrs. Katherine Tingley, and other members of the Theosophical Society: Ladies and Gentlemen:—

There is truly something unique about this strip of Oriente Province, this part called Santiago de Cuba. I have at times asked myself, in those moments of sleeplessness that come to everyone: What mystery lies buried in this soil: what hidden things lie there, that this should be the place from which so many things of the highest importance should emanate? Is it, perhaps, the spirit of Guamá, the unconquerable Indian, who in these same mountains that surround us, fought and died valiantly defending his country?

This celebration, which is a feast of universal peace, such as perhaps there has never been before in the world, is being held in Oriente; and is an act absolutely unifying in its tendencies, to which all the nations of the world have gathered with these three peoples who here sanctified these fields with their blood, in the fulfilling of their duty as ordered by their fatherlands.

From the depths of human consciousness a voice speaks to my heart and tells me something that thousands of years ago was written in the ancient books of India; this voice tells me that there is a bond that unites us to all creatures—to those who evolve under the ray of the sun, as well as to those which

germinate under our feet; that we all form a part of that great chain of life, which has its beginnings in the night of time. And that voice warns us, also, that we must not give useless pain to any creature—that we must not wantonly pick a flower, because that bond of brotherhood binds us all; because, as the insect and the plant repose impotently on the bosom of nature, so also the child rests on the breast of its mother. The child will become a man; and who knows what the insect and the plant, in their slow and mystic struggle upward, will be in these times to come—part

fields, when we see how splendidly the sun shines and how Nature raises her hymn to the heavens, let us uplift our thoughts and send out to all the world the message of "Peace, good-will towards men."

Address of Major Matias Botancourt, of the Rural Guards of Cuba

LADIES AND GENTLEMEN, OFFICERS AND MEN:

I am moved to speak to you for two reasons, First, the order I have received from the illustrious patriot who commands the regiment to which I have the honor to belong, Col. Saturnino Lora; and secondly, the great sympathy I feel towards the object of this celebration.

Today we are to lay the cornerstone of the building where before long a large number of children will receive their education—the men of tomorrow—under the wise direction of the Rāja Yoga teachers.

Let us fervently desire for this association the greatest prosperity—this universally known League, working for the good of all humanity.

There has been unveiled, also, a memorial to those who here died so heroically, bravely fighting, and offering themselves on the sacred altar of their fatherland.

Let us keep in remembrance their patriotism and sacrifice.

And you, directors and teachers of this school today to be inaugurated, may you always teach as you well know, the duties of citizenship, and especially the spirit of a soldier.

The man who does not do his duty is not in a position to claim any rights.

But, ladies and gentlemen, let me say to you, that these duties, when they apply to a soldier, are sterner, and perhaps more difficult, because under certain circumstances he finds himself entrusted with the defense of his fellow-citizens, of his government, and of that which is and should be the dearest thing in the world—the fatherland.

The monument erected to those heroes will speak to you more eloquently than all these discourses. Take your inspiration from it, and you will have the power to show your pupils not the crooked path, but the straight way of honor and rectitude that leads to good citizenship, and to the inexpressible satisfaction of duty done: to the temple of glory, where in the halls of Fame and defended by

after the last battle of the war

perhaps, of the bodies of heroes or of great benefactors of humanity.

We have come here to render tribute, not only to the soldiers of America, but to those of Cuba as well, for together we have gained our long-looked-for independence; we come also to offer homage to the Spanish soldier, who, sent by his nation, perhaps against his will, fulfilled his duty, sacrificing himself for his country. All of them did their duty.

Before we conclude, let us remember that at a time full of misery, at a time of desolation and hunger, Mrs. Katherine Tingley came to those who were dying from lack of everything, and to bring us, like a rainbow of promise, the emblem of nations, the augury of future happiness.

When we contemplate the mountains that surround us, when we look at those green

the sword of Justice, rest those who live in the memory of the peoples of the earth, as an immortal keepsake, admired by the world, and acclaimed from generation to generation for their heroism and for their virtues.

**Address of Acting-Governor,
F. Manduley**

LADIES AND GENTLEMEN:—

Courteously invited by Mrs. Katherine Tingley, president of the International Brotherhood League, the honor has fallen to me to occupy this place on account of the Governor of the province being absent. The program to be given today consists of two things:

First; a homage to the great American army, that on this battle-field poured out its blood and offered its life for the benefit of our cause; and a remembrance of our innumerable heroes, who with unrivaled constancy made sacrifices of all classes, giving up for the benefit of the country their plantations, their lives, and the future of their families, in order to obtain independence.

Before such grandeur, let us bow humbly, and once more declare our gratitude to that noble and generous American nation; let us honor the memory of our heroes, and see to it that the flag, emblem of our independence, is always raised with honor and without stain.

Second; the laying of the corner-stone of the edifice that the International Brotherhood League is going to build for educational purposes. In the name of Oriente Province, that I represent on this occasion, I congratulate Mrs. Katherine Tingley and the League for the success of its humanitarian work, and we offer her a loving reception.

The Râja Yoga School through the education that it gives, will continue elevating the future culture of this country to a much higher point. The Republic, with this good fortune, will then receive more consideration and estimation from other countries. The work of the Râja Yoga Schools will produce great results; their good methods and proceedings being of great assistance to our educators, it will be a great benefit to the country—making true citizens, respectors of the laws, maintainers of order, and sustainers of the absolute independence of the Cuban Republic.

A MOMENT OF INTROSPECTION

I. B. L. Officials Recalling Memories of the War; On the Grounds of the new School, San Juan Hill, Santiago de Cuba

Address of Mr. Holaday, U. S. Consul

LADIES AND GENTLEMEN:—

I heartily thank the International Brotherhood League, so worthily represented at this solemn act by Mrs. Katherine Tingley, for the honor of being named to pronounce a few words at the inauguration of the buildings that are to contain the Râja Yoga Academy.

Above all, it is impossible for me to silence the memories that throng my brain; in my heart I feel at this moment the sadness and the joys of the Cuban and the American people, when on this same spot was fought the decisive battle that was to free a whole people from oppression, raising for all time to come the banner of independence.

ple from oppression, raising for all time to come the banner of independence.

The American nation on that memorable day spared no sacrifice necessary to the carrying out of its work of redemption, and will continue fulfilling its noble and unselfish promises.

All here present this morning should render homage of feeling and respect towards those who fell in that bloody struggle. Among us there should no longer exist vanquished nor victors; there should remain nothing but the unity and fraternity of noble souls.

The strongest bulwark of a civilized nation should be found in its traditions; and that which will make it always grander is, to keep from staining those traditions, to the end that they may be perfectly preserved.

The erection of an educational establishment on this historic spot is an effective and appropriate means of perpetuating these sacred traditions, so intimately associated with the liberty and independence of the Cuban people, and they are no less sacred to the people of America.

I hope and believe that this new institution, consecrating its best efforts towards uplifting the youth of Cuba, will attain after so many sacrifices and unselfish endeavors, the most complete success in the difficult task which its founders have imposed upon themselves.

I offer then, my most fervent good-will toward the International Brotherhood League.

Office of the
the Mayor of Santa Clara
OFFICIAL

Santa Clara,
3rd December, 1908.
MRS. KATHERINE TINGLEY,
Santiago de Cuba.

Madam:

The City Council in session held on the 27th of November last, passed the following resolution among others as herein copied:

"The motion presented by Messrs. Dr. Eudaldo Gómez, Dr. Manuel Martínez Osuna, José García Conde and Licenciado Antonio Berenguer, was read, as correctly copied here:—

To the president of the Illustrious Council of Santa Clara.—

Honorable Sir:—

The undersigned being informed by the press of Santiago de Cuba and of this city (we attach a copy

Lomaland Photo. and Engraving Dept.

FOUNDATION OF THE SPANISH BLOCKHOUSE ON SAN JUAN

Captured and Destroyed by American Troops in the Last Battle

of the *El Demócrata* and another of *Publicidad*) that the Honorable Mrs. Katherine Tingley, President of the International Brotherhood League, at present staying in Santiago de Cuba, would perhaps accept the invitation of the authorities of this place to hold a public meeting, and believing that this might result in the Honorable Lady founding in this city an Academy for the education of children on the plan of those already established in Pinar del Río and Santiago de Cuba:

We pray this illustrious Corporation to take our wishes into consideration and to invite Mrs. Tingley to visit this city and hold a public meeting. Very Respectfully.—

Council after thoroughly considering the matter voted unanimously that the Municipal Executive proceed immediately and courteously to invite Mrs. Katherine Tingley, now residing in Santiago, to hold a public meeting in the "Caridad" Theater of this city in which will be expressed their desire that there be founded in this district a Râja Yoga educational center, similar to those now active in Santiago and Pinar del Río; a committee composed of the following being appointed by the President to meet at the station to await and salute the said Mrs. Tingley, and to attend upon her during her stay in this capital: Councillors Joaquín Montenegro, Joaquín Lubián, Francisco Montero, José Calich, and Dr. Gabriel Pichardo y Pichardo. In the same manner it was resolved unanimously that the expenses of the stay of Mrs. Tingley in this city shall be at the charges of the gentlemen who have made the motion referred to, the same being communicated to them by the Municipal Executive."

In session on the first instant Councillor Leandro Valdés was appointed as a substitute for Councillor Dr. Gabriel Pichardo who resigns his position as member of the said Committee.

I have the pleasure of communicating the same to you for your information and subsequent action.

Yours faithfully,

(Signed) Joaquín S. Silva
Mayor

Stamped with the Municipal seal of Santa Clara.

Mrs. Tingley

(From the Santiago Correspondent, *La Discusión*, Havana.)

HAVING accomplished the object which determined her recent visit to this city, Mrs. Katherine Tingley leaves for Santa Clara tomorrow, Saturday. The Governor of that province and the City Council of Santa Clara, have invited her to visit their city and make a public address. Also they have asked her to establish a Râja Yoga

Academy there, so it is considered possible that within six months Mrs. Tingley will have another school in that city. In Pinar del Río, where for the last two years there has been a flourishing Râja Yoga School, and perhaps in Havana, the illustrious benefactress will give public lectures.

Mrs. Tingley is very enthusiastic in regard to the Râja Yoga Schools which we shall have on the hills of San Juan, as soon as the buildings are completed. She has been asked by persons in many parts of Cuba, Puerto Rico, and Central and South America, to receive children in the San Juan School, which will include an Academy for girls, a military one

Lomaland Photo. and Engraving Dept.

SPANISH CANNON ON KETTLE HILL, SAN JUAN

On Ground selected as the site of the Râja Yoga Industrial School

for boys, and a school of arts and crafts, all in distinct parts of the ample grounds.

Mrs. Tingley's party consists of Mrs. K. Richmond Green, and Mr. Torsten Hedlund. The former has been associated with Mrs. Tingley from the commencement of the work for Cuba, and is a sincere admirer and true friend of this beautiful land. Mrs. Green is the chronicler of the Universal Brotherhood League in Cuba. Mr. Torsten Hedlund is a native of Sweden, where he exercises a great influence by means of an important daily published in Göteborg. The news which this gentleman will send and which will be published in his newspapers, will be read not only in Sweden, but throughout all Europe and America, wherever there are Swedes. Later he will visit Point Loma, California.

The Hon. Nan Herbert, Directress of the Academy in this city, to whose disinterested efforts so much of the excellent progress of this school is due, and Mr. Reinemann, from the Academy at Pinar del Río, are also members of the party.

We wish the illustrious Mrs. Tingley and her honored companions, the happiest of journeys and the best of success in her noble work for humanity.

The Râja Yoga School

(From *El Demócrata*, Santa Clara, December 12, 1908.)

MRS. KATHERINE TINGLEY remained in this city two days, yet this time was sufficient for the heart of the great benefactress of humanity to palpitate with the desire, which she will carry into practice, of founding here a school which will open in January next.

It is easy to make a eulogium of Mrs. Tingley. She has been the Marta Abreu of two cities of the republic, Santiago, and Pinar del Río. Can anything more than this be said? Or anything more just? She has taken the Râja Yoga teaching to those two extremes of our country. How could we do otherwise than receive her with an affectionate welcome! The aphorism of Don José de la Luz: "To educate is not only to fit for a life career, but to attune the soul to life," is the motto and device of Mrs. Tingley.

We have made great progress in the political world; we are independent, but that is not sufficient. With a soil rich enough to make our country progress by itself, just as a body launched into space and subjected to the laws of inertia only needs for its advance the condition that none shall hinder it in its career, so we ourselves go from progress to progress. The soil is rich, and hunger and misery are unknown here in normal times. But, how are we progressing morally? The evil of the century

pervades and enervates us. Old branches of an old tree, we need new sap for our shoots. We lack a support, an ideal, a new teaching: a belief and a faith to serve as a basis for our progress—the belief in the high destiny of humanity, the faith that we can fulfil it by our effort. Mrs. Tingley has the magic wand in her hands, she will cure our sickness with her schools. There are already more than sixty children registered.

The International Brotherhood League, of which Mrs. Tingley is President, is an institution which proposes to regenerate humanity by means of education. It is non-political and in matters of religion its members enjoy entire liberty of conscience. They have indeed a philosophy which serves as a base, and that not only ought not to surprise us, but it ought to appear natural to us that people who propose to carry out a work so great should have a philosophic principle, a system to guide and encourage them. It would be strange that such a purpose should be carried out with those who undertake it having no common bond of ideas.

"There is no religion higher than Truth," is the motto of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, established for

the benefit of the people of the earth and all creatures; it consecrates the principle of liberty and human responsibility and dignifies man by declaring him master of his fate.

Râja Yoga means practical culture, not alone theoretical, of the highest human faculties concurrently with those of the physical body. We have seen in Santiago de Cuba a seed sown in poor soil, and with the intelligent cultivation of the Râja Yoga teachers give the most beautiful fruits. We have seen children of the most humble class grow up under that educative system, and they have raised their heads illuminated by the light of reason; we have seen them advance with firm and sure step along the path of dignity, and those children have often been in their homes drops of dew which have soothed with their example the souls of their kindred seared sometimes with the misfortunes produced by ignorance and misery.

So we are glad that our town has received with affection the founders of the new school; we congratulate ourselves on being able to count upon that new fount of education and morals for the future to give an abundant harvest of eagerly desired grain.

At Pinar del Rio

(From a Havana Paper.)

PINAR DEL RIO, 9th December. As had been announced, the illustrious benefactress, Mrs. Tingley, foundress of the Râja Yoga Schools, arrived by yesterday afternoon's train from Santa Clara. There went to the station to receive her the provincial governor, Colonel Indalecio Sobrado; the mayor, doctor Alfredo Porta; the Secretary of the Provincial Government, señor Andrés Rodríguez Acosta; representatives from the Provincial Council and the City Corporation, and many friends of the illustrious lady, with a numerous public. The Military Company of the Râja Yoga Academy acted as guard of honor.

The distinguished guests and the committee proceeded to the Academy where the pupils and some of their parents awaited them. The children, dressed in white, received Mrs. Tingley with songs, flowers, and words of welcome and gratitude. An exchange of affectionate and appreciative greetings took place between Mrs. Tingley and the distinguished people who had come to salute her.

The foundress of the Râja Yoga Schools tells us that in Villa Clara she was the object of the most distinguished consideration on the part of the public officials and the people, whose courtesy and good will are graven as an imperishable memory upon her soul.

Within a month there will be installed in that capital another Râja Yoga Academy, in a beautiful house situated in San Cristóbal Street. Great enthusiasm reigns among the Villaclareños on account of the Râja Yoga School, for the establishment of which they have made great efforts.

In company with Mrs. Tingley are Mr. Torsten Hedlund, a well known journalist of Sweden and Director of the International Brotherhood League in that country; Mrs. K. Richmond Green, a distinguished Boston lady; the Honorable Nan Herbert, Directress of the Râja Yoga Academies of Santiago de Cuba and Santa Clara; Señor Manuel Renueles, of Santiago de Cuba, and Mr. K. E. Reinemann, Professor of the Râja Yoga Academy of Pinar del Rio.

Râja Yoga Academy in Santa Clara Center

IT was a memorable day in Santa Clara when the Râja Yoga Academy was opened on January 21st last. Since Katherine Tingley's visit to the city, both parents and

who, with the co-operation of faithful helpers united into a harmonious band of workers, makes every moment and every act tell for the true progress and joy of the whole world?

Miss Herbert, the Directress, writes most enthusiastically of the co-operation of the Governor of the Province, the Mayor and City Council and other prominent citizens, who invited Katherine Tingley to visit Santa Clara, and that with their interest, the school has begun under the most favorable auspices.

When Katherine Tingley was in Cuba, she received many applications for children to come to Point Loma, and though she brought with her several when she returned, there were many others that had to be refused as there were no more vacancies. Among those who came with Mrs. Tingley were the following: Raoul R. Lopez Marín, son of the former Minister of Education; Gustavo Porta, son of the Mayor of Pinar del Rio; Emiliano Lago, nephew of the Governor of the Province of Pinar del Rio; also three brothers, José, Felipe, and James Jané; Enrique Colombié, and Emilia de Moya, of Santiago.

There has also been such an influx of applications for the admission of children at Santiago, that the necessity for the new Academy shortly to be erected on San Juan Hill is clearly shown. The building will be begun next December after the next season's rains, Mrs. Tingley having decided to wait until then so as to avoid interruptions to the work when once begun, which inevitably would occur during the wet season. The designs for the building are all prepared and show it to be a very imposing structure, well adapted to the work in all its details.

In the Râja Yoga Academy

(From a Havana Paper.)

Pinar del Rio, 11th December, 7.10 p.m.

THE reception carried out last night in the Râja Yoga Academy in honor of Mrs. Tingley, Leader of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY, was magnificent, there being present a numerous party, among whom figured the Governor, Señor Sobrado; the Mayor, Señor Porta; the Chief of Public Works; Doctors Cabada, Montagú, Garcí Ribera, Cuervo, Lamar, etc., as well as distinguished families of this town.

The pupils of the Institution gave exercises in accordance with the Râja Yoga system and the children's orchestra added a delightful feature to the entertainment.

Señor Sobrado expressed the purposes of Katherine Tingley to enlarge the school building and make other improvements. The illustrious lady made a telling speech showing her love for Cuba and desiring days of peace and brotherhood for the happiness of the Island.

CORRESPONDENT

Lomaland Photo. and Engraving Dept.

LAGOON ON SAN JUAN HILL

The scene of one of the saddest and most tragic struggles of the last battle of the war

children had been looking forward to the time when Râja Yoga should be actually established in their midst.

The new Academy is under the direction of Miss Nan Herbert who is also Directress of the Academy at Santiago, and divides her time between the two. To assist her, several teachers have recently gone from Point Loma to Santa Clara.

The Academy building is one of the largest in the city, and in all its arrangements specially adapted for school work. It has been newly and artistically decorated under the direction of Mr. Leonard Lester, formerly a student at Point Loma, who for the last two years has been teaching Art in the Râja Yoga Academy at Santiago.

Adjoining the Academy is a spacious residence for the teachers. The children are crowding to the school and the people of the city are most hearty in their co-operation. All the plans for the school were arranged by Katherine Tingley before she left the Island, and great wonderment is expressed on all sides at the marvelous expedition with which the work of preparation has been done.

Is it not an evidence of what one person can do who is actuated by love for humanity, who has wisdom to plan and will and determination to execute, who is undaunted by obstacles, and

This is one of the victims of hereditary disease: never knew a day without pain, never had a chance to develop his mind, never had a body to develop.

That other was in jail once for a theft, can never hold up his head again. "Is your higher life for a man with a past like mine? Don't you have to have some sort of a clean soul to start with? I guess I might steal again if things got as bad as they were then and the chance opened. I tell you I'm terribly weak. Yet I'd like . . . if there *were* any sort of a way. . . What have you got to say, anyhow?"

The word opportunity is written across the whole stretch of life. But the letters are too big to see, their radiance too indistinguishable from common daylight.

Well then: it is written down the page of each year. "Oh we all know the value of New Years' resolutions."

But it is written at the head of the chapter of each particular new-born day; it is written on every line of the chapter. Behold! *It is every word of the line*—save one: that one is now. Yesterday is *then*, and that was never written in any book of *life*. And *tomorrow* has to have the breath of life in its nostrils before it becomes a living soul, a now. Life never breathes twice alike, and so tomorrow is unforecastable, not to be bothered with.

Thus whatever is now right in front and around, whatever condition now is, is opportunity.

Sometime we have all got to be perfect men and women. This may take many lives, but it will so be. Perfect men and women will possess every kind of power; their souls will be full-fledged.

Well: life is so cunningly arranged for every mortal, that every particular hour and condition contains an invocation to some power to come forth, to function and thereby grow—perhaps not much, one step; still, the whole thing is an affair of those one-steps.

If the condition is viewed by the mind in one way, it may, like the crying baby or the crippled and pain-racked body, be a deadly and impassable barrier; viewed in another way that same condition becomes an opportunity. In one view there is little but barriers, difficulties and discouragements, in life; in another there is nothing but stairway and opportunity.

Pain is difficult to bear. Think of it as an opportunity for development of the heroic pain-bearing power. Make the best effort you can to think of it and bear it in that way. Whereupon it becomes a step up the divine stairway to the Light; that *will* in you, which in your far-future (but perhaps not so *very* far) perfect manhood or womanhood will be so splendid and compelling and world-helping and even world-making, does the bit of growth possible to it in that particular moment. The divine Heart *present in that moment* is pleased and satisfied with you for the use you made of its gift. It does not ask perfection; it just asks the effort of that moment.

Mental inefficiency, perhaps dependent upon bodily frailty, is difficult to bear; and so is the sense of inferiority to those whose minds can quickly grasp things or which have been finely trained. *Try*, try to understand what you can. Think; think, say, of the full mean-

ing of the word opportunity. The perfect man will have a perfect and world-knowing mind. You have taken your step toward that height of mental outlook to which you, in some future life, will assuredly attain.

You love music but are too poor to get much of it. "Chance" now and then puts some fine music in your way. Drink hard and deep of it. "Chance," which is that divine Heart of the moments and of eternity, knows that some other developments are just now—perhaps for all this present life—more important for you. So it does not give you much music; expecting you, however, to do the utmost with the bit it does give.

The perfect man will be perfect in compassion. Compassion is a great power whose real use in the world we only faintly understand, since it is part of the creative power. Every day come opportunities for its use. See that you miss none; a friendly word, a cordial "good-morning," may do more than you know. Be particularly careful about it when you are feeling altogether irritated and irritable and chilly and selfish, for those moments are naturally the most fruitful opportunities.

Some man does you an injury, or his failings look repulsive to you. Seize that as the opportunity to think of him kindly, as misled by some passion, as overpowered by some circumstance that he cannot see as opportunity, as a son of Light that does not yet know it. In the far-off times of other lives you and he will look back at this together, each seeing how he helped or hindered his fellow.

If you have a vice under which you fail and fall, *fight*. Don't fight tomorrow, or this afternoon, but *now*. This afternoon will be now in its turn. There is always a difference that widens to eternity between a used now and an unused one. If you are going to fail this afternoon, you will nevertheless be stronger for the effort you made *now*. The great men of every sort are so because in past lives they used their *nows*. Now begin yourself.

In other words, stand front-on, to all the moments, and do something in each. Fill your whole consciousness with the sense of opportunity until you can see nothing else. And in each moment try to feel in your own heart that great Heart of the world which answers human life, the cries of human life, with opportunity; which yearns that we come at last to understand it, to know it, to feel that even in the pains which we see that we ourselves have brought about, it offers in each a blessing, a step, missing no single one.

Let us understand that life is nothing but opportunity. It is a mountain-side with a vast glory upon the top. Every moment can be made a step; out of every barrier and every difficulty can be drawn a strength. And the great benediction streams down into the lowest valleys upon him who *tries*, touching him from the first moment of the first effort, without any reservation on account of his past. It not only blesses him who tries, but *pre-eminently him who heartens someone else to try*.

"It's never too late to mend," says the old proverb. Don't try to mend; begin a new garment every day. STUDENT

THOU canst create this "day" thy chances for thy "morrow."—*The Voice of the Silence*

The Bible Absolutely Free from Error

BISHOP WELLDON, of the Church of England, writing in the *Nineteenth Century*, says that of the Reformers, Calvin alone insisted on the doctrine of the literal inspiration and inerrancy of Holy Writ; but that the Roman Catholics are tied up to a still more rigorous dogma:

According to the Pope, it would be impious either to regard inspiration as limited to certain portions of the Bible or to admit the possibility of error in the sacred writers. It would be intolerable to concede that Divine inspiration relates to matters of faith and morals and to these alone. For when the truth is at stake, no one is entitled to argue that it is not so important to consider what God said as what was his purpose in saying it. All the books which the Church receives as sacred and canonical have been entirely, and in all their parts, composed under the dictation of the Holy Spirit. But Divine inspiration, so far from leaving room for any possibility of error, not only excludes it, but excludes it without any qualification, inasmuch as God, who is the Supreme Truth, cannot in his nature be the Author of any sort of error. The complete immunity of all the Scriptures from error, has, the Pope declares, been the most positive belief of all the Fathers and doctors of the Church. It follows that any idea of contradiction between the sacred writers, or of any opposition in any one of them to the doctrine of the Church, must be repudiated as foolish and false. It follows, too, that as God, the Creator and Ruler of all things, is also the Author of the Scriptures, there cannot be, either in the natural universe or in the records of history, anything at variance with the Scriptures.

We must infer, presumably, that the Holy Spirit also supervised every *translation* of the scriptures. But the most striking point is the violence we have to do to our own reason; for, when we find contradictions, we are to assume that they are not contradictions. If two writers contradict each other, they do not really contradict each other. If anything in nature is contrary to what is said in the Bible, both are right. This seems to be the only attitude left for us to assume; and, as the Pope in his pronouncement appeals to logic and reason, it is hard to see why we should accord those faculties more respect in the case of *his* utterances than in the case to which those utterances refer. In short we are left in this quandary. If we accept the reasoning of the Bishop of Rome, we must reject the other reasoning; but, if we reject the other reasoning, we can but distrust the Pope's reasoning.

The whole thing amounts to the positive declaration that the Pope is above everything, an absolute autocrat over the entire nature of man. The infallibility of the Scriptures is based on the authority of the church of which he is supreme ruler; and his followers, it would appear, are commanded to believe in contradictions because he says so.

It is as well to have a definite statement, because then we know where we are. The Pope leaves us in no doubt as to the position he and his church intend to maintain, and we are free to choose whether we will accept this state of affairs. This church is particularly given to blowing hot and cold with the same breath. Hence it is of importance to notice that the flowery statements often made by those of its prelates who wish to recommend it to us as a model of reasonableness and liberality are obviously at variance with this positive declaration from the supreme authority they profess to recognize. H. T. E.

Some Views on XXth Century Problems

The Higher Role of Poetry

PESSIMISTS think that the days of poetry are over, lost in the colder light of concrete science.

They would be, if poetry were not the only now available language for the expression of another plane of being, a winged go-between connecting earth with an equally real heaven. The religious people ought to know more about this than they do, since for them it is a vital necessity.

For a part of our being we have no words; the few that pretend to apply have had nearly all the color washed out of them. The almost alone-standing word *spirit* awakes in most people merely a vague feeling of piety, perhaps some thought of Sunday and pews, silk rustlings and somnolent afternoons. "Ye are gods," and we are that far in realization of it!

There is no poetry for an animal. A tree is something to rub against; a purple and yellow sunset marks supper; the hush of evening is the time to keep an eye ready for the stir of a cautious rabbit; music is an indifferent noise; a painting is a piece of cloth that might be good to lie on if it were thrown in the proper place; a butterfly is a beak-full of meal—except the wings, which are rather a nuisance. The animal monad, though it has every potentiality, is so far only a unit of flesh consciousness incarnating in all sorts of flesh, bee-flesh, bird-flesh, tiger-flesh, dog-flesh, and in each of these fleshies living a different kind of animal life.

That is one pole of man's consciousness; and if he had no other he would be merely an animal monad in the completest kind of flesh. As he has a mind, he has evolved a rich language for the expression of all he knows of the rich world he lives in and his sensations therein.

But he has the other pole in the spiritual world, and that world must surely be supposed to be at least as rich, in its way, as the material world—as full of change and play and "scenery" and event. Those men who have succeeded in developing that pole of their consciousness, we call mystics; they try to tell us about that world—and almost instantly run out of words. For we have not evolved our language for any such purpose. It deals with trees and molecules and meals and heat and cold and dollars. So the mystics have to be content with general expressions of rapture; and with words which, taken from common life, can be made to do as symbols—for example, light. Sometimes their own minds make them fall into entire delusion; thinking they see as spiritual actualities pictures which the mind brought up from the region of terrestrial actualities.

Man actually is a spiritual being and does live part of his life in the spiritual world alongside of the other part in this world. And that is by far the richer and changefuller of the two. Our consciousness there is that of the heart. But we have not yet learned to *think* there; we have not yet a mind which stands to the rich stream of spiritual feeling as the common mind stands to the stream of

terrestrial feeling; we have not systematized; still less have we words which stand as close to such feelings as does for example *thirst* to its feeling.

Putting music, in this connexion, aside, the poets are our only interpreters. The higher among them do get their consciousness caught up into the spiritual world, or the fringe of it; they do get a far vision. And then they have to use words in a double way, doing the best they can. They so select and arrange them according to their sound and association that they go at more than their face value and awaken the feeling in him who hears or reads them. So selected and arranged, the words can take on a new light from above—almost apart from their face value in meaning. It is a very vital piece of work the poets do, not so much in making a new language—though we must one day have that—as making the old one do provisional duty for the coming new one. All the higher states that the poets give us are the sortings out of the faint general state we ought to get from the word *spirit*, a word so pale, so emptied, and then sometimes so hideously repainted and refilled!

STUDENT

Truthful False Testimony

A FRENCH court is seriously considering the employment of hypnotism for the obtaining of testimony in a celebrated case now pending. One would have thought that folly precluded by even the little that science does actually know of the hypnotic state. It knows of the occasional emergence of multiple personalities which may make the most absolutely diverse statements concerning each other, concerning events, concerning each other's past doings and history, which may incriminate each other with amazing circumstantiality of detail, every word being false. It knows that the hypnotized subject may weave his own personality into any scene or story upon which during waking moments his attention has rested, relating his own imaginary doings with perfect verisimilitude. And it knows that the subject's mind is guided by the expectancy of the operator, by his preconceptions, and by the pictures and thoughts in his mind.

Yet it is proposed to raise the sayings of the dazed victims to the status of legal evidence!

A professor in our own country proposes methods but little better. He will pronounce words of which some do and some do not relate to the supposed crime, his victim being required to reply with the first related word he can think of. The replied words and the relative times taken for the replies are noted, and from a study of these his innocence or criminality is noted. What is not noted is that the mere charge of a serious crime throws some natures into a dazed and even semi-hypnotic state based on fear, in which they will become negative to the operator's mind and sensitive to his expectancy, then behaving and answering in every respect as if guilty.

The whole set of methods are illegitimate,

morbid, and vivisectional. A grave and sane public opinion would not tolerate them. What with hypnotism in the churches, hypnotism in the hospitals, hypnotism in the laboratories, in the class-rooms, in the reformatories and schoolrooms, in the law-courts, juvenile and other, on the entertainment platforms, by parents in the nursery, and self-hypnotism in the new cults—it looks as though a never-hypnotized person would in a few years be a rarity—outside of the UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY! And every hypnotized person has lost *something* of his humanity!

The Marvels of Figures

PROFESSOR IRVING FISHER recently said that Massachusetts was the only State in the Union that presented statistics from which to judge of the increase in the length of human life. These statistics he accordingly gave, showing that longevity increases fourteen years in a century; that is, that people now live that much longer than they did a century ago.

The average length of life is now, say, thirty-four years. A century ago it was therefore twenty; the century before that it was six! In another thousand years it will be one hundred and seventy six.

This will hardly do. One fraction of one country for one century does not give space enough for a parallax to be visible. There exist nowhere sufficient statistical data to enable us to make any general statements about longevity. The probability is assuredly against its increase. Whilst we learn more hygiene we do not necessarily practise it. And we certainly make little enough application of that department of it which in practice is control of "natural" proclivity. It is *there* that real increase in longevity, when we attain it, will have its cause.

STUDENT

Against Opium

THIS country does things on a large scale, and when there are good things to do, the good done is therefore on a large scale. We have crystallized the civilized world's desire to suppress the illegitimate use of opium into definite proposals, already submitted to the other Powers. A conference is immediately to meet at Shanghai, and we have proposed that its work should reach back to the various home countries themselves, each appointing a commission.

"Our idea," say the official words,

is that each government's commission should proceed independently with the investigation of the opium question on behalf of the respective country; second, to ascertain the best means of suppressing the opium traffic if such now exists among the nationalities of that government in the far East; . . .

By way of a preliminary step of our own, Secretary Wilson has recently issued an order keeping opium designed for smoking out of the country. We have, of course, much more to do; for the use of morphine—we might as well include its worse sister, cocaine, while we are about it—is now a national peril. C.

Archaeology Palaeontology Ethnology

The Illustration

SPALATO is the town on the Adriatic to which the Roman Emperor Diocletian retired in A.D. 305. The Duomo is close to his palace and is usually supposed to have been the temple of Jupiter, intended by Diocletian for his tomb-house. Externally it is octagonal, the interior circular and domed, and it has a curious crypt. The pulpit, of many-colored marbles, is considered one of the finest specimens of Romanesque art, dating from early in the XIIIth century. The old Roman towns of Dalmatia contain much of interest to archaeologists. B.

The Greeks and Natural Science

IN a scientific contemporary occurs an extract from a paper on "The Greeks and Natural Science," in the "R. P. A. Annual." The writer maintains that the Greeks knew more natural science than is generally accredited to them, and then paints a picture of what might have been the world's subsequent history, had they pursued science to the extent of inventing means of communication such as we have now. They would have come into closer contact with the spiritual philosophy of India, and the two together might have raised mankind to such a pitch of civilization that the dark ages would never have occurred.

Aristotle described vast bodies of observed facts in botany and zoology and classified them; the geological observations of Pythagoras were as correct, and his conclusions from them as sound, as those of the founders of modern geology. Eratosthenes determined the obliquity of the ecliptic and measured an arc of meridian. These last facts are called "remarkable," but they can be remarkable only by contrast with a preconceived opinion as to the attainments of the Greeks. Euclid's geometry is also mentioned, along with Archimedes' mirrors, as an instance of Greek natural science; and this in spite of the fact that the writer distinguishes between inductive science and *a priori* science. This surely shows that there is some confusion of thought.

It may be safely inferred that the reason why the Greeks did not advance any farther along the lines which natural science has pursued in our day was not because they were unable but because they did not deem the pursuit profitable. And, taking the writer's cue, one might also indulge in a vision as to the probable course of subsequent history, had they done so. They might have developed their brain in the same unsymmetrical fashion as we have, and have lived to lament the loss of those finer faculties to whose exercise the world has been so much indebted. Did not Darwin so lament the blunting of his own finer faculties, and is not his case typical of modern culture in general? In that case

Lomaland Photo. and Engraving Dept.

ROMANESQUE PULPIT, IN THE CATHEDRAL AT SPALATO, DALMATIA

the world might have sunk into still darker ages. For would the materialistic science of these supposed Greeks have enabled them, any better than we, to appreciate the lofty philosophies of India?

Again, one cannot altogether agree to the laudation of the inductive method at the expense of the *a priori* method. Because at one time or another men have carried the *a priori* method to foolish lengths and become lost in the mazes of speculation; and because Bacon and others have cleared up the situation temporarily by starting the pendulum the other way; are we to infer that the one method is wrong and the other right? The obvious truth is that each method plays its own important part in the workings of the intellect; that an entire and symmetrical culture would use both in equal share; that partial culture lays stress alternately upon one and the other; and that no mind ever did or can use either one exclusively.

Let it not be forgotten that the Greeks in some mysterious way knew of some science of proportion that enabled them to create inimitable works of art. Our science has not discovered that as yet. Nor does it appear to

be progressing along the road that leads to that kind of knowledge and ability. Vast and intricate as our mathematical science is, it obviously excludes some vital factor that could enable it to find expression in works of beauty comparable to those found in Nature; hence it falls considerably short of being a "natural" science in the full sense.

To speak again of our mathematics: does it not universally labor under a great disqualification — that it has not discovered the connexion between abstract quantities and natural quantities? Its arithmetic is entirely discordant with its mensuration. Every single chord of a circle is in an indeterminate ratio with the circumference; all the functions of triangles, with trifling exceptions, are equally indeterminate. The periods of the heavenly bodies, the atomic weights of elements, practically everything, in fact, are expressed in approximations, and the indeterminate quantity reigns supreme.

In many other ways, too, our science is at variance with the practical necessities and actualities of life. The truth is that it is very highly specialized, having developed wonderful engineering skill as a burrowing animal but not being distinguished as a navigator of the higher strata. We can hardly disparage the Greeks because they did not depart to this extent from their usual rule of harmony and proportion in all things; and well for us that they did not.

Everything to its own cycle: modern science may be all right for the present cycle. It has played its destined part in uniting distant corners of the world and in expanding human ideas in the only way they could be expanded in such an age. But this is not to say that there were not similar periods in the past — a remoter past than our historical researches have yet revealed to us. The seas roll over the sites of races that ran their course and passed through all their stages; and these in all probability had their eras of physical science and carried them to greater lengths even than we have as yet. The Atlanteans had conquered the air.

The writer concludes by saying that

The wheel has come full circle. East and West have once more met; and what man shall forecast the future?

Oriental calm, stimulated by Occidental energy, will teach modern science that there is a wider meaning to the term "practical" and that wisdom in life means something more than a knowledge of a few physical forces. We have lately seen how readily an ancient race, previously supposed to be intellectually inferior, can master modern science when it wants to; and we may also see it developing that science to practical ends which we ourselves have not yet dreamed of. STUDENT

✻ The Trend of Twentieth Century Science ✻

Cycles in Earthquakes

THE Italian earthquake has occasioned some scandal in that it was not predicted. Indeed the methods of geology have been arraigned and its acquirements contrasted with those of astronomy. The contrast is not of course very just, for geology largely depends upon astronomy and must to some extent await astronomical investigation.

Still, there is something to be said for the charge. Geology has not made all the use of astronomical data that was possible to her. Theories as to the causation of earthquakes have, till almost recently, neglected anything that astronomy might have to say about the condition of the sun in respect to spots, neglected to note whether there might be an earthquake cycle corresponding with the spot cycle or the solar rotational cycle; neglected the moon; and neglected the varying pulls, however slight, that would result from the varying conjoint and opposing positions of the other planets. The movements of the earth's axis of rotation upon her axis of figure have only begun to be related to earthquakes and there is as yet hardly a speculation upon the possibly planetary and solar causes of these movements.

The newest theory of earthquakes, that of Mr. Stanley, gives the earth a crustal or sub-crustal circulation of molten rock in long tubes that very much suggests the subcutaneous circulation of blood in the smaller vessels of the body. In a recent lecture this geologist balanced a quantity of ice in one scale-pan of a balance, with weights in the other. As the lecture went on the ice gained weight to the extent of half an ounce. Condensing the air about it and precipitating the moisture upon itself, it was maintaining a current towards itself from its whole vicinity. The lecturer argued that at both poles of the earth, but particularly at the south, the same process must be going on. Currents of air must be attracted from the equator to the pole, chilled there, and made to deposit their water vapor as snow. Thus at the south pole the mass of ice may be a hundred miles in thickness above the sea level. The enormous weight of this he did not attempt to calculate.

Then came reference to a French experiment, which showed that water in a glass tube properly encased, kept under adequate pressure and greatly heated, finally dissolved the tube that enclosed it.

Beneath the earth's crust, or in its deeper layers, is already the necessary heat; the water is from the under surface of the polar ice-cap; the pressure is the mountainous weight of a hundred superincumbent miles of ice. We have therefore, according to the theory, a lake of rock in white-hot solution in water, under this pressure. From the pole it therefore forces its way outward on all sides and along lines of least resistance through the crust. One of these lines, for example, is supposed to cross the Antarctic Ocean, (underneath it), reach Cape Horn, and then run

up the west coast of South America beneath the Andes. Volcanoes are vents, places of "give" along these vast arteries; an earthquake is the oscillation of the crust following upon a "give" or upon any sudden movement of the current of fluid rock. For like all theories up to today, though not necessarily like those of tomorrow, this one connects earthquakes and volcanic outbreaks as two sides of one process.

However this may be and however much further knowledge may—Theosophy says *will*—disconnect the two phenomena, it remains to show that they are not at haphazard but periodical. There may be several overlapping cycles, some peculiar to the earth's own life, some related to recurrent planetary, solar, and lunar, cycles; and they will be doubtless difficult to disentangle. As a matter of fact, though he would not own it and may be unconscious of it, the geologist, who has only just admitted solar influence in this matter and hardly yet admits lunar, does not at all like the idea of planetary influence. It has just a flavor of astrology and therefore of "superstition" which he does not wish to encourage. Still, facts have a way of finally getting very obtrusive. STUDENT

Hypothetical Matter

WE have curiously inverted our conceptions of late years. Matter we were sure of, and we postulated an ether. Now, it is the ether we are sure of, and we postulate matter.

The physical world is what we see. But how do we see it, and exactly what do we see? Darkness cannot be positively seen; anything visible is so because it emits or reflects light, and it is the light alone that is seen. But if light is ether in vivid vibration, then it is ether we see, and it alone.

Then perhaps we can touch the physical world? No; nothing, no most ultimate particle, touches any other; there is space between. Across that space, which is often enormous compared to the size of the particles even of solid and continuous matter, play the forces of attraction and repulsion. We know only ether, set in motion or tension by forces; "matter" is a postulate, a set of points from whence forces emerge into action upon the ether, the ether which alone we see and know.

But again; what are sight, touch, and the rest? Are they not changes in sensuous consciousness? Must not the ether be a plenum of consciousness of some sort, capable of modifying *our* consciousness just because it is, of the same nature?

Human thought seems to have got the thing upside down. The mind conceives of itself as surrounded by masses of particles of heavy deadness which it calls matter. This does not work well; so the scientific mind proceeds to put together a number of incompatible conceptions, to add to the lot some verbal conceptions to which thought cannot correspond—*e. g.*, absolute elasticity—and then

call the whole *ether*, conceiving it piecemeal.

Might not more understanding gradually come if scientific men, without renouncing their proper work, were to begin altering their minds, begin conceiving of *consciousness* as the stuff of things with man's consciousness in relationship of kind? It would take a good while for the mind to become readjusted, but the effort would be worth while; all kinds of new and illuminating conceptions now utterly unsighted, would come into view. This for the simple reason that mind would have for the first time thrown itself into relation with actuality, with the positive fact of things. Surely that could not be without its certain, if slow, influence.

And then there would be no difficulty in conceiving of the existence of *higher* ethers, that is to say planes of cosmic consciousness interacting with *our* corresponding planes of consciousness—so far as we had developed. We could speak, as did the ancients, of purely divine ethers or Aethers, intercommunication between them and our corresponding centers being—as in lower cases—by way of a corresponding order of *Light*. In those upper or inner divine seas there would be conscious centers of action, "gods" if one likes the word. And within each, as well as in man, and beyond each and man, the selfhood of one *SELF*—reachable not by petition, for that is postulating separateness, but by retreat to individual selfhood raised ever more and more toward its highest, communion of self with *ITSELF*. Religion, science, and philosophy, would then have regained their unity. Each working with the other two we should not need three mental compartments. STUDENT

Water-Finding

A LIVERPOOL (England) firm has placed on the market an automatic water-finder which really does the work it professes.

The atmosphere is usually electro-negative and the earth electro-positive. Currents are always tending to flow between, establishing momentary and local equilibrium; currents said to be least at mid-day and for an hour on either side of that, and less when earth and air are charged with moisture.

The principle upon which the instrument works is that these currents are strongest in the vicinity of the subterranean water courses, a magnetic needle affording the method of measurement. Apart from this, smaller indications are given when the instrument is carried over very metalliferous soils.

We are accustomed to deny the possibility of a power whose working we cannot understand. On that principle the majority of people have usually denied the existence—though perfectly well-evidenced—of *human* water-detectors. It always seemed probable that this power rested on an extra sensitivity to passing electricity. Now we know that subterranean water facilitates or increases these currents between air and earth, we can perhaps put ourselves to less trouble in denying the human detector who senses them. STUDENT

Lomaland Scenic Beauties

THE illustration, fine as it is, can give to a stranger no idea of the beauties of color in the scene. Earth, herbage, sky and sea, all combine to offer the most bountiful array of delicate hues, so harmonious as to present to the glance an effect of quiet uniformity, but unfolding themselves to the attentive eye in endless variety. The soil gives every variety of yellow, brown and red-brown; the leaves all shades and tints of green; the blossoms bejewel the landscape with patches of gold, purple and rose; nor are the grays of the lichens wanting as setting to the brighter colors. Beyond, the ocean makes a broad band of darker greens, blues and purples; and over all is the sky, clear blue as sapphire, and at sunset decked with ever-new effects that defy all imagination and description.

There is a genial warmth and exhilaration exhaling from the unexhausted soil and from the herbs, all of which are fragrant. Since its occupation, Point Loma has become more beautiful; more herbs and trees have grown; and birds have flocked hither in greater numbers. H.

Armored Animals

AMONG animals we find almost every kind of armor, from integuments like the shield of a savage to suits of mail like that of a knight, and even what resembles the plating of a battleship.

Among mammals the armor-bearing species, excluding the mere pachyderms like the rhinoceros, are confined to the *Edentata*. These include the pangolins of Southern Asia and Africa and the armadillos of South America. Both are survivors of a very ancient stock whose traces are found in the rocks. Of old the armadillos were a mighty race, with numerous species and with individuals of gigantic proportions. The *glyptodon* was 11 feet in length, and the *chlamydothere* was even larger. These beasts carried on their backs huge armored domes of bony plates. In spite of their invulnerability they have perished from the earth, becoming extinct in a manner "it is impossible to surmise." This "constitutes, perhaps, the most mysterious problem of geological study."

The pangolin is a creature almost lizard-like in outline, clad from head to tail in a suit of horny plates, like huge thick finger-nails, overlapping each other. Its head ends in a long narrow snout, within which is its ant-eating tongue. In walking, it preserves the claws of its fore feet by walking on its palms, so to say. Part of the head and the under part of the body are unarmed, and the creature rolls itself into a ball like a hedgehog when surprised. The scales are really a modification of hair.

In the armadillos of South America, however, though they belong to the same order as the pangolins and also eat ants, the armor is of bone-material deposited in the true skin in the shape of little shields, though each shield is itself covered with a horny plate developed in the epidermis. The dorsal surface alone is, as a rule, protected; so the animal tucks its head and limbs in when attacked.

In Tortoises, which are reptiles, the carapace is formed of plates, some of which are an outgrowth from, and actually welded to, the backbone and ribs, while others originate in the true skin. The exterior of the carapace is covered with horny material—the "tortoise-shell." The joints of the outer covering do not correspond with those of the inner.

Among insects there are some beetles which have a very hard covering, and others which seem to owe

DIM Coasts, and cloud-like Hills, and shoreless Ocean—

It seemed like Omnipresence! God, methought,
Had built him there a Temple: the whole World
Seemed imaged in its vast circumference.
No wish profaned my overwhelmed Heart.
Blest hour! It was a Luxury,—to be!

Coleridge

their protection merely to the appearance of hardness; for, while closely imitating the others in appearance, they are really soft.

Among crustaceans we have the lobsters in a jointed coat of mail, and the crabs preferring the strong-box type of protection. Finally we have the molluscs with their consummately architected shells, arched and ridged and closed by herculean muscles. *Tridacna gigas* has been found to measure more than a yard in length and to weigh 500 pounds, and would be capable of the alleged feat of holding bathers until they were drowned by the tide.—(Abridged from *Country Life*, London.)

Why is it hard to understand why animals became extinct? Perhaps because we have the notion that Nature proceeds by a blind momentum, obeying dynamic forces that, once started, are inexorable. In that case the animals should have been able to survive geologic changes, and at least a few Noahs and Deukalions should have found refuge during the cataclysms. Besides, other animals did not become extinct. What calamity could have blotted out so many doughty warriors from the whole earth?

But if we surmise that the stocking of the globe with life is accomplished by intelligent agencies and in accordance with designs, it will not seem so strange why there should be one type of animals in one age and another in another. And we may suggest that the races became extinct through failure

of offspring when the Monads of that kind were no longer supplied; as happens with human races.

A Monument to Horses

A MONUMENT to the horses killed in the South African campaign has been erected at Port Elizabeth, Cape Colony. It consists of an oblong base of granite surmounted by a bronze statue of a war-horse and of a soldier feeding it. The pedestal has been shaped on one side into a drinking trough for horses, above which are three drinking fountains for human beings; and the inscription runs:

The greatness of a nation consists, not so much in the number of its people or the extent of its territory, as in the extent and justice of its compassion.

The monument has been erected by public subscription raised by small contributions from all parts of the British Empire. T.

Preserving the Bison

THE bison range, in the Flathead Indian Reservation in Montana, for which Congress made an appropriation, has been selected. It embraces about 12,800 acres, which will be fenced in. Funds for the purchase of the bison are being raised. The first person to take steps for the preservation of the American bison from extinction was the late Austin Corbin, who fenced some 6000 acres at Blue Mountain Park, New Hampshire, and secured a herd of bison. This herd became the inspiration of the present American Bison Society, founded in 1904.

This so-called "buffalo" is the animal which man, in the pursuit of his imagined rights and interests, so nearly extinguished; so it is only just that by man the mischief should be undone as far as possible. We have not yet discovered how to recreate an extinct species of any kind. STUDENT

From THE DHAMMAPADA

THOUGH in the mind hath made us, what we are

By thought was wrought and built. If a man's mind
Hath evil thought pain comes on him as comes
The wheel the ox behind.

All that we are is what we thought and willed;
Our thoughts shape us and frame. If one endure
In purity of thought, joy follows him
As his own shadow—sure.

"He hath defamed me, wronged me, injured me,
Abased me, beaten me!" If one should keep
Thoughts like these angry words within his breast
Hatred will never sleep.

"He hath defamed me, wronged me, injured me,
Abased me, beaten me!" If one should send
Such angry words away for pardoning thoughts
Hatreds will have an end.

For never anywhere at any time
Did hatred cease by hatred. Always 'tis
By love that hatred ceases—only love;
The ancient law is this.

Whoso imagines truth in the untrue,
And in the true finds untruth—he expires
Never attaining knowledge: life is waste;
He follows vain desires.

Whoso discerns in truth the true, and sees
The false in falseness with unblinded eye,
He shall attain to knowledge; life with such
Aims well before it dies.

As rain breaks through an ill-patched roof, so break
Passions through minds that holy thoughts despise;
As rain runs from a perfect thatch, so run
Passions from off the wise.

The righteous man rejoiceth in this world
And in the world to come; in both he takes
Pleasure. When he shall see fruit of his works
The good sight gladness makes.

The law-obeying, loving one, who knows
Only one verse of *Dharma*, but hath ceased
From every hatred, malice, foolishness—
He is the Buddhist priest.

Sir Edwin Arnold

Facts and Fancies

DAY by day the sun rises upon a world of activity. Men women and children awake from sleep. The work of the previous day is resumed or new work is begun. Some work strenuously with a definite object in view. Others make the best of life in a mechanical sort of way. The very youngest children are usually bright and happy, but as they grow older what are usually called the cares of life come over them, like a darkening cloud, and they fall into the general stream of older people. And so the old world jogs on day after day and year after year.

And now the question arises, what are all these people doing? What are they living for? What pushes them forward and how is their action guided?

If we were to ask this question about the

plants and animals the answer is evident. These are guided by the laws of nature. They grow naturally. They have no ideas or thinking faculties. Their being is provided for them and tended by the mighty forces that play through their lives.

Is it the same with man then? Not at all. He does not grow naturally. Would that he did. Having a mind and a power of will he chooses his own course in life. He finds himself in the world, surrounded by a multitude of different courses of action and thought, each of which (did he but know it) is of vital importance. There are endless ideas, attractions, repulsions, all for his choosing or rejection. Perhaps he accepts his surroundings without much question, modifies them a little to suit himself, and falls into the stream. May be he is strong enough really to think for himself. Between the two extremes there are infinite gradations.

What guide is needed that he may choose rightly? Evidently that he should know the truth about himself, and that he should so guide his thoughts and actions that they may be in harmony with the nature which surrounds him, with the laws of his own being, and with the destiny of his race.

It is well, now and then, to pause and review the situation. No merchant or banker would consider his business complete without a periodical balance sheet. No general would dream of going into battle without a careful review of the situation of the enemy. Any other course would be simply madness and invite defeat and destruction. In the same way, no man who is wise, will go on living and working, day after day and year after year, without continual and careful review of what he is doing and why he is doing it.

No intelligent observer of passing events can avoid noticing that the whole world of men is passing through just such a review. There is no record in history of so important a balance sheet of assets and liabilities as humanity is now making for itself. It is expressed in a thousand ways. Individuals, cities, nations, are becoming increasingly alive to the necessity of finding out something of the real truths of the situation as regards themselves,—individually and collectively—and their fatherland.

In making this review, is it not clear that it involves in every case, a search after the real truth? We do not intend to be blinded any more. Overcoming our natural tendency to let things go on as they always have done, we find ourselves compelled to put on the thinking cap.

In doing this we begin gradually to see daylight. We separate facts from fancies and illusions. The latter cling to us with a desperate tenacity. But the strong man, or the strong city, or the strong nation, will make a powerful and continuous effort and throw them overboard. Then will come freedom and a new birth.

Every community is made up of individual units. The nation is a community of states, the state of cities, the city of individuals. Strength arises from united and harmonious action, and in each case the responsibility of the whole lies with the individual. The cry of the pessimist is ever before us, "I can do nothing," but he is not well informed. If he were so, he would know that all the great re-

forms which the world has ever known have been initiated by individuals, who, voicing the needs of their day, and perceiving the opportunity afforded by the unuttered, scarcely recognized aspirations of their fellows, have broken the bonds of fancy and proclaimed the truth. Their usual fate has been, first persecution, and later on, deification. But this has been because those who surrounded them have not had that courage of their convictions which the martyrs had themselves. So we need not listen to the pessimist. He does not realize how, over and over again it has been proved, that one man, strong in the power of truth, can take a citadel fortified in error.

Everyone will agree that what is needed in the present day is an urgent recognition of the immanent consciousness, the Divine Power, as the guide of the world. If every man could only see this with an understanding eye, all would be well.

But the difficulty lies in a general misunderstanding of how this is to be accomplished. To comprehend it rightly we must unflinchingly separate fact and fancy. For countless ages the fact has been known to the sages of all time and is proclaimed by the great world Teachers. The fiction is represented today by the outcome of multitudinous creeds, priestcraft and churchianity.

And yet the truth is so simple that even a little child can understand it, better perhaps than a college professor. It is expressed in the words of William Q. Judge: "Man is God incarnate."

If this be true then where shall we look for the deity which shall guide us, if not within ourselves? This is a fact which everyone recognizes more or less completely. Why not make it more insistent than ever before? Why not make it the guiding factor in all that we undertake?

Everyone knows that from the heart of man flow those expansive and beneficent forces which make for the universal good. The Spirit of God dwells within, and is felt in the appeals and in the guidance of conscience. It cannot be argued about. Everyone knows it is there and feels its influence. It is "true, eternal, strong, pure, compassionate, just." If this guidance were taken as the ruling power in individual, city and nation, how soon would there be a magic change! For the individual as for the nation the kingdom of Christ would be at hand.

Upon this noble teaching that mankind is in touch with the divine, through the manifestation of the divine spirit within him, which he may seek after, feel and know, rests the declaration in the Declaration of Independence that "all men are created equal." Upon this fact also depend all progress and the future evolution of the human race. All reforms depend upon it, for it is the guiding factor in them all; and we may rest assured that the world will never come to an end until the great perfection of mankind is accomplished by this means.

In the meantime we have to do our duty in the present day. We have to recognize that the world will always be just what *man* makes it, for he is its *creator* by means of the divinity that works through him. By the recognition of the Brotherhood of all men and of their inalienable right to guidance by the God within, will the world be saved. STUDENT

POLITICAL GREATNESS

NOR happiness, nor majesty, nor fame,
Nor peace, nor strength, nor skill in arms or
arts,

Shepherd those herds whom tyranny makes tame;
Verse echoes not one beating of their hearts,
History is but the shadow of their shame,
Art veils her glass, or from the pageant starts
As to oblivion their blind millions fleet,
Staining that Heaven with obscene imagery
Of their own likeness. What are numbers knit
By force or custom? Man who man would be,
Must rule the empire of himself; in it
Must be supreme, establishing his throne
On vanquished will, quelling the anarchy
Of hopes and fears, being himself alone.

Percy Bysshe Shelley

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question What interpretation does Theosophy give to *Matthew x, 28*?
"Be not afraid of them which kill the body, but are not able to kill the soul: but rather fear him which is able to destroy both soul and body in hell" — Gehenna.

Answer The general tenor of the passage is plain enough. Jesus is sending his disciples to the "lost sheep of the house of Israel." He warns them not to expect any better treatment than he has himself received: "The disciple is not above his master." They are not, however, to be terrified by the evil words or actions of men. Hypocrisy is a sin and a blunder; and all the works of hypocrisy will be laid bare. Physical suffering and the death of the body are of no weight compared with what injures or destroys the soul. Therefore he says, "fear him which is able to destroy both soul and body in hell." A similar passage is found in *Luke xii, 5*: "Fear him which after he hath killed hath power (or authority) to cast into Gehenna."

This general meaning is plain enough; it is only when we come to examine the last clause critically that difficulty arises; and the difficulty has been felt ever since the early days of Christianity. Clemens Romanus, a reputed disciple of Paul, seems to refer to this very passage in his second epistle. In recent times German scholars have held opposite views as to whether God or the devil is meant. English scholars, though not unanimous, have thought that the weight of evidence upholds the former view.

It is noted that in the first clause, "do not be terrified by those that kill the body," *phobeisthai apo* is used. This is a Hebrew idiom found in the Old Testament (LXX) Apocrypha, and in the New Testament, but not in the classics. It has the force of "turning away in terror." But in the second clause only *phobeisthai* is used. In the New Testament this has sometimes the sense of "to regard reverently."

Even to the Theosophist the passage is not wholly free from difficulty, though the main signification is obvious. H. P. Blavatsky has taught that there is such a thing as the loss of the soul; that there are soulless men, many of them. By the "lost soul" she does not mean the higher Ego, or the reincarnating Ego; and certainly not the HIGHER SELF. She means the lower self which often fights against the higher Ego, our true Self. Jesus

speaks of the great loss the man (or manas) sustains by losing his soul, even though he gain the whole world.

The septenary nature of man was not known 2000 years ago, except to the few. Jesus had to use the only means available — the Aramaic or Greek ideas and words of his time. In this way he used the term Gehenna, the figurative word for the lower part of Sheol, or the after state. But the "body" does not go into the unseen world, and therefore body and soul could not be destroyed there. Luke is free from this difficulty for he says "hath power (or authority) to cast into Gehenna."

In a sense no one can cast us into hell; we must do it ourselves. We must burn ourselves, yet the New Testament speaks of God as "a consuming fire." The Holy Ghost is the consumer as well as the regenerator. We find the same idea in Hindü philosophy. We see the same truth illustrated around us in nature. Hence, as the lower nature persistently wars against the higher, a time may come when lower ego and higher ego will be separated, and in that case the lower ego is "cast forth as a brand and is withered," as Jesus taught. This is a most terrible "hell," and if there be many such people in the world, it is no wonder H. P. Blavatsky said "the man-bearing earths were the only hells in the universe." (REV.) S. J. NEILL

Answer II. Very often in attempting to get at the meaning of a statement it is taken in its literal sense, aside from the spirit and genius of the writer or speaker, or without due reference to the context. Now it is surely right to look at a statement from a literal standpoint; this must not be ignored, and due weight must be given to the choice and meaning of every word; but can this be done if we do not have the keynote of the whole teaching of which this is a part?

The first part of the statement is surely clear enough, and presents no difficulties: the injunction is to have no fear of those who can kill the body only, and the reason for this attitude is implied in the latter part, namely, that man is more than body, and that though the body be destroyed, he does not cease to exist. In fact, are we not warranted in assuming from the statement that the body is no more than an instrument? But then we have the teaching that the soul may be destroyed, and the point of the question seems to be in regard to the meaning of this and *who* or *what* is he or it that can destroy both body and soul.

As stated in the foregoing answer, some believe that God is meant, and others that the devil is referred to as the destroyer. But is the former of these views consistent with the general teaching of Jesus in regard to God, who careth for the sparrows, "and are ye not much better than they?"; "who maketh his sun to rise upon the evil and the good, and his rain to descend upon the just and the unjust"; whose will it is "that not one of these little ones should perish." Yet we must not forget that when in speaking of the wicked servant who had been forgiven a debt by his lord, yet refused to extend the like forgiveness to a fellow servant, and for which his lord "delivered him to the tormentors," Jesus said

concerning him, "So likewise shall my heavenly Father do also unto you if ye from your hearts forgive not every one his brother their trespasses." And a careful consideration of still other passages will make plain, so it is claimed by students of Theosophy, that those things which Jesus says the "Father" does, are the action of the Law — the Higher Law — and that there is nothing arbitrary in it, but the "will of the Father" and the Law are one and the same. In the same way the action of the "Devil," if there be a Devil, cannot be but according to Law, or if evil be taken to be action contrary to Law, in its higher phase, then still the effects are governed by and are the result of Law.

Now, in the statement in question, we have reference to two kinds of death, the outer, physical death, and an inner death, death to the soul. Both must be under the action of the Law. The first may or may not be the result of acts done in the present life; it may be the repaying, through the Law, of evil done in a previous existence; or it may come in the line of duty, as in war, or otherwise as the act of another for which the sufferer is not directly responsible.

But in the second case, the responsibility is direct, the destruction that is wrought on body and soul together is from oneself and not from another, the means of destruction are in one's own hands and the Law provides that the penalty shall be carried out; not an arbitrary penalty, but the result of one's own acts and thoughts and inherent in them. Can we say that God or the Devil destroys body and soul in Hell? Surely, only if we make both God and the Devil synonymous with man himself; for verily man is his own savior and his own destroyer. He makes his own heaven and his own hell. But this statement just made cannot be fully understood apart from the Theosophical teachings of Karma and Reincarnation; and in the light of these there is both warrant and support of the truth of it in the teachings of Jesus himself.

"What shall it profit a man if he gain the whole world and lose his own soul; and what shall a man give in exchange for his soul?" This Jesus said after he had described the man who lived for himself alone and had heaped up riches for sensual enjoyment and ease. There are two courses open to man in life; either to live the higher life, which is in accord with the divinity that is within him, a life of altruism, self-control, and the performance of duty; or the life of the lower nature, selfishness, ambition, or lower still and more gross, one of sensualism and vice. The one leads to self-emancipation, to power to become what man truly is, "one of the sons of God" — it is the pathway of advance; the other leads to self-destruction, to the loss of the soul.

But should we fear? No, "fear only to fail in your duty, and even then let your fear be for others and not for yourself," said Katherine Tingley. No, there is no cause for fear if we do but keep our eyes on the light, and our hearts fixed on the performance of duty and the welfare of others. To work out our own salvation, as Paul says, that is the task set before us; for neither by God nor Devil external to ourselves, or other than ourselves, are we either saved or damned. The kingdom of heaven is within, and there too is the kingdom of hell. The choice is ours. STUDENT

THE UNIVERSAL BROTHERHOOD AND THEOSOPHICAL SOCIETY

FOUNDED AT NEW YORK CITY IN 1875 BY H. P. BLAVATSKY, WILLIAM Q. JUDGE AND OTHERS
REORGANIZED IN 1898 BY KATHERINE TINGLEY

C e n t r a l O f f i c e P o i n t L o m a C a l i f o r n i a

The Headquarters of the Society at Point Loma with the buildings and grounds, are no "Community" "Settlement" or "Colony." They form no experiment in Socialism, Communism, or anything of similar nature, but are the Central Executive Office of an international organization where the business of the same is carried on, and where the teachings of Theosophy are being demonstrated. Midway 'twixt East and West, where the rising Sun of Progress and Enlightenment shall one day stand at full meridian, the Headquarters of the Society unite the philosophic Orient with the practical West

The Hand of God

PLAGUE, pestilence, and famine, earthquake and tidal wave; these are among the things we attribute to "the hand of God." No one, we say, can prevent or foresee or understand them; they are huge calamities that must be passively endured. Thousands are swept away, and the whole matter we hold to be right outside the province of human will. There is some disturber outside the universe, with power and will to wreak havoc upon us; we dare not dream of our own responsibility. If we had more imagination it would be a nightmare to us, would this.

The truth is, that we have grown so accustomed to shirk responsibility, that we are unfitted to meet this question in the way it ought to be met. We look for the cause of every illness outside of our own shortcomings; and hold that justice has no sway this side of death. The first thing that a manly philosophy would teach us is that we are the masters of our own fate, and that nothing flows to us save from our own hands. We should make that an axiom, and cultivate spiritual courage. There is no happening not replete with splendid lessons, which go unlearned by reason of our obliquity of vision.

Such occurrences as this terrible one in southern Italy, for example, might teach us many things. We have been cultivating unwholesome and unnatural conditions. We need have recourse to no dogmas; there are truths which all creation is conspiring to shout at us always. We are boxed up with the rest of humanity on this globe, which is our mother, our native home, our abode, during the past, present and future. It is probably not true that you can come to any place where man has not been. Where there are deserts now, there were abundant civilizations of old times; not a sea rolls, but over some antique empire. All the matter of the world is full of the contact of man; we have strewn our thoughts over the mountains and the plains, and even the ocean waves cannot escape from them.

Climate and surroundings go to make us what we are. The desert puts its impress on some of us,

MEMBERSHIP

in the Universal Brotherhood and Theosophical Society may be either "at large" or in a local Branch. Adhesion to the principle of Universal Brotherhood is the only prerequisite to membership. The Organization represents no particular creed; it is entirely unsectarian, and includes professors of all faiths, only exacting from each member that large toleration of the beliefs of others which he desires them to exhibit towards his own.

Applications for membership in a Branch should be addressed to the local Director; for membership "at large" to G. de Purucker, Membership Secretary, International Theosophical Headquarters, Point Loma, California.

the forest upon others; the character of one people will have a large dash of sea-faringness in it; others will be shot with the irregular grandeur and mysticism of the hills. Nature segregates and mixes her children that they may grow into the perfect races she desires. She would have each race reach

We, who go armed against each other; who live in an atmosphere of mutual suspicion; who cultivate selfishness as a virtue—we have not risen up and fluted with our wills that there shall be order and decent living throughout the world. We have let vice grow in our midst; we have banished the idea

and that by gluttony (to put it baldly), which is a state of the mind. Your body is fit and trim, or lax and unwholesome, ultimately, as your mind and character make it. Indeed, nothing goes through the mind but leaves its stamp on the body, and not only on the body but on all the surroundings; one sees that in the feckless and littered habitation of a slovenly-minded person. Do we do nothing to the earth then?

of our divinity. It is through orderly living that health is maintained; and where will you find that upon earth? Is it to be wondered at that nature grows sick, and must try severe remedies?

When such a catastrophe happens, one always notices that a great wave of sympathy is roused from all over the world, and the nations vie with each other in sending help. We are suddenly interested in the afflicted people, and desire to be, even remotely, of some service. That ought to be our normal condition, but it is not. If it were, at any rate we can say that there would be that much less evil for a cataclysm to undo.

The effect results from the cause, and is not arbitrarily set down after it. Indigestion, which is the result of gluttony, is intended also to be its cure, did we not so close our eyes to these things. It is inevitable in the nature of

things that pain should follow upon the breaking of laws. Here then is a warning against our selfishness and an alleviation of it for the time being; it is a grand calamity, and caused by what? Set it down as an equation; it is the easiest one in the world to solve. Science has not yet arrived at such a point, it is true; but then there are so many points at which science has not yet arrived; and so many at which she is but arriving year by year now; points she has liberally fulminated against too, while she was still infallible.

out into the unknown, and gather jewels of experience and wisdom. She has set infinite variety on the paths we are to travel. We are here for her sake, and are a part of her; through us whatever she may learn is to be learned.

Now what goes on in the mind has its effect on the whole nature of a man. It is true that we are affected by our physical conditions; but it is also true that our physical conditions are affected by us; and this last is more true than the other. Your indigestion was perhaps caused by unwise eating;

The Theosophical Address at Isis Theater

OWING to an unusually stormy evening, the usual Sunday evening meeting at the Isis Theater, San Diego, was postponed until the Sunday following.
